On the opposite side of the river are the Botanical gardens, said to be the finest in the world; we intended to visit there when we visited the palace. When we arrived at Calcutta we anchored within one hundred yards of the esplanade at five o'clock and when all the swells were out driving. I have not seen such a handsome collection of turnouts anywhere except in the Central Park in New York. It was a prettier sight even than New York; as the ladies dress in brighter colors and nearly every carriage had two native coach and two footmen, dressed in the native costume; the sight was most lovely, especially to us poor fellows who had not seen a decent turnout since we left home. This was lovely, but not half so much so as "Klem Garden" a little park where the band played so as to seven every evening; this park is devoted to children; it reminds one of a living bouquet of flowers; all kinds of finely dressed children and nurses jumping and dancing around to the music; to add to this is the beautiful way in which the garden is laid out. After the gas is lit it is even more beautiful than ever.

The first three or four days were spent in tarring down, painting ship, and in making the vessel presentable. After that, we had a couple of days' exercise, and were inspected by the Admiral and staff, which inspection was passed in such a creditable way as to call forth the compliments of the Admiral; and what pleases me most is that my division beats the others in everything; it had been hovering over us for more than a month, and we felt very much relieved when it was over. During all this time we had been dining out, going to parties, dancing, attending the races, in fact, making ourselves as prominent as possible in the society of Calcutta.

As soon as the inspection was over, the Captain, several of the officers and myself, accepted the invitation of a Hindoo gentleman to visit his palace in the country. We started at 5 A. M., took breakfast, and started on a train that left at 6.30, rode about sixty miles up there; at the railroad station we got an excellent breakfast, having got very hungry by this time. There we took carriages and drove to the grounds of a native prince, where we were to have been received, but the prince was very unexpectedly called away and we merely had a view of the palace and grounds. It was the prince Burdwan. We went first to see his menagerie, where we saw all sorts of animals of the very finest kind, not cooped up in small cages as we see them at home, but in large airy pens. They were all fat and sleek and gave one some idea of the wild animal. The large Bengal tigers and the leopards were much handsomer than I ever imagined they could be. Then there were alligators moving in large tanks and lying on the banks near it, and a deer park containing at least a hundred fine specimens of the native deer. Then there were all sorts of birds, from the ennary to a pair of ostriches, the larger one being over twelve feet in height; the smaller, or female bird was of a brown color, but the larger bird partly a deep glossy black and the rest a clean snowy white; when he would step off he would work his wings in such a way that would convince you that he was the most magnificent of all birds, if one of them in the American eagle. From there we went to the palace; I think it must compare well with the palaces of European princes, fine marble floors, elegant frescoing, numerous marble statues, costly oil paintings, etc. After going through the different rooms, halls, etc., until we got tired, we adjourned to the railroad station to get luncheon, which may as well be called dinner as a more hungry set of men you never saw. We astonished the native waiters at the amount we ate. After this it was announced that the elephants had arrived, the prince having placed two of his private ones at our disposal. There were eight of us with two elephants, four on each; the saddle on one was arranged like the body of an ordinary business wagon, with a box and two seats, with room for two on each seat; on the other there were no seats, the back of the animal being made as flat as possible by means of pads; these elephants were perfectly immense. Old Hannibal, Van Amburgh's big one, was small in comparison to either of these; from the ground to the lap of the fore-shoulders of the largest was eleven feet, six inches; I am sure I thought it was thirteen feet, before we measured it. I was in the smaller one, very little smaller either. But first I must tell you about our mounting; they were afraid to bring these too near the depot, so we took our carriages to go to the elephants. We were riding along very quietly when all at once we heard a most terrific roar; most of us jumped clear off the carriages, the rest were all ready just ahead of us in the middle of the road; I shall this immense mountain of flesh, slapping his trunk around, and kicking up a dust with his feet that was not at all pleasant to look at, when we knew we had to ride on their backs for sixteen miles. We divided the party, and as the Captain was to go on this one, on account of his seniority, he allowed him to mount first. Each elephant had two drivers, one following behind with a spur, and one astride his neck with a hook made of iron, with the point and hook sharp; the whole thing must weigh four or five pounds; the make the animal do what he will. We could mount, this hook was driven into their heads in a way that was truly cruel, at least we thought so now, although before we had finished with them we would have been glad if it could have been driven in farther; after using this hook until the blood fairly ran in streams from his head, he was induced to get on his knees, a ladder was quickly placed against his side, and the Captain started up as fast as he could; just as he got hold of the ear with his hands, before he could get his feet in, up jumped the elephant and struck off in the field with the Captain, an old, grey haired man, dangling at his side. The Captain held on nobly, and after the mate had amused himself for about five minutes, by another application of the hook he consented to lie down again, when by quick working the others barely got into the seat before he was off again. Then if you could have seen the scientific skirmishing close by your humble servant and the other members of the party, in getting near enough to toss up a cape to one, a coat to another, etc., so far one elephant loaded; the other one not in sight. Now this elephant (not the loaded one) in order that we might at once become accustomed with his agility and sportiveness, started off into a tea-acre lot, with his load of human freight. It is useless for me to say they were frightened,—on a run with his trunk out straight in one way, and his tail in another, roaring and bellowing in a fearful manner; after making a circuit of this lot several times, off he started down the road; we jumped into our carriage and started after him. I must confess sincerely hoping that No. 2 would not turn up, but no such good news. Just beyond us was a corner with a large tree; by the time we had reached this, we were close behind No 1, he having stopped to eat up several trees and drink up one or two lakes, we had to pass. This for the moment had quieted No. 1, and we forgot his actions, when all at once he darted behind this tree, and there was fun; such a conglomeration of horrid noises I never before heard, and I sincerely hope may never again. It seems that No. 2 with her young one was here waiting for us to come up. The cause of the rumpus was that No. 1 had but a short time before lost its young one and they were both fighting about the baby of No. 2. We cleared that carriage instantly. I would have gladly climbed the tree if I could, although I knew if either of these beasts wanted me all they had to do was to reach up their trunks and take me. The tops of the highest trees were nothing to them. After a copious application of the hook and spear, they were separated by a short distance. They were made to kneel, and we were told to jump quickly if we did not wish to be stepped on, as the other one was liable to change at any moment. As I had no immediate desire to be stepped on, I made a rush, not waiting for ladder or anything else; we had no ear to get into, but simply to get on the back and hold on as best we could as there was some one on either side of him getting up as best they could. I had only his head and tail left. I took the latter as the most harmless part. I ran and jumped as far as I could, caught hold of his tail with one hand and a rope that was hanging over it with the other; the agility I displayed on this occasion was truly wonderful. I did not get entirely on the saddle the first time, but as soon as I could get a good hold with my hands, remained as I was, spread eagle over his hind quarters, hanging on for dear life, and waiting further developments. I don't know where the other fellows kept their hearts; mine nearly choked me, but perhaps I was more tired than the rest. Everyone went on the principle, as there was no credit to be gained, there was no use in being brave. After closing my eyes and waiting quietly for death or something worse to happen for some time, I found our brute on his feet quietly going back to the baby; we all climbed up to our seats and fixed ourselves as comfortably as possible for the ride; it was then 4 P. M.; we expected to arrive at the house of a friend about 8 that evening, but what a mistake; we had boarded our craft, but the fun had only commenced. After the baby had partaken of a barrel or so of its mother's milk, we started off, the two old ones vieing with one another as to who could make the most noise, or itself more disagreeable. We tried to let No. 1 go ahead and keep several hundred yards to the rear with No. 2 for just as sure as he came to a corner he would stop to cut up a few capers, and before we would know it, we would be together again amidst such a row as I have fruitlessly attempted to describe. It is a well known fact that when an elephant roars and bellows, he is not necessarily dangerous, but when he trumpets it means mischief. As it commenced to get dark, they commenced to trumpet, and if anything became more unmanageable than ever. At times, it was almost necessary for us to take off our caps, as our hair stood so straight that we could not keep them on. About nine in the evening, after being subject to all manner of frights, danger of being brushed off by the limbs of trees, thrown off by his incessant shying and jumping to say nothing of his unearthly noises, we found to our disgust, that the mating instead of remaining flat, had commenced to take the shape of his back, *i. e.*, high in the saddle, and slanting downward each way like the roof of a house; I held on by my hands for some time, letting my feet hang overboard until finally my body gave way, off I went, landing on my feet of course, and in admirable space of time I was on the bank behind a tree. As we were then only two miles from the house of our friend's uncle, I concluded to walk there, and as the seat was very uncomfortable they all got off. I walked on ahead to talk with the Captain, and partly from all accounts, their elephant must have behaved even worse than ours. It was very amusing to them to see at what a safe distance I kept, and, to see how quickly I would find a tree in case their elephant stopped or went from one side to the other; it had ceased being fun for me a long time before that, and must have gone off the road fifty times, and since I have learned that it was much more dangerous than to have the elephant, as the whole place is filled with cobras, a most deadly snake, far more dangerous than the rattlesnake. At the uncle's, both elephants were stopped, we all dismounted and rested fifteen minutes while our saddle was fixed when we started again, this time accompanied by a large number of native servants carrying torches, refreshments, and everything else imaginable. The remainder of the journey was very much the same, only a little worse; we arrived at our destination at 4 A. M., having been twelve hours on the road. During the whole of the ride, those on our elephant had a constant source of amusement in the baby; a more mischievous and comical creature never existed; his great delight was in frightening people. The native huts are very neatly built, of a light frame, thatched with mud and straw, and all open on the side next to the road; we passed quite a number of them, the people were at dinner. The baby would wait until we had passed and attracted their attention, then as unnoticed as he could, would walk down and the first thing the people would know, his head would appear in their midst, and such a scattering near women and children, trying to find the quickest way of getting out was disturbing their visitor; the baby would then stick his nose in all the different dishes; whether he found anything to suit him or not, he had a playful little habit of taking the table by one leg and walking out; almost invariably he would carry the leg longer than he did the rest of the table; then again, he took particular delight in teasing one of the keepers, and would sneak up behind, take hold of his clothes, and give him a good shaking, and before the keeper could get at him, would scamper off out of the way. Whenever the elephants would stop their noise, the jackals would surround us with a noise only equalled by the elephants; one would think that all the children in New York poor house were being spanked at the same time.

W. Field.

John Jenkin's Sermon.

The minister said last night, says he,
"Don't be afraid of giving,"
If your life ain't nothing to other folks,
Why, what's the use o' livin'?"
And that's what I said to wife, says I,
There's Brown, the miserable sinner,
He'd sooner a beggar would starve than give
A cent toward buyin' a dinner.

I tell you our minister's prime, by Jo,
But I couldn't quite domineer,
When I heard him givin it right and left,
But who was he hit by his sermon,
Of course there couldn't be no mistake
About what I asked of long-winded prayin
For Peters and Johnson they sot and scowled
At every word he was sayin'.

And the minister he went on to say,
"Thrivin' business kinder cheerin,
And religion's as good for every day
As it is to bring to meetin
I don't think much of a man that gives
The Lord Amens at my preachin,
And spends his time the following week
In cheatin' and over-reachin'."

I guess that dose was bitter enough
For a man like Jones to swaller;
But I noticed he didn't open his mouth,
Nor once after that, to holler
"Hurrah," says I, for the minister"—
Of course I said it quiet—
"Give us some more of this open talk;
It's very refreshing diet."

The minister his 'em every time
And where he speaks of fashion,
And a-riggin' out in bows and things,
As woman's ruin' passion,
And a-comin' to church to see the styles,
I couldn't help a winkin'
And a-nudgin' my wife, and says I, "That's you.
And, guess it sot her thinkin'.

Says I to myself, "That sermon's pat;
But man is a queer creation;
And I'm much afraid that most o' the folks
Won't take the application.
Now if he had said a word about
My personal mode o' sinnin'
I'd have gone to work to right myself,
And not set here a grinnin'.

Just then the minister says he,
"And now I've come to the fellers
Who've lost this shower by usin' their friends,
As sure's you're born, fellers,
Go home," says he, "and find your faults,
Instead of hankin' your brothers'"
"Is here," he says, "and says the rest
You've tried to fit for others."

My wife she nudged, and Brown he winked,
And there was lots o' smilin
And lots of lookin' at our pew,
It sot my blood a boilin',
Says I to myself," Our minister
Is gettin a little bitter;
I'll tell him when sermon's out, that I
Ain't at all that kind of a critter."

"Hold On, Sam."

In the life of Samuel Hick, one of John Wesley's preachers, is an incident which may sometimes be of use to those who seek opportunities for the cause of Christian benevolence. Hick was a blacksmith by trade; but he was constrained by the love of Christ to preach the Gospel, and he continued in the work forty-two years, until his death.

He was a most active propagator of the doctrines of Wesley, and a man of uncompromising faith. So bold and mighty was his spirit of prayer, that he often did almost incredible things and received almost incredible answers. He once, in company with his brother, visited the place of his birth, to collect money for a chapel. He proposed to call on a man who was well known to be very wealthy, but penurious. The brother thought it would be of no use. But Hick went and begged for a contribution, and received in return an absolute refusal. At once he was upon his knees, praying for the stingy sinner. "Hold on, Sam," exclaimed he; "I will give you a half crown." But Sam continued praying to the Lord that that was far too little for such a rich man. Suddenly he exclaimed again, "Hold on; I will give you two crowns." Sam now arose from his knees, and bore away the answer to his prayer.

A desperate case demands a desperate remedy. When men beg of Christ, sometimes the bold stroke is the wisest stroke. Conscience is arrayed against avarice; and when conscience and Christ both plead against an avaricious spirit, the avaricious spirit has the worst of it.—*Watchman and Reflector.*

The Right Way of Correcting Mistakes.

A story is told of a prominent man who lived in Detroit forty years ago, and who at that time owned more steamboat stock than any other man in the Western country, besides other wealth to a large amount. He had just completed a splendid new warehouse at Buffalo, and wanting a suitable clerk to take charge of it, he advertised for one in the papers. The next morning, early, a candidate for the position presented himself, a rather young man in appearance, when the following conversation occurred:—

"Young man, when you make a mistake in any of your books, how do you correct it?"

The young man explained, in a very profuse manner how he should proceed to make it all right.

"A good way no doubt to do it," replied the old gentleman, "but I shan't want you."

Very soon another aspirant put in an appearance. A similar question was asked him, and in a long and eloquent manner he pointed out the remedy in all such cases. All the reply was, "Young man, I shan't want you."

Some three or four others dropped in during the day, and to each one the same question was put, and they all had some smart way of rectifying mistakes in their books. The old gentleman was entirely ignorant himself of the art of book-keeping, but he had wisdom in all things, which is more than a match for learning. Just at the close of the day, a plainly-dressed man, with a bright eye and a brisk step, called for the situation.

"Take a seat, sir," said the old gentleman, "I want to ask you just one question. When you make a false entry on your books, how do you go to work to correct it?"

Turning upon the questioner a cold, sharp look, the young man replied "*I don't make that kind of mistakes, sir.*"

"Ah! my dear sir, you are just the man I have been looking for all day," and in a few moments the man who corrected his blunders by not making them, was installed in the office.—*Norwich Bulletin.*

The Duties of a Mother.

By the quiet fireside of a home, the true mother, in the midst of her children, is sowing, as in vases of earth, the seed of plants that sometimes give to Heaven the fragrance of their blossoms, and whose fruit shall be *not a* rosary of angelic deeds, the noblest offering she can make, through the ever ascending and expanding souls of her children, to her Maker. Every word that she utters goes from heart to heart with a power of which she little dreams. Philosophers tell us, in their speculations, that we cannot lift a finger without moving the distant spheres. Solemn is the thought, but not more solemn to the Christian mother than the thought that every word that falls from her lips, every expression of her countenance, even in the sheltered walk and retirement of home, may leave an indelible impression on young souls around her, and form, as it were, an underlying strain of that education which peoples Heaven.

Extraordinary Result of Kindness.

A servant of the Rev. Rowland Hill suddenly died, and his master preached his funeral sermon to a numerous audience, in the course of which he mentioned the following anecdote: "Many persons present were acquainted with the deceased, and have had it in their power to observe his character and conduct. They can bear witness that I speak the truth, when I assert that for a number of years past he has proved himself a perfectly sober honest, industrious and religious man, faithfully performing, as far as lay in his power, the duties of his station in life, and serving God with constancy and zeal: and yet this very man, this virtuous and pious man, was once a robber on the highway. More than thirty years ago he stopped me on the highroad, and demanded my money. Not at all intimidated, I argued with him. I asked what could induce him to pursue so iniquitous a course of life. "I have been a coachman, sir," said he, "but am now out of a place, and not being able to get a character, cannot get employment and am therefore obliged to resort to this means of gaining a subsistence." I desired him to call upon me; he promised he would and kept his word. I talked further with him, and offered to take him into my service. He consented; and ever since that period he has served me faithfully, and not me only, but he has faithfully served God. And instead of having finished his life in a public, ignominious manner with a disgraceful halter, as he probably would soon have done, he has died in peace, rejoicing in hope, and prepared, we trust, for the society of just men made perfect."

Decline of Technical Skill.

Invention has been one of the banes of America. In nine cases out of ten it arises from the desire of a short cut to fortune, and has filled our workshops with restless spirits, and the Patent-Office with wild plans, all to the great detriment of practical industry. While our artisans have been inventing schemes for rapid riches, technical skill in America has notably declined. In nearly every branch of industry the best workmen come from abroad, and the things we so often brag of as the results of American genius, are the products of foreign-trained skill simply paid for by American capital. That our inventors have done great things, that the prevalent restlessness has produced, amid a multitude of idle schemes, a few notably good devices, no one can justly deny. But it is nevertheless true that aspiration for patent rights, so commonly indulged in, diverts the ambition from technical excellence into hopeless and commonly idle experiment. And our American artisans, moreover, are educated in so many different things, that they turn from one avocation to another with facility fatal to any highly-developed skill in any. We need in this country a much higher technical training; we need better designers, better workmen, a better taste, a greater honesty and faithfulness in labor.—*Appletons' Journal.*

A Text for Boys.

A man of very pleasing address, but very dishonest in his practices, once said to an honorable merchant, "whose word is as good as his bond," "I would give fifty thousand dollars for your good name."

"Why so?" asked the other, in some surprise.

"Because I could make a hundred thousand dollars out of it."

The honorable character which was at the bottom of the good name he cared nothing for: it was only the reputation, which he could turn to account in a money point of view, which he coveted.

But a good name cannot be bought with silver; it, of all other possessions, must be fairly earned. When it is possessed, it is better business capital than a great sum of money. It is a capital any boy or girl may secure. Honesty must be its foundation, even in the smallest particulars. When an employer says, "That is a boy I can trust," he will always find himself in demand, provided he joins with it industry. "The hand of the diligent maketh rich."

It seems hard at the time, may be,—this ceaseless round of work, while other boys are longing about store steps, or playing on the green. But the reward will come if you are faithful. While tongues are dragging out a miserable lifetime in privation and poverty, the hard-working boy lives at his ease, respected and honored.

Remember this, if you desire to make your way in the world. There is nothing that can secure you success like a name for honesty and industry; and you will never acquire either if you are a lounger about the streets and a shirk at your business. Everybody suspects a lad who is often seen about saloon doors or tavern steps. It undermines a boy's character for honesty very rapidly to mix with society he finds there; and such habits tend to anything but industrious ways.

"A good name is rather to be chosen than great riches, and loving favor rather than silver and gold." Print that text on your heart, and carry it with you in all your walks and ways. It is worth far more than silver and gold to you.—*Presbyterian.*

Constitution of Farmers' Club.

I herewith append a part of the Constitution of the Montgomery County (Kansas) Central Farmers' Club. We believe it embraces a plan of organization, which, if adopted by the farmers of the country generally, cannot fail to result in great benefit to agriculturists everywhere:

II. This Club shall consist of one member from each Farmers' Club in the county, and one representative from or for each school district, who shall be a member of some Farmers' Club in his township, and who shall receive his appointment from the President of the nearest Farmers' Club, or be elected by members of clubs in his district, where there are three or more residents.

VI. It shall be the duty of the Recorder of statistics to transcribe with accuracy into a book or books, the quarterly statement made by representatives from the different school districts, taking care that the statement from each township be recorded separately. It shall also be his duty to prepare for publication, as the Club may direct, statements of the condition of the agricultural interests of the county as shown by the statements of the district representatives.

VII. It shall be the duty of the representative from each school district to make a quarterly statement in duplicate of the condition of the agricultural interests of his district; one copy to be put into the hands of the Recorder of Statistics at least one week before each quarterly meeting; the other to be read before this Club and to be retained by the representative and turned over to his successor. These statements shall not date more than ten days prior to the quarterly meeting for which they are prepared.

These statements shall contain in regard to each school district:

I. A general description of the different kinds and quality of soil, water, timber and stone; the amount of land under cultivation; the amount in rods of hedge or stone fences, and their conditions; the number and kinds of fruit and forest trees planted and their condition; the amount in acres of products planted, in growth, harvested or standing, their condition or quality, and where practicable the actual or estimated yield; the amount of such products which will be offered for sale, or an estimate of the deficiency, if any.

II. Giving the numbers of different kinds of domestic animals, their condition, increase or decrease, and from what causes; the number each of animals being fed or grazed for pork, beef, or mutton, with an estimate of their gross weight when fattened, the amount for sale, or amount of deficiency, if any; also, the number of animals kept for breeding purposes, specifying sexes and breeds and whether pure bred, thorough bred, crosses, grades or common stock;

III. Giving the population of each district, number of persons of either sex over fifteen years of age, increase or decrease of population, and from what causes, and the number over the age specified actually engaged in the labor incident to agricultural pursuits.

A State organization was recently formed something after the plan of our county—being composed of two delegates from each representative district. We think we shall succeed. We find our principal opposition among farmers who had never seen other plan of organization in which their brothers failed to see any merit; but we hope to get them all in.—*New York Tribune.*

Treatment of Old Horses.

Perhaps the most inhuman treatment that an old animal receives falls to the lot of the horse. It has to travel on the road with the young and vigorous, draw one-half of the plough in the field all day beside the more than equal mate, and is allowed the same time to eat and rest. If there is a defective collar or bad-fitting harness, it belongs to "Old Dick" and when by constant use he is reduced to almost worthlessness, he is sold, perhaps, into the hands of some barbarian, because he is almost worthless; and after dragging around a short time, dies an "old scrub" at the age of twelve years. A horse should not be old until he is twenty; and we have known many very vigorous several years in advance of that; and the secret of their longevity was not in the peculiar vitality of the horse, but a genuine humanity in the owner.

It does not injure a horse to labor, any more than it does a man; and it is only by over-exertion, exposure and ill treatment, that it is jaded at the time when it should be in its prime. When men learn to exercise humanity toward animals for the right of it, which should be a sufficient incentive, they will find a second compensation in the way of absolute money profit.—*Exchange.*

High Farming.

A noted farmer in New England, who is also a prominent agricultural writer, in summing up the impression brought home from a recent trip to Europe, says, "I am thoroughly confirmed in my old faith that the only good farmer of our future is to be the 'high farmer.' There is a widely prevailing untipathy among the common farmers of our State against not only the practice of high farming, but against the use of the phrase by agricultural writers. This is all wrong, and should at once be corrected. Through some misconception of the meaning of the phrase and also of its application, they have come to believe it synonymous with theoretical 'book-farming,' 'new-fangled notions,' boastful strides of progress, followed by disappointments and final failure. This is all an error. High farming simply means thorough cultivation, liberal manuring, bountiful crops, good stock, good feed and paying profits therefrom."

BETTER FROM FRANCE.—If our dairymen need a spur, an eye-opener, a lesson which speaks volumes in three words, here is one at the head of this article. Butter is actually brought from France and sold by the New-York dealers. And this is thus because there is an actual scarcity in the market of really good butter put up in attractive shape for small consumers. When we know that one dairyman gets $1.15 a pound for his product, another $1, and another 75 cents, the year round, at his dairy door, it is easily seen that it will pay to bring butter across the ocean from France, if it is only good and shapely enough to suit the tastidious purchasers who will have something nice whatever it may cost. All this butter is made from choice cows, choicely fed on clean, sweet food; the milking is done in the cleanest manner; the milk is handled as carefully as though it were nectar; the cream is churned with the utmost care by clock and thermometer, the butter is worked with skill, and is made up into shapely cakes which do not require to be cut when brought to the table. Compare, then, this cake—hard, golden yellow, sweet, fragrant, and tempting to all the senses—with an unsightly chunk which is cut out of a greasy keg, and smells of old age and mouldity, and is made from the cream from cows filthily fudged and carelessly milked, and is churned anyhow, and the difference is amply accounted for.

Stone-colored Wash.

I painted a board fence and a rough outbuilding two years ago, and it is nearly as good to-day as it was when finished, and it costs comparatively nothing. The fence is a common, rough board fence, with a capboard nailed on the top; and I have leaned on the fence a hundred times, and it will not soil a black coat, or any garment, by so doing, but appears slaty, with no disposition to crumble.

Take two pounds of flax seed and boil it in a common wash boiler for an hour or more, in four pails of water; after thoroughly boilling, strain it into an old tight barrel; put in one peck, in bulk, of common land plaster, one peck of nicely sifted wood ashes, one quart of wheat flour, and one quart of salt. Put in your barrel a good stick as large as a handspike, and stir it until it is as thick as cream; let it stand in the sun for a week, and every time you go by the barrel, stir it thoroughly, and by the end of a week it won't settle, but will remain incorporated, and is fit for use.

The above was made in quite warm weather, and worked up like sponge batter, two or three times, before putting it on; but a good stirring would, in a minute or two, reduce it again to its creamy consistency. It is now as hard as slate, and is certainly valuable in preserving the wood, and is a cheap luxury in good looks for fences or second class buildings, and I know it is no humbug.—*Rural Home.*

BEST TIME FOR PAINTING HOUSES.—The best time for painting the exterior of buildings is late in autumn or during the winter. Paint then employed will endure twice as long as when applied in early summer or hot weather. In the former it dries slowly and becomes hard, like a glazed surface, not easily affected afterward by the weather, or worn off by the beating of storms. But in every hot weather the oil in the paint soaks into the wood at once, as into a sponge, leaving the lead nearly dry, and nearly ready to crumble off. This last difficulty, however, might be guarded against, though at an increased expense, by first going over the surface with raw oil. By painting in cold weather, one annoyance might certainly be escaped, namely, the collection of small flies in the fresh paint. —*The Technologist.*

CHEAP PAINT.—A cheap paint may be made for outbuildings that will last for years, by taking milk and cement,—or "water lime," as some call it,— mix and apply three or four coats; any dry color may be added. This will last for years, and by renewing once in two or three years, a building will look as well as if painted with oil paint. To put this on, the paint should be stirred constantly as the last paint will soon all be used out, and at last you will have nothing but sand. Have a boy to stir it all the time; mix often.

Sumac.

This industry has already reached important proportions in Maryland and Virginia, but there is much room yet to be occupied in the market, and the supply may be drawn from North and South Carolina, Georgia, Alabama, North Mississippi, and even South Missouri. Previous to 1865, but little American sumac was used; now nearly 4000 tons are drawn from our old fields and forests, yet at the same time the consumption has largely increased, and there is yet an amount imported exceeding 2000 000 in value. All this and more can be furnished from home sources if industry and energy will only attempt it.

The consumption every year increases, and England alone uses over 20,000 tons. There is no reason why we should not supply ourselves, but also import some to Europe. At present the supply is drawn mainly from the wild shrub, but the time will come when it will be profitable to plant the trees for their leaves. It is done now in Sicily, and where land is cheap it may become the chief use of the American is for dyeing, as from careless preparation all of it does not answer for tanning morocco. But, as we have stated, some of the Asherleaf now well prepared, and of the rest will eventually imitate that example. It produces a fawn color, a rich yellow a peculiar shade of green, and a red. The best and richest in tannin is found furthest south, hence that found in the Northern States has but little value. The berries are used to make wine, but as the leaves should be picked before they are ripe, both cannot be saved.—*New York World.*

GARDENING NEAR NORFOLK.—The growing of truck for the Northern markets is a very extensive and increasingly important industry around Norfolk, Va., so much so as to afford a constant and heavy freight for several of the Old Dominion Steamship Company's largest vessels. The present season has, as we are informed, been an unusually successful one. There is still room, and land may be either rented or purchased; but a person should by all means go and see for himself before making any permanent arrangements. By far the best way for an Eastern man is to take passage in one of the vessels above mentioned. They are perfectly staunch and seaworthy, thoroughly equipped, and officered by gentlemen. The trip is a very enjoyable one, affording a day at sea, a sail through historic waters, and a ride up the James River to Richmond, if that is desired. About the pleasantest time to make the journey is during the last half of September.

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $7,367.86, being an increase of fifty per cent. on the balance due depositors at the close of the present year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $10,311.17. The past history of the Bank is a matter of just pride to all—business and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $8,000 or $9,000 deposits.

The Bank pays six per cent. interest

on savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.

Special arrangements made for receiving balances accruing payable by check, and bearing 5 per cent. interest.

Certificates of Deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED

at request of depositors, from Branches where kept, to any other Branch without risk or trouble, and without loss of interest.

For full information about the Bank address the Actuary at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

JOHN T. BENTLEY,
WATCHMAKER
AND
JEWELER.

Watches, Clocks, Jewelry, Silver, and Plated Ware Sold and Repaired.

Fancy Goods of all kinds constantly on hand.

Cake, Candy, Confectionery, and General Furnishing Store.

Baltimore Wharf, Fort Monroe, Va.

THE
FREEDMAN'S
SAVINGS & TRUST
Company,

Chartered by Congress, March, 1865.

PRINCIPAL OFFICE,
WASHINGTON, D. C.

NORFOLK, Va. BRANCH

IS LOCATED AT
NO. 116 MAIN STREET,
Corner of Atlantic Street.

SIX PER CENT. INTEREST

A new paid, business monthly. Dividend days July 1st and January 1st. Accounts correspondingly made with Washington. Arrangements made for receiving deposits payable by check.

Certificates of Deposit, bearing six and four per cent. Interest, issued.

Bank Hours, 9 A. M. to 87. M. Open also Saturday Nights from 6 to 7 o'clock.

Deposits of any amount received from any person, and repaid on demand.

SOUTHERN WORKMAN

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. 2. HAMPTON, VA., NOVEMBER, 1873. NO. 11.

How They Brought the Good News from Ghent to Aix.

BY ROBERT BROWNING.

I sprang to the stirrup, and Joris and he;
I galloped, Dirck galloped, we galloped all three.

"Good speed!" cried the watch as the gate bolts undrew,
"Speed!" echoed the wall to us galloping through.
Behind shut the postern, the lights sank to rest,
And into the midnight we galloped abreast.

Not a word to each other; we kept the great pace—
Neck by neck, stride by stride never changing our place;
I turned in my saddle and made its girths tight,
Then shortened each stirrup and set the pique right,
Rebuckled the check strap, chained slacker the bit,
Nor galloped less steadily Roland a whit.

'Twas a moonset at starting; but while we drew near
Lokeren, the cocks crew and twilight dawned clear;
At Boom a great yellow star came out to see;
At Duffeld 'twas morning as plain as could be;
And from Mecheln church steeple we heard the half chime—
So Joris broke silence with "Yet there is time!"

At Aerschot up leaped of a sudden the sun,
And against him the cattle stood black every one,
To stare through the mist at us galloping past;
And I saw my stout galloper Roland at last
With resolute shoulders, each butting away
The haze as some bluff river headland its spray:

And his low head and crest, just one sharp ear bent back,
For my voice, and the other pricked out on his track;
And one eye's black intelligence,—ever that glance
O'er its white edge at me, its own master, askance:
And the thick heavy spume flakes, which aye and anon
His fierce lips shook upward in galloping on.

By Hasselt Dirck groaned, and cried Joris, "Stay spur!
Your Roos galloped bravely, the fault's not in her;
We'll remember at Aix"—for one heard the quick wheeze
Of her chest, saw the stretched neck and staggering knees,
And sunk tail, and horrible heave of the flank,
As down on her haunches she shuddered and sank.

So we were left galloping, Joris and I,
Past Looz and past Tongres, no cloud in the sky;
The broad sun above laughed a pitiless laugh;
'Neath our feet broke the brittle, bright stubble, like chaff;
Till over by Dalhem a dome-spire sprang white,
And "Gallop," gasped Joris, "for Aix is in sight!"

"How they'll greet us!"—and all in a moment his roan
Rolled neck and croup over, lay dead as a stone;
And there was my Roland to bear the whole weight
Of the news which alone could save Aix from her fate,
With his nostrils like pits full of blood to the brim,
And with circles of red for his eye-sockets' rim.

Then I cast loose my buff coat, each holster let fall,
Shook off both my jack-boots, let go belt and all,
Stood up in the stirrup, leaned, patted his ear,
Called my Roland his pet name, my horse without peer,
Clapped my hands, laughed and sang, any noise, bad or good,
Till at length into Aix Roland galloped and stood.

And all I remember is friends flocking round
As I sate with my head twixt my knees on the ground,
And no voice but was praising this Roland of mine,
As I poured down his throat our last measure of wine,
Which (the burgesses voted by common consent)
Was no more than his due who brought good news from Ghent.

The Yellowstone Reservation.

Between the forty-fourth and forty-fifth parallels of latitude, and reaching from the one hundred and tenth meridian to a short distance beyond the one hundred and seventh, is a tract of land of about three thousand square miles, which has been set apart by Congress as a national park or pleasure ground forever, and which embraces some of the most beautiful and remarkable scenery upon the American continent. The elevation of the country included, will average about six thousand feet, while the mountain ranges which bem in the vallies have a general elevation of from ten thousand to twelve thousand feet, so that the land is not available for stock raising nor for agricultural purposes, although the climate, during the summer months is charming, and the air pure and invigorating with few storms, and bracing winds. The Reservation includes the sources of two of the largest rivers on the continent, besides numerous forks and smaller rivers, while the Yellowstone Lake is a beautiful sheet of water, some twenty-two miles long, and fifteen wide, with a depth of three hundred feet. Its western shore is heavily wooded with pines, and its eastern offers a succession of open prairies, abounding with elk, deer, and grouse, which, with the trout in the lake afford tempting sport to the hunter and fisherman. The characteristic features of all this region are the result of active and comparatively recent volcanic action, this action being still manifested in the numerous hot springs or geysers, which are the most remarkable at present known, exceeding in grandeur and nubbiness, the long famous ones of Iceland. It is these that our illustration represents,

and we take from the account of one of the first travelers who visited them a brief description of their wonders. After following the course of the Yellowstone River through the magnificent scenery of its banks, until they launched their little boat upon the waters of the Yellowstone Lake, the party struck through pathless woods beyond the lake, and after a ride of thirty-one miles, reached the lower geyser-basin of the Fire-Hole River, which with the second or upper basin, cover an area of seventy-five miles, and include thousands of springs and geysers whose temperatures range from warm to the boiling point. As the nature of a geyser may not be correctly understood by all our readers, a short explanation will not be out of place here, in order that this strange development of Nature's mysteries may be more truly appreciated. *Geyser* is a word of Icelandic origin, signifying to rush out, and an artificial geyser can be so made as to give a very clear idea of the thing itself. Take an iron tube about six feet long, the upper end opening into an iron pan, and the lower end encircled by a fire which represents the internal heat of the globe. About two feet from the bottom, the tube should be surrounded by a second fire, representing the heat given to the geyser tube by the heated rocks. Now if water is poured into the pan and tube, as it becomes heated it will be thrown into the air as often as every five minutes, and the result is then a complete miniature geyser, the tube being, in nature, siliceous or glassy-lined, and of very great depth, while the basin surmounting it is of the same material and often has a diameter of thirty or forty feet. The geyser field of the Fire-Hole River is filled with warm springs, geysers, and the warm streams flowing from them, while in the lower basin there are many beautiful mud springs, red, white, blue and pink, varying from one foot to forty in diameter, and filled with a very fine puff of different degrees of thickness. The steam beneath this mud throbs and bubbles up, throwing back the mud in various forms and sometimes projecting it to a considerable height above the spring, and this, with the deposit about many of the craters of primrose-colored sulphur, give an extraordinary brightness to the scene. Most of the geysers in the upper basin have built themselves high craters which stand out all through the valley like so many monuments, and from the article from which this account is an extract we select descriptions of a couple of the most curious of these singular formations. The Grand Geyser, whose eruptions occur at intervals of thirty-one hours, is one of the largest, and its action is described as follows: "preceded by a deafened rumbling like the muttering of distant thunder, suddenly a column of boiling water about eight feet in diameter rushed from the orifice of the geyser, and attained the extraordinary height of two hundred feet from the ground, falling back so heavily as to cause the earth to tremble beneath us."

In the upper right-hand corner of our picture is the Castle Geyser of which the writer from whom we quote, says "In point of beauty we must yield the palm to the Castle. This is in the center of a gently sloping mound, above which its crater rises to the height of twenty-five feet, coated with a beautiful bead-like formation, resembling some old castle that has been subjected to a bombardment. Near the Castle is one of the large, warm springs so abundant throughout the neighborhood, whose beauty it is almost impossible to describe. They are of all sizes up to a diameter of three hundred feet, and of unfathomable depth, with sides curiously scolloped and incrusted, and marble-white, while the water within is of the purest turquoise blue." Besides these two geysers' basins, there are on the Yellowstone River numerous mud volcanoes and hot sulphur springs, while the scenery is of the strangest and most striking character. The hot springs on Gardiner's River have deposited a mass of sediment, covering an area of about three square miles, and filling a gorge whose head is a thousand feet above the river level, descending abruptly till its foot reaches the river bed. About half way up the gorge there is a series of terraces containing semi-circle basins, filled with the most beautifully blue water of all temperatures, which furnish elegant bathing places, while the coloring of the whole mass, snow-white, tinted with pink, scarlet and yellow is wonderfully brilliant. It seems probable that before many seasons this magnificent region will be open to travelers, when its glories ought to attract beholders from all the world, so unparalleled is its scenery, and so favorable its climate during two or three months of the year for the invalids who may desire to try the efficacy of the various springs. The illustration given here, conveys a more accurate idea of the wildness of the geyser region, than could be offered in words, and we trust our readers will enjoy the glimpse which it gives of the as yet, almost unknown beauties of the Yellowstone Reservation.

Kings of England.

The earliest kings of England were sovereigns only in name, and until about the year 800 there was no distinct succession, Egbert of Wessex, who ascended the throne in 727, being the founder of what afterward became the English monarchy. Fifteen monarchs of this house reigned in direct succession, when the invasion of the Danes, put a Danish king, Canute the Great, upon the throne, whose line continued in possession until in 1042 Edward the Confessor took the crown. In 1066, the great Norman invasion swept over England, leaving behind it many Normans settled in the country, and their king, William the Conqueror, who was succeeded by his son, and from whose day the monarchy has been unbroken, with the exception of the Protectorate of Cromwell, until now. The list of English kings from William the Conqueror is easily remembered with the help of the following rhyme, which gives them in the order of their reigns:

First William the Norman, then William his son,
Henry, Stephen and Henry, then Richard and John,
Then Henry the third, Edwards one, two and three,
And again after Richard, three Henrys we see.
Two Edwards, third Richard, if rightly I guess,
Two Henrys, sixth Edward, Queens Mary and Bess.
Then Jamie the Scotsman and Charles whom they slew
Yet received after Cromwell another Charles too,
Then Jamie the second ascended the throne,
Good William and Mary together came on,
Till Anne, Georges four, and fourth William, all past,
Victoria's here, may she long be the last.

The English monarchy which has always been "limited" that is, has allowed little real power to the sovereign, resting the actual authority of the government in the House of Lords and the House of Commons, has gradually become more and more republican in its form, until to-day the reigning monarch is little more than a figure head, and possesses but a small share of political influence.

Changes have followed each other so quickly during the present century and the current of political sentiment in England is so strongly liberal, that many people doubt whether the monarchy proper can continue after the death of the present queen, whose oldest son, the Prince of Wales, would be her legal successor. But even if the aristocracy of England hold their place socially for years to come, their political power is surely passing from them, and England has already virtually a republican government, a government which respects and cares for rich and poor, high and low, and in most respects is as truly liberal as our own.

Thanksgiving.

Once more has come the season wherein we have chosen to keep our national Thanksgiving, and once more, our harvests being safely stored away, we begin to prepare for the winter, which is almost here, and to take account of what the summer has brought us. When harvests have been full, and work plenty; when sickness or death or misfortune have not entered our doors, then it is easy to keep the festival and to be thankful in truth for the blessings of the year; but there are few of us to whom no evil has come, and our endeavor should be to remember our causes for gratitude as citizens, as members of a great nation, rather than as private individuals. Surely there is much to be thankful for in that our lot has been cast in a free country, under a liberal government, in a land where every man can make a home for himself, and get an education for his children; and it is a good thing for us to stop for a day to consider how real the reasons are for gratitude which is too often only on the surface. If we will look about us, we can find on every hand, the mercies of a wise Creator; and what can be more fitting than that His creatures should set apart a time for public acknowledgement of His bountiful goodness to them as a nation? Let us at this season strive honestly to put away from us all petty malice, all discontent and envy, and for one day to remember only our blessings, for thereby shall we make for ourselves a true Thanksgiving.

THE SOUTHERN WORKMAN.

THE
Southern Workman,
ISSUED MONTHLY.
S. C. ARMSTRONG,
RICHARD TOLMAN, } *Editors.*
J. H. LARRY,
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who and to circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which paper is to be sent.

For further information, address

J. H. LARRY, *Publishing Department.*

The Southern Workman.

HAMPTON, NOVEMBER, 1873.

THE October number of Harper's Magazine, which is rich, as usual, in pictorial popular contributions, contains a fourteen page article upon the Hampton Normal and Agricultural Institute. It is full in description, and amply illustrated, and is calculated, we think, to interest many of the million readers of "Harper's" in the school and its objects. We have indeed, already seen valuable evidences of such results, and are happy to acknowledge the new obligations under which the writer has placed the school by this timely and well written article. At the same time, we must say that we may be forgiven for finding a few flies in the ointment, which certainly would not have been there had the article been revised by the heads of the school. It was the usual fly there is found in such publication, and is therefore entitled, already seen,

At Home.

What the Choir Sang About the New Bonnet.

A foolish little maiden bought a foolish little bonnet,
With ribbon and a feather and a bit of lace upon it;
And that the other maidens of the little town might know it,
She thought she'd go to meeting the next Sunday, just to show it.

But, though the little bonnet was scarce larger than a dime,
The getting of it settled proved to be a work of time;
So, when 'twas fairly tied, all the bells had stopped their ringing,
And when she came to meeting, sure enough, the folks were singing.

So this foolish little maiden stood and waited at the door,
And she shook her ruffles out behind, and smoothed them down before.
"Hallelujah! Hallelujah!" sang the choir above her head,
"Hardly know you! Hardly know you!" were the words she thought they said.

This made the little maiden feel so very, very cross,
That grace her little mouth a twist, her little head a toss;
For she thought the very hymn they sang was all about her bonnet
With the ribbon and the feather and the bit of lace upon it.

And she would not wait to listen to the sermon nor the prayer,
But pattered down the silent street and up the church aisle stair,
Till she reached her little bonnet, and in a bandbox put it
Had hidden safe from critic's eye her foolish little bonnet.

Which proves, my little maidens, that each of you all feel
In every Sabbath service but an echo of your ideal;
And that little head that's arched with softly little
Aught sing—and sing about a thing on front
—*Organ.*

Night Air.

Consumptives and all invalids and indeed persons in health are cautioned to avoid the night air. By them who offer this advice forget that there is no other air at night but night air? Certainly we cannot breathe day air in the night. We have only the choice between night air pure and night air poisoned by the exhalations from our saints and lungs. Why, should we be so terrified at the admission of night air into our bedrooms? See how soundly the delicate little ones and tender robin sleep under its full and immediate influence, and how fresh and vigorous and joyous they rise amid the outpouring choirups of the morning! Their lungs are never out of order, and this we know by their daily song. I have a turkey full eight years old, that has not passed a single night in shelter. He roosts on a cherry-tree, and is in primest health the year through. Three fowls preferring this to the warm perches in the henhouse, took up their quarters with him early in the season and have never gone to any other roosting place. The cow and the horse sleep safely on the ground, and the one has shown to rest on the dewy moon even top. But these beautiful examples of our great war will be found in the examination among a million returned soldiers that night air is not a poison. Camp and field are generally enough in the transition from an overheated room to a cold one, but there would be no danger of this if ventilation were properly attended to. It is not necessary, however, that pure air should be cold air. An open fire greatly improves the atmosphere of a bed room. With a fire the window will be kept open, and the air of the room constantly changed, and less bedding is needed, an important advantage, for a heavy weight of bed clothing interferes with circulation and breathing, and prevents the escape of the gases which the skin is constantly giving off. Among the many hundreds whom I have advised to sleep with open windows, I have never known one person to be seriously injured even temporarily.

At first you may contract a cold, but if you bathe freely in cold water, and gently yet vigorous rubbing upon the parts exposed while in bed even the may be avoided. After a few weeks' experience you will take to exhorting your friends upon the importance of well ventilated bed rooms.

Save the Fragments.

"Many a little makes a mickle," is a good old Scotch saying. Here is another that sounds English, "Take care of the pence, and the pounds will take care of themselves," but there is a higher unity for frugality. When our blessed Lord had fed five thousand by miracle, and could have created enough food for the world by uttering a single word, "He said to His disciples, gather up the fragments that remain, that nothing be lost." The most bountiful-Giver in the universe wounds His followers a lesson of economy, even with fragments of fishes and bread.

Some years ago, the dust and shavings from a bookbindery, where gold leaf is used to make the titles on the backs of books, were sent to the goldbeater's to be burnt out. And how much gold do you think was found from the little particles that had fallen on the floor? Why, a lump that was valued at twenty pounds! Enough to buy 200 Bibles or 20 000 tracts. The shavings from the edges of books in the same bindery sell for 600 or 700 pounds a year for paper rags.

If boys and girls would save the fragments of time, and devote them to reading and study, they might become learned and wise. If they would save the fragments of money they might become wealthy and useful. If they would save the fragments of opportunity, they would do a great deal of good.

It is as right to be economical and saving as it is wrong to be miserly and mean. Save to give, and give to save. Then you will say, as a good man did, "What I kept I lost, and what I gave I have."

The Nursery.

How the bright eyes sparkle and the pouting lips part with wonder and eagerness—and how can they help it?—over the gem of all little magazines for little readers, the charming little "Nursery," full of beautiful pictures and lively stories and easy reading. There's a whole Thanksgiving Day in his happy face.

What a different start in life that child has from his grandfather. When that old gentleman was a little boy the only children's books, except the dear old ever new fairy tales, were primers "adorned" with ugly wood cuts, and a few dull story books full of stiff, grown-up talk that passed for good advice and didn't do his great harm because the little wise heads knew enough to skip it. The child who did not learn to read, missed little, of childish enjoyment to say the least, in these days.

Now the best authors and artists give the whole of their minds to making books for children, and some of the truest thinkers devote themselves to finding out how best to please and teach them; and that is as it should be. We cannot begin too soon to make the little ones know and love what is good and beautiful. If we can't afford to buy books for them, give them flowers and grasses, and shells and acorns, and—oh, always—bright and beautiful words.

We would be very glad if we could send into every family of the readers of the "Southern Workman," a copy of "The Nursery." We do all we are able to, to give them a share in it, and we are greatly indebted to the publisher, John L. Shorey, of 36 Brimfield Street, Boston, for many of its beautiful engravings that have adorned, and are yet to adorn our third page.

The Rag-baz of the United States.

The little village of Stockbridge, Massachusetts, where the "Hampton Students" have been resting after their winter campaign, is in the center of the loveliest and one of the busiest parts of New England, in the heart of the Berkshire Hills. It is easy to forget that there is anything more important in life than to swing in a hammock and look through half shut eyes over a landscape worthy of Edens' broad, sunlit fields, white roofs and spires gleaming among the tall New England elms that spring in living fountains of green from the meadows, the Housatonic winding under its willows, and the hilltops horizon of hills. It is easy to understand how this atmosphere of quiet nurtured the students and theologians, the literary men and women of a past generation, of whose honored names Stockbridge is still proud.

But the quiet of the little village is banished in on all sides by one of the most important industries of the country. Massachusetts has long been at the head of the paper manufacture in the Union, perhaps in the world, and Berkshire County is the chief gathering place of the paper makers, the great factory of the United States. Into these beautiful valleys come pouring rags by bales by tons, by car loads, from all sections of the Union, and from over the seas. Irish rags, Scotch rags, German rags, Italian rags; cotton rags, linen rags, silk rags; clean rags dirty rags, and passing the sigh the wonderful processes of nature redeemed for use, and returned, perhaps to the countries which furnished them, in unrecognizable forms of letter paper, newspaper, or blank note paper, delicate tinted sheets for ladies' correspondence and collars for their dainty necks.

The first paper mill in Massachusetts, then the English Colony of Massachusetts Bay, was set up in 1717, and in 1720 was granted the privilege of coining about 40,000 a year. Now, one of the smallest of the paper mills in the old Bay State, one which the proprietor modestly declares might be wiped out of existence and not be missed in the trade, though it is one of the most prosperous and best conducted, and is about to be enlarged; this little mill at Housatonic, near Stockbridge, manufactures 2,500 lbs of paper every day the year but Sundays when it is never running, and it furnishes the chief or entire supply of paper to one of the largest publishing houses in New York City.

For a hundred years after the establishment of that first paper mill in Massachusetts, paper was made by the slow and laborious processes of hand work, and a rag drawn across this knife and cut to bits, and the chance buttons, hooks and eyes, woolen pieces or other intruding substances tossed aside with wonderful quickness. The room is filled with flying dust, though the rags are "first class" rags and clean as can be expected. After a second sorting they are "dusted," whisked and whirled about in a cylinder filled with long teeth, and then softened by boiling ten hours in a basin made of waste of soda and lime in a revolving iron boiler. From time to they pass into the "beating engine," a long trough filled with water, in which the revolution of a cylinder armed with steel ribs carries them round in a perpetual current, and rubs them into pulp, while the dirt passes off in the water which is constantly renewed. The "half stuff," as it is then called, is next strained, and bleached by steeping twenty-four hours in chloride of lime which must be carefully washed out when it has accomplished its purpose, or the paper would soon crumble. This is done in the "washing engine," which is just like the "beating engine," only the ribbed cylinder is raised so as not to rub the pulp till it is thoroughly washed. Then a little Prussian blue is added for exactly the same purpose that the laundress puts bluing into her rinsing water, to make a good white. If the paper is to be tinted, the coloring is now added, and sometimes the sizing which is to give it stiffness and polish. The cylinder is then lowered once more, and the pulp is "beaten" to the final quality of fineness, and is ready to pass to the "Fourdrinier."

This wonderful machine takes up the length of a long room, and works away

till by itself so like a live creature that you feel like asking where its brains are. The milky pulp and water flows into it at one end, and is turned out at the other in neatly cut sheets of white paper!

The thin stream, looking like skim milk or starch water, pours through wooden troughs in the top of the room into the receiving vat, then through the trough called the "flow box," in which are double particles of sand still left settle, then through the strainer to which a shaking motion is given, while the pulp passes under other boxes or rollers and not in sight behind. From this it passes into a shallow vat just the width of the desired sheet, and from the open side of this vat upon a long web of felt passes under the wire cloth revolving round rollers. A jarring motion given to this web, settles the pulpy fibres together, while the water drains through the holes. The pressure of a cylinder coming over it, dries it still more, till it has body enough to glide smoothly from the web of wire to one of felt, like a blanket, and from this over and under a succession of great iron rollers, that press and dry it more and more, and finally deliver it to the jaws of formidable shears which cut it neatly into uniform lengths and drop them carefully into a regular pile for the first touch of human hands.

The sheets are then hung in the loft of the mill to dry completely, then "calendered," or ironed for the last high polish by sliding quietly through a number of wooden rollers, then sorted into three qualities according to their perfection, trimmed and packed for sale.

All this is woman's work, and in some of the mills at least, three-quarters of the operatives are women. Paper making is indeed one of the daintiest of trades. There is nothing in these grey stone mills, and the cottages clustering about them to mar the beauty of the picturesque sites they seem invariably to select. The hands, some mansion that often forms the center of the group has generally been the home of several generations of proprietors; and among the workmen also, some follow their fathers in the mill, so that family feeling increases the common interest felt in keeping up improvements, and proves free labor consistent with a strong bond of sympathy between employer and employed, to the benefit of both.

The Housatonic mill is a remarkable illustration of this pleasant state of things. The womanly influence and taste of its lady proprietor has made the little village on the riverbank a model of beauty and comfort. She has built comfortable boarding houses for the young women, and founded a good library of two thousand volumes. It is pleasant to know that though entirely free to the whole neighborhood, and constantly used, no book has ever been lost from it. This library, the little church owned by the operatives, and the pretty little cottages nestling among their own vines and flowers are as strong witnesses to the prosperity of the establishment, as the huge new mill is that is building on the river bank below.

There is something indeed most fascinating in the romance of this practical nineteenth century, the union of business and art. What fairy tale more marvelous than that the fluttering rags of an Italian beggar—laziest of all vagabonds—sprawling picturesquely in the Naples' sunshine, have furnished, it may be, this fair sheet on which I am writing the story of industry for the "Southern Workman?"

The Door of the Spirit Land—An Indian Tradition.

BY JACK MURRAY.

[For the "Southern Workman."]

There is a little stream in western New York which, after flowing peacefully for many miles from its source, through a deep and quiet valley, falls suddenly a hundred and fifty feet over bare, black rocks into a chasm so gloomy that it seems to have been rent asunder by some terrible convulsion from which Nature can never recover, though mysterious ages have passed since she felt the shock.

The action of the startled waters, or perhaps of some larger flood in forgotten days, has hollowed out the sides of the gorge at the foot of the fall into a deep cavern, and along the chasm, indeed the top of the cleft is narrower than the bottom, and its walls slant toward each other at a considerable angle. About thirty feet down on one side, however, is a ledge over three feet wide, running parallel with the top, and giving a secure footing.

A cave of considerable extent runs back into the side of the gorge. This cave is even larger, or at least longer, than the hollow at the base of the fall, and is thought by some of the ablest authors and artists in this country to have been, have for thirty years held as great control of British popular opinion as have the thunders of its graver contemporary, the "*London Times.*"

Abraham Lincoln.

"You lay a wreath on murdered Lincoln's bier
You, who with mocking pencil wont to trace,
Broad caricatures of splendid men,
With graceful charcoal lines and easy skill,
His length of shambling limb, his furrowed face!

"His gaunt, gnarled hands, his unkempt hair,
His rustic dress, his bearing all at ease,
His lack of all we prize as classical,
His power our will to shame, of art to please!

"You, whose smart pen backed up the pencil's laugh,
Judging each step as though the way were plain,
Reckless, so it could point its paragraph,
Of chief's perplexity, or people's pain!

"Beside this corpse, that bears for winding sheet
The Stars and Stripes he lived to rear anew,
Between the mourners, his head and feet,
Say, scurrile jester, is there room for you?

"Yes: he had lived to shame me from my sneer,
To fame my pencil, and confute my pen—
To make me own this kind of princes peer,
This rail splitter a true born king of men!

My shallow judgment I had learnt to rue,
Noting how to occasion's height he rose,
How his quaint wit with inkle home truth seem more true,
How iron like his temper grew by blows!

How humble, yet how hopeful he could be:
How in good fortune and in ill the same:
Nor bitter in success, nor boastful he,
Thirsty for gold, nor feverish for fame!

He went about his work—such work as few
Ever had laid on head, and heart and hand—
As one who knows, where there is a task to do,
Man's honest will must heaven's good grace command.

Who trusts the strength will with the burden grow,
That God makes instruments to work his will,
If but that will we can arrive to know,
Nor tamper with the weights of good and ill?

So he went forth to battle on the side
That he felt clear was Liberty's and Right's,
As in his peasant boyhood he had plied
His warfare with rude Nature's thwarting mights.

The unbreased forest, the unbroken soil,
The iron bark that turns the lumberer's axe,
The rapid that o'erleaps the lastman's toil,
The prairie hiding the mazed wanderer's tracks,

The ambushed Indian, and the prowling bear—
Such were the needs that helped his youth to train;
Rough culture—but such trees large fruit may bear,
If but their stocks be of right girth and grain.

So he grew up, a destined work to do,
And lived to do it: four long, suffering years
Ill-fate, ill-feeling, ill-report, lived through,
And then he heard the hisses changed to cheers.

The haunts to tribute, the abuse to praise,
And took both with the same unwavering mood;
Till as he came on light from darkling days,
And seemed to touch the goal from where he stood

A felon hand, between the goal and him,
Reached from behind his back, a trigger prest,
And those perplexed and patient eyes were dim:
Those gaunt, long-laboring limbs were laid to rest!

Those words of mercy were upon his lips,
Forgiveness in his heart and on his pen,
When this vile murderer brought swift eclipse
To thoughts of peace on earth, good will to men!

The old World and the new from sea to sea,
Utter one voice of sympathy and shame!
Sore-heart, as stopped when fain it sat but high,
Sad life, cut short just as its triumph came!

A deed accurst! Strokes have been struck before
By the assassin's hand whereof men doubt
If more of horror or disgrace they bore;
But thy foul crime, like Cain's, stands darkly out!

Vile hand, that headest zoulder on a strife,
Whatever its grounds stoutly and nobly striven;
And with the martyr crown crownest a life
With much to praise, little to be forgiven!

April, 1865.

Freedom's Gift to Woman.

Freedom's rich and special gift to woman is the gift of Home! A better gift than the ballot box with greater responsibilities.

The right to your children, the right to your husband, the right to labor for your loved ones, the right to a pure and secure home, humble it may be, but your own; a home whose happiness and virtue depend more than half upon yourself—what higher regard and privilege can be given, and what can call for greater preparation?

Let such prizes as powerful motives to exertion as his new rights of citizenship are to your voting brother. You have as much need of education as he has. There is as much connection between arithmetic and housekeeping as there is between logic and politics, to say the least. Knowledge is power in your department as in his. You want a mind raised above the small annoyances of daily drudgery, as well as a heart that knows how to gild them with love. You want something better to think of than gossip. You want to know how to teach your children, and keep pace with your husband, to help him if need be and he is sensible enough to let you. I have heard a man say he would not let his wife teach him to read because he thought it would humiliate him. He pays dearly for this foolish pride by remaining in ignorance, but I hope there are not many such.

A loving woman, whose mind and taste are cultivated will make a pretty, happy home out of a cabin, and its brightness and blessing will spread through a whole neighborhood.

My freed sisters, we women can never bring too much thought and love into our homes.

By special request, we reprint the following verses from an old number of the London "*Punch*" the famous comic paper of England, whose keen satire and sharp wit strikes at some of the ablest authors and artists in that country, and which we

Sewing on Buttons.

It is bad enough to see a bachelor sew on a button, but he is the embodiment of grace alongside a married man. Necessity has compelled experience in the case of the former, but the latter has always depended upon someone else for this service, and, fortunately for the sake of society, it is rarely he is obliged to resort to the needle himself. Sometimes the patient wife scalds her right hand, or runs a sliver under the nail of the index finger of that hand, and it is then that the man clutches the needle around the neck, and, fingering to tie a knot in the thread, commences to put on a button. It is always in the morning, and from five to twenty minutes after he is expected to be down stairs! He lays the button exactly on the side of its predecessor, and pushes the needle through one eye, and draws the thread after, leaving about three inches of it sticking up for fee way. He says to himself: "Well, if women don't have the easiest time I ever see." Then he comes back the other way, and gets the needle through the cloth well enough, and lays himself out to find the eye, but in spite of a good deal of jabbing the needle point persists in backing against the solid parts of the button, and finally when he loses patience, his finger catches in the thread, and that three inches he had left to hold the button, slips through the eye in a twinkling, and the button rolls leisurely across the floor. He picks it up without a single remark, out of respect for his children, and makes another attempt to fasten it. This time, when coming back with the needle, he keeps both the thread and button from slipping by covering them with his thumb, and it is out of regard for that part him that he feels around for the eye in a very careful and judicious manner, but eventually he gets through, as the search becomes more and more hopeless, he falls to jabbing about in a loose and savage manner, and just then the needle finds the eye, and comes out through the button and part way through his thumb with a celerity that no human ingenuity can guard against. Then he lays down the things with a few familiar quotations, and presses the thread down between his knees, and then holds it under his arms, and finally jams it into his mouth, and all the while he prances about, the floor and calls on heaven and earth to witness that there has never been anything like it since the world was created, and howls, and whistles, and moans, and sobs. After a while he calms down, and puts on his pants, and fastens them together with a stick, and goes to his business a changed man.—*Danbury News.*

"Harper's Monthly" for November, 1872, has an interesting article on the silk-weaving establishment of the Brothers Cheney, in South Manchester, Connecticut. This "*Industrial experiment*" is remarkable not only for the successful introduction of silk weaving into the United States, but for the beneficial supervision exercised by the proprietors over all the interests of the operatives. The firm consists of six brothers, whose houses are all situated on the ground of the establishment. These grounds are laid out like a park, without fences. The cottages for the operatives are designed with artistic taste and with a view to convenience and ventilation—furnished with a constant supply of pure water and gas, and rented on an average of less than one hundred dollars a year. The supervision of the proprietors extends also to the quality and price of domestic supplies, to the education of children, boarding houses for the unmarried, to provision for moral and intellectual culture, social entertainments and appropriate amusements. For the latter purposes they have built a large and beautiful hall, with accommodations for library and reading room, the meeting of temperance lodges, exhibitions and theatrical entertainments. Religious services are held in the hall on Sundays, at which clergymen of different denominations officiate. Thus the monotony and nervous exhaustion of mill life are relieved, and the temptation to intemperance met by healthful recreation. The results of this wise and sympathetic supervision have been so happy that self-interest might well lead other manufacturers to adopt similar methods for securing similar advantages, and to avoid the evils which result from an opposite course.

Dwellers in Tents.

A little wigwam earth we roam
In these frail tenements we call our home;
Journeying toward a refuge that is sure,
A rest secure

Only a little while,
We dread the frown of life,or court its smiles;
A dwelling then, we have in other lands,
Not made with hands.

Therefore we need not fear
Though earth and rust corrupt our treasure here;
Though midnight thieves creep in with silent stealth,
And steal our wealth.

Then we need not mourn
When sad no clouds across our skies are borne;
When winter chills us, and the storm is keen
In our frail tents.

For in our Father's house,
A mansion fair He hath prepared for us:
And early till His voice shall call us home,
We dwell in tents.

—*Selected.*

"When Ye Think Not."

These words of our Lord have just received here a fresh and impressive illustration and enforcement.

Joseph Koyal, a student of the Hampton Institute, labored by his teachers and companions, ate his breakfast as usual, Monday morning, October 18th, and then went to his work in the field, as lively and cheerful as ever. Shortly after, while at work, he was stricken down with congestive apoplexy, and within the brief space of about one hour, was reduced to a breathless, pulseless corpse. How quick the transition from the busy scenes of earth to the tribunal of his Judge, leaving his many friends to mourn his departure.

"When ye think not." Probably there was nothing upon which our deceased friend thought less the previous Sabbath morning, when assembled with us for worship, than that before another Sabbath, his place in the church and in the school and at the table, would be vacant; his voice hushed in the silence of death; and that the Sabbath's sun of October 20th, instead of lighting him on his way to the sanctuary, would be shining upon his grave. And when he went to his work that Monday morning, in the flush of youth, and seemingly of health and strength; with prospects of long life apparently as fair as ours, probably there was nothing further from his expectation than that, ere noon of that day, he would be prostrate in death.

"When ye think not." While visiting a certain cemetery this summer, a friend directed my attention to a monumental stone bearing this inscription: "There is but a step between me and death"; remarking that the man to whose memory that stone was erected, had been very miserly, so bent on grasping and hoarding money for himself, that he not only would not give any in charity to the needy, but neglected to pay even his honest debts. And when a friend reminded him that he ought not to so labor to lay up treasure on earth, to the neglect of laying up any in heaven, he said that he meant to attend to his duty in this regard. But suddenly, in the midst of his eager, unprincipled chase after the world, he was called to give an account of his stewardship.

"When ye think not." As a gentleman was standing on the platform of a railroad station, a friend, in bidding him farewell, alluded to the brevity of human life. The gentleman replied, repeating with apparent indifference, the familiar words, "Time is short." The next moment, having made a false step, the lips that uttered those words were quivering in death beneath the iron wheels of the car. "Therefore ye also ready: for in such an hour as ye think not the Son of man cometh."

Talmage On Vultures.

"Ye shall hold in abomination among the fowls, the vulture."

Taking the suggestion of the text, drive out the vulture from your soul. God would not allow the Jews to eat it. It lives on carcasses; it fattens among the dead; with tireless wing it circles about battle fields. Wilson, the American Ornithologist, counted two hundred and thirty-seven vultures around one carcass. If crossing the desert when there is no sign of wing in the air, a camel perish out of the caravan, immediately the air begins to darken with vultures. There are many professed Christians who have a vulture in their soul. They prey upon the characters and feelings of others. A doubtful reputation is a banquet for them. Some rival in trade or profession fails, and the vulture puts out his head. These people revel in the details of a man's ruin. They say, "I told you so." They rush into some store and say, "Have you heard the news? Just as I expected! Our neighbor has gone all to pieces! Ha! ha!"

That professedly Christian woman having heard of the wrong doing of some sister in the church, instead of hiding the sin with a mantle of charity, peddles it along the streets. She takes that afternoon to make her long neglected calls. She tells the story ten times before sundown, and every time tells it larger. She rushes into the parlor to tell it, and into the nursery to tell it, and into the kitchen to tell it. She says, "Would you have thought it? Well, I always said there was nothing wrong about her. Why, I should not speak to her if I saw her on the street. Is it not horrible? But better, say nothing about it, because there may be some mistake. I do not want my name involved in the matter. I guess I will just go over and ask them at No. 853 whether they have heard it. Guess it must be so, for Mary Ann says her husband saw a man who heard from his business partner that his blind, old grandmother had seen something that looked very suspicious!" The most loathesome, miserable, God-forsaken wretch on earth is a gossiping woman. I can tell her on the street, by sight. I have never seen her before. She walks fast and has her bonnet strings loose, for she has not had time to tie them since she heard that last scandal. She looks both ways as she passes, hoping to see new evidences of depravity in the wind-down. I think that when Satan has a job so infinitely mean that in all the pit he cannot find a devil mean enough to do it, and all the bribes and threats have failed to get one willing for the infernal errand, he says to one of his sergeants, "I go up to Brooklyn, and in such a corner get that gossiping woman, and she will be glad to do it." And sure enough, like a hungry fish, she takes the hook in her mouth and Satan slacks up the line, and lets her run out further and further, until, after a while, he says, "It is time to haul in the line," and with a few strong pulls he brings her to the beach of fire. What do you say? That she was a member of the church? I cannot help that. When Satan goes a fishing he does not care what school the fish belongs to, whether it is a Presbyterian mackerel or an Episcopalian salmon. Amid the thunder-crash of Sinai, God said, "Thou shalt not bear false witness against thy neighbor." And in Leviticus he says, "Thou shalt not go up and down as a tale bearer." Take not into your ear that scum of hell that people call *tittle tattle*. Whosoever willingly listens to a slander is equally guilty with the one who tells it, and an old writer says they ought to be hung—the one by the tongue and the other by the ear. Do not smile upon such a spaniel, but like a pleased dog, he eats his dirty paws upon you.

Throw back the shutter of your soul, O Christian men and women, and see if there be within you a vulture with filthy talons and cruel beak. Let not this unclean thing roost in your soul, for my text says, "Ye shall hold in abomination among the fowls, *the vulture.*"

Extract from the Life of Rev. Thomas P. Haat.—The Hoop Poles.

BY HIMSELF.

In 1830 the subject of temperance was just beginning to attract attention in the lower parts of North Carolina. Some of the inhabitants of Onslow County determined to form a temperance society, and invited me to aid them in their efforts to do so. I was unknown by person to any of them. I stopped at a tavern, near the place of meeting, to get my supper, and have my horse fed. The landlord was both inquisitive and communicative, but he was not Yankee enough to keep his own secret and find out mine. Anxious as he was to know who I was and what I was about, I managed to make him content with the information that I was a traveler eating my supper, and was very much pleased with it.

In my turn, to pump him, I asked him about the news of the neighborhood; what preaching and Sunday-schools they had? He said they seldom had meetings of my kind; but there was to be a temperance meeting near there that night. Temperance meeting? What kind of a meeting was that? He did not know, had never been to one, nor seen anybody that had. But he had heard that there was a new Bible found by temperance men that said it was a sin for people to get drunk at weddings and at love feasts, or to drink apple jack and peach brandy and old Santa Cruz rum, or any other of the good creatures of creation. He was afraid they would ruin the country. For his part, he was against such things, and he knew it would ruin him.

"How so!"

"You see I have a good many customers who make their living by cutting hoop poles. These they sell to the West India trade for barrels and hogsheads for Jamaica spirits. Now if folks won't drink rum, they won't buy it. And if they won't buy it, folks won't make it."

"*Well, what of that?*"

"What of that! Why, there will be no sale for hoop poles, and I will have no customers. Besides this, you know that I trust the boys now, and they will not pay what they owe me if they cannot sell their poles. Last week Jim W——'s wife came to me and asked me not to trust her husband for rum any more, for he never brought home any of his wages, and often scolded her and the children for crying for clothes and good victuals. Poor thing! I was sorry for her, for I know it was true. But I knew if I did not let Jim have more, he would not owe me, only never pay me what he owed me, which was a good deal, and would take nearly all his hoop poles; but that he would not trade with me, but go to Neil T's, the meanest man, who sells liquor to the niggers for stolen corn and bacon, and help him instead of me to get a living. Besides this, our doctor, who is a judge of good liquor, tells me that folks cannot live about this way unless they drink liquors. They will have the shakes, and if they cannot get it, they will be sure to die without it. Won't it be awful, sir, to see all the mothers and children, and young men and women, and old folks dying because they can't get any rum? This is not all. The most that we go for is masters, and trainings, and sales, and warrant trials, is to see the fun and the fights. They never meeting, quarrel and fight until the liquor works. Why, old Jones and his sons would walk more nor a hundred sights to have a fight and a drink. The constable tells me it is a great fall for him, these musters and warrant trials; that he would have no business much, if the people did not drink. There was a good old preacher down about here, telling the folks about what wonderful drinks they used to have at Caney. How when the people got real well drank on mean liquor, Jesus made an awful sight of liquor, better than old Jamaikey, and they kept up the frolic all night. How the Apostle Paul gave the rich Kurrinthens a good going over, for making sport and stingy as to get drunk without offering to treat the poor folks at the church, and told them that if they would be so selfish, to go home and get drunk in their own homes. He warned the folks against the new Bible and doctrines of these infidels, who were bringing disgrace on the Bible. For his part, he said he was willing to have the old Bible that his fathers fought for, on his side."

I do not know how much longer the landlord would have continued, but I stopped him, saying: "Let us go and hear these fellows. We will sit together, and if they say anything you do not like, give me a hint, and I will answer it." Agreed; so we went to the meeting. Services had commenced. The president was rehearsing the evils of drink, and pointing them out very clearly. Every now and then the landlord touched me to note all that was said. After the president closed, I asked permission to make a few remarks. It was granted. I told them that I had agreed to come with my friend, the landlord, who had requested me to reply to what was said. I then repeated all he had told me about the hoop poles, and doctors, and constables, and preacher, etc. Somehow or other the same words spoken by the landlord to me, sounded very differently from my lips to the audience and to himself than they did when he uttered them.

The result was that the most of those present determined to join the society; and the landlord left in disgust. I was invited to stay with the president. When I asked the landlord what I had to pay for my supper and horse, he said, "Nothing, take your horse and go; but hark here, you old rascal, don't you come this way again." I did not. But the people reformed, and I never heard of any injury resulting to them unless it was that the landlord had to leave the place, and never come that way again.—*Watchword.*

My Beautiful Lambs.

BY MRS. F. C. DOLE.

(For "The Southern Workman.")

Love in my fold I gather them all,
Beautiful lambs of my tenderest care,
Where the day goes out, and the banners fall,
Leaving the place for the night to stare.

I gather them in from the dampening dew,
Fold them close to my bosom warm;
They are so loving, so tender and true,
I would kindly keep them from every harm.

Your Father in Heaven, forever kind,
Will keep us all as guide as wherever we roam.
Though darkness gather and midnight blind,
His hand is leading us nearer home.

Nearer His home where no shadows are,
Nearer His face where no night may be;
Nearer His mansion divinely fair,
On the shining shore of the jasper sea.

Keep the Roots Sound.

"What are motives?" asked Ben.

"The reasons and feelings which direct our conduct," said his sister.

"They are the roots from which our actions spring."

"And hid like roots," said Ben.

"Yes," answered his sister, "they are not always seen."

"Then how can people tell whether motives are good or bad?" asked Ben.

"They cannot always tell," said his sister. "A kind act may spring from a low motive. You remember the story you told of George Cuswell, who took his grandmother a bunch of flowers, and because he loved her or cared particularly to please her, but in order to get ten cents out of the old lady. That was a kind act done from a selfish motive."

"Yes, it was," said Ben. "George never did it for her sake, not a bit of it. But then *she* did not know that, and she was as tickled as could be."

"And since we must judge people by their actions, not being able to take into account their motives, our judgments of people are not always true. We may think too well, or we may not think well enough of them. There is only one person whose judgment is exactly right in every instance."

"Somebody who can look inside and see our motives," said Ben; "and that, of course, is God."

"Yes," said his sister, "there is no possibility of deceiving God. King David felt this when he prayed, 'Thou desirest truth in the inward parts.'"

"It is the wisest and best thing to be straight and true always," said Ben.

"I think that. I believe in keeping the good animal; don't you, sister?"

"Indeed I do!" cried Helen.

"Indeed I do!" may we all cry.

Temperance.

Some time ago, the Convocation of Canterbury, an ecclesiastical association embracing about two-thirds of the Church of England, sent out a list of questions respecting the extent, causes, consequences of, and remedy for intemperance. No pains were spared to make the examination thorough and fair, and from all parts of the United Kingdom came the replies of pastors, judges, magistrates, chiefs of police, chaplains, and wardens of prisons and Reformatory institutions. The substance of their testimony is, to use the words the Report, "that the drinking usages and the liquor traffic are the great bane and curse of England, and that the beershop is the center of debasement, immorality and ruin." Further than this, the report states, that there were found about a thousand parishes where the traffic is unknown, and these are the model parishes of England, in respect to intelligence, morality, domestic comfort, and religion. This is surely valuable witness as to the direct power for evil of intemperance, and applies just as closely to America as to England. Here, too, the liquor shop supplies the poison, which corrupts the life of a whole neighborhood; and here, too, the only means by which any community can be kept in decency and order are the careful limitation and regulation of the liquor trade.

It is not only legal restraint which is required, but it is personal influence and activity that must control and avert this terrible danger of intemperance, and the usefulness of temperance societies can scarcely be too much dwelt upon, for they multiply individual power tenfold and increase general interest in a subject of primary importance to all of us. If a majority of the members of any community exert themselves steadily and unitedly to overcome and counteract the influence of the liquor sellers and consumers, the improvement in the condition of that community will soon be visible, and the result of their efforts will scarcely be felt far beyond the limits of their immediate labors, that the encouragement to undertake such work is immense. Organized opposition to the use of intoxicating drinks is what is needed throughout this country, and we wish every reader of the "Southern Workman," would speedily set about his or her part of the work.

A Poor Ragged Irish Boy.

A poor ragged lad came to a ragged-school in Connemara—a miserable little Arab of the streets, with scarcely a trace of the child in his face. One day, however, he appeared radiant in a new suit of clothes.

"How is this, Mike?" said the teacher.

"Oh, sir," he said, "sure daddy's a teetotaler; and I never stopped till I brought him to the meetings, and he signed the pledge; and *look at me now, sir!*"

CHANGES.—The wheel of Fortune is constantly revolving, and the rich man to-day may be the poor man to-morrow. A majority of the rich men in our principal cities were once poor, and many who once possessed their thousands are now indigent. The largest tax ever paid in the city of Boston was paid by a man who once went barefoot to his work.

SPURGEON states his position with candid emphasis. This is from a recent sermon: "At the Lord's table I always invite all Christians to come and sit down and commune with us. If any man were to tell me that I am separate from the Episcopalian, the Presbyterian, or the Methodist, I would tell him he did not know me, for I love them with a pure heart fervently, and am not separate from them. The pulse of Christ is communion; and woe to the Church that seeks to cure the ills of Christ's Church by stopping its pulse! I think it a sin to refuse to commune with any one who is a member of the Church of our Lord Jesus Christ."

Gems.

It is more difficult, and calls for higher energies of soul, to live a martyr than to die one.

We can do more good by being good than in any other way.

To-morrow is the day on which idle men work and fools reform.

EXEMPLIFYING duty, does more than explaining it.—*Rowland Hill.*

MANY talk familiarly of sanctification in the lamp, who know but little of it in the piece.—*J. C. Ryle.*

LET friendship creep gently to a height; if it rush to it, it may soon run itself out of breath.—*Thomas Fuller.*

I WILL listen to any one's convictions, but pray keep your doubts to yourself. I have plenty of my own.—*Goethe.*

IF I wanted to punish an enemy, it should be by fastening on him the trouble of constantly hating somebody.—*Hannah More.*

OH how sweet to work all day for God, and then lie down at night beneath His smile.—*McCheyne.*

GRACE cannot be severed from its fruits. If God gives you St. Paul's faith, you will soon have St. James' work.—*Toplady.*

BIBLE promises are like the beams of the sun, which shines as freely in at the window of the poor man's cottage, as at the rich man's palace, and a little more so, for there are far more promises to the poor than the rich.

THE slightest sorrow for sin is sufficient, if it produce amendment; the greatest is insufficient, if it do not.—*Colton.*

Trifles.

IT has been proved that, after kindling his fire, a miner stuck a cork in the end of the bellows, to save the little wind that was in them.

TALK about the modern falling off of home affections. Our wives are becoming *dearer* every day.

A LITTLE girl of eight or ten summers being asked what dust was, replied that it was mud with the juice squeezed out.

A JEW in a drab overcoat approached the arrivals on a night train, and in a voice smooth as oil, said, inwitingly: "Will *thee* have a carriage?" Of course, the brethren speedily filled his vehicle. But when they went away came: "Where's *thee's* baggage?" they saw the deception, and with great dispatch quickly clambered out again. The backman to this day cannot account for the sudden change in the manner of his passengers.

SOME men at Louisville were betting on the weight of a large mule, when one man, who was a good judge of the weight of live stock, got behind the mule to make his observations. Just before he died he gave it as his opinion that if the mule was as heavy all over as he was behind, he must weigh not far from 47,000 pounds.

A BOY defined salt as "the stuff that makes potatoes taste bad when you don't put on any."

A PRUDENT clergyman, unwilling to accuse a citizen of lying, said he used the truth with penurious frugality.

SOME people are never contented. After having all their limbs broken, their heads smashed, and their brains knocked out, they will actually go to law and try to get further damages.

AN ELECTION STORY.—In an old Pennsylvania town, where they voted the Democratic ticket sound, so the story goes, in 1868, the experiment was made of putting a Republican ticket in the field. A Mr. Green was the candidate selected, but by reason of sickness he was unable to go to the polls an election day. When the returns were published, Mr. Green had just one vote. Chagrined at this, and annoyed by the accusation that he had voted for himself, he announced that if the person who had voted for him would come forward and make affidavit to the facts, he would reward him with a suit of clothes. A few mornings afterward a burly Dutchman called upon Mr. Green, and abruptly remarked: "I wants dat suit of clothes." "Then you are the man who voted for me?" "Yah, I ans dat man." "Are you willing to make an affidavit of it?" "Yah, I swear to em. Mr. Green, accompanied by the intelligent voter, went to the office of the Justice of the Peace, and the required affidavit was made, upon which the clothes were purchased and given to the deponent. At parting, Mr. Green said: "Now, my friend, just answer me one question. How came you to vote for me?" "You vants to know dat?" "Yes." "And you won't go back on de clothes?" "No." "Veil," said he, slowly, and with a sly twinkle of the eye, "den I tole you—I *made a mistake in de ticket.*"

Publisher's Department.

"TAOUMA the "Southern Workman," finds himself lately at his work this month, yet he feels he has an excuse which will be received by every well-wisher.

The printing office has been crowded with very important work, which it would not do to lay aside on any account. The working corps of the office, which stood nobly at the post through the hot and unhealthy months of the past summer, deserved weeks of vacation where it took days, but these one or two days made us feel our dependence on the printers. Our office force has just been increased, and we hope, in the future, to be on time.

AGENTS WANTED.—Smart canvassers are wanted in every village throughout the South, to get subscribers for the Southern Workman. Good pay given. For terms, etc., address

J. H. LARRY,
Office "Southern Workman,"
Hampton, Va.

A RED cross before this paragraph will indicate to the subscriber that HIS SUBSCRIPTION HAS EXPIRED. He is requested to renew immediately.

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,337,317.67, being an increase of 83½ per cent. on the balance due depositors at the close of the preceding year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $225,154.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is fairer promise. Before the next annual meeting we shall be able to report $5,000,000 due depositors.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.

Special arrangements made by mail, for receiving business accounts payable by check, but bearing 4 per cent. Interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED.

at request of depositors, from Branches where kept to any other Branch without risk or trouble; and without loss of interest.

For full information about the Bank address the *Actuary* at Washington, D. C., or the Cashiers of the respective Branches. Copies of Our Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information received may be prescribed by addressing the President, J. W. Alvord, Esq., or D. C. Eaton.

THE

SOUTHERN WORKMAN

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. 2. HAMPTON, VA., DECEMBER, 1873. NO. 12.

America.

My country, 'tis of thee;
Sweet land of liberty,
Of thee I sing:
Land where my fathers died,
Land of the pilgrim's pride,
From every mountain side
Let Freedom ring!

My native country, thee—
Land of the noble free—
Thy name I love:
I love thy rocks and rills,
Thy woods and templed hills,
My heart with rapture thrills
Like that above.

Let music swell the breeze,
And ring from all the trees
Sweet Freedom's song:
Let mortal tongues awake;
Let all that breathe partake;
Let rocks their silence break—
The sound prolong!

Republics.

The word "Republic" comes into our language from the Latin, being made directly from the two Latin words, *res*, a thing, and *publicus*, belonging to the people, and means simply a state wherein the governing power is in the hands of the people.

The earliest and best known republics, such as Sparta, Rome, Venice, etc., were governments in which the power was divided between several individuals, and, in many respects different from our modern republics, of which the United States is the best example.

Any community in which no one person possesses sovereign power is actually a republic, and England, since 1688, has full claim to that title, inasmuch as a "limited monarchy" which since the data mentioned, has been the form of government in England, intrusts the reigning monarch with scarcely more than nominal authority, putting the real power, as with us, into the hands of the Houses of Lords and Commons, which correspond to our Senate and House of Representatives. The older republics, as has been said, were governed by families or aristocracies, but the liberties of the people were always preserved, and the rights of individuals more carefully recognized than under any other system. Of the republics of the present day none is on so good a scale as our own, although our nation is comparatively in its childhood; but it is interesting to notice the growth and change of the less important attempts to establish purely republican governments, while many hopeful observers foretell the speedy downfall of all existing despotisms and monarchies before the irresistible influences of freedom. In Europe, France and Spain have been for years struggling to obtain organized liberty, and to become true republics, but, as yet they cannot be considered to have accomplished that end, for the character of their people and the unfortunate effect of their past experience, makes it difficult for them to govern themselves, and thohs is a liberty which, but too frequently, degenerates into license.

Of the smaller republics there are three, which are likely to be of special interest to our readers, namely: Liberia, Hayti and San Domingo. The first of these, Liberia, was organized on the west coast of Africa by American negroes, and has been, up to the present time, an entirely successful experiment. There is a population under the jurisdiction of the republic of 250,000, which is composed of various tribes, who govern themselves through two Houses, similar to our own, and a President, who is elected for a term of two years. The people exist in great comfort and security, and maintain a regular and well-ordered republican system, which does credit to its founders and supporters.

Hayti and San Domingo are republics, established upon one of the largest and most beautiful of the West Indian Islands. Hayti, which is the western end of the Island, has a population of 550,000, and is governed by a President and two Houses, its laws being founded upon the legislative code of France. San Domingo upon the eastern end of the island, has had a varying fate, being sometimes in the power of one nation and sometimes of another, and almost constantly at war with Hayti, or disturbed by internal dissensions, until in 1859, a republic was finally proclaimed, which has subsisted, until the present day and promises a prosperous future. There is scarcely anything in history more tragic than the struggles of the Haytian people, and the story of Toussaint L'Ouverture, and his brave followers should be read by all men who are of the blood of the negro, that they may feel what a noble race they spring from.

It seems that to found a republic demands a more than common share of heroism and self-sacrifice, and we may well ask ourselves if honesty, self-control, and a courageous morality are not essential to the continuance of any government which, like our own, is a government of the people.

In the year 1606, James I. being king of England, two companies were formed in England for the colonization of America, the London company to which was granted South Virginia, extending from Cape Fear to the Potomac, and the Plymouth company, to which was granted North Virginia, extending from the mouth of the Hudson to Newfoundland. The London company at once sent out ships laden with colonists, who, on May 13, 1607, founded the Commonwealth of Virginia, by building Jamestown on the James River, under the direction of the famous Captain John Smith. For the first time the King retained the government of this little commonwealth in his own hands, but gradual changes in the constitution resulted in the establishment of a house of burgesses, chosen by the people, which met, for the first time June 19, 1619, and was virtually the beginning of representative government of America.

Five years before this time, however, Capt. John Smith having examined the coast from Penobscot to Cape Cod named the country New England, and returning home published such descriptions of his most discoveries as led to the formation of a new company incorporated as the council established at Plymouth in Devon for the planting, ruling, ordering and governing of New England in America," which company received unlimited powers of legislation over a territory comprising more than a million square miles, and including Nova Scotia, New Brunswick, the Canadas, New England, New York, Pennsylvania, nearly half of New Jersey, and all the continent lying directly west of those States.

This vast province was naturally beyond the control of any corporation; and the first English settlement within its limits was made without the knowledge of those who considered themselves the legal possessors of the soil, and without the aid of King James, by a body of Puritans, one hundred in number, who, driven from England by religious intolerance, landed, Dec. 21, 1620, at a harbor in Massachusetts Bay, which they called Plymouth, in memory of the last English port from which they had sailed. These people, the "Pilgrim Fathers of New England," were a body of stern, determined men and women, who had come across wild, unknown seas, in search of the liberty denied them nearer home, and their little settlement on "New England's rock-bound coast," carried within itself the principles which were destined in years to come to govern a country whose greatness was then undreamed of.

The government of the Plymouth colony was, from the outset, strictly republican. The governor was elected by the people and restricted by a council of five, and afterward of seven assistants, the legislature, at first comprising the whole body of the people, though, as soon as the population increased, the representative system was, of necessity, adopted.

Other colonies were rapidly formed, but those of Virginia and Massachusetts retained their influence, and to a greater or less extent, affected the various settlements, setting them a noble example in the matter of education and honest legislation. In the course of little more than a century from the settlement of Jamestown, thirteen colonies had been founded by the English within the limits of the present United States, and as early as 1660 the prosperity of these colonies had become so great as to arouse the jealousy of the mother country, whose rulers began, from this time, to make every effort to force American commerce to English hands.

As the colonies increased year by year in importance and wealth, the desire for political freedom increased in proportion, and the republican ideas planted by the first settlers found an atmosphere congenial to quick and vigorous growth, though there still existed a warm attachment to England, and much personal loyalty to the crown. But the English government, as the time drew on, grew more and more blind to the signs of the times, and would not relax its hold of the colonies, but, on the contrary, determined to enforce its own, that it continued a course of systematic injuries to the trade and manufactures of America, endured by the colonists only because they were inflicted behind the shield of the Constitution. As time went on, however, the oppressors of the infant States became bolder, and in 1761 the Parliament of Great Britain issued writs empowering the officers of the customs in America to search stores and houses for goods which had not paid the heavy duties previously imposed, a measure which caused intense excitement and was never executed for fear of the result. Two years later trouble arose in Virginia, in regard to the payment of the clergy, and it was finally decided by the English authorities that the colonies should be taxed directly in spite of all their protests, in pursuance of which decision, the "Stamp Act" was passed March 22, 1765. This act declared that every document used in trade in the colonies, must, to be valid, have affixed to it a stamp, the lowest in value costing a shilling, and thence increasing indefinitely in proportion to the value of the writing. The enforcement of this act, against which the colonies unanimously remonstrated was to be ensured by quartering upon the colonists as many troops as the English ministry thought proper to send out, a measure of tyranny which was formally denounced by the colonies through a congress, held for the purpose in New York, with authority to act for all the people. Public indignation ran so high that in 1766 the "Stamp Act" was repealed, but its repeal was only followed by fresh attacks upon colonial liberty, and new duties were put upon paper, glass, tea and other necessaries, so that nothing remained for the colonists except to bind themselves, as they did, to use none of those articles, thus depriving the British government of the looked for revenue.

Nothing, however, seemed to affect the policy of the English king and his ministers, and oppression followed oppression, until, in self-defence the colonies held conventions and sent delegates to the "Old Continental Congress," at Philadelphia, which met September 5, 1774, and was representatives from every colony, except Georgia. It is said of the members of this congress, that "Patrick Henry was unrivalled for eloquence, and John Rutledge ablest in debate, while, for solid information and sound judgment, George Washington was the greatest man of them all." This assemblage of brilliant and powerful men agreed upon a declaration of rights in which was set forth the claim of the colonists, as British subjects, to assist in making their own laws, and in imposing their own taxes, to the right of trial by jury in the vicinage, of holding public meetings and of petitioning for redress of grievances; while the maintenance of a standing army in the colonies, without their consent, was protested against as were eleven acts, passed during the reign of George III. in violation of colonial rights and privileges.

There is little doubt that, at this time, a majority of the English people sympathized with America, but the king was violently opposed to any attempt at conciliation, so that little attention was paid to the protests of the Philadelphia congress, and the measures so obnoxious to the Americans finally passed the British parliament. As this showed that peace was no longer to be hoped for, the colonies began, in earnest, to prepare for war; and when General Gage, then commanding at Boston, sent out, on the night of April 18, 1775, a part of his forces, to destroy the military stores of the colonists at Concord, the first blood of the Revolution was shed at Lexington, a name forever famous in American history. The tidings of this fight spread like wild fire through the country, and before the end of the month 20,000 men were encamped around Boston, while before the end of the summer the power of all the royal governors from Massachusetts to Georgia was at an end. Not only in the towns but on the remotest frontiers the people acted with boldness and energy, and on May 10, 1775 the second Continental Congress assembled at Philadelphia, whence, with a moderation and calmness, which showed the real courage of the people, a last petition was sent to the king, though at the same time a federal union of the colonies was formed, and assumed national authority. The conflict between Great Britain and the colonies was now regularly initiated, and the American government began, at once, to establish the various departments, required by the position in which the new-born nation found itself. A committee was appointed with authority to build thirteen frigates, thus founding our present Navy Department; a secret committee was appointed to correspond with friends in England, which was the germ of our State Department, while a war committee and a financial committee had been practically instituted before the actual commencement of hostilities. And now the decisive step was to be taken which ensured the union of the colonies into a single republic, and the official account of it is as follows: On June 7, 1776, Richard Henry Lee introduced into Congress a resolution declaring "that the united colonies are, and ought to be, free and independent States, and that their political connection with Great Britain is, and ought to be, dissolved."

After an animated discussion, the resolution passed by the votes of nine colonies, and Franklin, Jefferson, John Adams, Roger Sherman and Robert R. Livingston were appointed to draw up a Declaration of Independence. Jefferson wrote this, and, while it was under discussion, Congress sat with closed doors to exclude the excited populace, who waited outside in crowds to hear the decision of their chosen legislators.

In the steeple of the State House hung a bell, imported before from London, on which, by a strange coincidence, was graven the text, "Proclaim liberty throughout all the land, unto all the inhabitants thereof;" and when on a fair July day, nearly a hundred years ago, that bell rang out a joyous peal, the people who were eagerly listening, knew that the "Declaration of Independence" had been accepted, and the Republic of the United States, was one of the nations of the world.

On the 9th of July, Washington caused this "Declaration" to be read at six o'clock in the evening at the head of each brigade of the army, and the order which he issued at the same time shows the spirit which, as we fought, and the faith he had in the cause. "The General hopes," said he, "that this important event will serve as a fresh incentive to every officer and soldier, to act with fidelity and courage, as knowing that upon the peace and safety of his country depend, under God, solely on the success of our arms; and that he is now in the service of a State, possessed of sufficient power to reward his merit, and advance him to the highest honors of a free country." Throughout the whole country the excitement was intense and the rejoicing very general, though the people had suffered too much not to be well aware of the difficulties which lay before them and to understand that they had undertaken no light task in declaring themselves entitled to the privileges of freedom. The officers whom they elected, legislated for them wisely and well, and the changes effected by the separation from Great Britain were, in the beginning, simply these: "Every former subject of the British king in the thirteen colonies now owed primary allegiance to the government of the people and became citizens of the new republic;" except in this, everything remained as before; every man retained his rights; while the affairs of internal police and government were carefully retained by each separate State, which could, each for itself, order upon the career of domestic reforms. But the States which were henceforth independent of Britain were not independent of one another; the United States of America assumed powers over war, peace, foreign alliance and commerce.

The articles of confederation which were adopted at this time, suffiied during the years of war which followed the Declaration of Independence, but when our Revolutionary struggle was finally ended, and our national liberty firmly established, it was found that they did not form a sufficient constitution for the nation, as they did not give the needful authority to Congress to legislate for the whole country, and were deficient in regard to the adjustment of quarrels between the States, the common defense, etc. In consideration of this, a national convention was called, which met in Philadelphia May 14, 1787, and after a deliberation of four months, adopted the present Constitution of the United States, and submitted it to the people for their ratification. After long discussion, lasting in some of the States for two or three years, the Constitution was adopted by all of them, first by Delaware and last by Rhode Island, and went into operation March 4, 1789. While many minor changes have taken place in our national policy, the Constitution, which was framed for us by the wise foresight of our fathers, has proved to be equal to every demand made upon it in peace or war, by a country whose growth has been unparalleled, and whose citizens have come together from every land in the world. The original seven articles drawn up and signed by the members of the second Continental Congress have been retained, while, from time to time, amendments have been added, to the number of fifteen, which, however, all embody the spirit and carry out the intention of the original document.

No one can read the history of the events which led to the Declaration of Independence and the establishment of the Constitution of the United States without feeling the power of those republican priniples which inspired the founders of our government, and which, from their day to our own, have stood almost every test that can be applied to legislative system. The fact that we have a vast reserve of luxuriant unsettled country to fall back upon, has, of course, been greatly in our favor, and the enemies of the republican form of government do not hesitate to say, that without that we should long ago have found ourselves forced to accept a monarchy. They assert that it is only our immense extent of territory that has saved us from the dangers of over population, that we have thriven as a nation, and are still able to hold fast our motto, "*E Pluribus Unum*." But, on the other hand, we who have experienced the practical benefits of our republican system, and know what it is to live under the law of the people, believe that freedom and equality mean something very different from misrule and license, and are not afreid to see our institutions subjected to the trials which are overturning, one after another the older monarchies and despotisms of Europe, Asia nud Africa. We believe that that government is the best which gives to each of its citizens the amplest possible opportunity for improvement and growth, while making each individually responsible for the public welfare, and in our own Republic, as it stands to-day, we find these conditions. We are told that "Greater is he that ruleth his spirit than ha that ruleth a city," and we hold that to be true of nations as well as of men. The nation whose people rule themselves has surely the best guarantee of its own healthy growth, and it is in no spirit of braggadocio, that we delaro our firm faith in the Republic which has withstood a century of dangers, from within and without, and now ranks foremost among the nations of the world.

Scientific and Mechanical.

How Broadcloth is Made.

The better to manifest what woollen is not, let us see what cloth is. Stage by stage, from sheep's back to gentleman's back, we will trace the history. The wool being shorn, goes to the stapler's, and by him is sorted. It is neither long nor short, and, for the cloth manufacturer, if wool be not moderately short, it must be short and artificially. It is next well oiled and spun into thread or yarn, then woven into a tissue that will be cloth by-and-by, though a long way distant from cloth when it leaves the weaver. The tissue, if examined at this stage of manufacture, would display its threads just as madam's stuff gown does. A coat of the material would be threadbare all over, despite its newness. Before this material can become commercial cloth, five chief things will have to be done to it. Its texture must be closed; it must be shrunk—that is to say, it must be cleansed; a nap must be put upon it; superfluous nap must be shorn off; finally, it must be hot-pressed. First, as to the closing or shrinking. If you bear in mind what has already been stated about the quality of felting possessed by wool, due to the presence of certain awlike teeth, the reason of shrinkage will be understood. To accomplish this is the fuller's task, and he goes to work as follows: He takes the material to be shrunk, wets it, soaps it, and submits it to the fulling-mill for a considerable time—seven or eight hours—under which operation the shrinkage is effected. The fulling machine is an engine so contrived that certain heavy pieces of hammers are brought to bear upon the texture already soaped, wetted, and laid in a trough. The hammers are so fixed in the machine that not only do they fall upon the texture with heavy thuds, but at the same time turn it about, each stroke being delivered on a fresh portion. Now, bearing in mind the awlike teeth, and the quality of felting, what happens will be easily understood. The wool fibres are well soaped, as we already know, and but for their serrations, all looking one way, they would slide each other in various and irregular directions. Practically, however, they can only slide one way—namely, with the roots foremost. The result is that the awlike teeth catch among each other, at every catch making the wool fibres shorter, whereby the entire texture is shrunk, and, of course, proportionately closed up and thickened. The result being accomplished, the workman clears away the soap by means of fuller's earth and water, the fabric remaining still in the trough, and still wrought upon by the fulling hammers or piles. Being taken from the fuller's mill, the shrunken material has next to be dried. This is done by hanging it an tenter hooks stuck into the margins of the texture at convenient distances. Obviously, this is an operation that would admit of considerable deceit in dishonest hands. The wet fabric might be injudiciously stretched—made broader and longer to the prejudice of material. Formerly the exact amount of stretching to be used was regulated by Act of Parliament, so important did the matter seem. Well, our material, woven, fulled and dried, is not cloth yet, though a considerable way advanced on its way to cloth. It has no nap, so the next process will be imparting a nap to it. Let us suppose, now, by way of introducing the nap imparting process, that a piece of our material having been laid flatcon a board, a cat gets on it and scratches it. Puss would get a sort of nap on our material, though she would deal with it somewhat roughly. If the scratching effect of cats' claws were such as the clothworker required, he might imitate the operation by some sort of wire-tooth machinery. Altogether too violent it would be; for, although nap is really scratched up out of the texture, this is effected by little hooks incomparably finer than the claws of any cat—finer than any hooks man's ingenuity has enabled him to devise, the agent used by clothiers being, as by the Romans, being the booklike growths of the *Dipsacus fullonum*, or fuller's teazel. This plant, in growth, is something like a thistle, though, botanically, it differs from a thistle. It bears round heads, each about the size of a small apple, and studded all over with fine hooked protuberances. Many of these teazel heads being packed together and bound up tight on a flat surface, make a sort of comb, or curry-comb, and this was the invariable way of packing teazels for use in cloth manufacture once. They may also be packed on a cylinder, but however arranged, their use in getting up nap out of thread will be obvious. Caused to run against the incipient cloth, they scratch out little odds and ends of wool, and produce a hairy surface. One stage farther, then our woven material has advanced on the road to perfect cloth, but it is not cloth yet. The nap just scratched up by the teazel hooks is of all lengths, within certain limits. The manufacturer wants an even length, which he accomplishes by shearing. Next follows hot-pressing, which being done, we regard the cloth as made.

IMITATION OF MARBLE.—By an ingenious though simple process, our American slate is now transformed into a beautiful substitute for marble. The rough blocks of slate are first planked down to the required thickness and the patterns are then drawn upon the slabs which are cut into the proper shapes and polished The sawing is the peculiar feature in the operation. The material is prepared in a vat, and the slab is let down upon the composition, which adheres to the surface of the slate. The slab is next baked in an oven for one night, and then receives a coat of varnish, manufactured for this special purpose, and after six repetitions of these processes it is finally removed and polished, the surface presenting a beautiful appearance. So firmly united to the slate is this coating that it cannot be scaled or chipped off without taking the slaty particles with it.

SPIRITS of Turpentine has been found to be the best antidote for phosphorus poisoning. Those working in match manufactories may benefit by this.

The Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, RICHARD TOLMAN, J. B. LARRY, } *Editors.*

J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

"The Southern Workman" should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. B. LARRY, *Publishing Department.*

The Southern Workman.

HAMPTON, DECEMBER, 1873.

The Beloved Physician.

Such, indeed, was the late Dr. Levi Dwight Seymour, of Hampton. He was born in Hadley, Mass., 1819; graduated at Berkshire Medical College, Pittsfield, 1842; practiced in Western New York four years; then in Greenfield, Mass., until 1862, when he engaged as surgeon in the army, and was in the United States' service until 1866. He afterward practiced in Hampton, until God suddenly called him hence. After visiting a patient Sabbath morning, Nov. 16, and while preparing to attend public worship, he was stricken down with apoplexy; and on the evening of the next day, the silver cord was loosed and the golden bowl was broken; thus quickly leaving his wife a widow, and his children fatherless; and throwing into deep affliction, not them only, but the religious society, of which he was a loved and honored member, of whose Committee of Arrangements he was the Chairman; together with the officers and pupils of the Normal School, and a multitude of the surrounding community, to whom, as physician, he so kindly and faithfully ministered in sickness.

Thus our beloved physician has yielded to that stroke of death, which he had sought so earnestly and with such a high degree of success, to avert from ourselves. And since, by means of his professional knowledge and skill, so many of us were relieved from pain and sickness, and held back from the grave, his memory is embalmed in our grateful hearts.

He did not, indeed, ease every pain and cure every disease, and save every patient from death. He knew too much to make any pretensions of this character; knew that there was a limit to the healing art. No taint of arrant quackery or boastful empiricism characterized him. He was, to such an extent, the reverse of the ignorance of high looks and big words and blustering pretensions, and such a dislike for the mere flourish of trumpets, was so modest and unassuming in his deportment, that he did not always pass in the community for what he was really worth.

But we, who were intimate with him, knew him but to love him. He was a man of that quiet refreshing humor, which made him a very agreeable companion; of that magnanimity of soul, which lifted him above the mean and selfish, so that he would have been the last one to take any such unmanly advantage as that of striving to raise up himself by pulling another down; of that sterling integrity and generous public spirit, which caused him to be highly valued as a friend and neighbor, and trusted and honored as a citizen.

As a physician, he had the interest in his patients which rendered him watchful and ready to apply the needed remedy, with that sympathetic feeling, that considerate and delicate kindness, which is often as beneficial as the medicine itself. But his distinguishing and crowning excellence was, that he so denied himself that he might give his medicine and his services to the poor and the despised. With much truth he might have adopted as his own, the words of the patriarch Job, "When the ear heard me then it blessed me; and when the eye saw me, it gave witness to me; because I delivered the poor that cried, and the fatherless, and him that had none to help him. The blessing of him that was ready to perish came upon me; and I caused the widow's heart to sing for joy. I was eyes to the blind, and feet was I to the lame. I was a father to the poor."

May we be followers of him in that which was thus praiseworthy, so that we may receive at last from the lips of our final Judge, "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me."

The Illustrations for December.

For the month which closes the year of 1873, we are happy to be able to present our readers with a fine cartoon of Congress in session, a picture which, we are sure, must be of interest to all who know anything of the political life of our country.

In another article we have given some account of the work which the National Congress is expected to do, of it privileges and restrictions, and of its influence as a political body; and in this particular we particularly calling attention to the value of the large illustration which accompanies this number of "The Southern Workman," we desire also to remind our readers of the real beauty and importance of the series of pictures that we have laid before them during the past twelve months. Such illustrations could be offered at the very moderate price of our annual subscription, only through the generosity of certain friends in the North, from whom we have obtained the plates of our engravings for a merely nominal sum, or, in some cases, without any payment whatever; and, in making our hearty acknowledgments to them, we once more take occasion to impress upon our readers the wisdom of profiting by the liberality that makes "The Southern Workman" one of the cheapest monthlies in the country. We believe that it is its own best advertisement; and as it is published solely in the interest of its readers, we do not hesitate to ask those readers to assist in increasing its subscription list by recommending it and circulating specimen copies among all who are likely to be interested in our undertaking. "The Southern Workman" ought to be supported by Southern workmen, and we appeal to them to help us in making our journal a power for good in the land.

The Cuban Question.

During the last month, our country has been quite excited at the prospect of war with Spain, but, as we go to press, the clouds of war are breaking, and we read with pleasure that Spain has acceded to the demands made by the United States. We cannot help thinking somewhat anxious yet, as it is a question whether Spain, now so shaken by interior and exterior troubles, is strong enough to exact from the authorities in Cuba that we are entitled to.

We are sorry to see that there are those who are disappointed at the peaceful turn matters have taken, and hope and believe such rankling spirits are few. Let the Administration hold fast to its old motto, "Let us have peace." We hope, however, that no peace will be purchased at the cost, for years to come, of such a disturbed and barbarous reign as poor Cuba has seen for the past few years.

A Righteous Verdict.

Wm. M. Tweed, of New York, is sentenced to the penitentiary for twelve years, Ingersoll for five years, and Farrington for eighteen months. It is time the people should answer Tweed's question as to his frauds: "Well, what are you going to do about it?"

A Terrible Ocean Disaster.

At two o'clock on the morning of the 23d of November, the staunch steamship, *Ville du Havre*, which left New York for Havre, France, on Nov. 15th, under Capt. Surmont, came in collision with the British steamship *Loch Earn*, and sunk almost immediately. Over two hundred lives were lost, and these of the first families of New York, Boston and Chicago, who were going to Europe for health or pleasure. According to the latest reports, there were but eighty-seven of the passengers and crew saved.

Prospects Ahead.

Some time ago we referred to a movement then said to be on foot in England, looking to an association of capitalists for the promotion of direct trade with the Southern and Western States, and more particularly the introduction of capital, at low rates of interest, for the development of the vast agricultural and mineral resources of our own and other States in the South and the great Mississippi Valley. The organization of the society is now completed, and it is announced that early the next season a deputation of heavy capitalists will visit the southern country, with a view to personally inspecting the great fields of mineral and agricultural wealth, which offer such grand inducements to capital and labor. The deputation will be composed of some of the leading business men of Great Britain, France and Germany. The beneficial results of such a visit, carried out on a comprehensive plan, can hardly fail to be of the most important character.

Several causes are said to have stimulated to this movement in the three leading governments named. Every year demonstrates more conclusively the fact of their growing dependence on this country for breadstuffs, and ultimately no doubt for much of its mineral wealth. Professor Anstead, of London, who, we believe, is President of the Geological Society of England, is now in this State, in the interest of heavy English capitalists, looking to development of our coal and iron resources. He lately appeared, before the Senate Committee on Transportation, at Charleston, West Virginia, and there testified to the importance of the James River and Kanawha Canal, to the great and growing interests, agricultural and mineral, of the West. He is reported as saying that one of the most powerful claims of this route for development lies in the fact, that were cheap transportation opened up from our coal fields of the Kanawha River to Norfolk harbor—one of the finest in the world—it would ere long become the greatest coal station on the globe. It would defy competition from any other part in the world for supplying the Eastern cities, South America, West Indies, and many of the English colonies.

He is further reported as saying: "The day is now made upon England would be released, and fleets from three-quarters of the globe would come and go out thence, carrying the best qualities of coal to the different naval stations. Cheapness, quality and proximity would all combine to make trade in coal follow this, its legitimate and natural channel. This route, for which

...ued from fourth page.

The term of office of ...ves and consequently the term of each congress, expires by law on the 4th day of March of every second year. The duties of Congress are to lay and collect taxes, imposts and excises, which must be uniform throughout the United States; to borrow money, when necessary, on the credit of the United States, to coin money as required, to define and punish piracy and offenses against the law of nations; to declare war, to raise and support the army and navy; to provide for calling the militia when required, and to exercise exclusive legislation, in all cases, over the District of Columbia. The limits of congressional power are well defined, and are as follows: Congress can make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press, or the right of the people peaceably to assemble and to petition the government for a redress of grievances. Farther than this, Congress has the right, in the case of the President's or Vice-President's inability to act, for any cause whatsoever, to declare what officer shall act as President until the disability be removed or another President elected.

The judiciary of the United States consists of a Supreme Court made up of one chief justice and eight associate judges, who are appointed for life by the President, by and with the advice and consent of the Senate, so that in this way Congress exercises control over both the other branches of the government, and is, to some extent, responsible to the people for the action of the executive and judiciary departments. Congress also has power to admit new States to the Union, and to dispose of, and make all needful rules and regulations respecting the territories and other property belonging to the United States; and it alone has authority to define the punishment of treason. The State governments are carefully limited in their independence, for without the consent of Congress no State may lay any duty on tonnage, keep troops or ships of war in times of peace; enter into any agreement or compact with another State or with a foreign power; or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

While the above statement of the powers and limitations of the National Congress does not, by any means, cover the whole ground, it still gives most of the facts necessary to an understanding of its place in our system of government, and shows plainly enough that it is truly the *people* who govern. The executive power is vested in a President, who, with the Vice-President, is elected for four years by a college of electors, each State returning as many electors as it is entitled to have senators and representatives in Congress. In South Carolina these electors are appointed by the legislature, but in all the other States they are chosen by popular vote, which, of course, puts the choice of the President and Vice-President directly into the hands of the people.

In short, the more closely our institutions are studied, the more evident it becomes that the minds which originated them were thoroughly imbued with the spirit of republicanism, and had strong faith in the final triumph of the principles for which they themselves risked everything. We, who have inherited from them the right to call ourselves citizens of the United States, ought, as one of our first duties, to make ourselves thoroughly conversant with the theory and practice of our government. We ought to understand its machinery and the differences between it and other existing systems, and to know what its enemies say against it, and what evidence its friends can bring forward in its favor. Ourcitizenship will not be of much valuo to us as long as we remain ignorant of what citizenship means, and no man can do his duty at the most unimportant political meeting until he knows the reason for his appearance in it and something, at least, of the probable results of his action. There is great need of a more intelligent comprehension of the principles of republicanism, and we should all remember that here in our own country, republicanism is on trial. If it fails, the people, who were too ignorant to govern themselves, will have to bear the disgrace; if it succeeds, the people, who have shown themselves equal to the demands which such a republic as ours makes upon its members, will have won for their country a glorious place upon the world's list of nations.

"long chase," but you feel sure it will stop some time—there is no run against a stone wall. You swoop down upon it like a ... on a butterfly. Hurrah!—so—a sudden flaw lifts it just as your fingers touch it. You fling yourself farther forward, slip, and down you go on your nose, while your hat sails majestically away before the wind in a manner full of grace if you only had time to watch it. Up and off again. The boys and street dogs join in the chase. It is growing exciting. The dogs bark and the urchins shout, you are getting quite into the spirit of the thing yourself, when you meet that pretty girl you are trying to captivate. She springs out of your way, looks startled, alarmed, inquiring, and then bursts out laughing, while on you rush; glad at least to get out of sight. But now you have lost your head as well as your hat; you don't see what you are running after, or, where you are running to; so, the next thing, you dash into a portly old gentleman with his arms full of bundles, and almost knock the breath out of him. You apologize, help him pick up his bundles, hand him his cane, and mutter something about such a windy day, and how a gentleman feels at losing his hat, when a very dirty boy steps up and asks you sixpence for fishing *something* out of a mud puddle, and the portly old gentleman gasps scornfully—"*Is that* what you were running after?" Well, you can get another, you know—hats are plenty. If you had only thought of that a little sooner though!

But plenty as hats are, and this was what we intended to say at the beginning of this article which is designed to be serious, we had as small an idea, as some of our readers have, perhaps, of the extensive provision that is made for covering the heads of the people, till we stood the other day in the work rooms of the "Union Straw-works" at Foxboro, Massachusetts, which we visited in company with the "Hampton Students," who are seeing as well as singing, a good deal on their travels.

"How many straw hats do you make in a year?" we inquired of the gentleman who kindly piloted us through the works. "Two millions," was the overwhelming answer, "and these are all made in the working season from December to July. We turn out sometimes in a busy season, eleven thousand hats a day;" and all this enormous supply for the country alone; none are exported. There are various other straw hat manufactories in the country, but this is the largest. In the busy season, eleven hundred hands are employed, seven hundred of whom are women. These operatives belong chiefly to a very intelligent and superior class of working people, principally American, from Maine and Cape Cod. They are well taken care of; there are three large boarding houses connected with the factory for the women, and there is a library of seven hundred volumes belonging to the employees. As they are paid by the piece after learning the trade, skill and industry tell upon their incomes, and some of them carry back to their country homes comfortable little sums for future capital or dowry.

The boys toss their hats up into the air in their fun, without much thought that they are the same from which the world be surprised to hear that it comes all the way from China—most of it. The Canton straw is the best, and work over there (or under there) is vastly cheaper than here, so it pays for the factories to send over the blocks and the thread to the Chinese workmen who braid the straw and sew it over the forms. Some of the braid is now imported and sewed here. Seven agents of the company are employed in distributing this braid to the women straw-sewers in the country for twenty miles around Foxboro. There are also one hundred and fifty straw-sewing machines in the factory, on which a girl can sew the braid into the shape of a hat in a very few minutes. This is no cheaper than hand-sewing but more convenient, as a sudden change in the fashions sometimes requires a sudden change in the work. After the hat is sewed by hand or machine, it has got to be bleached, blocked, pressed, trimmed, shaped and packed. We have little room to describe all these processes, and they must be seen to be clearly understood. The hats are bleached by boiling in chemicals, and steadily passing through a preparation of glue. They are then hung out to dry. It is amusing to see a large meadow full as it can hold of hats set up on short stakes—not straw hats only, but huckram bonnets ... which are also made here ... of a shape ... ing, by hand or machine. They are then shaped for the ... time, the proper roll being given to the brim, and then are ready to be packed for sale.

And this is the history of a straw hat, at least till it comes to the boy's hands. After that we fear its course is downward till it reaches the...junk shop or the gutter.

The fashion which control the makers and wearers of hats are brought one season for the next, from France and England. The next spring style is gentlemen's straws will be nearly as tall as a silk "stove pipe," the upper half of open-work straw for ventilation. In this bit of fashion news "The Southern Workman" is quite ahead of the Press in general.

A Novel Spoiled.

The heroine was not beautiful, to begin with, nor in any wise remarkable. She was just a plump, winsome little maiden, and she stood at the ... that opened on Sunday evening, with an air of very reverent of staidness and composure. Outside the gate was a tall figure, a face bronzed and bearded, and a low voice uttering words half pleading, half resentful. There was a moment's pause, then the voice questioned, with a dash of bitterness—

"Shall I go, Maggie?"

"Just as you please, Mr. Clifford!" whereupon the questioner turned suddenly about and strode rapidly down the country road, crushing the glittering sand under his feet, while Maggie sped into the house, up to her room, and bolted her door as if afraid of being pursued. She peeped through a window, from behind the curtain, until the lonely pedestrian on the quiet road had vanished from sight; then she assured herself that "if Tom chose to act so—so—she didn't care!" and proved her utter indifference by burying her face in her pillow with a burst of sobs, and entire forgetfulness of the pansies in her pretty hat.

They had quarreled about nothing,—at least she couldn't remember what it began with—but, of course, it was all over between them now, and he would go away as he had said. She wondered, as she lay with her flushed, tearful face turned toward the stars, how it would seem to do that night, and go away from it all. Wouldn't somebody be sorry then? She almost wished she could do it.

Tom, on the other hand walk, discoursed furiously to himself upon the fickleness and perversity of all womankind. "Not one of the whole race worth breaking a fellow's heart for," he remarked savagely, though with a queer little quiver about his lips the while. One thing was certain, he would not stay moping there. The world was wide, and there was nothing now to hold him back. He would resign his place in the village store, and join the party for Arizona. Yes, he would take the first train for the city; there whom are women. These operatives belong chiefly to a very intelligent and superior class of working people, principally American, from Maine and Cape Cod. They are well taken care of; there are three large boarding houses connected with the factory for the women, and there is a library of seven hundred volumes belonging to the employees. I thought it was big enough to reach ... to the top, and it does," said Carlie disparagingly. "Anybody could have got over the side of it if they wanted to. Now, pay o cent."

Billy stepped a valiant demonstration to ... Carlie's dollar down this piled it," but Carlie remonstrated. Presently, a ... in a neighboring lot suggested an ... of relief, and the call ... from, in high spirits, ... to appropriate them. ... they could carry but one at once, but gradually they piled them up, with one end ... fence and the other resting upon the ... quite forgetting, in their zeal for a thorough ... cade, to make any arrangement for ... ing their gate when the required toll should be paid. It was slow, tolsome building; but the two little faces, though flushed and perspiring, were also triumphant as they gazed upon the completed structure, with its last pole standing nearly upright against the cart. Partly for coolness to herself, partly by way of ornament to the edifice, Carlie removed her sun-bonnet from her head and hung it upon this highest point.

"But nobody can't get through that!" exclaimed Billy, panting?. "How much do you s'pose we'll make?"

"Dollar, maybe," replied the sanguine Carlie, her eyes growing round with the stupendous prospect. "I'm too tired to build any little house to live in to-day; let's stay out-doors."

Out of doors was very pleasant. They sat down on the soft grass that edged the road and curled the long stems of dandelion while they waited for their fortune to come; growing so interested in their occupation at last, that they had almost forgotten that they were waiting for anything, when a horse and rider came dashing down the road, and Tom Clifford, with barely time to reach the village in season for the city-bound train rode full upon the barricade. For a gloomy and desperate suitor, bent upon rushing to the ends of the earth, to be stayed in his course by an old cart loaded with bean-poles, was certainly exasperating. Nevertheless he could not go on; and as the two beaming and satisfied young faces peered out at him, he demanded in vexed astonishment:

"What on earth have you got here?"

"We're, a toll-gate," explained Miss Carlie with dignity. "Me and Billy made it, and we'll let you through if——"

But the statement of terms was cut short. The horse at that moment espied the fluttering white sun-bonnet, and seizing so favorable an opportunity to be frightened, sprang suddenly to one side, flung his unsuspecting rider to the ground, and sped away up the road again. Tom rolled over and sat up in a bewildered sort of way, got upon his feet slowly, brushed the dust from his clothes, and looked after his retreating steed with a long whistle.

"Well! it isn't likely anything will stop him now until he gets home, so I might as well stay and pull this thing down. What possessed you two youngsters"—... these Tom paused, laughed, and grew more like his good-natured self than he had been for twenty-four hours. The defiant, indignant, disappointed expression of those little, dirty faces was irresistible. Carlie protested stoutly when the arcana had begun to be explained, but Billy and Tom persuaded and explained, and the promise of a ride in the cart when he rolled it back up the lane, effected a satisfactory capitulation.

The toll-gate disposed of, Tom's next move was to follow his horse, and he speedily discovered that the wise animal had not taken the trouble to go home, but had stopped nearer by at a place where he had frequently been allowed to make himself quite at home. He had been recognized at once, and saddled and bridled but ridden without suspicions of evil. The women had gathered about him, Aunt Polly with hands dripping from the suds, Aunt Becky leaning upon her crutch, and Maggie pale and trembling—when Tom arrived upon the scene, with nothing at all the matter but a rent in his coat. In the kindness of her heart Aunt Polly insisted that it should come in for repairs. "She was wasting, to be sure, and Becky was no great hand with any needles but knitting needles, but Maggie could do it slick as you please."

The owner gladly consented, "It did look rather badly to wear through the village—if it wouldn't be much trouble to just put a stitch in it."

He watched the color come back into the face bent so steadily over that piece of darning; watched the white fingers busy with their task, and remarked significantly:

"What a talent you have for making things right again."

"After other people have made them, crooked," added Maggie, promptly.

"I don't think these threads will show that they were ever separated."

Maggie made no reply to that, and he looked on in silence a few minutes longer.

"There! the breach is made."

"Quite," she said.

---

that has yet been heard in this world; and still more perfect, as what earthly song is now—if some voices are still wanted to fill up the harmony, there is more hope to-day than ever, that the time is approaching when the sounding brass and tinkling cymbals of dissonant sects shall be drowned in the grand chorus of universal Love.

The recent meeting in New York was the Sixth Conference of the World's Evangelical Alliance. The first was held twenty-seven years ago in London, in 1846. The first proposal of such a meeting came from an American clergyman. It met with an unexpectedly hearty response from pastors and churches in all countries of the Christian world, in which a strong desire for closer intercourse had long been growing. On the appointed day, the 19th of August, 1846, some eight hundred leading Christians, including many learned Congregational and Methodist ministers, from our own and other nations, assembled in Freemasons' Hall, London, to consider the great question of forming a World's Evangelical Alliance. Episcopalians, Methodists, Presbyterians, Independents (as the English Congregationalists are called), Baptists, Moravians, Lutherans and others were represented in the great assembly.

In the words of one of the German delegates to the recent New York meeting, Dr. Noel of Berlin: "The Alliance thus formed, does not aim at a union of all branches of the Church into one denomination; still less does it seek to establish a new church or to melt and mix together those which in different languages, countries and forms serve God their Saviour after their own manner. But the Evangelical Alliance will seek to inspire them all with the consciousness that their members, one and all, belong, as children of God, to one blessed Lurd and Saviour, and are in duty bound to join in true love for the purpose of doing His work."

The practical results of this united Christian work have been signal and blessed. It has been begun and continued with united prayer. One of the earliest resolutions passed by the Alliance was in these words: "That it be recommended that the week beginning with the first Lord's day of January in each year, be observed by the members and friends of the Alliance throughout the world as a season for concert in prayer on behalf of the objects contemplated by the Alliance." This annual Week of Prayer has been increasingly observed year by year, and as Dr. Noel goes on to say, "In reviewing the events of the last quarter of a century, Christians cannot fail to recognize God's goodness in answering these united prayers of His children. The opening of many lands to the free circulation of the Bible, and proclamation of the Gospel, the breaking of the chains of slavery and serfdom, the religious revivals in many lands, and the increased life in the Christian Church, have seemed to follow as very direct answers to these Christian prayers and efforts.

The first meeting of the Evangelical Alliance after its formation, was held in London, in the autumn of ... after ... at rare intervals; the third in Berlin, Prussia, in 1857; the fourth in Geneva, Switzerland, in 1861; the fifth in Amsterdam, Holland, in 1867. All of these meetings were largely attended by delegates from all the branches of the Alliance in different lands, and distinguished by peculiar interest and followed by much good done.

The sixth meeting has just been held in New York. It has been the largest, and in many respects, the most interesting and remarkable of all the meetings than so far gone, to separate the sons of Noah, to give them different languages to send them off in different directions, that the whole earth might be peopled; but while Thou didst scatter them abroad on the face of the earth, Thou didst also provide that they should come together. Thou hast raised up the Christian Alliance, and by that means the families of the sons of Noah are gathered together again, and meet on the same platform, preaching the same Jesus, and for the accomplishment of one great purpose. We thank God for what has been done. God grant that those who have shared in this great Conference may be strengthened to carry the Truth abroad, and that the Church militant may be enabled to join the Church triumphant in glory."

We might easily fill this whole number of "The Southern Workman," with interesting extracts from the many able speeches that occupied the ten days' meetings—from the venerable President of the Alliance, ex-President Wolsey of Yale College, from ex-President Hopkins of Williams, Rev. Henry Ward Beecher, and many other of our American as well as of the distinguished foreign delegates; but these must suffice.

A spirit-stirring Farewell meeting at the Academy, overflowing into four or five other halls, closed the Conference on ...

Englishman. I expected to see much here that would interest me, but my expectations have been so greatly surpassed, that though I have been here only a month, I feel one-half American already. I look round here, and while I see the Stars and Stripes, my eye rests immediately after on something which looks like our English Union Jack. I hope they will always be folded together in that peaceful way. The worst of all things is, for Christians to stand aloof from each other. Like the man who saw on the hills of Scotland what he thought to be an enemy, but who found, as the mist cleared away, that it was his own brother, so amid our controversies, we see through a mist, and mistake for enemies those who are really our brethren."

Very great interest was excited by the delegate who came farthest to the Alliance, even 14,000 miles—the Rev Narayan Sheshadri, a converted Brahmin from East India. He appeared on the platform in his native costume, of flowing robes and white turban, and his very eloquent use of our language, which he spoke with wonderful fluency and almost without any foreign accent—far more perfectly than any other one of the foreign delegates—caused the churches and halls in which he spoke to be almost thronged.

An interesting letter was read from the Conference of the "Old Catholics," as they call themselves, then assembled in Constance, Switzerland. This body consists of a large number of priests and members of the Roman Catholic Church in Germany, who refuse to acknowledge the infallibility of the Pope, which he proclaimed as a doctrine of the Church at the so-called Œcumenical Council in Rome, in 1870. They have given up, or are giving up more and more, prayer to the saints, the worship of the Virgin, the sale of indulgences, and obligatory confession, and have recommended that their priests shall be allowed to marry. They have already nearly one hundred congregations, with five thousand members, in Germany, and now that peace is restored with France, the movement will doubtless spread through that country which has always had a large party of Liberal Catholics. It has already spread through Catholic Switzerland.

In a paper read by Rev. Dr. Hoge of Richmond, upon the condition of Christian work in our Southern States, he says: "Virginia has taken the lead in the great work of education and there, the Free School system, inaugurated in 1870, has been most faithfully and efficiently managed. The establishment of Normal schools for the Freedmen, like the excellent Agricultural and Polytechnic Institute at Hampton, near Fortress Monroe, will do more than anything else to confirm their possibly wavering interest in educational schemes for their benefit. Enlightened and well-trained colored teachers, thoroughly understanding the idiosyncrasies of their own race, and sincerely desirous to promote their good, without partisan or selfish aims, will become the best agency for keeping alive their present zeal for self-improvement, and for inspiring them how to guard the great ... conferred upon them against the raids of pillaging and unprincipled demagogues."

The colored members of the Alliance were largely represented in the meetings, and I cannot better close these extracts than with a few words from a prayer made on the fourth day of Association Hall, by Rev. J. P. Campbell, D. D., from Philadelphia, Bishop of the African Methodist Episcopal Church: "Oh Lord, Thy wisdom and goodness was manifested when so far gone, to separate the sons of Noah, to give them different languages to send them off in different directions, that the whole earth might be peopled; but while Thou didst scatter them abroad on the face of the earth, Thou didst also provide that they should come together. Thou hast raised up the Christian Alliance, and by that means the families of the sons of Noah are gathered together again, and meet on the same platform, preaching the same Jesus, and for the accomplishment of one great purpose. We thank God for what has been done. God grant that those who have shared in this great Conference may be strengthened to carry the Truth abroad, and that the Church militant may be enabled to join the Church triumphant in glory."

THE SENATE OF THE UNITED STATES.

will be remembered that when the colonies separated from Great Britain, the States retained their independence, so far as concerned their own internal affairs, but united in giving a portion of their power to a central government, and agreeing that the laws made by that government, so long as they did not conflict with the Constitution, should be of superior authority to the State laws.

All powers that the Constitution did not expressly give to the federal, or central government, or did not expressly prohibit to the States, were reserved to the States, respectively, or to the people, and the original agreement of the States still stands, the federal government holding now, as it did at its first establisment, the chief authority. There are three branches of the main government: the legislative, the executive, and the judicial; but as it is with the legislative, or law-making branch that the we have chiefly to do, we shall describe that as fully and clearly as possible, for it is a subject which should be thoroughly understood by every citizen of the United States. Our national legislature consists of a Congress, composed of a Senate and a House of Representatives, the former of which consists of two senators from each State, chosen by the respective legislatures for six years, in such a way that one-third of the whole body goes out of office every two years. The Vice-President of the United States is president of the Senate by virtue of his office, and in his absence the Senate elects a president, who acts temporarily. A senator must be thirty years of age, must have been for nine years a citizen of the United States, and, at the time of his election, must be a resident of the State for which he is chosen. The House of Representatives is composed of members chosen for two years by the people of each State; they must be twenty-five years of age, seven years citizens of the United States, and at the time of their election must be residents within the States for which they are chosen. The number of representatives in Congress is fixed, by law, at two hundred and thirty-three, and they are apportioned among the several States according to their representative population, every State being entitled to at least one representative. There are also delegates, one from each organized territory, who are entitled to speak in the House, but not to vote. The House of Representatives chooses its own speakers and other officers, has the sole power of impeachment, (the Senate having sole power to try all impeachments made by the House,) and originates all bills relating to revenue.

Members of both Senate and House receive $6,000 for each congress, ($3,000 a year,) and mileage at the rate of $8 for every twenty miles of travel in the usual road in going to and returning from the seat of government. The pay of the Speaker of the House and the President of the Senate *pro tempore* is $12,000 a congress.—The regular sessions of Congress commence on the first Monday of December in each year, and extra sessions may be called by the President whenever he considers

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. III. HAMPTON, VA., JANUARY, 1874. NO. 1.

SANTA CLAUS. — Drawn by C. G. Bush.

124790
15

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, RICHARD TOLMAN, J. H. LARRY, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

Southern Workman should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. H. LARRY, *Publishing Department.*

HAMPTON, JANUARY, 1874.

Agassiz.

In the death of Louis Agassiz which occurred at Cambridge, Massachusetts, at 10.15 P. M. December 14, the people of America have lost a faithful friend. Many of our readers knew him but to love and respect, while those who knew him not, will reap benefits from his noble and self-sacrificing life. One of the back numbers of our paper contains a fine portrait of this celebrated scientist, and a short sketch of his life; but as many of our present subscribers have not seen this number referred to, we will give another sketch of his life and works. His full name was Louis John Rudolph Agassiz. He was of Huguenot descent, born in Motiers, Switzerland, May 28, 1807. For six succeeding generations his lineal descendants were clergymen, his father being a Protestant pastor over the parish of St. Imier. His mother was the daughter of a physician, and was herself a woman of an extensive education. She taught him in his early school-days and, in fact trained him in view of making him a physician. He had a nobler thought, however, to which he devoted himself with an honest and untiring zeal. This devotion is perhaps best indicated in a characteristic reply which has often been quoted, but it is worth being again mentioned. Once when a business man pressed him to become a partner in a business where his knowledge would be considered of great value, he replied: "I have no time to make money."

He was once beset by publishers to write a book for school use, and a good round sum was offered him for the work. He answered, that he was not the man to do that sort of work, and also the less of it was done the better. "It is not books we want, but students. The book of Nature is always open. All that I shall write will be to make them study that book, and not pin their faith to any other."

The secret of the great personal influence which he everywhere exerted, lay in his singleness of purpose and simplicity of style and manners. He kept one object in view and seemed to forget everything else. He was simple in dress and living, and might have been mistaken for some sturdy mechanic. His massive head, slightly inclined forward, rested on a thick-set, heavy frame. His face was ever beaming with good humor. His eyes brightened with the kindliest interest when giving information to some inquiring student, or revealing to an audience a new discovery. His addresses were generally extemporaneous, and though the English language was not his native tongue, he used it like a master.

The most important undertaking which will suffer by his death, is the Cambridge Museum. Of this he was the founder, and worked hard to make it a success. It has been in operation but fourteen years, but is now probably second to none in the world, if we may take Professor Tyndall's judgment in the case. In this work he received valuable pecuniary aid from Francis C. Gray of Boston, who bequeathed for this purpose, in 1858, the sum of $50,000. The next year, the State of Massachusetts voted $100,000, $71,000 being raised by private subscription. Since then, $150,000 have been added to the fund: $25,000 by the State, $100,000 from Mr. Shaw, and $25,000 from Alexander Agassiz.

Another work linked with his name should be mentioned, the Natural History School at Penikese Island. It was started last year under favorable auspices, and the many teachers who attended it during the summer months will sadly regret the loss of its teacher, whose place cannot be filled in their hearts, even if it is possible to fill it in the school. A Mr. Anderson furnished the funds for this experiment, and it is to be hoped that it will still go on successfully.

Though he was an adept in all branches of Natural History, he has done more in the science of ichthyology than any other man. The fossil branch of this science is almost wholly due to his labors. One work of his on this subject, in which he was aided by Baron von Humboldt, is in five volumes, with a folio atlas containing three hundred and eleven plates, where seventeen hundred species are either wholly or partially figured and described.

Nearly forty years ago he began to unfold his glacial theory, which met from his brother scientists very violent opposition, but to-day that theory has become generally accepted. He has had high honors conferred upon him by scientific societies the world over. He was opposed to Darwin's theory of the origin of mankind, or the Development theory, and wrote a masterly article on the subject, for the New York Tribune, which received much attention and criticism. His work increased with his years, and his great responsibility, no doubt, hastened his death. The whole world will miss and mourn him, and his labors will still remain as lasting monuments.

The Boston Tea Party.

Boston has had a Tea Party! Is that anything surprising? perhaps you will ask. Yes, there *is* something surprising about this tea party. Boston only has this kind of a tea party once in a hundred years, and this is but the second. The first was the largest tea party ever heard of, and it was the greatest surprise of the age. It surprised kings and councilors and shook the throne of King George. It took place Dec. 16, 1773. There were some peculiarities about this tea party. The guests were not invited or expected, and when they arrived they didn't drink any of the tea, but simply acted as waiters and *passed it round*, and old Neptune (every Normal School boy and girl knows who he is), drank the whole of it. He drank three hundred and forty-two chests of tea in less than two hours. If tea drinking leads to gossip and scandal, as is said, how garrulous the old Sea God must have got by the time he had drank his three hundredth chest, and what yarns he must have spun about Amphitrite, or "Amphy," as he used to call her, for short, and all his other wives and their relations. But you wish to know about the Tea Party, and why they have had another; I will tell you. You all remember that about a hundred years ago, when this country belonged to Great Britain, attempts were made by the British Government to tax its colonies for its own support. The Colonists, feeling that taxation without representation was tyranny, resisted what they considered an act of oppression, and at last declared their independence, and after the war of the Revolution, they triumphed. Among other methods of taxation was a duty on tea, which the colonists determined not to pay. They held meetings all over the country, and denounced the tax, and pledged themselves not to buy or drink any tea while this duty was levied. When the first ship, the *Dartmouth*, which came to Boston with a load of tea after the passage of this act, arrived, there was intense excitement. She anchored, Nov. 28, 1773. The citizens held a meeting, Nov. 29, in Faneuil Hall, the famous "Cradle of Liberty," as it is well called, which was attended by more than five thousand people, and which lasted two days. They passed resolutions calling on the agents of the ship to send her back, with her cargo to England. This they agreed to do, but the English Governor, Hutchinson, refused to let the vessel go back until duty was paid. As soon as the Governor's decision was made known, on the evening of Dec. 16, a party of fifty to sixty citizens, disguised as Indians (who were plenty in those days), went on board the three vessels (two other ships having arrived with tea meanwhile), and, as I said before, in less than two hours every one of the three hundred and forty-two chests of tea were taken out, broken open, and cast into the salt waters of Boston harbor, much to the astonishment, no doubt, of the eels and fishes, who were not accustomed to such a luxury. They did this, sounding the war whoop, but without injury to any other property or any man's person. When their work was done, the crowd that had followed them, quietly dispersed, and the town became before midnight as quiet as on a Sabbath. Of this bold act, John Adams wrote in his diary as follows: "Last night three cargoes of Bohea tea were emptied into the sea. This is the most magnificent movement of all. There is a dignity, a majesty, a sublimity, in this last effort of the patriots that I greatly admire. This destruction of the tea is so bold, so firm, intrepid and inflexible, and it must have such important and lasting consequency, that I can but consider it an epoch in history." And on the same day he wrote to James Warren: "This is the greatest event which has yet happened since the controversy with Britain opened. The sublimity of it charms me."

The example of resistance which had thus been set in Boston was followed elsewhere. The teas shipped to New York and Philadelphia were sent back in the ships that brought them, without being landed; in Charleston they were stored in a damp cellar, where they soon spoiled. The destruction of the tea was, in truth, an epoch in history, of that struggle which so soon resulted in the total overthrow of the authority of the mother country an epoch only equalled in local interest by the evacuation of Boston, a little more than two years afterward.

The Boston "Advertiser," to which we are indebted for most of the incidents here related, pictures the astonishment with which one of these stern patriots, if he could revisit the earth, would look on the Boston of the present day: *then* a small town of 17,000 inhabitants; *now* numbering over 300,000, its boundaries enlarged, and its flats filled in and covered with palatial residences, and noble granite warehouses taking the places of the fashionable dwelling houses of his day. What would be his amazement if he were to pause at the site of the house of Samuel Adams, and look at a procession of queer looking carriages, moving along on iron bars, and was told that they contained chests of tea, which had been brought across the Pacific Ocean and over the whole width of the Continent in less time than it took, in his day, to bring the "plague" (as our patriot fathers used to call the taxation tea), across the Atlantic from England. Perhaps his amazement would be even greater to be told that a message might be sent to the successor of George III. and an answer received in less time than it took the agent of the tea ship to ride out to Milton Hill for Governor Hutchinson's decision.

So you see there *was* something surprising about this tea party given one hundred years ago in Boston, and why its citizens have now celebrated the centennial anniversary of that important event, with a social gathering in Faneuil Hall, where tea took the place of wine as a beverage in which to pledge each other to the maintenance of those grand principles of liberty and equality for which our fathers fought and suffered. Faneuil Hall is no longer large enough to contain even a fair representation of the citizens of Boston, and other public halls were engaged for the occasion, where speeches, tableaux of the scene in Boston harbor, were given, and where tea was handed round, not only by Indians, but by beautiful women in the dress of the olden times. May we never forget nor desert the great principles which our fathers made such sacrifices to secure.

The Hampton Students.

This band of Normal School singers, who, nearly a year ago, left their studies, and under the leadership of Mr. Fenner, their musical instructor, went North to raise funds by their concerts, for the erection of a new building, returned here at Christmas to spend the holidays among their old friends and schoolmates. They have received, as they deserved, a royal welcome from both students and teachers, and the massive walls of "Virginia Hall," now receiving its roof, greeted them with eloquent, though silent testimony to the success of their labors. The deportment of our singers, under all circumstances, has been such as to win for them, from the best quarters, unqualified commendation. We are gratified to state that the reputation of the Hampton Normal School has been well maintained by these, its first representatives at the North, and that while the large audiences, before whom they have appeared, have been entertained by their music, they have been no less gratified and pleased at their modest bearing. Their course has been followed by their teachers with deep interest; and it has been a great satisfaction to us to feel, that the Hampton Students have not only not been spoiled by the public life they have led, and the attentions they have received, but that they return to us animated by even a more earnest desire and intention to consecrate all their powers to the great work of elevating their race. We hope their stay here will be full of enjoyment, and that when they leave us to resume their labors in behalf of the school, they will go forth with the same high purposes which have hitherto animated them, and which have brought for them such a satisfactory record.

Draining.

BY GEORGE DIXON.

If I were asked what was necessary to secure the successful raising of uniform, good crops; my reply would be, first, get the water out of the soil; next, plow deep and stir the subsoil; then, get organic matter into it. These are all dependent on each other—without draining, deep and subsoil plowing is of little advantage; and green manuring, that is adding organic matter to the soil by plowing green crops into it, is difficult to effect without the two former preparations of the land. In England, draining is considered the farmer's *sheet anchor:* without it, he knows he is always contending with an enemy under his feet, which is robbing and injuring him by day and by night; and the only effectual way to get rid of the foe is to give the land a thorough underdraining. I purpose in this article to bring before you the plan of draining adopted in England, which has taken half a century to mature. The English farmer first tried what is being done in this State, to get clear of the water by open ditches: these, in the north of England, are called "*stells.*" The chief use of these stells or ditches was to give an outlet to the surface water, which collected in the furrows on each side of the ridges. This ridge and furrow plan was, no doubt, introduced by the Romans, and continued to be the only plan of getting the surface water off the land, till the beginning of the present century. These ridges varied in width from twelve to twenty feet—the wetter the land the higher the ridges. By constantly gathering them up with the plow, the center of the ridge was often two feet or more higher than the furrow. It was customary to see the middle of the ridge producing a good crop, which gradually diminished down to the furrow, where seldom anything grew, in consequence of the roots of the plant almost immediately striking the water. This ridge and furrow plan certainly ought to be adopted on all flat lands and wet bottoms, till the farmer can afford to have them thoroughly underdrained. It would be a great advantage to have the arable uplands also gathered up into ridges for reasons which will be given.

In England, experience proved that these open ditches, or stells as they were called, were of little use, however deep, in draining the water from the subsoil. The sides soon hardened by the heat of the sun, and it was no uncommon thing, when the surface water got dammed back in the furrows between the ridges, to find it stand till it was stagnant, within a few feet of the open ditch.

On the moors in England, springe of water rising through deep, light soil to the surface, produce bogs which are hidden by moss growing over their surface, in which cattle, in attempting to pass, sink so deep as to be unable to extricate themselves, and have to be dragged out by chains. So treacherous and so dangerous are some of these quagmires, that travelers, on horseback, getting into them in the dark, have sunk out of sight, and all that was left to tell the sad tale, was the hat of the rider, too light to sink with its owner. When these moor lands were enclosed, the farmer endeavored to tap these springs and draw off the water underground. This was the origin of draining. Sometimes these springe issued from the sides of hills, from some rock strata under the soil, and subsiding in the level ground at the foot of the slope, injured the crops. To get clear of this water, the farmer made at first a ditch at the foot of the bill, which kept the water from pressing on to the level ground, but the hill sides still remained wet and unproductive. To remedy this, ditches were cut parallel with each other across the slopes, till the water was intercepted. In order that these hill sides might be cultivated, the plan of covered drains was hit upon. They were made by fixing stones on each side of the narrow ditch, and placing flat stones for covers on the top. The soil was then put back, and the drain was out of sight. The depth was seldom more than was sufficient to keep the cover stone out of the reach of the plow. The farmer soon perceived that his crop was best over these drains; and that its influence extended on each side to a limited diatance. Scientific farmers now turned their attention to draining. They saw something in it beyond taking the water from bogs and hill sides. Their first experiments, in general draining, were with wet bottoms and clay lands, in which water abounded in the surface soil. The only mistake they made in draining these lands was the want of depth. To get the cover stone out of the way of the plow, was then thought sufficient. The advantages of deep draining were not then discovered. The farmer at that time never thought of draining his uplands, particularly if they sloped so as to allow the surface water to run off by the furrows. Science was again brought to bear on the subject; and explained to him the way in which draining not only improved his low, wet lands, but gave him the reason why his light uplands would be equally benefited by it. If water is allowed to stand in contact with the subsoil, whether it comes up in springe or falls from the heavens, it generally produces noxious compounds which impair the growth of plants, whose roots strike down into them. Draining not only draws out these noxious fluids from the soil, but, in wet seasons, when there is an excess of water from the clouds, makes a ready way of escape for it; without which it collects on the surface and carries away the soil with it, making those awful washes which have destroyed thousands of acres in this State. To properly drained lands these excessive rains are an advantage. The water, in percolating through the soil, not only washes out the noxious substances which poison the roots, but renders the subsoil available for the inorganic food of the plant: and, as it has been proved, that every shower brings down with it ammonia and other nitrogenous matter, held in solution in the vapor contained in the air and the clouds, organic food is thus taken to every root of the plant. Science has also proved that growing plants also require supplies of fresh air, at their roots, as well as in contact with their leaves. The descent of rain water to the drains after a shower, displaces the stagnant air, and carries with it fresh supplies of the necessary elements contained in the atmosphere, and thus, where good drainage exists, the soil is refreshed and fertilized by every shower that falls.

Another of the benefits of draining is that it changes the physical structure of the soil. Lands which, before drainage, were stiff, hard, sour and bad to work, when drained, became dry, loose and sweet, so that they are worked much more easily. It is a well known fact that water in the soil increases evaporation, which makes the land cold; rendering seed time later, and making the crops require more time to mature. Water passes so readily through drained soil that, as soon as the rain ceases, the land becomes dry, and the farmer is able at once to proceed with his operations. But in undrained lands how often does it happen, that by having to wait till it dries, the season is lost.

Experience has proved that the deeper the subsoil can be penetrated and loosened the better it is for the growing crop; hence deep drainage gives free scope to the subsoil plow and allows the root to penetrate, and draw its inorganic elements from that which, before drainage, was often the death of the plant. For want of draining in some districts in Scotland, as soon as the roots reach the noxious matter in the subsoil, the crops begin to sicken. The beans and oats look well up to April and May, but in June and July, when the roots get down to the ochrey subsoil, they blacken and fall. It is a local saying when this happens, that "the beans and oats have gone to Auchtermuchty," a fair being held at that place about the time the crop fails. As soon as these lands become drained and the noxious fluid in the ochrey subsoil is permitted to pass down, they seldom fail to mature the crop.

The fact being established that draining greatly increased the produce of the cereals, particularly wheat, the British Parliament, alarmed at the large importation of grain, and wishing to be independent of other countries for the food of the people, also to encourage the farmer, passed a statute enabling him to borrow money of the Government, for the purpose of draining. The amount borrowed was to be paid back by annual instalments, which spread over a number of years. The diminished cost of cultivation after the land is drained, and the large increase in the produce, repay the entire cost of thorough draining in the third or, at the most, the fourth year, so that all beyond is clear gain. Parliament appointed a commission to inquire into the best methods of draining and to draw up a code of regulations for the guidance of those who availed themselves of the Government money. The facts gathered by the commissioners led them to fix the minimum depth of the drain at three feet, and the maximum at fifty inches. This may be thought a great depth, but it was found that the roots of many plants extended over three feet into the soil in search of the elements necessary for vegetable nutrition, which would have had to have been obtained nearer the surface had the land remained undrained.

(TO BE CONTINUED.)

Different Opinions.

Under the above title we propose to quote the opinions of different people as taken from their lectures, sermons, or the standard newspapers. It should ever be distinctly understoood that "The Southern Workman" is not a political paper. It would urge its readers to be independent of party ties, and to think and vote for themselves; and that they may the better do so we propose to give them in this column, a chance to think and read.

From a Lecture by Wendell Phillips.

After referring to his tour in Europe, which had enabled him to gather the materials for his lecture, he said: America has been for the last seventy years the focus of the world's interest, and the channel in which the world is moved mainly has been that of material growth. With the single exception of our having worked off the poison of the slave system, the growth of this country for the last seventy years has been material. It has added nothing otherwise to the philosophy of government; it has thrown little or no light on social questions; the last fifty years have shown us material growth such as it is impossible that any other fifty years will ever show. If I were to say that the last seventy-five years in the world have shown progress such as three centuries previous could not show, and such as it is extremely unlikely that two more centuries will show, I should not overstate the truth, because this lavish development of steam power and telegraph and the immense development of the co-operative effort of wealth—molding production, facilitating production, cheapening production—have made such an exhibition of mental force as it is not at all likely that any two centuries will ever see again. But for these elements the British Government would have ceased to exist at least a generation ago. The next century will show us social changes, not material, in my opinion. Great changes in the relations of capital and labor; great changes in the position of woman; great changes in the nature of government, in the relations of Church and State—these are to be the prominent facts of the next hundred years. If they come, well. If they do not come, that boy is born to-day who, like Gibbon, when he wrote the "Decline and Fall of the Roman Empire"—that boy is born to-day who will write the decline and fall of the American Republic. Because to any thoughtful man it is evident that the grasp of associated wealth in an age when the sin of not being rich is only atoned for by the effort to become so; the grasp of associated wealth of bank and railroad and manufacturer on legislative independence, on the possibility of individual independence, is so rigid and despotic and inevitable that unless we evade it by some great social changes it won't be possible for this republic to survive. We see a power infinitely grander than that of the feudal barons of three hundred years ago, infinitely more irresistible than that. To-day Mr. Gladstone said, speaking of the disestablishment of the English Church: "We cannot trust the Church beyond the clasp of the Government's hand; as a rival power wielding £90,000,000 sterling it is too grave a charge to the British Government." £90,000,000—$450,000,000—too grave a charge for the British Government, three times as strong as ours; and yet one man at the head of the Pennsylvania Railroad, Mr. Scott, wields $450,000,000, and the very sweep of his garments as he marches east from San Francisco to Philadelphia is more than sufficient to sweep down Legislatures as he goes. I look for no safety here except to great social changes. I believe that the day has gone by in this country when you can get half a man's power out of him on a system of wages: it was possible two hundred years ago.

The lecturer then contrasted the people of this country with those of Europe, drawing some humorous parallels. The man who has the biggest pile of dollars is the biggest man here, and here there is a possibility of accumulating money; so the American puts money at the top and everything else below. It is not so in Europe, although we think it is. There there is a superabundance of labor. When Horace Greeley saw a man in France working with an ill-shaped instrument to reap with, he went to him and said: "Why dont you get a scythe? you could do three day's work in one." The man said, "Because I have not three days work to do"—and this is seen all over Europe; there is too much labor, and there is no necessity for planning.

He then referred to the condition of women. There was one thing in which Europe was far ahead of this country, and that was that they knew no difference between the black and the white man. He had traveled all over Europe and found the black man on an equality wherever he went, and seeing this he turned away, knowing that he must be, at least, four thousand miles from Boston. [Laughter and applause.]

From Harper's Weekly.

THROWING AWAY THE PUBLIC MONEY.

It is to be hoped that Congress has assembled with a profound conviction of the public impatience of extravagance of every kind. If it has not, it will have conclusive evidence of it at the first sight of railroad loans or subsidies, or national aid to the private pockets of persons or of companies. It is no secret that the Pacific railroads will press most vigorously for assistance, and the power of the railroad lobby in Washington is undeniable. But members should recollect in time that every man who votes away the money or the credit of the country to these roads will be branded as false to the public interest. These projects are attempts to enrich private persons at the public cost, and the Crédit Mobilier investigations of last winter show us how the work in Congress is done. The argument is that they are great public works, and it is declared to be a national duty to "develop" the resources of the continent. Such an argument is applicable to every kind of speculation, and every intelligent person knows that these roads are the growth of the wild and reckless spirit which belongs to an irredeemable paper era.

From the N. Y. Tribune.

The gratuitous fling of the President's at Senator Sumner, in a recent interview with some colored men from Louisiana, provokes general condemnation wherever it is noticed. The Chicago Tribune quotes the General's remarks, and seems fairly to express the common verdict. "'If a Civil Rights bill be not passed at the present session of Congress,' said Gen. Grant, 'it will be because extreme measures are urged by a person claiming to be a particular friend of the colored man.' If Gen. Grant thought that this insinuation would prejudice the minds of the colored men against Senator Sumner, he will probably find that he was mistaken; if he made it in gratification of a personal feeling against Mr. Sumner, it was unsuited to the occasion and unworthy of his position."

Annie and Willie's Prayer.

'Twas the eve before Christmas: "Good-night" had been said,
And Annie and Willie had crept into bed;
There were tears on their pillows, and tears in their eyes,
And each little bosom was heaving with sighs,
For to-night their stern father's command had been given,
That they should retire precisely at seven,
Instead of eight; for they troubled him more
With questions unheard of, than ever before;
He had told them he thought this delusion a sin,
No such being as "Santa Claus" ever had been,
And he hoped after this, he should nevermore hear
How he scrambled down chimneys with presents each year.
And this was the reason that two little heads
So restlessly tossed on their soft, downy beds.
Eight, nine, and the clock on the steeple tolled ten;
Not a word had been spoken by either till then,
When Willie's sad face from the blanket did peep,
And whispered, "Dear Annie, is you fast asleep?"
"Why no, brother Willie," a sweet voice replies,
"I've tried but in vain, for I can't shut my eyes,
For somehow it makes me so sorry because
Dear papa has said there is no 'Santa Claus.'
Now we know there is, and it can't be denied,
For he came every year before mamma died;
But then, I've been thinking that she used to pray,
And God would hear everything mamma would say,
And perhaps she asked him to send Santa Claus here
With the sack full of presents he brought every year."
"Well, why tan't we p'ay dest as mamma did den,
And ask Dod to send him with p'esents aden?"
"I've been thinking so too." And without a word more,
Four little bare feet bounded out on the floor,
And four little knees the soft carpet pressed,
And two tiny hands were clasped close to each breast.
"Now, Willie, you know we must firmly believe
That the presents we ask for, we're sure to receive.
You must wait just as still, till I say the 'Amen,'
And by that you will know that your turn has come then;
Dear Jesus, look down on my brother and me,
And grant us the favor we are seeking of Thee.
I want a wax dolly, a teaset and ring,
And an ebony workbox that shuts with a spring;
Bless papa, dear Jesus, and cause him to see
That Santa Claus loves us far better than he;
Don't let him get fretful and angry again
At dear brother Willie and Annie. Amen."
"Please, Desus, 'et Santa Taus tum down to-night,
And b'ing us some p'esents before it is 'ight.
I want he should dive me a nice 'ittle s'ed,
With b'ight shinin' 'nners, and all painted 'ed;
A box full of tandy, a book and a toy;
Amen, and den Desus, I'll be a dood boy."
Their prayers being ended, they raised up their heads,
And with hearts light and cheerful, again sought their beds.
They were soon lost in slumber both peaceful and deep,
And with fairies in dreamland were roaming in sleep.

Eight, nine, and the little French clock had struck ten,
Ere the father had thought of his children again;
He seems now to hear Annie's half suppressed sighs,
And to see the big tears stand in Willie's blue eyes;
"I was harsh with my darlings," he mentally said,
And should not have sent them so early to bed;
But then I was troubled; my feelings found vent,
For bank stock to-day has gone down ten per cent.
But of course they've forgotten their troubles ere this,
And that I denied them the thrice-asked for kiss;
But just to make sure, I'll steal up to the door,
For I never spoke harsh to my darlings before."
So saying, he softly ascended the stairs,
And arrived at the door to hear both of their prayers.
His Annie's "Bless papa" draws forth the big tears,
And Willie's grave promise falls sweet on his ears.
"Strange, strange I'd forgotten," said he with a sigh,
"How I longed, when a child, to have Christmas draw nigh.
I'll atone for my harshness," he inwardly said,
"By answering their prayers ere I sleep in my bed."
Then he turned to the staircase, and softly went down,
Threw off velvet slippers, and silk dressing gown,
Donned hat, coat, and boots, and was out in the street,
A millionaire facing the cold, driving sleet,
Nor stopped he until he had bought everything,
From the box full of sweets to the tiny gold ring.
Indeed he kept adding so much to his store,
That the various presents outnumbered a score.
Then homeward he turned, with his holiday load,
And, with Aunt Mary's help, in the nursery 'twas stowed.
Miss Dolly was seated beneath a pine tree,
By the side of a table spread out for her tea;
A workbox, well filled, in the center was laid,
And on it a ring for which Annie had prayed.
A soldier, in uniform, stood by a sled
"With bright, shining runners, and all painted red."
There were balls, dogs, and horses, books pleasing to see,
And birds of all colors were perched in the tree;
While Santa Claus, laughing, stood up in the top,
As if getting ready more presents to drop.
And as the fond father the picture surveyed,
He thought for his trouble he had been amply paid;
And he said to himself as he brushed off a tear,
"I'm happier to-night than I've been for a year;
I've enjoyed more true pleasure than ever before,
What care I, if bank stock fall ten per cent. more?
Hereafter I'll make it a rule, I believe,
To have Santa Claus visit us each Christmas Eve."
So thinking, he gently extinguished the light,
And tripped down the stairs to retire for the night.
As soon as the beams of the bright morning sun,
Put the darkness to flight, and the stars one by one,
Four little blue eyes out of sleep opened wide,
And at the same moment the presents espied.
Then out of their beds they sprang with a bound,
And the very gifts prayed for were all of them found.
They laughed and they cried in their innocent glee,
And shouted for "papa" to come quick and see
What presents old Santa Claus brought in the night,
(Just the things that they wanted), and left before light;
"And now," added Annie, in a voice soft and low,
"You'll believe there's a Santa Claus, papa, I know."
While dear little Willie climbed up on his knee,
Determined no secret between them should be,
And told, in soft whispers, how Annie had said
That their blessed mamma, so long ago dead,
Used to kneel down and pray by the side of her chair,
And that God, up in heaven, had answered her prayer.
"Den we dot up and p'ayed dest as well as we tould,
And Dod answered our p'ayers. Now, wasn't He dood?"
"I should say that He was, if he sent you all these,
And knew just what presents my children would please.
(Well, well, let him think so, the dear little elf,
'T would be cruel to tell him I did it myself.)"
Blind father! Who caused your stern heart to relent,
And the hasty words spoken so soon to repent?
'Twas the Being who bade you steal softly up stairs,
And made you His agent to answer their prayers.

—*Christian Weekly.*

Snow.

It seems as if Christmas was never so truly Christmas-like as when the snow has thrown its soft veil over field and forest, covering the barrenness of winter, and even in the great cities making, for a time, all things clean and pure.

There is something very fitting in a "white world" for Christmas, and the exhilaration of the fresh and sparkling air, which always follows a snow-storm, lends a new glow to our blood, and new rigor to our spirits. In countries where the cold is commonly severe, the snow is a cloak in good earnest, covering up in warmth and safe darkness the little seeds and tender buds that might, without its friendly protection, be frozen beyond the power of the summer's sun to revive; and everywhere it has its uses in refreshing the soil and filling anew our springs and wells.

Many of us know that it is only rain frozen in its fall from the clouds to the earth, and while we may have watched with pleasure the steady, noiseless falls of the millions of little flakes that fly downward in a single moment of a snowstorm, we do not know the real beauties and wonders of the snow until we have looked at it closely, flake by flake, under a microscope or magnifying glass. If we do that, we see something of which we never dreamed—beautiful, delicate crystals of every variety of form—stars, flowers, little fern-like leaves, strange figures and fairy-like devices, fashioned by the wondrous power of the frost. Every snowstorm is made up of innumerable fine crystals, often too fine to be seen with the unaided eye, but when they have been examined with the help of a glass that magnifies their size sufficiently for us to see plainly the beauty of their shapes, a snow-storm will never look the same to us again, for we shall know that its white clouds hide innumerable, tiny miracles fresh from the Creator's hand. Then, when the flakes have fallen, and lie in fair, white drifts and sheets, over the world's face, how lovely it is! The

sunlight sparkles among the crystals, flashes back from the icicles, and gleams upon the smooth surface of the heaped up snow, the trees bow low under their white burden, the earth is almost too dazzling in its new garments and in a single night seems to have changed its whole aspect and won a new title to our love. On such days winter is no less beautiful than summer, and when we have the cheerful blaze of our hearth fires to welcome us within doors, the cold outside only serves to heighten our enjoyment of the warmth of our homes; and the whole scene—the storm and the sunshine, the brightness of the snow and fire, the fierceness of the winter wind, the shelter of the happy home, brings to mind the Psalmist's words: "Fire and hail, snow and vapor, wind and storm, fulfilling His Word."

Our Baby.

Did you ever see our baby,
Little Tot;
Such a dainty little sprite,
Eyes so full of sparkling light,
Lips as red as cherries bright?
Tell you what,
She is just the sweetest baby
In the lot.

Ah! she is our precious darling,
And to me
All her little ways are witty;
When she sings her little ditty,
Every word is just as pretty
As can be;
Not another in the city
Sweet as she.

You dont think so?—never saw her;
Wish you could
See her with her playthings clattering,
Hear her little tongue a-chattering,
Little dancing feet a-pattering
Think you would
Love her most as well as we do:
If you could.

Every mother's darling baby,
I suppose,
Every father's "little Blossom,"
Is a treasure to their bosom,
Just as cheering and endearing,
As our rose;—
Heavenly Father, spare them to us
Till life's close.

A Trap to Catch A Sunbeam.

A STORY FOR CHRISTMAS TIME.

It was a cold, sharp, biting wind, which blew into the miserable room inhabited by old David Coombe, the cobbler, and sharp and biting it found it, as he now and then, in the pauses of his work, stopped to chafe his hands and warm them by the few embers which were in the little grate.

Cold and cheerless enough it was to be sure, in doors and out; the people in the streets were hurrying along, bowing their heads, as if to induce the wind to attack the crowns of their hats and bonnets, instead of their poor, blue noses. Men in rough coats had their hands snugly lodged in their pockets, only drawing them out when, at the corner of the street, the wind seemed to be disposed to blow off their hats, and they were obliged to make an effort to save them, and a remark at the same time, not altogether complimentary to the said wind, and poor women were shivering along, wanting infinitely more than two hands to keep on the shawl, bonnet, and boa, and keep down the petticoats, so impeding their progress.

Poor old David Coombe has no dinner to go home to, nor no home but the little, dark room in which he works; he has never told the pitying public he is starving, because, as he says, "Why, I ain't a-starving while I can have some bread and some cheese, and now's and then's some outsides of bacon, but still I think it's a hard case, as continually a-working don't bring nothing; and this here dismal hole as I live in,—why it ain't living, 'pon my soul it ain't—oh lor!"

Poor David, he always finished with "oh lor," and as he said it, it was certainly the acme of despair, it seemed to come from the depths of that browny chest with a kind of groan.

David had always been a poor man, and it seemed that he always would be; he had no idea of improving his condition, no idea that he could be better off by his own exertions, but thought it was the duty of the rich to make him comfortable, and fully expected that one day some wealthy man would remove him from his wretched home and place him in independence. He was matter of fact to the letter, and never told an untruth, but grumbled at his hard lot whenever any one went near him, until at length no one tried to comfort him, but left him to himself; so he went on mending his neighbors' shoes, for the miserable payment which kept him from day to day, but never made him richer.

Toward the evening of that same cold and windy day, David finished his work, lighted his pipe, and prepared to spend the evening as was his wont, in smoking and ruminating. He stretched out his legs, put his head on the back of his rickety chair, and puffed away, occasionally removing the pipe from his mouth, and ejaculating "Oh lor!" in answer to his thoughts—for of a melancholy nature David's thoughts always were.

"Darkest hole as ever I see, certaisly, and darkness is oncommon lonesome,—never a bit of sun comes in this place, winter nor summer." Whether it seemed to him at the moment that there was no place for the sun to come in at, it is hard to say, but he looked around the room, and his eye rested on a small window crusted with dust and dirt, and continued: "Why, there's a winder,—mayhap it's a dark street, yet when I takee home the work at t'other housee, the sun shines, and it looks light and cheerful, hut my place! oh lor!"

It grew darker and darker.

"Well," he said, "this pipe's out, and now I'll have a drop of tea: yes, I likee tea very well,"—and he lighted his candle, and out of a piece of whity-brown paper he took some tea, and warming some water in a tin kettle, he proceeded to make it, and to drink it from a pewter mug, without milk or sugar; this was soon dispatched, and he relighted his pipe.

It grew darker and darker. David again looked around his room and again ejaculated, "Oh lor!" when suddenly a brilliant light

OUR BABY.

streamed into the room, so dazzling that he started to his feet in terror. It faded as suddenly, and in its place was a minute female form of exquisite beauty. Its gauze-like robes of a pale straw color were covered with beautiful little insects, its long hair seemed like a cloak of gold, hanging over its shoulders, and was ornamented with flowers sparkling with dew. Its face was so bright, so very bright, that the bewildered and terrified David could not look on it, and he covered his face with his hands.

At length, in a voice like the sweetest toned music, the Spirit spoke:

"Mortal, why are you so terrified? I will not harm you. You wished for me but now, to lighten your gloomy dwelling, and in consideration of the good qualities you possess, I am come to tell you how you may secure me always, if you will.

"I and my brilliant sisters are many in number, and a bright and joyous life we lead, for there is nothing on this large earth that does not love us, and welcome our approach; the little insects flutter lovingly about us; the flowers look brighter and more glad when we rest upon them; the water dances and sparkles with glee in the light of our smile; the animals love us, and sleep the sounder when we watch over them; everywhere we are welcome.

"In the gloomy prison we can enter, no heavy bolts can keep us out, and do we but know some poor being is there immured, who repents him of his crime, we enter there to cheer and comfort him. By the sick and the sorrowing we take our place, we are with all who seek us, who try to find us; with all who will lift their eyes from the earth, from the world and its groveling cares, and seek us where alone we are to be found, in our own bright sky. Though clouds may obscure us for awhile, we are still there, and shine the brighter for the passing gloom.

"But 'tis true in this world we are hard to catch, David Coombe, harder to some than to others; you are one who find it hard; you say neither winter nor summer is your dwelling gladdened by our light; do you invite us, David Coombe? we love bright places and clean and brave hearts, David, and above all, true and grateful hearts, who love and worship the Being who made us, and them. In these hearts, David, there is always a Sunbeam; no place is dark and joyless, however poor and wretched, to such hearts as these.

"Do you, then, endeavor to catch one of us, to gladden your heart and your dwelling, I will tell you how to get the Trap.

"It must be bright and pure, and baited with energy, perseverence, industry, charity, faith, hope and content. Do thus, David Coombe, and you will never say again, no sunbeam gilds your dwelling, nor gladdens your declining days; till then, farewell."

The voice ceased, David uncovered his eyes, nothing was to be seen but a small streak of light, which gradually faded quite away, and David was alone in the darkness.

"Why, I've been dreaming surely, and that 'ere grinding organ is the musical voice as I thought I heard; queerish dream too: lay a trap for the sun, ch? Eaergy, why, who can have any energy in this world, when everything's done by steam; it's gone out, it ain't no use. Perseverance, well, don't I persevere; mending boots and shoes for twenty years is perseverance I should think, and industry too. Charity, well, I don't exactly know what that is; giving of money, I s'pose; well, I never had none to give, never. Faith, ah! I used to know what that meant once. My mother used to tell me something about that, in a big Bible with pictures, but it's long, long ago. Mother, poor mother, I've forgot all you taught me.

"I had a Bible though—now I wonder what's gone with it—that would tell me about faith; I'll have a look to-morrow. Hope, I always have hoped, but it's never been no use as I could see; and content, content with what? this old dark place, oh lor!" And poor David, more puzzled and bewildered than he had ever been before, lay down on his straw mattress and tried to sleep, but his thoughts were full of his strenge vision, and he could not sleep; the musical voice still rang in his ears; the bright being still glittered in his eyes.

It struck him at last that a part of the advice he could follow, he would clean the room, certainly, at least, have it cleaned; so, early in the morning, David determined to venture up stairs to the woman of the house, who let him the room he inhabited, and ask her to lend him the services of her eldest child. Although for many years he had been Mrs. Dennis's tenant, he had never been in her room, never held any communication with her, save to pay his weekly rent, and she, like the rest of the people who knew his grumbling disposition, and the total impossibility to comfort him, never tried to do so.

It seemed to cost him an effort to make up his mind to ascend the staircase from his own gloomy room; he opened his door, looked out and then went in again; at last he opened it very suddenly, and with a quick step, ascended three or four of the stairs, paused and considered again; this reflection seemed to decide him, and he did not stop again until he stood before Mrs Dennis's room.

He knocked gently at the door; it was opened by a clean, fat, merry-looking woman, who started back in surprise.

"Why, bless my heart, Mr. Coombe, who'd ever a thought o seeing you? Is anything the matter? come in do, take a chair, sir." And she handed the cobbler a chair by the fire, on which a bright kettle was singing, and before which a table was drawn, ready laid for breakfast. In the window were a few plants of Chrysanthemums in bright red flower-pots, and altogether an air of cleanliness, cheerfulness and comfort pervaded the little room. A fat, healthy child was seated on the ground expressing, in its own sweet way, its pleasure at the toy with which it was playing; on its little white head rested a sunbeam!

"Well," thought David, "one would a 'magined that little chap warn't up to laying a trap, but he's catched one of them sunbeams; what a funny dream! I mus'n't say nothing about it here though, they'll think I'm mad."

"And what's brought us the pleasure of seeing you, Mr. Coombe?" asked Mrs Dennis.

"Why, Ma'am, I wants your gal to come and clear up my place a bit."

Talk of astonishment, never was it so depicted as in Mrs. Dennis's face at this speech. Clear up Coombe's place a bit! oh! how often she had longed to do so: felt that his room was a disgrace to her house, and thanked her stars that it was the kitchen, and that the friends who came to see her, could not see it. Clear the place up a bit, good gracious!

"Certainly she shall, Mr. Coombe," at length she said. "She shall come as soon as ever she's done her breakfast. Will you take some along with us?"

"Thank you; well, as you're so kind, I will take a sasck."

"Here is Betsy, come Betsy," she continued addressing a good-looking girl, who entered the room, "make haste and eat your breakfast, Mr. Coombe wants you to go down and clean his room up a bit;" and Mrs. Dennis winked tremendously at her daughter, who etared in astouishment at the visitor and his request. "So make haste, Betsy, and clear up here, and then you can go down to Mr. Coombe's."

"Yes, mother; father ain't coming in to breakfast, I s'pose."

"No, dear; come, hustle about."

Quickly the tea was made: the little white-headed baby was lifted from the floor, fastened in a chair, and presented with a leaden spoon to amuse him until they had time to feed him. Mrs. Dennis cut the bread and butter and handed it to Coombe, who took it timidly, as he felt the strong contrast between his black fingers and the brown, but perfectly clean ones of his good-hearted hostess. As the meal proceeded, David gradually felt more comfortable, though the strange feeling of being comfortable for the first time for many years, could not wear off.

What a cheerful room it was! what a change from his own gloomy, dirty, dingy one! and how that Sunbeam seemed to revel in it! now glittering on the bright pewter teapot, then dancing on Mrs. Dennis's tea, then glancing on the old cat's back, and hiding among the Chrysanthemums in the window; and when the child had done his breakfast, and was again upon the ground, it fell upon the tiny toy with which the boy was playing, and seemed to sparkle more and more as the child crowed with glee.

"How the sun do stream in here, Mrs. Dennis," at length David ventured to remark. "How oncommon you must miss it when it's a wet, dull day, and there ain't no sun."

"No, Mr. Coombe, we don't, it seems always sunny here, we don't take no particular notice of the weather; when we're all well and together, we're too happy to mind it. You're my sun, ain't you, my blessing?" she continued, snatching the child from the ground and covering him with kisses; "Mother's own boy, don't she love him, that's all."

Betsy soon cleared away the breakfast, and putting on a large apron, prepared to take her way to the gloomy room below.

"Shall I find some soap there, Mr. Coombe, or shall I take some?"

"Why, I'm afraid I'm out of soap—oh lor!"

You may well say, oh lor, David! out of soap, indeed.

"Oh!" said Mrs. Dennis, "take some soap and a pail and brushes and so on, of course, all you want, you know."

With true delicacy she felt all this was needed, but would not have him pained to say so. Well armed therefore with cleansing apparatus, Betsy departed, and David, who had some work to take home at a little distance, departed too, Mrs. Dennis good naturedly making him promise that, if his room was not finished on his return, he would take his dinner with them; and away he went with his peculiar, shuffling walk, wondering to himself how he should like his room when it was clean, whether he should have that strange dream again, and whether the "Sunbeam" would really come and lighten his dwelling.

And thus he pondered, as he shuffled up one street and down another, and finally entered a little court, where he was going to leave some work, and receive the money, he hoped.

He knocked at the open door, and waited; no answer; he knocked again. David was beginning to get very cold, and rather impatient; so he coughed rather loudly, and then a low, weak voice said:

"Is any one there?"

"Only me, Mr. Miffin," answered Coombe.

"Come in, will you then," answered the voice, "I can't get up," and David entered and walked into the front room, where, on a press bed, lay a man suffering evidently from severe illness. The room was dirty and in great confusion, and a coke fire was smoldering in the rusty grate.

"Well, Mr. Coombe, brought boots home, eh? no use to me, I'm very bad."

"Sorry to hear it, sir, I'm sure; everybody seems ill, or miserable, or something; oh lor!"

"My wife's been out this two hours, and I'm all alone, wretched enough I can tell you. I believe she's gone out to try if she can get us something to eat; we'd no dinner yesterday, and, how you are to be paid, I don't know;" and a long sigh told a sad tale of physical and mental suffering.

There was a pause, and David said to himself: "Two and eight pence at home, and eighteen pence for next job—well, yes, I will. As to paying of me, Mr. Miffin," he continued along, "why don't be worrying yourself about that; the best thing as you can do, is to get well, wear these here boots and make another hole in them, for old Coombe to mend, when you can pay him; oh lor!"

The sick man opened his large, sunken eyes, and stared at the bent, dirty figure before him, and then holding out his wan, thin hand to him, said in a low, trembling voice:

"Bless you, this is true charity; draw that curtain, friend, please, the light is too strong"—there was a blaze of sunlight in that little room, and one of its bright rays was resting on the cobbler's head!

In a few moments, David was on his way again, but he felt different; changed in some strange way; there was a kind of bounding feeling at his heart, a younger sensation, which brought back a dim recollection of a sunny green and cricketers where he had been the victor; his step seemed firmer, quicker, and a mingled sound of "this is true charity," and "in such hearts as these, David," seemed ringing in his ears."

A loud cry in the street startled him from his reverie, and a horse came galloping toward him bearing its powerless rider, a young, fair girl.

"Mischief there—oh lor! why don't some one stop it; some one! why, I will." It was soon accomplished; the horse was stopped, and the fainting girl's head was resting on the dirty old cobbler's shoulder.

A dense crowd had collected around them, everybody suggesting something and everybody differing, when a gentleman came riding up, and, with a face deadly pale, inquired if the poor girl were hurt.

"No, sir, only faint and frightened, this man saved her, sir, here he is, sir," but David had resigned his burden to other hands, and was pushing his way ont of the crowd.

The new comer was so intent upon having the poor girl carried into a chemist's shop, and properly attended to, that David escaped without his notice, the crowd saying:

"Well, that ain't like a gentlemm, never to give the poor man nothing after risking his life;" and, as they dispersed in different directions, two policemen came up and authoritatively ordered them to "move on."

"Oh lor!" said David, when he had walked some distance, "well, I wonder if that's what people calls enigy."

His next customer paid him his eighteen pence, and gave him more work, and then David took himself toward home; and that cold, easterly wind, which had been blowing for some days, whistled into his ears, and blew the dust into his eyes, but he did not heed it, it did not make him cold as it used; he felt warmer than he had done for a long while; he seemed to have awakened from a torpor; there was a warm glow about his heart, and he thought that the Spirit's words must be true, and that sunbeams did sometimes visit people's hearts, or his would never feel so warm and comfortable, when he had nothing to make it so.

Mrs. Dennis was at the door talking to a neighbor, when he arrived, and she said:

"Come along in, sir, your room's quite ready, but you must not disappoint us of your company to dinner." So David, looking somewhat confused, accepted the invitation, and followed the kind-hearted woman to the sitting room, where the cloth was already laid for their dinner.

The husband was at home at this meal, and such a pleasant one David had not sat down to for many years; before he left he was engaged to dine with them on Christmas day.

Ah! David, well may you stand with your hands in those ragged pockets and stare at your little room; well may you wonder where you can have got to. The floor so well scrubbed, and sprinkled with white sand; the grate, so well blacked, with such a bonny, sparkling fire in it; the kettle bright and filled with water on the hob, ready for his tea; his tools neatly arranged side by side; the window cleaned so that he can see out of it, see into the street! see the people going past! and, above all, see the setting sun, glittering on the windows opposite! his pewter mug brightened and put on the shelf beside his pipe; his few plates and dishes washed and ranged on the shelf too; the little round table, that was his mother's, polished, actually polished! and smelling so refreshingly of turpentine and bees' wax, a chair before it, and on it his Bible, his long lost Bible!

David was astonished; he stood by the door and looked at it, he stood by the window and looked at it, then he stood by the fire and looked at it, and finally he sat down in a chair and covered his face with his hands, as though he thought it was some optical illusion, which must pass away the moment he uncovered them.

But no, it was no vision, no illusion, but pleasing reality, and David restored his hands to his pockets, and again ejaculated, "oh lor!" He opened the Bible, a bright, bright light fell on its leaves and rested on the words: "Let us not be weary in well doing, for in due season we shall reap, if we faint not." And a voice, the same low, musical voice he had heard before, said, "This is our favorite home, David. You will always find us here."

As soon as his astonishment had somewhat subsided, at all he had seen and heard, and at the miracles Betsey had worked, he summoned sufficient resolution to venture again to Mrs. Dennis's room, to thank her and offer remuneration for her services.

"I'm come," he said, as they opened the door at his modest knock, "to say as you have been and made my place oncommon nice, and I hope you'll tell me what will satisfy you as regards paying; so long as it ain't more than three and two pence, I can pay you at once, but if it is, I must owe it to you."

"Oh, there, hold your tongue, Mr. Coombe, do, about paying; nonsense; my Betsy's very pleased to have made the room look so nice, and we're all pleased that you're pleased, and that's payment enough; besides, it's been a lesson to her against she goes out to service, and she shall come and do it for you every morning, if you like."

"Well, I'm very much obliged to you; I ain't a man as can talk nor make fine speeches, but I never says what I don't mean, and I can't always say what I do, and somehow it seems like it now, perhaps you'll shake hands with me; it won't come off," he said, as he held out his hand to Mrs. Dennis, with a half comical glance at its dingy color.

"I'm not afraid of that, Mr. Coombe, and I am glad to shake hands with you; I'm a rare one to shake hands; there ain't that being in the world as I wouldn't shake hands with, rich or poor, dirty or clean, good or bad; as for the dirt, why, a little soap and water would soon settle that, if the hand as you'd hold of did soil yours, and I believe a good hearty shake of the hand goes right to people's hearts, and speaks more to them than a power of words. Well, now, a sister of my husband's behaved uncommonly bad to him, no mistake about it, and Tom, he stuck out as he wouldn't speak to her again, nor yet let none of us. Well, do you know, that worreted me so, I couldn't rest a night, and I said to him just afore Christmas last year, 'Tom,' says I, 'make it up with 'Lisbeth, do. She's the only relation you've got, and you know she ain't rich, and 'pon my honor, Tom,' I says, 'the roast beef will stick in my throat o' Christmas day, if I don't see her at the table along with us, so I shall ask her, Tom; eh?'

"'Do as you like,' says he; that was quite enough; I sent a message to her, and she came; well, the moment I saw her, I grasped hold of her hand, and gave it a hearty shake, and then Tom did, and all the children; we, none of us, said nothing, but them shakes of the hand said, as plain as we could have spoke it, 'Lisbeth, all's forgiven and forgotten; let bygones be by-gones.'"

Oh! how the stream of golden light is shining on that good face.

That night the sleep of David Coombe, the poor old cobbler, might have been envied by princes; in his dreams, bright visions flitted before his eyes, and he heard soft music, and sweet voices murmuring the words, "Bless you, this is true charity."

He awoke early and arose to look out of the window—yes, he could look out of the window now. That sharp, biting wind had driven up a snow storm, and the ground was thickly covered, but the masses of cloud were moving away slowly, showing glimpses of the pale, blue sky, and David thought it would be a fine day after all.

He ate his breakfast, which he seemed to enjoy more than he had ever done for years, and then sat down to his work. It was no longer with a listless air that he handled his tools, but quickly his fingers moved, and suddenly a strange sound issued from his lips, —David Coombe was singing!

The clouds had again gathered over the sky, and the snow was falling heavily; it was dark and gloomy out of doors, but David thought his room anything but gloomy, and he still continued that unearthly sound he called singing.

He worked away for some time, until Betsy came to do his room; and then, as he appeared to be in her way, for she repeatedly moved him from side to side of the apartment, he thought he would go out a little while; it did not snow much, besides, he did not mind the weather, so he shuffled out.

He had not proceeded very far from home, when he saw seated on the curb-stone, a child two or three years old, crying bitterly, and, standing by its side, a baker's man with a basket of bread on his shoulder.

"Do you happen to know this young'un?" said the man, as David approached. "He's crying for something to eat. I think he's lost."

"No, I don't, poor little chap. What are you going to do with him?"

"Oh! nothing. Give him to the police, is the best thing."

"No, no; perlice is too rough for that 'ere young thing; I'll take him in my 'bit of a place out of the cold and snow, he won't be worse off there than here; and if he ain't cowed, why we'll muddle on together, won't us, little 'un; will you come?" And David held out his hand to the child, who took it directly, and looking up into his face, with his large, dark eyes filled with tears, lisped, "Mammy, hungry."

"Oh lor! what a pretty creature," and taking him up in his arms, David proceeded to his home, talking to the child all the way, in his strange rambling manner, promising him food, and that "Mammy would soon come."

David had indeed come out in a new character: for years he had not been so active; he cut the child a huge piece of bread, and seated it on the chair close to the coke fire Betsy had made up so nicely; and taking off its wet shoes and socks, hafed and warmed its little, cold feet. The snow had ceased, the clouds were again rolling away, and the pale, cold, winter sun streamed into the room, and rested on the child and on that black and brawny hand supporting him so gently.

But David was very puzzled too, and kept saying, "Oh lor!" in his old way, when the child began again to cry, and, in a little, walling voice, asked for "Mammy." He was not used to children, poor old David, and when he had satisfied its hungor, and dried its wet feet, he did not know what to do next, nor how to stop those sad tears; but now came the "Sunbeam" to his aid; it sparkled on the pewter mug, and though the tears were still wet on its dimpled cheeks, the child laughed a merry laugh, and, pointing to the mug, said, "Pretty."

And through all this laughing, David heard the sweet Voice, he now knew so well, saying, "Good David, richly do you deserve our presence now."

In a short time the child seemed quite at home, and David began to work, while the little fellow trotted about the room, and examined the tools, the "Sunbeam" ever following him, shining amongst his golden tresses, and sparkling in his tears, not yet dry upon his peach-like cheeks; and then David shared his scanty dinner with him, giving him by far the largest quantity, and watching with a degree of satisfaction he had never experienced while eating his own dinner, the relish with which the poor child devoured it; and, then, when the daylight began to fade, the boy grew sleepy, and David took him in his arms, and began again that quaint old tune, to lull the child to rest; soon its large eyes closed, and the long lashes swept its cheek, and the boy slept.

Gently David laid him down on his own mattress, and when he had lighted his candle, began again to work, ever and anon glancing at the sleeping boy, and feeling a strange sort of pleasure he had never before experienced.

Suddenly a great deal of talking in the street attracted his attention, for it was a quiet out of the way sort of place, and there was seldom any noise there of an evening; therefore the earnest, but not angry tones, David heard, made him lay down his work and listen.

There was a knock at the door—perhaps the house was on fire—he moved quickly from his seat and went toward the mattress. Had he money hidden there? no, David had no treasures, but the sleeping child was there, and David stood close beside him, that, at the first alarm, he could take him in his arms.

Mrs. Dennis had opened the street door, and now called out:

"Mr. Coombe, open your door, please, we can't see, and here's some one wants you."

"Some one want Coombe! Well, that's odd," he thought. "Oh! I dare say its only some shoes to mend; all the better;" and he shuffled ont, and he heard Mrs. Dennis say:

"Straight on, ma'am, Mr. Coombe has opened the door. Take care you dont fall; but I'm afraid it's a mistake, as he has not said nothing to me about it."

"Oh! sir," said the stranger, in an agitated voice, as soon as she saw Coombe, "have you seen a child, a boy, my only child; oh! speak, or I shall go distracted."

David Coombe could not be hurried, so it was no use; but at length he said, "I don't know if it's yourn, look;" and slowly and methodically carrying the light to the mattress, he exhibited the sleeping child to the woman: one glance was enough, and the mother clasped her lost treasure to her heart. He opened his eyes, but finding it was his mother's face gazing into his, only put his little, fat hand in her neck, and fell to sleep again.

"We are not rich, sir," she said, while tears of delight filled her eyes, "but if there's anything we can do for you, we shall be so glad, and if you will come and take your dinner with us on Sunday, and let my husband thank you for the care of him—he's our only one," she said, looking fondly at the child.

"For the matter of thanks, ma'am, that's nothing, you're quite welcome, I'm quite sorry to lose him, and shall be uncommon pleased to come and see him; but as to dining out, why I ain't much of a figure for that; oh lor!" and poor David glanced at his shabby clothes.

"Oh! don't name that, do come, pray," earnestly urged the grateful mother; and telling him where she lived, she bade God bless him, and hurried away, to relieve her husband's anxiety.

David was a little finstered at this unusual excitement, and actually was kept awake with thinking how he should go to dinner with strange folk in such clothes; he must confide in Mrs. Dennis, for to-morrow is Saturday, he had but one day to consider of it, and some brighter wits than his must be consulted.

Accordingly, the next morning he sat with his room door open, that he might hear her go out to market, for he did dare to venture up to her room again, but meant to speak to her as she went out; but she saved him the trouble of coming to her, by coming to him, for a little feminine curiosity was busy in her brain, and she could not forbear coming to inquire all particulars about the child. David gave all the explanation he could, and then began to broach the important subject of his attire; what was to be done? he could not go, could he?

"Could not go! la! bless the man, why not? you lay your clothes outside the door to-night, and I'll well brush and beat 'em: my husband shall lend you a clean shirt and neck-handkerchief, and I'll black your boots, and, bless your life, you'll look like a buck."

"Go, by all means, make friends and keep 'em, Mr. Coombe, that's my motto; we're none of us so independent hnt that a friend's a good thing to have, and mixing with our fellow-creatnres keeps our feeling from getting stiff like, from want of use; and you want a little soap, sand and hot water is a capital thing for one's hands, when they get dirty," she said, as a sort of afterthought, when she was leaving the room.

"Oh! ah! thank you, mum; perhaps you'd be so obliging as to get me half a pound of soap." "Oh! willingly," she answered: this invitation was indeed likely to prove beneficial. He gave her the money for his useful purchase, and sat down to his work.

The morrow came, and David, with a sort of childish curiosity, opened his door to take in the things, he knew his kind landlady would have ready for him. There they were sure enough, well brushed, and the ragged places mended. The good woman had sat up over night, much beyond her usual hour, to prepare his things for him. There was the clean shirt, and the checked blue and white cravat, and his boots polished, and moreover, unheard of luxury, a clean, red pocket-handkerchief.

David carried them all into his room, and surveyed them with the greatest delight, and as he hold the clean shirt in his black hands, the gentle hint respecting the soap and water occured to him: so he lighted a brisk little fire, made the water boil, and, in a short space of time, there was actually on David's face a positive smile of vanity; he was scarcely recognizable.

How the "Sunbeam" did dance about the room! David began to think he must save up some money, really, to buy a hat. The hat, compared with the boots and clean shirt, was decidedly shabby. He was quite anxious to see and thank Mrs. Dennis, so he put his door open as usual when he wanted to see her, and whiled away the time by taking his breakfast, and brushing up the hnt.

The bells began to ring for church; how plainly David heard them, plainer than ever; now Mrs. Dennis would soon come down, she always went to church, and was never late: yes, here she comes: David shuffled out to meet her.

"Good morning, Mr. Coombe, I was coming down to see you; my gracious, how nice you look, don't he, Betsy! Would you like to go to church along with us?" she said, suddenly, as it struck her that may be it was the shabbiness of his toilet which had kept him hitherto away.

"Well, yes, I raly think I should," he answered hesitatingly, as the new idea occurred to him.

"Come! that will be nice! Run and fetch Mr. Coombe's hat: make haste, Betsy;" the girl quickly returned with it, and, with a kind of bewildered air, which this entirely new position occasioned, David, taking Mrs. Dennis's proffered arm, proceeded to church.

The service over, and the sermon concluded, David heard with a vivid remembrance of years gone by, the beautiful blessing called down on the congregation, and, mechanically followed Mrs Dennis out of church, scarcely knowing where he was, and repeating again and again "the peace of God which passeth all understanding."

He did not return home with his kind friend, but proceeded to his new acquaintances, who were on the look out for him, and the moment he turned the corner of the street, they saw him, and set out to meet him; and soon his hard hand was clasped in the dimpled one of the child, who dragged him eagerly along, chatting all the way.

From this time forth, David, each successive Sunday, dined with his grateful friends; the child was taught to call him Uncle David, and green spots in his existence were indeed these Sabbath days.

Time pressed on, and seldom now had David to complain his room was dark and cheerless; Betsy perseveringly kept it clean, and the faithful "Sunbeam" never deserted it. One day Mrs. Dennis called him up with the startling information that two ladies wanted to speak to him. He shuffled quickly up stairs, and in the passage stood two young ladies elegantly attired, the younger remarkably pretty, and as he advanced toward them, she fixed her deep blue eyes on his face, and looked long and earnestly at him, till David, old David, began to feel quite bashful; he had never been used to the scrutiny of such eyes.

Suddenly she said, "Pardon my troubling you, but did you not some time ago stop a runaway horse?"

David thought a moment, and then answered: "Why, yes, I did."

"Oh! I am so glad; you are the person I have been long endeavoring to find; Papa has been so anxious also; I am the young lady whose life you saved, and I have been unable to rest until I discovered you; at length I was directed to you by a woman who works for me, who told me of your kindness to her little boy: why you seem to go about doing good," and she smiled at him such a smile; who would not have envied the old cobbler? "Now tell me what can I do for you," she added.

Much of this speech had been lost on David, he could not understand long orations, but he perfectly understood the last sentence, and said:

"Why, give me some shoes to mend."

A slight smile again passed over the pretty lips addressing him, and she said:

"Well, if you will come and fetch them I now promise me you will come," and presenting him with her card, she turned to her friend and said: "Now, Ada, let us hurry home and tell Papa, he will be so delighted. Will you let me shake hands with you," she continued, holding out her small one to David. "You cannot tell how grateful I am to you."

Poor old David, he was quite overpowered; but his hand was clean now, though hard and brown, it is true, so he took the proffered hand, and stammered something about being "werry welcome," and bowing repeatedly, and promising to come early the next morning, he watched the ladies out of sight, and, returning to his room, said:

"Well, these is the rich people as I have been expecting, I suppose; if I mends all the family's shoes, I shall get on p'r'aps, and be a comfortable sort of old chap after all. Oh lor!"

A bright light filled the room and the Voice said, "Remember, David, by your own exertions you have found friends, not by idly hoping for them, without an effort to obtain them."

"Werry true," was David's mental rejoinder, and he lighted his pipe and sat down to enjoy it, thoroughly enjoy it, without any of the miserable thoughts which had once oppressed him. Never more did he complain that the sun gladdened not his dwelling; repeatedly was he requested by the grateful girl whose life he had preserved, to go to a larger, better house; but no, he liked his fairy-haunted place the best, and refused to leave it; besides he loved the Dennises in his own odd way, and would not leave them; so she let him have his will, but had the room painted and papered with a gay paper, filled the little window with plants, and made it, as he thought, a much fitter abode for his "Fairy Sunbeam," though that little secret he kept with jealous care; and often, as he sat in a comfortable armchair, which she had given him, those deep blue eyes gazed kindly upon him, and in her sweet, low voice she would read to him from his own old Bible, now handsomely bound, and teach him what was Faith.

Years passed away, and old David Coombe died and was buried, followed to his grave by his constant friends the Dennises, and his little adopted nephew.

"Well," said Mrs. Dennis on her return from the funeral, as she wiped her good humored eyes, filled with tears, "David used to talk a deal about the sun, and seemed to love it so, and, strange enough, it rested on his face when he died, and on his coffin when they lowered it into the grave."

Reader, of whatever rank or station, have not you, like David Coombe, murmured at your lot? Is there not "a still, small voice" ever addressing you: "Mortal, whatever your lot on earth, is it not better than you deserve? and amidst all your troubles have you not much to be thankful for? Are you sad? there are sadder hearts than yours, go and comfort them and that will comfort you. Are you poor? some are starving, cold and houseless: warm and shelter them and think how rich their blessings make you."

There are constant opportunities for kindly actions, if we would only watch for them; then "Let us not be weary in well doing," and we shall soon find, as old David Coombe found, that "in due season we shall reap, if we faint not."

A Hymn.

BY MRS. P. C. DOLE.

Oh, weary way, so hard to mount,
Oh, tender feet, unused to tread
O'er bitter brambles, toward the fount,
Where all His chosen shall be fed—
Dear Father, make the way more clear,
And help the feet that weary there.

Thy Holy Spirit silvering all,
Who could turn back, or fear to take
The pathways where thy glories fall,
And onward press, for Jesus' sake?
Thy pastures green, and waters still,
Under the guidance of Thy will.

Live to do Good.

Live to do good, but not with thought to win
From man return of any kindness done.
Remember Him, who died on cross for sin,
The merciful, the meek, rejected One:
When he was slain for crime of doing good.
Canst thou expect return of gratitude?

Do good to all; but while thou servest best,
And at thy greatest cost, nerve thee to bear,
When thine own heart with anguish is oppressed,
The cruel taunt, the cold, averted air,
From lips which thou hast taught in hope to pray,
And eyes whose sorrows thou hast wiped away.

Still do thou good, but for His holy sake,
Who died for thine; fixing thy purpose ever,
High as His throne, no wrath of man can shake;
So shall He own thy generous endeavor,
And take thee to His conqueror's glory up,
When thou hast shared the Saviour's bitter cup.

Do naught but good; for such the noble strife
Of virtue is, 'gainst wrong to venture love,
And for thy foe devote a brother's life,
Content to wait the recompense above;
Brave for the truth, to fiercest insult meek,
In mercy strong, in vengeance only weak.

Practical Religion.

A preacher, in the State of Georgia, tells us that, having admonished his hearers one Sabbath against the vices of lying and stealing, to which they were prone, some of them remonstrated with him against this kind of preaching, saying: "If you want to talk to us about lying and stealing call us together for this purpose on Monday; for we want to have a good heavenly time on Sunday." It seemed to them to spoil the goodness of the time, the heavenliness of the meeting, to be reproved for any sins of which they were guilty, and exhorted to repent and reform. They wanted to be entertained, and to sing and enjoy themselves without being disturbed by any call to break off transgression or perform any duty.

But the test of the value of any preaching service is not how *nicely* it makes us *feel*, but how *nobly* it makes us *do;* whether it leads us to be more honest and true, more kind and loving, more industrious and obedient; in a word, more Christ-like, and so aiming to do right in all things. We cannot be too deeply impressed with the fact that religion is not simply something to be felt, and sung and shouted, but something to be done; to be done, too, always and everywhere.

At the close of the last school year, one of the graduating class said to the writer: "I would not take a thousand dollars for the instruction I have received here," specifying particularly the application of religion to daily life, adding: "Our people have no idea of it; I, myself, had no idea of it when I came to this school; but now I see that religion has to do with everything." Yes, religion has to do with everything, is not a mere thing of Sabbaths, and sanctuaries, and sacraments, but of every-day practice; should control us at work as well as at worship; is a religion that can not only sing and pray, but labor faithfully; not a mere prayer-meeting religion, but a school, a farm, a work-shop religion; a religion that can be trusted in the market place, as well as in the church; behind a man's back as well as before his face; that scriptural religion which requires that whether we eat or drink, or whatsoever we do, we should do all to the glory of God.

The Record of Rum.

In the Constitutional Convention in Ohio, the Yearly Meeting of Friends in Ohio presented a memorial on the liquor traffic. This was introduced by David Tatum in an able speech, from which the following is taken:

The annual retail sale of intoxicating liquors in this country, to which Ohio adds a large percentage, is $700,000,000; and, according to the best authority, it burdens the Republic with 8,000,000 paupers, at an annual cost of $100,000,000. The cost of crime, from intemperance, is $40,000,000; the waste of grain, fruit, etc., $50,000,000. The loss of productive industry to the country through wasted time and talent of tipplers and drunkards, is $225,000,000; the support of insane, idiots, and disabled, is $100,000,000; wages on value of time of manufacturers, dealers, clerks, and employes in the traffic, is $300,000,000; wasting our country's resources annually, $1,500,000,000; and adds to the Government revenue only $50,000,000.

It is plain enough that this tremendous drain upon the nation's financial resources is burdening the country with taxation and with demands for charity.

The combined devastation of war, famine and pestilence has never inflicted such deadly blows upon our national prosperity, nor exacted such enormous taxes, nor ruined and slain so many of our brave young men, nor brought so much wretchedness, woe and desolation as the traffic in spirituous liquors. It is pre-eminently the crime, the shame and the curse of this nation, the darkest stain upon our Christian civilization, and the chief hindrance to our social and financial prosperity.

The statistical report of the Agricultural Department, for 1870, states that there are 405,787,041 acres of land included in farms in the United States, the cash value of which is estimated at $9,263,803,861; and the value of the farm products, farming implements and live stock is $4,309,693,544; and the annual amount of wages paid to farm hands is $310,286,285. Now the retail sale of intoxicating beverages in this country is nearly equalled to one-thirteenth the assessed value of all the farms of the United States, and over one-seventh the value of all the farm products, farming implements, and live stock, and over double the amount paid to farm hands in the agricultural interests of our country.

Alcohol is the only substance in nature that can extinguish parental affection; and this demoralizing agent people are permitted to deal out, not only to young men but to those who have dependent families, to bear the burden of suffering through abuse, dishonor and want. And how often it has happened that intemperate parents have communicated to the physical nature of their children impaired constitutions and disease, with weakened moral power and the self-destroying appetite.

Gems.

CULTIVATE consideration for the feelings of other people, if you would never have your own injured. Those who complain of the most ill-use are the ones who abuse themselves and others the oftenest.

DESERVE friends, and you will have them. The world is teeming with kind-hearted people, and you have only to carry a kind, sympathetic heart in your own bosom to call out goodness and friendship from others.

THE little things which you may do for those about you will fall back upon your heart as the summer dews fall upon the vineyards. What if it is nothing but a kind word to a schoolboy crying in the street; it dries his tears, and the aching heart grows light and glad again. Who knows what clouds of darkness one kind word may dispel?

BE not stingy of kind words and pleasing acts, for such are fragrant gifts whose perfume will gladden the heart and sweeten the life of all who receive them.

IT requires more magnanimity to give up what is wrong than to maintain what is right; for our pride is wounded by the one effort, and flattered by the other.

MOTTO FOR THE WARFARE.—No pain, no palm; no thorn, no throne; no gall, no glory; no cross, no crown. —*William Penn.*

THE best rule under persecution is, if you are made to suffer for religion, see that religion does not suffer by you.

Sparks.

THERE are some things it won't do to trifle with; for instance, a woman's opinion, and the business end of a wasp.

A SHREWD old gentleman once said to his daughter: "Be sure, my dear, you never marry a poor man; but remember that the poorest man in the world is one that has money and nothing else."

A CORONER'S jury, impaneled to ascertain the cause of the death of a notorious drunkard, brought in a verdict of "Death by hanging—around a rum shop." In California, a coroner's jury, under similar circumstances, rendered a more courteous verdict: "Accidental death while unpacking a glass."

AN applicant for a pair of boots at one of our shoe stores was asked what number he wore, and replied, as soon as he could recover from his surprise: "Why, two, of course."

"Your children may never have wealth," observed a neighboring clergyman to his congregation; "but when they grow up, it will be something for them to boast that their fathers were not members of the Forty-second Congress."

"OH!" gasped fat Mrs. Weighty, as she ascended the second flight of stairs in her new residence, "I really cannot run up any more stairs." "Of course not," testily answered her husband. "But if the stairs were made of dressmakers' bills you could run them up very easily." "I do detest puns," exclaimed Mrs. W., the next day, recounting the conversation to a friend.

ECONOMY iz a savings bank, into which men drop pennies, and git dollars in return. Avarice iz like a graveyard; it takes all that it kan git and gives nothing back. Error will slip thru a crack, while truth will git stuck in a doorway.—*Josh Billings.*

The Spirit of Christmas.

The holiday time of Christmas and the New Year has come again, and the end of one year and the beginning of another follow so closely upon the great festival of Christmas that, the gayety and rejoicing reach through the last days of the old year to the quiet days of the new, and make a complete break in the routine of the life of Christendom, changing, for the time, the current of our thoughts, and bringing back to the world something of the happiness of childhood. When we think that for nearly two thousand years the feast of Christ's nativity has been kept in some wise by His followers, we feel how great the power is, which has made Him to be so remembered among men; and in the midst of our merrymaking we pause to remember the stable in Bethlehem, where so long ago, the Little Child was born, who is the Prince of Peace—

"It was the winter wild
While the heaven-born Child
All meanly wrapped, in the rude manger lies:

. . . . . .

Nor war, nor battle's sound,
Was heard the world around:
The idle spear and shield were hung up high:
The hooked chariot stood
Unstained with hostile blood:
The trumpet spake not to the armed throng;
And kings sat still with awful eye
As if they surely knew their sovereign
Lord was by."

The story of our Saviour's birth and life and death is so familiar to us all, that we seem too often to be indifferent to its meaning; we read it and hear it read; we speak of it often and know all its details well, but, somehow we do not take it home to our hearts, and learn to let it do its work in our everyday life. Just now when we are happy in united families, in good cheer, in the giving and receiving of gifts; just now is the time above all others when, it being the anniversary of Christ's birth into our world, we should try to make Christ's spirit ours, and resolve to be henceforward His loving servants. At Christmas time it seems easy enough to be kind and cheerful and full of good intentions, and the real Christian carries Christmas through the year, bearing with him from the spring's sunshine, through summer's heat back again to winter snows, the remembrance of the hope that the first Christmas brought to men. To make Christmas last from December to December is what we need to do—not just the eating and drinking and jesting, which, perhaps to many of us is all that Christmas means; but the spirit of love and hope and faith, which is what makes Christmas a thrice blessed day, should go with us from year's end to year's end, and until life's close reveals to us the complete blessedness of Heaven; and wipes away the recollection of our trials here.

While the pleasures which the Christmas season brings, come to almost every household, yet there are always among us those who have no means and no ability to fitly keep the day, and we who are more fortunate should take care that some part of our happiness is shared by our poorer neighbors. Our own Christmas will be all the merrier if we are sure that our friends do not lack a dinner, or some simple token of our remembrance of them; and we should watch closely that we do not make the day merely an occasion for selfish amusement. When we resolve to keep the Christmas spirit through the year, we can make no better beginning than by carrying as much of it as we can into our neighbors' houses; so while we pray for a blessing for ourselves, let us do our best to make for other people a "Merry Christmas and Happy New Year."

Scientific and Mechanical.

The Influence of Electricity on the Growth of Plants.

M. H. Bridgman of Norwich, England, has lately investigated the influence of electricity on the growth of plants, and has used for this purpose, a very weak galvanic battery, or rather a single element with weak acids in order to obtain a very weak current. He takes a three-inch square glass plate, and after laying upon it two strips of sheet tin close to, but not touching each other, covers the plate with felt soaked in rain water. On the latter he spreads a thin layer of cress seeds, that had been previously well soaked in rain water. The two wires of the battery are then brought into contact with the strips of tin, and their other ends are stuck through the felt. The electric current is immediately established, one-half of the felt having positive, the other negative electricity. On another piece of moist felting, entirely disconnected from the battery, is placed also some cress seed in order to observe the difference in the growth of the portions of seed. After the lapse of four days, the seed on the positive side of the first piece of felting gave signs of germination, while their hulls were shriveled up and becoming black. On the negative side of the felting the seeds were at the same time swollen, and their hulls which retained their natural color, were beginning to burst. In six days the first shoots broke forth. The seeds on the second plate of felt, which were not under the influence of electricity, first sprouted many days later. The most peculiar result of this trial was, however, that while on the negative pole, where there was every sign of stronger development, the root sprout sank downward into the moist felting; on the other hand, on the positive felt the root sprouts rose upward from the blackened and dried up seeds. The upward movement of the root sprouts has already, in 1867, been observed by Blondean, but he ascribes it to the influence of electricity in general, and not especially to the positive electricity.

Sun Printing on Fruit.

If you would like to surprise any member of your family, or any friend by giving them an apple, peach, or pear with their initials neatly printed on one side, this is the way to do it:

Just before the fruit ripens, cut the desired letters from a sheet of thin, tough paper; then paste them on the side of the fruit most exposed to the sun; and, when in course of time, you remove the paper from the ripe surface you will find the letters distinctly marked upon it.

A GERMAN scientist has found that, by mixing lamp black with ten times its weight of sulphuric acid (sp. gr. 66° B.), allowing the mixture to stand for some hours and then washing it free from the acid, the material acquires the power of mixing readily with water, and possesses all the qualities of genuine India ink.

Publisher's Department.

THE "Southern Workman" greets his friendly readers with a "Happy New Year."

The dress he has worn for the last two years was laid aside Christmas day, and for another year he proposes to wear his new holiday suit. We hope his new dress will he so attractive, that every Southern cottage door will hid him welcome. He will bring not only choice reading and fine illustrations, hut will present to each of his patrons a beautiful Oil Chromo, the finest gift chromo presented hy any periodical of equal price. Though the chromo system is open to objections, we heartily believe that onr friends, North and South, will commend us in our purpose to cultivate a taste In our homes for art as well as for literature. We do not boast that we have our pictures printed hy the thousand, for our sole nse; hut we are happy to inform our patrons that our presents do not advertise themselves as cheap gifts, but are such as they might select for themselves in any respectable art store. We call upon all our friends to aid us in our work which, for a season must be hard and profitless in a pecuniary sense. The labor already accomplished hy our Workman is such as to give us bright hopes for the future.

Every subscriber to the Southern Workman, has a choice from the following subjects: Little Samnel, Interrupted Breakfast, The Matron, representing a motherly cat and her playful family, and lastly, yet finest of all, our choicest chromo, our pet, Returning Home.

NOTICE TO TEACHERS.—Do you want a globe for school use? Send us, then, the names of six new subscribers to the Southern Workman, and we will send you one free of any charges, securely packed in a strong paste-board hox.

AGENTS WANTED.—Smart canvassers are wanted in every village throughout the South, to get subscribers for the Southern Workman. Good pay given. For terms, etc., address

J. H. LARRY,
Office Southern Workman,
Hampton, Va.

☞ A RED cross before this paragraph will indicate to the subscriber that HIS SUBSCRIPTION HAS EXPIRED.

A RARE CHANCE
FOR
WATERMEN AND OYSTERMEN
TO SECURE A
CONVENIENT AND COMFORTABLE HOMESTEAD,
ON THE BANKS OF THE HAMPTON RIVER, IMMEDIATELY IN FRONT OF THE TOWN OF HAMPTON.

Having already disposed of most of the rear or east part of the "Oakland" land, which I bought of Dr. William E. Wood since the late war, I will sell the remaining thirty acres which front upon the Hampton river, including the peninsula known as "Knobs," which also fronts upon Hampton river, and is bounded on the rear by a cove extending its wholelength.

A forty foot avenue will be opened from the banks of Hampton river, immediately in front of the northern portion of the town of Hampton, extending across the Marten road, to the main county road leading from Hampton and Fortress Monroe to "Fox Hill." A road twenty feet wide above ordinary tide, will be opened from said avenue along the cove side of "Knob's," to the last lot on the south end of said peninsula, thus affording to all purchasers a right of way from the river and cove to the said county road. A survey of said land, sub-divisions of the same and the said avenue and twenty foot road, is now being made by the County Surveyor, and on or after the first day of January, 1874, I will be prepared to receive bids for the said land, which will be cut up in small parcels so as to accommodate those of small means with a homestead.

CHAS. K. MALLORY.

HAMPTON, Dec. 15, 1873.

FREEDMAN'S
SAVINGS & TRUST
Company,

Chartered by Congress, March, 5, 1865.

PRINCIPAL OFFICE,
WASHINGTON, D. C.

Branches in all cities and large towns of the South and Southwest.

FIVE CENTS, or larger amounts, received on deposit, and Bank Books issued.

ALL PROFITS paid to depositors as interest, not exceeding seven per cent. per annum.

INTEREST on sums of ONE DOLLAR and upwards begins first of each month, and is payable on the 1st of January and 1st of July.

☞ *Every Account strictly confidential.*

THE NORFOLK BRANCH,
AT
NO. 116 MAIN STREET,

Is open daily from 9 A. M. to 3 P. M. and on Saturday Nights from 6 to 8 o'clock.

☞ DON'T WASTE MONEY! SAVE THE SMALL SUMS!

J. W. ALVORD, *President.* H. C. PERCY, *Cashier.*

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,237,927.67, being an increase of *fifty per cent.* on the balance due depositors at the close of the present year.

There are no stockholders in this Company, and all the profits, over and above expenses, go at each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $122,215.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $5,000,000 due depositors.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.

Special arrangements made for receiving business accounts payable by check, and bearing 4 per cent. interest.

Certificates of deposit issued bearing interest and available anywhere in the United States.

ACCOUNTS TRANSFERRED.

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and *without loss of interest.*

For full information about the Bank address the *Actuary* at Washington, D. C., or the Cashiers of the respective Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be procured by addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

W. E. FOSTER & CO.,
Plumbers, Gas & Steam Fitters,
No. 111 MAIN STREET, NORFOLK, Va.

A full line of Gas Fixtures, Plumbers' Goods and Materials. Speaking Tubes, Bells and Pumps put up at short notice. All work executed in a superior and workmanlike manner and warranted. Agents for the WILD CUCUMBER WOOD PUMP.

SAMUEL CUMMING,
DEALER IN
DRY GOODS, GROCERIES,

HAMPTON, FEBRUARY, 1874.

THE INAUGURAL MESSAGE.

General James L. Kemper, Governor of this commonwealth, assumed the executive office on the first of January, 1874, and on the same day sent his inaugural message to the General Assembly. Under the leading topics discussed we quote as follows:

THE GOVERNMENT OF THE RACES.

"I do not hesitate to affirm, so encouraging and decisive has been the progress of the last four years, so clearly developed by the past are the obligations of to-day, that, if we are but guided by prudence, if we go forward with courage tempered with forbearance, and if no federal legislation shall intervene to disturb the relations between the races, we cannot fail to bring our experiment to a successful and prosperous issue."

UNIFORM SYSTEM OF FREE SCHOOLS.

"A sum of money is being annually expended in impartially educating both races not far short of the amount required to meet all the other expenses of the government, and this system has received the deliberate sanction of the white race, who chiefly contribute the means by which it is maintained."

In regard to the duty to the colored population, "assigned us by Providence," the Governor says:

"We intend to perform it by scrupulously guarding the newly acquired rights of the colored man; by affording him liberal facilities for education and inciting him to use them; by developing his best qualities and capacities and interesting him in the preservation of order and the enforcement of justice; by shielding him against devices of the vicious and thriftless; by habitually according him the kindness, forbearance and sympathy which his comparative dependence and weakness invite, and by cultivating such relations of active cooperation and mutual trust and common interest between the races as will combine both in recovering the general prosperity, and make each an indispensable instrumentality for that end."

In the following, General Kemper well illustrates the general feeling of ex-Confederate officers:

"Neither cherishing resentments nor repining over the irrevocable past, abating no jot of self-respect, yielding to no act of self-abasement, recognizing the indissoluble bond by which the destinies of Virginia are bound up with those of the Republic, they have, with true and brave hearts, and with uplifted brows sworn their fidelity to the restored Union.

"It is with the confidence which conscious self-respect inspires, it is in the spirit that becomes men, that we boldly claim reciprocity of respect and respectful good will between our fellow citizens of the North and ourselves. What we want is peace with honor; not the name and forms, but the living realities of peace.

"We vouch to all a cordial welcome and ample guarantees for life, liberty and the pursuit of happiness, whatever their political or religious affiliations of the past, present or future."

In "return for the vast donation of land with which the munificence of Virginia endowed this Union in its weakness," Gov. Kemper claims that the national treasury might well, "in the plentitude of its wealth and power, restore prosperity to our State by assuming her debt."

He says, with force, "Justice, humanity and the best interests of the colored race and the country at large, invoke the common government to enable us to effectuate its policy of educating and elevating our newly enfranchised population by supplying to the State the necessary means to that end."

The message is emphatic in regard to payment of the State debt.

"Obligations to public creditors, binding the honor and good faith of the Commonwealth, should be fulfilled to the utmost of her ability, in any event and under all circumstances."

A close scrutiny of all public appropriations is urged.

PUBLIC INSTITUTIONS.

"The care of our public institutions, educational and eleemosynary must be generous to be prudent." Higher institutions and public schools are commended "to the most liberal legislation compatible with the embarrassed condition of the treasury."

A CENTRAL WATER LINE

connecting the Ohio River with Chesapeake Bay is urged a "vital question of the day."

At present, "while the want of cheap and abundant food is oppressively felt in many eastern sections, corn is yearly consumed as fuel in some of the grain growing States of the Mississippi Valley."

The feasibility of this water line running through Virginia has been proved, and it is needed quite as much as a national as a State benefit.

The Governor advises that the oyster law be revised; that speedy provision be made for payment of the interest on the State debt; that a permanent financial policy be matured and adopted and that measures be taken to encourage immigration.

The spirit of the inaugural is that of a hospitable welcome to all comers, loyalty to the national government, kindliness and justice to all sections and classes, irrespective of color or opinion, and only needs to become the evident spirit of the people of Virginia, to insure benefits greater than extinguishment of the State debts.

There is a manly, soldierly directness in it that is convincing of the sincerity of the resolve of its brave writer to do his part toward bringing about a new era of efficiency "in the Government and a "noble union of all the elements of Virginia's strength."

DR. RUFFNER'S REPORT.

This valuable document is replete with interest. We publish a few of its statements.

Number of public school scholars enrolled in Virginia in '72 166,337.
Number of public school scholars enrolled in Virginia in '73 160,859.

The Doctor accounts for the loss of 5,518 pupils by unusually rough weather and roads, and by poverty and disease. Improved teaching and discipline tends to throw out the lazy and indifferent.

Bad teaching, in many more cases, has occasioned a decline in numbers.

"It is gratifying to observe that the average monthly pay of teachers, increased from $29.86 per month, in 1872, to $32.00 in 1873.

"The favorable advance in public sentiment has continued and is unequivocally shown.

"The general financial condition is more satisfactory than it has ever been.

"During the past year our State has received from the Peabody Fund, $31,450.00"

This outlay has multiplied itself many times in a stimulated local enterprise and liberality. The general agent, Dr. Sears, has been always ready to aid by his personal services, and offers increased encouragement to normal instruction.

County superintendents of education are poorly paid, hence frequent resignations to the detriment of the school interests.

The splendid school systems of Richmond and Petersburg are expanding and improving. In Lynchburg, Norfolk, Portsmouth, Alexandria and Staunton, there has been steady improvement educationally.

"There is a general testimony to the improvement in the qualifications of teachers; yet nine-tenths of our teachers are far below what they ought to be and must become. Now and then over the State we meet a true, well furnished teacher, but, most frequently, the sad spectacle of misrule and superficial teaching meets the eye. It is highly important for the Board of Education to have authority to use a portion of the school funds for the systematic training of our army of teachers."

Teachers' institutes have been held but there has been a lack of means of paying even traveling expenses of those qualified to give systematic instruction.

The higher institutions of the State are referred to with a just pride; their prosperity is greater than ever before. It is proven by statistics that "when the white population alone is concerned Virginia has a larger proportion of her sons in superior institutions, probably, than any State or country in the world," as follows:

STATISTICS OF 1872.

"Virginia has 1 to 722 of her white population in college.

"Virginia has 1 to 1233 of her whole population in college.

"Massachusetts has 1 to 1588 of her white population in college.

"Massachusetts has 1 to 1615 of her whole population in college.

"Connecticut has 1 to 1529 of her white population in college.

"Connecticut has 1 to 1630 of her whole population in college.

"What stronger evidence could be presented of the love of Virginia for the higher branches of learning, than the fact that it cannot be quenched or even suppressed by the pinching poverty which now overspreads the State?"

Dr. Ruffner appeals eloquently for improved female education:

"From no source, so far as I know, has the State ever given anything to advance the education of her daughters," although Virginia has endowed men's colleges munificently.

The Agricultural and Mechanical College has succeeded beyond all reasonable expectation, but is under serious embarrassment for want of building funds.

The Hampton Institute is kindly mentioned and its report published in full.

A mass of valuable statistics is appended to the pamphlet, making it a most valuable document and showing that the "Old Dominion" is not likely to lose her pristine leadership if educated men are to come to the front.

THE JUBILEE SINGERS.

This celebrated company has met with a most favorable reception in England. In some places they have received very substantial help, and everywhere their concerts have been crowded. In Glasgow, Scotland, they were detained for weeks beyond their appointed time singing to throngs, who could not be satisfied. The Scotch find in these old slave songs a curious similarity to their own peculiar national airs.

We have just received an English paper giving an account of these singers in Hull. Their popularity is such that there was almost a mob at the concert hall, and policemen were employed to preserve order.

They visited the house and room in which Wilberforce, the great leader of emancipation in the British Empire, was born, and there sung "John Brown," and the English national anthem. They have sent over to America twenty thousand dollars, as the net profit of the English concerts, and expect to raise about fifty thousand in the Old Country. Their object is the erection of "Jubilee Hall," at Nashville, Tennessee, and the establishment of Fisk University on a solid, permanent basis. This they will undoubtedly accomplish.

There is nothing in the story of emancipation of slaves in all history so remarkable as the undertaking of the Jubilee Singers. Not only is the spirit of self help surprising, but the *power* they have over every class of people is wonderful.

Mr. Gladstone, the Premier of Great Britain, said he never had been so impressed as by their wild choruses. The "blue blood" of England has received them with the greatest cordiality, and acknowledged the beauty and strength of their songs as well as the claims of their cause.

Professor White, of Fisk University, is the mainspring of this movement. At first there was only discouragement: for weeks they made no headway, and Mr. White was compelled to pledge his small personal property to secure the means of carrying his brave company from one place to another.

The tide finally turned, and to-day the "Jubilee Singers" may claim to have made a most creditable page in the history of their race.

A large, permanent and finely appointed University standing on the beautiful and commanding heights above Nashville, Tennessee, will forever testify to the faith and courage of George L. White, to the capacity of the negro race, and to the brave and arduous labors of the *Jubilee Singers.*

DRAINING.

BY GEORGE DIXON

(Concluded from third page).

The farmer with undrained land is like a mariner steering his vessel against wind and tide; however skilful or persevering he may be, he can make very little *permanent* improvement in them; his manures do very little good after the first year; whether they are those collected in the barn-yard, or lime, guano, superphosphates, or other artificial fertilizers; as soon as they reach the watery subsoil they cease to act beneficially and are lost to the future crops. When the intelligent farmer has drained lands to cultivate, in which his home-made manures and artificial fertilizers are retained from year to year, till exhausted by the growing plants, he is able to bring all the resources of modern science, as well as his old experiences, to bear upon them, with much more certainty of success; and encouraged by an adequate return for his labor and capital employed in the increased productiveness of the soil, he will extend his improvements and devote his additional income to the permanent amelioration of his plantation.

Thirty years ago, there resided in London an energetic gentleman named Mechi, who manufactured scissors, razors and all kinds of fancy cutlery, and articles for the toilet; he realized a large fortune and became an alderman of the city. Tired of London life, he determined to pass the remainder of his days in the country, and try his hand at farming. There happened

to be a poor, clayey farm of one hundred and seventy acres for sale nt Tiptree, in Essex; this he purchased, and was determined to improve it by skilful husbandry. Seeing many of bis neighbors unable to use the subsoil plow, on account of the shallowness of their drains, he determined to put his, forty-eight inches below the surface. The alderman's experiment was laughed at hy his Intelligent neighbors. His deep drains were constantly decried as Impracticahle and worthless. They said, "The water will never find its way into the drain pipes through such thick, impervious clay. It stands hy reason that it will do no such thing. Does not the water stand on the surface of such land till it stinks, in the very footprints of the horses' hoofs, or is evaporated hy the sun? It would as soon leak through a brick as through such strong clay as that. It is all nonsense to bury a man's money in that style. He will never see a shilling of it back again." In the face of these opinions nnd remarks, Alderman Mechi went on with his deep drains, laying his pipes down every furrow, field after field, *deep below the surface*, till the whole farm was drained. I wish to call your attention to the result of this experiment. The rain water did find its way into the pipes by gradually percolating, not only through the part where the drain was out, but through the soil a considerahle distance beyond; for the clay, losing its moisture, shrank and cracked between drain and drain, producing innumcrahle fissures, which filled up with soil and sand from the surface, forming veins and arteries which took off the water, freed from all sediment hy filtration, to the depth of the drains. In some places they tapped springs whose waters bad before risen to the surface, and discharged themselves over the land. The drains in the furrows were laid with n burnt clay pipe, twelve inches long, and two inches diameter: these discharged themselves into a larger pipe, and these again emptied themselves into the main artery, a large pipe which conveyed the water to the lowest part of the farm, where the huildings were situated, furnisbing an ample supply for the house, steam engine, cattle, and all the stable and barn-yard wants; and this in a place where before no water could be got without pumping it from a well. The Tiptree experiment is a great success. The increase of produce is tenfold; and those who derided and opposed it, have adopted tbe plow to their great advantage. Deep draining inaugurated a new era in farming; hy it lands, once considered worthless, have become valuahle; and the productiveness of the country greatly increased. Alderman Mechi introduced several other improvements; hut I shall only mention one here, his deep tillage, which the farmers in England are gradually adopting; hut this mode of culture can only be carried on to advnntage in lands tbnt have had the noxious fluids of the subsoil carried off by deep drainiug. I must refer those who put the question, "Does it pay?" to the halance sheet which the alderman puhlishes every year for the benefit of the public, in which he shows that after paying the interest of money expended in the cost of the estate, and the improvements thereon; the interest of the capital employed in stock and implements, the cost of seed, labor, nnd all other expenses, he has a large margin of profit; and this from land once considered more worthless than the worn-out uplands of Virginia.

I cannot give you correct dates in the history of draining. Its benefit to arable lands was hardly known before the commencement of the present century. The first drains, as I stated above, were made hy placing n stone on each side of a narrow ditch with a flat stone on the top for a cover. When these were used for draining wet bottoms, they were few and far between, and generally crosswise of the furrow, and not more than twenty inches deep. In crossing the furrow the cover was so near the surface that it was often displaced by tbe plow, and the surface water rushing in soon silted up the drain. The next attempt was the rubble drain. These were made hy outting a ditch about two feet deep, as narrow as possible, up each furrow, and filling it to the depth of eigbt or ten inches with small stones, generally gatbered from the land, and broken to the size of a walnut. On the top of the broken etones long grass or turf was placed and the soil put back to the level of the furrow. These did considerahle good, hut they were so near the surface that in heavy rains the water found its way into them in a direct stream, which, carrying with it land and other earthy matter filled up the interstices among the stones, and they ceased to run. The next improvement was the horseshoe draining tile. It was made by turning a sheet of fiat clay, about an inch thick, over a piece of wood, a cross section of which resembled the letter U. These answered better than rubble drains. The slow process of making them hy hand made them too costly. An ingenious hlacksmith, named Lambert, who lived at Stockton, on the river Tees, invented a machine, hy which the horseshoe tile was made hy putting clay into a box and pressing it through a die, hy means of a screw and lever; with this machine they afterward made the round or pipe tiles, which continue to be used. Lambert's machine was greatly improved hy Whitehead, of Preston, in Lancashire, who obtained for it the first prize at the last exhibitions of London nnd Paris. With Whitehead's machine, a man and two boys, in one day, can make four thousand pipes, twelve inches long and two inches diameter. These, when hurnt are sold for six dollars a thousand. The cost of one of Whitehead's machines, on board at Liverpool, with dies to make pipes from inch and half to twelve inches diameter, is about two hundred and fifty dollars.

The two-inch pipe tile is the one most approved; when carefully laid from forty to fifty inches below the surface, with a gentle fall, it is found that nothing hut clear water enters the joints. Experience has proved that a drain in each furrow is most effectual, but should the ridges be small, one in every alternate furrow, is considered sufficient. There is a class of men in England who follow draining as a husiness, and hy long practice have become very expert. They will cut, lay and fill in a drain at twelve cents a rod. The farmer first goes up and down the furrow to be drained, with the plow, and turns out all he can; the drainer follows bim and shovels all that is loose off the top; then, with a long spit, he reaches the required depth in three draws, leaving it just sufficient width at the bottom to receive the two-inch pipe. He next cleans out the bottom, with a sharp, semi-circular shell tool, with a handle put in nt an angle of forty-five degrees, which he draws toward him, along the bottom of the drain, till it becomes perfectly smooth. It generally happens that sufficient water gathers in the drain to test the fall, but should it be dry, water is brought for this purpose and poured in nt the head of the drain. If it runs off satisfactorily, the workman begins nt the lower end, and, by means of nn irou tool shaped like an L, with a long wooden handle, he hooks on the pipes, one at a time, and places them along the bottom of the drain. They are covered carefully at first, and then hy means of a drag the material which has been dug out is pulled in most expeditiously.

Before concluding this paper, I would refer to another advantage, secured hy draining, in which all are interested. In England the ague, (called here chills) was very prevalent in certain sections of the country. The records of the meteorologist went to prove that the disease was engendered hy infectious exhalations from the undrained lands of these districts. As soon as they were drained, the fogs and mists disappeared, and with them fever, ague and other epidemic diseases. Such being the case, apart from the consideration of any pecuniary profit arising from the draining of lands, it becomes the duty of governments, and all good citizens, to promote it in every way in their power. Let us sum up the practical benefits to be derived from draining.

1st. It is a necessary preparation for all other improvements which may be applied to the soil; so that it is useless to attempt others till tho water is got out of the land.

2d. It is a deepening of tbe soil. The noxious ingredients having been carried off hy the drains, the subsoil retains the fertilizers for the benefit of the descending roots of the plants.

3d. It allows the fertilizing matter held in solution in the water from the clouds, to go down to the roots of the plants, instead of running off the surface and carrying the soil with it.

4th. It allows air to be conveyed to tbe roots of the plants, through the openings made by the percolation of the water through the soil to the drain.

5th. It not only produces a change in the soil but also a change in tbe climate, making the crops mature earlier and preventing rust and mildew, which are occasioned by excessive moisture.

6th. And last, hut not least, hy taking the water from the surface, hy underground drains, we render the air more salubrious, and thus benefit our neighbors as well as ourselves. Another proof of our dependence on each other, whether it be in the culture of the *dead earth* or of the *living intellect*.

IMPROVEMENT.

We have several times alluded to the improvement in our little town, and we note with pleasure the fact that this improvement is in no wise diminishing, hut rather on the increase. For months past our mechanics have all been constantly and actively engaged in the erection of new houses and the repairing of such as were too small or inconvenient for the use of their owners. Within the last twelve months some half dozen large stores all with comfortable dwellings attached, have been erected on Main street. Besides this, dwelling houses are going up all over the place, and a general air of activity and thrift pervades the entire town. We are extending our borders too, and pushing our limits far into the country. Places which in 1861 were considered the suburbs, are now the centers of trades. On both sides the river this work of extension and improvemeut is going on. Indeed, from Fort Monroe to the western extremity of Hampton is little less than a continuous town; and this it will surely be when a few more years of prosperity have elapsed. All the signs point to that end and lead to that conclusion, and any person engaging in business here should conduct his operations with reference to that end. True, we will never be a great city, situated as we are at the extremity of a narrow peninsula with navigable water along each side its whole extent; with no hack country full of ores or metals to pour its supplies into our lap; with limited depth of water at our front, we cannot hope even in the most distant future to arrive at the dignity and proportions of a large or populous or wealthy city; but we can and will have one of the most flourishing and attractive towns on the whole Atlantic coast.

There are many things we lack: things essential to our rapid growth and best prosperity. We lack good streets, we lack good schools, we lack a savings bank and corporate institutions generally. Talk as you will about the monopoly and greed of corporate bodies, hut there is no getting along without them; there is no such thing as real, substantial, public improvement without their assistance.

Great improvements need great expenditures of time, hrain and capital; and these can only be obtained hy the united efforts, the concerted energies and combined capital of many individuals. Who builds your railroads, opens your canals, endows your colleges, founds your asylums? Corporate bodies! These then we need and must have to catch the hints and apply the suggestions and concentrate the energies and means of the intelligent and wealthy around us. Single individuals can do much to improve the appearance and condition of our town, hut even when they have done the most, there are measures of general good wholly beyond their own control aud outside their resources, which hy the united efforts and means of many would greatly enhance the attractiveness of our town and the convenience of our people. Now, then: who will take the initiative in establishing a bank? Who will inaugurate a free library? Who will accept the honor of founding a night school?

[Though it is a rule of ours to avoid personalities, the following, from a regular contributor is too rich to lose. We certainly have a second Tom Hood in our midst.—ED.]

Come ye who love a country's names and listen to my ditty,
While I rehearse the titles of good old Elizabeth City:
Here's IVY trailing o'er the fields and running through the alleys,
And NETTLES spreading out their arms through all Back River's valleys.
A CAMM and tranquil LAKE, adorned with most inviting nooks,
Where lovers of romantic turn may poetize on BROOKS.
No flocks and herds graze on our plains as in the days of yore,
And yet our SHEPHERDS oft are seen beyond the village MOORE.
And here the botanist may find new species any day,
We have a kind of THISSEL unknown to Wood or Gray.
Like all our race we're subject to Dame Fortuue's random freaks,
Some dwell along misfortune's vales, and some among the PEEKS.
Some, born to luck, rejoice for life in pleasure's LIVELY WRAYS,
While some, alas, in poverty go MOURNING all their days.
In doctors we are well prepared with any place to cope,
For we've got the choicest SEMPLE, and are confident in HOPE,
But should a case prove obstinate and still refuse to yield,
To make a cure, we've naught to do but to present our SHIELD.
Our ship of state will ne'er go down, if that the winds will lull,
Though crippled as a HOLCHAFT, she's sound throughout her HULL.
Our people all must honest be, though poverty should pinch 'em,
For if they steal VON SCHILLINGS worth we're ready then to LYNCH 'em.
Our DARLING miller as he grinds, by turns wakes up and dozes,
And close beside him there's the COUCH, where honesty reposes.
On change we're not behind the times; our stock's always at par, oh,
We may not have the backbone, but we've got the spinal MARROW.
With furniture we're all supplied; of SHEETZ we have a store,
Would give to every HOUSE a pair, and then have something mere.
Ye housewives busy o'er your churns and fretting o'er the yield,
How would your hearts rejoice to see a perfect BUTTERFIELD.
'Tis said this is a land of peace, exempt from foeman's ravage,
But cannot be a Christian land while it contains a SAVAGE.
Catholicism here may boast in blissfulness of hope,
There are priests and fathers everywhere, hut we have got the POPE;
Oh! saddest of all human sights, to see the great brought down!
Here's POPE without Pontificate, and KING without a crown.
A showman here would "make his Jack" without resort to shams,
We've lots of educated HOGGS and STORES of CUNNINGHAMS;
Should these prove insufficient your taste to satisfy
A CAMPBELL stands in readiness to amuse the curious eye.
No frowning castle blocks the way of traveler on our street,
Yet almost daily, hand to hand, do KNIGHT and PALMER meet.
Confectionery is our boast! we challenge any town,
Our CAKES are never failures, but are always DUNN up BROWN,
Our MELLENS are delicious, of the old JACK WYATT breed;
Potatoes of the TOLMAN sort, the very best indeed.
Let other towns present their claims, and prove them if they can,
We rest in perfect confidence, we have the CUMMINO man.
People of every shade and hue upon our streets are met,
For some are WHITE and some are BROWN and some are black as JETT;
And some of these are native born and some come here by chance,
And strange, we have a FRENCH man here who never was in France.
Each man you meet is hus[illegible] peaceful trade pursuit',
One drives the plane, [illegible]nd
[illegible] one you'll see
Our bravery is we'
borne the sl
And, as we are a
game tow
With prospec'
may d
Our BARNE
bur
Our towr
h
And if
No
T

LUCY GRAY; OR, SOLITUDE.

WORDSWORTH.

Oft I had heard of Lucy Gray;
And when I crossed the wild,
I chanced to see at break of day
The solitary child.

No mate, no comrade, Lucy knew;
She dwelt on a wide moor,—
The sweetest thing that ever grew
Beside a human door.

You yet may spy the fawn at play,
The hare upon the green;
But the sweet face of Lucy Gray
Will nevermore be seen.

"To-night will be a stormy night,—
You to the town must go;
And take a lantern, child, to light
Your mother through the snow."

"That, father, will I gladly do;
'Tis scarcely afternoon,—
The minster clock has just struck two,
And yonder is the moon!"

At this the father raised his hook
And snapped a faggot hand.
He plied his work;—and Lucy took
The lantern in her hand.

Not blither is the mountain roe—
With many a wanton stroke
Her feet disperse the powdery snow
That rises up like smoke.

The storm came on before its time;
She wandered up and down;
And many a hill did Lucy climb,
But never reached the town.

The wretched parents all that night
Went shouting far and wide;
But there was neither sight nor sound
To serve them for a guide.

At daybreak on the hill they stood
That overlooked the moor;
And thence they saw the bridge of wood,
A furlong from their door.

They wept, and turning homeward cried,
"In heaven we all shall meet;"
When in the snow the mother spied
The print of Lucy's feet.

Then downward from the steep hill's edge
They traced the footmarks small:
And through the broken hawthorn hedge,
And by the low stone wall;

And then an open field they crossed;—
The marks were still the same;
They tracked them on, nor ever lost;
And to the bridge they came.

They followed from the snowy bank
Those footmarks one by one,
Into the middle of the plank;
And further there were none!

Yet some maintain that to this day
She is a living child;
That you may see sweet Lucy Gray
Upon the lonesome wild.

O'er rough and smooth she trips along,
And never looks behind;
And sings a solitary song,
That whistles in the wind.

WORDSWORTH.

In the extreme northwest of England, among the Cumberland hills, William Wordsworth was born, on the 7th of April, 1770, and among the same hills, a faithful student of their beauty, he learned to write the descriptions of natural scenes, and the tender, thoughtful poems which gave him long ago the first rank among modern English poets. A man, highly educated, neither rich nor poor, with a strong and healthy nature which made for him warm and faithful friends, he was content to spend his life amidst the quiet loveliness of the country of his birth; and, with his sister, to whom he was deeply attached, and his wife and children, he lived in unusual happiness and almost unbroken health, until his death in 1850. "With the exception of tours in Scotland and on the Continent, and occasional visits to London, his whole life was passed among the lakes. In enjoyment of worldly competence, he walked, boated, wrote, attended church and received visitors. In his later years the day began and closed with prayers; and after breakfast the family read the lessons and psalms. His study was in the open air, in which, he says, nine-tenths of his poems were shaped; and by no one else has the world of sight and sound, from the planetary motions in the heavens down to the restless shadow of the smallest flower, been so sedulously studied during a long life."

Surely this is a pleasant picture of a poet's home, and inclines us to feel the reality of the sentiment to which the poems of Wordsworth give such eloquent expression, while retaining always the simplicity which was his characteristic. The most elaborate of his productions is "The Excursion," a long poem in blank verse; while "The White Doe of Rylstone," a story in verse, was the one upon which he himself set the highest value. Besides these, he wrote many sonnets, poems and ballads, all of which are of interest, while some of them ought to be known by every reador of the English tongue.

Two other famous poets, Southey and Coleridge, lived near Wordsworth in Cumberland, and these three with their associates founded what is known as the "Lake school" of English poetry.

The poem of Wordsworth which we give herewith, is one of the simplest of his productions, but it gives a fair idea of his style, when, in disgust at the highly ornamented poetry common in his day, he returned to the opposite extreme and wrote about simple things in simple words, for which reason we have chosen to present it to our readers.

LUMBERING IN WINTER.

Early in the autumn, before the heavy winter snows begin to fall, in those thickly wooded regions whence comes most of our lumber supply, gangs of strong armed, hardy lumbermen start out from the settlements and strike into the heart of the forests where they are to find their winter's work. All along the northern borders of the United States lie these great forests, unbroken save by broad lakes, or the wild rivers which form the roads whereon the immense rafts of timber float down to the cities and the sea. The lumbermen "go in," as it is called, provided with all necessary stores for the winter, and are frequently never heard from again, or themselves receive no communication from the outer world, until they come down on their rafts when the warm suns of spring have thawed the river ice and opened a path for them out of the trackless forest. They pass the months of their exile in log huts, working through the short winter days with might and main, hewing and splitting and drawing the great trees which are by and by to be built into houses and ships and made in a thousand ways to serve the uses of men. The men endeavor, if possible, to station their encampment upon some gently sloping hill side down which the logs can be rolled, or easily drawn by oxen, to the stream at its foot, on whose bank they are heaped through the winter, each log bearing some mark which shows to whom it belongs. Then when the spring rains have swollen the streams and carried away the ice, the logs are set afloat and commence their perilous journey down the current, carrying with them some of the lumbermen whose business it is to conduct the rafts through the difficulties which beset their course. Almost every mountain stream brings down its share of the winter's harvest in the shape of those huge, rough logs which unite in the larger rivers, and in vast rafts pass down to their destination. It is during this season that the greatest dangers in the lumbermen's work occur, for often the logs get jammed in the narrow spots in the river, and then no pen can describe the wildness and confusion of the scene. The blocks of broken ice and the heavy logs, driven by the strength of the current, pile themselves up between the river banks till the water, obstructed in its flow, becomes a boiling flood, and as far as the eye can reach dashes with unavailing fury against the solid mass of ice and timber. And out upon this treacherous, rough bridge must the lumbermen go, cutting the ice, hewing at the logs, treading with steady foot, and striking with sure hand until obstacle after obstacle is cleared away and the great raft starts once more upon its downward course. At the risk of their lives these men do this, for after their object is accomplished, and the raft set free, their return to land depends upon their own strength and courage, as they are beyond the help of their companions, and it is no easy thing to leap from one rolling log to another, to avoid the crashing ice and madly rushing water, and to leap at the right moment and the right place upon the broken shore. No season passes without some loss of life and limb; and the cold, the loneliness, the hard work and the danger, make lumbering a by no means attractive occupation. Still like most things it has its bright side, and doubtless when after a hard day's work the men gather at night around a huge, crackling fire with a hot supper beside them, they laugh and make merry with little thought of hardship or danger, and lie down under their coarse blankets to that sound, sweet sleep known only to those who are not afraid of "a hard day's work."

VENICE.

About four miles from the coast at the northwest end of the Adriatic Sea, is a long, narrow belt of land, broken by numerous openings through which the waters of the Adriatic flow into the lagoon between the mainland and the belt. This lagoon is from twenty-five to thirty miles long, and about five miles broad, and upon a group of seventy-two little islands, lying close together upon its still, blue water, the city of Venice has been built. The city proper is about six miles in circuit, and from whatever point it is approached, seems to be actually floating upon the surface of the sea, for in all directions it is penetrated by canals, one hundred and forty-six in number, the largest of which, the Grand Canal, divides the city into two unequal parts, and is spanned by a single bridge, the famous Rialto, an arch of marble built in 1590, and now covered with little shops, so precious is a solid foundation in this city of the sea. The smaller canals are covered by three hundred and sixty different bridges, and upon them the houses front as upon an ordinary city street; the private houses being chiefly of brick, three or four stories in height, with balconies and doors from which the inhabitants step directly into their gondolas, as the long, narrow, black boats are called, which take the place of carriages or omnibuses in other cities. The larger houses or palaces are very beautiful, and are generally square, with a court in the middle, while many of them have both land and water entrances, for though the communication between the various parts of the city is by water, yet there are numerous alleys, three or four feet wide, smoothly paved with slabs of marble or stone.

The history of Venice is deeply interesting, for the city was at one time one of the great maritime powers of the world, and distinguished for the luxury and refinement of its people. Although its greatness has passed away, many evidences of it still remain, and the churches and palaces of Venice are among the most beautiful and highly decorated in Europe, the cathedral of St. Mark, in particular, being incredibly rich in marbles, mosaic work, and bronzes. Of old, the chief officer of the Venetian government was called the "Doge," and the Doge's palace, originally built in 820, but demolished several times since, is a fine building, fronting upon the only open square in the city, containing, beneath and above its magnificent rooms and galleries, the cells where prisoners of state were confined. The manufactures of Venice were, in their day, justly celebrated, and some of them, as, for example, the manufacture of glass, are still carried on; but, at best, the city is now only the ghost of its ancient, beautiful self, and is interesting principally by virtue of its past.

CONTENT.

There are two kinds of people in this world who are contented, and although they resemble each other in being satisfied with what they have, yet in truth they are as far apart as the poles, for with one class the content arises from the fact that they desire nothing better than they have; while with the second it comes from a cheerful acceptance of what a higher power has decreed to be sufficient, and does not prevent an earnest seeking for better things. The people who fold their hands in comfortable indolence and without striving to improve their condition declare themselves to be "contented," were surely never held up to us for imitation; for the word has a far higher meaning and the state is by no means so easy of attainment. True contentment comes only to those who, having done their utmost, are able to renounce their own desires, and confess humbly that what has been given and what has been denied, are alike for the best, and with eyes clear enough to see beyond this world, find some sunbeams in the darkest lot. The continual feast of a contented mind is supplied from a higher source than they know of who have not honestly labored to do something for the advancement of themselves and their fellow-creatures.

THE HABIT OF READING.

"I have no time to read," is the common complaint, and especially of women, whose occupations are such as to prevent continuous book perusal. They seem to think, because they cannot devote as much attention to books as they are compelled to devote to their avocations, that they cannot read anything. But this is a great mistake.

It isn't the books we finish at a sitting which always do us the most good. Those we devour in the odd moments, half a dozen pages at a time, often give us more satisfaction, and are more thoroughly digested than those we make a particular effort to read. The men who have made their mark in the world have generally been the men who have, in boyhood, formed the habit of reading at every available moment, whether for five minutes or five hours.

It is the habit of reading rather than the time at our command that helps us on to the road to learning. Many of the most cultivated persons, whose names have been famous as students, have given only two or three hours a day to their books. If we make use of spare minutes in the midst of our work, and read a little, if but a page or a paragraph, we shall find our brains quickened and our toil lightened by just so much increased satisfaction as the book gives us.

Nothing helps along the monotonous daily round so much as fresh and striking thoughts to be considered while our hands are busy. A new idea from a new volume is like oil which reduces the friction of the machinery of life. What we remember from brief glimpses into books often serves as a stimulus to action, and becomes one of the most precious deposits in the treasury of our recollection. All knowledge is made up of small parts, which would seem insignificant in themselves, but which, taken together, are valuable weapons for the mind and substantial armor for the soul.

"Read anything continuously," says Dr. Johnson, "and you will be learned." The odd minutes, which we are inclined to waste, if carefully availed of for instruction, will, in the long run, make golden hours and golden days that we shall be ever thankful for.—*Scribner's Magazine.*

GOOD MANNERS A DUTY.

BY HENRY WARD BEECHER.

Men often speak of good manners as an accomplishment. I speak of them as a duty. What, then, are good manners? Such manners as the usages of society have recognized as being agreeable to men; such manners as take away rudeness, and remit to the brute creation all coarseness. There are a great many who feel that good manners are effeminate. They have a feeling that rude bluntness is a great deal more manly than good manners. It is a great deal more beastly. But when men are crowded in communities, the art of living together is no small art. How to diminish friction; how to promote ease of intercourse; how to make every part of a man's life contribute to the welfare and satisfaction of those around him; how to keep down offensive pride; how to banish the rasping of selfishness from the intercourse of men; how to move among men inspired by various and conflictive motives, and yet not have collisions—this is the function of good manners.

That a man is a mechanic, is no reason why he should not be a perfect gentleman. I affirm for every American citizen the right to be simply a man, but a good-mannered man. I have seen men at the anvil who were as perfect gentlemen as men of books or men of society. I know no reason why a man who digs in the soil, a man who works in metals and woods, a man who builds, should not be a perfect gentleman. There is nothing in mechanical occupations which is incompatible with the highest courtesy.

Every man is bound to observe the laws of politeness. It is the expression of good will and kindness. It promotes beauty in the man who possesses it, and happiness in those who are about him. It is a religious duty, and should be a part of religious training.

This feeling of reverence does not prevail to any great extent among us. I discern a great lack in this respect. Children, now a days, are brought up to be pert, to be saucy, to be almost without restraint. They are brought up to have very little regard either for their parents or for their superiors. And, although there are a great many Christian households where children are rightly bred in this regard, it seems to me there has been a decay of that instruction which used to prevail, the tendency of which was to make children modest and respectful. We bring up our children to be old, and smart, and impertinent.

This courtesy which carries with it respect; this testimony of veneration to the aged; this yielding one's self in a thousand little society rites for the sake of making others happy—oh, what brightness it gives to life! What beauty, what adornment it gives to Christian character?

There are many other points that I might speak of. The effect of punctuality and order; the relations which men sustain to each other's convenience and necessities—these and a hundred other branches of this subject, I might discourse upon; but it is not necessary that I should go into them. I have given such examples as I have, merely as specimens for the purpose of calling your attention to the minuteness and carefulness with which the Scriptures inculcate these things. It enjoins not merely the right spirit, but the right spirit manifested in the most beautiful way.

ENGLISH FAMILIES FOR VIRGINIA.—Colonel Wm. F. Gray, of Amelia County, Virginia, who has been for some years past connected with European emigration to the Western states, has been on a canvass of the counties adjoining Richmond, looking for homesteads for a large number of English settlers coming to Virginia, commencing in the spring. He returns to England this month to attend their being forwarded thence. Many well-to-do families, both from England and Scotland, are embraced in the large number who have contracted with him for a residence in Virginia. We believe he contemplates settling them in colonies, so that a feeling of homesickness will be dissipated by daily association with familiar faces and voices.

DURING the month of December there were coined at the Philadelphia mint, 3,137,900 pieces, to the value of $1,750,795.

THE FROST.

BY MISS GOULD.

The Frost looked forth one still, clear night,
And he said, "Now I shall be out of sight;
So through the valley and over the height
In silence I'll take my way.
I will not go like that blustering train,
The wind and the snow, the hail and the rain,
Who make so much bustle and noise in vain,
But I'll be as busy as they."

Then he went to the mountain, and powdered its crest,
He climbed up the trees, and their boughs he dressed
With diamonds and pearls, and over the breast
Of the quivering lake he spread
A coat of mail, that it need not fear
The downward point of many a spear
That he hung on its margin, far and near,
Where a rock could rear its head.

He went to the windows of those who slept,
And over each pane like a fairy crept,
Wherever he breathed, wherever he stepped,
By the light of the moon were seen
Most beautiful things. There were flowers and trees,
There were beries of birds and swarms of bees,
There were cities, thrones, temples, and towers, and these
All pictured in silver sheen!

But he did one thing that was hardly fair,—
He peeped in the cupboard, and, finding there
That all had forgotten for him to prepare,—
"Now, just to set them a thinking,
I'll bite this basket of fruit," said he;
"This costly pitcher I'll burst in three,
And the glass of water they've left for me
Shall '*chick!*' to tell them I'm drinking."

ICE BOATS ON THE HUDSON.

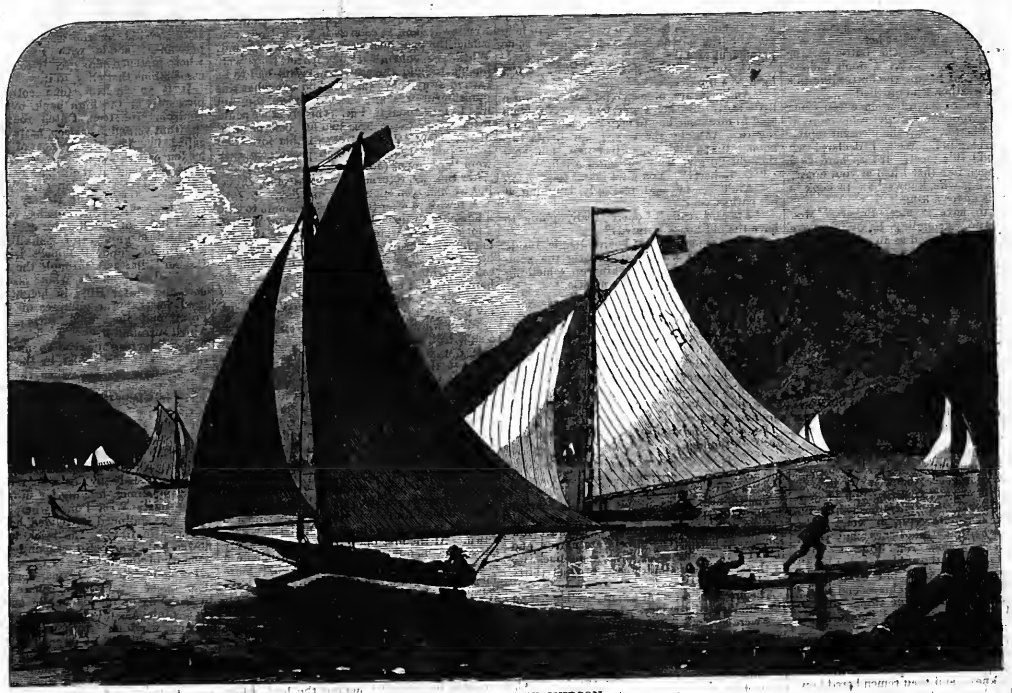
For the above spirited illustration we are indebted to the generosity of Messrs. J. R. Osgood & Co., as for many others which we have still in store for our readers. It gives a lively picture of an amusement which is unknown to the Sunny South, but enjoyed in full perfection on the broad Hudson river, among the Highlands, where the ice, unaffected by the tides, which break it up below, affords all winter a firm, smooth course, many miles in length, for the ringing steels of skaters, or the swifter flight of the ice boats. There is nothing nearer like flying, indeed, than the exhilarating speed with which these winter pleasure boats glide over the glittering mirror of the ice-bound river, their sails unsullied by the storms which summer crafts have to encounter, and spread like snowy wings to the brilliant sunshine and the "wind that follows fast."

The passengers looking out at the gay scene from the railroad train, that is dashing down to New-York along the base of the mountains on the further shore, at the rate of forty miles an hour, may give up the race with the close trimmed little craft that has slipped ahead.

In 1866 the *Una*, one of the fastest of the ice boat fleet which has its quarters at Poughkeepsie, ran from Newburgh to Hamburgh, six and a half miles, in seven minutes. A glance at our picture will show exactly the construction of the ice boats, and account for their marvellous speed. The immense disproportion between the broad spread of sail and the almost inappreciable friction to be overcome of the three sharp runners over the glassy surface of the ice, admits of a velocity that is almost incredible. The boats would actually *run ahead of the wind* if they were sailed directly before it; one stronger blast than usual would send them on with such force that they would have to wait for the next to overtake them. Therefore they are always sailed at an angle with the wind, and the sails kept trimmed as close as possible.

They are evidently built only for pleasure, any extra weight being a hindrance to speed, and more than two persons are seldom carried. In a stiff breeze one man sometimes has to stand on the windward runner, to keep the boat from upsetting. He holds on by the shrouds, and changes his rather critical position from side to side of the boat as its direction is changed. He must have as wild and breathless a ride as he would if he could stand on the cow-catcher of a locomotive.

At several of the river towns there are ice-boat clubs, and many an exhilarating race comes off between their favorite crafts.



ICE BOATS ON THE HUDSON.

MRS. THOMPSON'S WHITE WARE.

BY MRS. R. B. EDSON.

Mrs. Thompson stood by the kitchen table paring potatoes for dinner. Something was evidently wrong with the little lady, for there was an unmistakable air of "spite" in the way she tossed the potatoes into the pan of cool spring water, waiting there to receive them.

To begin at the beginning: Jane Lawrence had been an unusually romantic girl. She had always fancied she would marry some famous artist or scholar who would take her to Rome or Venice, where she would live in a perpetual dream of beauty. She so loved beautiful things! Perhaps all women do, and perhaps that is the reason so many barter love for gold.

But contrary to all her preconceived notions, she married Robert Thompson, a plain, practical farmer; and went to live at the old homestead, which had been the abode of the Thompsons for generations.

If she could have had things a little different, she wouldn't have minded the work so much. If she could have had soft carpets and tasteful furniture, and books, and pictures, and flowers. To be sure she had a little strip under the south windows, where sweet-briar grew, and pinks and sweet-williams, and marigolds blossomed in their season. But they were so old-fashioned; and she pined for the rare and elegant plants that she had seen in conservatories and public gardens. But Robert Thompson would as soon have thought of buying the moon, as such useless things as flowers. And though his wife earned them a dozen times over, it never entered his heart that she did. Indeed, he considered it a very liberal thing when he gave her twenty-five dollars fall and spring to buy her clothing, and wondered vaguely where it all went to, and if she had not some hoarded away somewhere.

Certainly Mrs. Robert Thompson must have been very hard to please. But the particular matter of grievance on this particular day was of quite another thing. The "Easterville Sewing Circle and Ladies' Benevolent Society" was to meet at the farm house the next Friday, and Mrs. Thompson had set her heart on a new set of white ware for the occasion, and that morning had broached the subject to her husband.

"What's the matter of these dishes?" he asked, pointing to the "mulberry and white" plates, which Mrs. Thompson was washing.

"They are all out of date to begin with; and half of them are cracked, or broken; besides, there isn't nowhere near enough to set the table."

"What's become of the china mother used when she had company?"

"It won't look well on the table, Robert, with this mulberry, all cracked up as it is."

"I guess the victuals will taste just as well out of 'em, anyway."

"But we really need the dishes, Robert. There has not been a dish bought since I came here, twelve years ago, and—"

"They'll do just as well for twelve years to come. You wouldn't have thought of it, if it had not been for the sewing circle. If they can't come and eat out of such dishes as we've got, they are welcome to stay away;" and he took down his hat to go back to his mowing.

There were tears in Mrs. Thompson's eyes, but she crowded them bravely back, and tried hard to steady the tremor in her voice, as she said, pleadingly:

"Please to give me the money to get them, Robert. Grover has got some real pretty ones—and cheap, too; I can get all I shall need for four dollars."

"Well, I guess Grover'll keep 'em for all me. I've got no four dollars to spare," turning to go out. "By the way," looking back from the door, "Jones, and Lee, and Hubbard will be here to dinner, and perhaps to supper. We went to get all the south meadow down to-day, if we can. Grass is stout this year, there's a third more than there was last. And Hubbard wants six pounds of butter to-night—don't forget to have it ready;" and with these words he went out, leaving his wife to her long, weary day's work, darkened and made distasteful by her disappointment. She was both grieved and angry. It was a little thing, perhaps, but it is the little things that delight or annoy.

What did it matter to her if the grass was heavy, and butter up to forty cents a pound? It only brought her more and harder work, and no recompense save her bare board and clothing. She could earn more than that in any other man's house.

"Well, I had no business to marry Robert Thompson," she said, moodily to herself, her slender wrists aching from beating over the butter for Hubbard; "everybody always said he was close and shrewd, and prophesied that he would be rich some day—what do I care for riches, if they don't do me any good, don't make my life any fairer or softer! I am not fitted to be a farmer's wife—and yet I have loved Robert Thompson!" She said this half savagely, as if she was disgusted and angry with herself for it.

All through the long forenoon Mrs. Thompson had nursed her wrath. Robert was selfish and unreasonable, and she did not care who knew it. "I will not have the circle meet meet here, and set the table with that old-fashioned china, and that stained and cracked mulberry—no, not for twenty Robert Thompsons. The rooms are shabby and out of date enough, mercy knows;" and her thoughts reverted to the pretty, tasteful homes of her friends where she had met on circle day.

Fifteen minutes before noon, and full that time before dinner would be ready—for they were usually a little behind, and Mr. Thompson always wanted his dinner boiling hot—Mrs. Thompson saw four tired, heated, hungry looking men coming up through the orchard. The table was not set, and she hurried quickly about it. Just then Frank and Charlie, her two boys, came rushing in from school, each shouting, "Mother, mother," and each wanting something right off. She felt tired, and hurried, and out of temper, which was not helped by her husband's impatient—

"Why isn't dinner ready? I told you we were in a hurry to-day. If I hadn't anything to do all the forenoon but get dinner, I'd try and do it before night."

A bitter retort sprang to her lips, but just then Charlie cried out,

"Oh, mother, mother, just look at my copy. I ain't going to write e, b, ab'a any more; I'm going to write sentences just like Frank. Just read it, mother. The teacher said I must get it by heart, and always remember it."

Mrs. Thompson glanced up, laying the plates as she read: "A soft answer turneth away wrath, but grievous words stir up anger." It was not that it was new—she had read it a score of times—but something in its appropriateness, that fell like a cool hand upon her heated pulse.

"I will have it ready in a moment, Robert," she said quietly.

He looked up: evidently he had not expected just that reply; for if the truth must be told, he had thought more than once that forenoon of his wife's request; not that he thought of granting it, but that he expected that she would, as he termed it, "sulk over it."

"I say, boys," he said as they went into the cool, north room to their dinner, "it don't feel much here as it did down in the meadow. A woman has an easy time of it; they don't know what hot weather is."

Mrs. Thompson, waiting on the table, with a scarlet face, did not reply; but Hubbard gave Jones a queer look out of the corner of his eye, as he half glanced at her.

"Why didn't you set the butter in the stove? you might as well. I don't believe there's any need of having the butter like this if it is warm weather," he growled.

"I took it out of the cellar since you came in; but I will go down, and get some more, if you think I'd better," was the pleasant reply.

"No, never mind. Well, I declare! wh didn't you boil this meat? It's as hard as a rock. Not much like that I had at your house, Hubbard. Your wife knows how to cook a diuner that is fit for a king."

"I tried to have it nice, Robert," Mrs. Thompson said, struggling hard to choke down a rising sob, as well as an angry word.

The men did not speak, and Mr. Thompson finished his dinner with a thoughtful face. By and by he grew to watching his wife's face: there was something in it he could not understand. He looked down at the mulberry and white—it did look old and dingy beside the snowy table-cloth—he wondered he had never noticed it before. He went out into the kitchen—how hot and stifling it was! a vague idea that it wasn't such a comfortable place after all, flitted through his mind. He went out toward the barn, the sun was hot, but there was a fresh breeze blowing from the south, and the men were lounging in the shadow of the barn.

"I never pitied a woman so in my life," Hubbard was saying; "she works like a slave and does not even get a 'thank ye' for it."

"She'd never ought to married Bob Thompson," replied Jones, "a delicate, sensitive little thing like her. However, he won't make money out of her blood and bones many years. I never saw a woman run down so fast. She looks as faded as the old house that hasn't seen a drop of paint since old Grandfather Thompson had it fixed up for his second wife."

"And Jennie used to like things nice so well! She'd better have married Squire Burnham—I wonder if she isn't sorry?"

Was she? The thought came crushing like a bolt of fire through the heart and brain of Robert Thompson. She might have married Burnham he knew; and then remembered how prond he had been that she turned from the wealthy young squire, to marry him, and to come to the old homestead to take care of his invalid mother. And how tenderly she had done it, too! He could bear it no longer. He stole noiselessly away from the unconscious talkers, and started at a quick pace down the street.

Mrs. Thompson had washed and put away the last dish, and with a weary step had taken down the broom, when the sudden sound of wheels coming into the yard sent her to the door.

"I've brought down that ware, Mrs. Thompson," said the brisk voice of Grover, springing to the ground, and lifting a large basket carefully from the wagon.

"I didn't order them, Mr. Grover," she gasped in a frightened voice. "I only said perhaps, I—"

"O, its all right. Mr. Thompson came up this noon and ordered them. I thought you didn't send him, for he didn't seem to know what he wanted, only he gave me ten dollars and told me to bring what was necessary. I have brought you a tea and dining set, including three dozen plates. If there is anything you don't like, I'll take it again and make it all right."

"O, I shall like them, I know," she said, trying hard to control her voice.

"Well, I'll leave the basket, and Robert can bring it up some time," he said, springing into the wagon and driving off.

Then Jane Thompson sat down on the floor beside the basket of crockery, and cried as if her heart would break. They were magical tears, too, for they washed all the weariness and despair from her face, and the shadow from her eyes and heart. She forgot that she was tired, or that the day was hot, but went to unpacking and washing her new treasures, singing softly to herself all the while. She put some nice, clean papers on the shelves, and then she folded some and cut them in scallops, and put them over the edges, and then she arranged her beautiful ware with the drooping sprays of convolvulus and fuchias, standing off every few moments to admire it. I doubt if Mrs. Squire Burnham was ever so entirely happy in her life.

She had got it all arranged, and stood in the pantry door, with a bright, happy smile in her eyes and on her lips, when a voice—it was a trifle husky—said close beside her:

"What is it Jennie?" (he used to call her that in old days, before hardness or indifference came between them).

"O, Robert!" taking a step toward him. He opened his arms and drew her close to his heart, kissing her as fondly and tenderly as he ever had in the days of their courtship.

"I have been a brute, little wife," he whispered huskily; "can you ever forgive me?"

"Forgive you? O, Robert! I never was so happy in my life! I have been to blame too; I haven't—"

"Yes you have!" he interrupted, "you've been an angel compared to me. I've made a slave of you, you shan't work so any more. Jones's Laura is coming up to-morrow, to help you till after haying, and then I'll make some permanent arrangement."

"O, Robert! I can get along now. I feel light as a bird."

"And you are, almost," he said, smiling a little sadly into her eager face. "No, I am able to hire some one to help you, and I am going to. And, by the way, saw Leeds this noon. It's a dull time, just now, and so I thought I'd give the poor fellow a job."

"O, Robert!" "You ain't going to—"

"Ain't I?" he said, teasingly, laughing at her enthusiasm.

"Are you really, Robert—really going to have the old house painted?"

"Every square inch of board, Jeunie, inside and out. And when you get over the summer's work, you can be looking up something to brighten up the old place a little."

"Robert!"

"What?"

"I want to tell you something—you won't be angry?"

"No," smiling.

"Well, to-day—it was wrong, I know, but I felt so discouraged—I almost wished I had married Squire Burnham; but now, O, Robert! I wouldn't marry him for fifty thousand French cottages!"

For answer he stooped and kissed her tenderly on the lips.

CHINA.

The Chinese cities are all dirty, but Amoy is the dirtiest of the lot. You can form no idea of it without seeing it. There are few Europeans here. The streets are narrow and full of corners and stone steps, sometimes two or three, and sometimes flights of from thirty to fifty of them.

The first time we went ashore, we landed on the outskirts of the city, where the stone cutters were at work. They were carving a stone very much like our granite. Some were making large pillars, for a temple, quite elaborately carved; others were making "Joss's," or idols, varying in size from two inches to ten feet in height. Their work was surprisingly well done, considering their imperfect tools.

As we were walking through the city, we passed a crowd of Chinese gathered around a pile of burning charcoal; there were about ten bushels of charcoal, which was kept aglow by large fans, with which several Chinamen were blowing it. Our guide said they were going to burn an idol. After proceeding a little farther, we came to where they were making a terrible noise by beating about a dozen gongs. Of course we wanted to know what this was for; our guide tried to keep us from going in the building, but we pretended not to understand him, and in we went. The building itself consisted of a large room, about twenty-five feet square inside, and in the center of this was another, about ten or twelve feet square. The floor was of stone and was heated when we went in. We were bound to see all we could, so we pushed on till we could get our heads inside the inner room. In it there were three men undergoing puuishment for some religious offense. One of them had a large knife stuck in his cheek until the handle stuck out straight and stiff. The blood was running down his almost naked body, until it reached the heated floor—or rather it was a mixture of blood and perspiration together.

Another had his hands folded and a wire pierced through his fingers so that he could not open them. The wire appeared discolored, and so little blood came from the wound that I concluded that the wire must have been hot when the fingers were piereed.

The third one had a large cut on the back side of both legs, underneath the knees, and was unable to stand up, so we thought he was hamstrung. The floor was so hot that these men were obliged to step around pretty lively to keep from burning the soles of their feet.

There were two men with them who, I think were priests; one of them had a large knife the blade of which was about eighteen inches long. The other held in his hand, suspended by a short chain, a wooden ball about six inches in diameter, full of sharp, iron spikes, two inches long. These two instruments they used not at all sparingly, whenever the poor fellows slackened their motions in the least.

Our guide appeared very much alarmed, and succeeded in frightening us so that we left; but after knocking about the city for half an hour, we returned and found the poor men still in there, but apparently nearly used up. This time we did not wait for the guide to take us out; the old fellow with the long knife pointed to the door in no pleasing manner, and while we were choosing between curiosity and safety, he made three or four steps toward us, flourishing his long knife in a very threatening way; it was enough for us; if you could have seen us stepping over old women, little children and gong beaters, you would not have wondered that the old priest gave it up as a wild goose chase.

We waited at the safe distance of twenty yards to see it out. The idol had been taken down and thrown upon the coals while we were away, and as soon as it was entirely consumed the poor men were allowed to come out. When the cold air struck them they were unable to hold themselves up, and had to be carried away. We tried to find out what this punishment was for, but our guide did not like to talk about it; but, as nearly as we could make it out, these three men had been accused of not being "Joss men," and this form had to be gone through with to prove that they were "Joss men" (Joss is their name for God). After this we returned on board ship, thinking we had seen enough for one day.

A few days after this we went ashore to take a horseback ride. There were six of us, and a lot of horses were brought around that we might take our choice. They were very nice horses, but so small that, even with a Chinese saddle, which raises one six inches above the horse's back, I could hardly keep my feet off from the ground, and would keep stubbing my toes against all the stones.

When we were all mounted we started off at a slow trot, single file, along streets so narrow that I was obliged to squeeze my knees as close to the horse's side as possible to keep them from going through windows, or from upsetting counters, full of articles for sale. I hit a tray of peanuts with such force, that I not only upset that, but a Chinaman with it. He saw me coming and tried to hold on to it. In some places my knees would hit on both sides at the same time. We were also continually turning short corners, and bumping our knees against the corners of the buildings. I tore my pants so that I ruined them entirely. Every few minutes we would come upon a flight of stairs, sometimes up and sometimes down. At the first one I tried to get off my horse, but, before I had a chance, he made a jump, and was scrambling up, making it more dangerous to get off than to keep on. I soon got used to it, and never thought of dismounting, no matter how steep. There was not a single instance of any of these horses stumbling, either going up or down stairs.

We found a fine chance to race after leaving the city, and thought we would try it. We were going around the brow of the hill, our horses at full speed, I having the lead, when I suddenly found myself at the head of a very long flight of stairs, extending all the way down the hill, and a steep one it was, too. I tried to hold my pony in, but it was no go, so down I went, the rest all following. I thought of Putnam, while I was going down, and came to the conclusion that, if his "steppes" were as steep as these, he deserved his reputation. I pulled about half the mane out of the pony's neck trying to hold on. Much to our surprise only one person was thrown; in that case the saddle girth broke, and he went sliding over the horse's head, saddle and all, considerably frightened, but not otherwise injured. This gave us all a lesson, and we did not try racing on the roads again.

Next we visited one of the three largest temples of Amoy. It consisted of several different buildings, some of wood and some of stone, all filled with idols. In the center is a magnificent pagoda, made of stone pillars, beautifully carved, in which is kept the principal idol. Even the caves and fissures in the rocks, on the mountain side, are filled with idols, making about five hundred, altogether, in this temple. The priests are there all the time, and from one of them we bought some ale; he served it on a counter in front of one of the largest idols.

W. FIELDS.

WASHINGTON'S HEADQUARTERS AT NEWBURGH, N. Y.

One of the ways in which are shown the universal love and reverence of the American people to the great man, who was first in war, first in peace, and still is first in the hearts of his countrymen, is the care and pride which are taken to preserve, in its original condition, every house in which he established his headquarters while commander-in-chief of the American army. Quaint, and weather-beaten, and picturesque they stand in many a town and village scattered through the land, pointed to with pride and affection, and spared by even the irreverent spirit of progress, which, in this new country, seldom shrinks from leveling to the ground whatever ancient landmark stands in the way of railroads or business streets. But who would think of remodeling the old-fashioned inconvenience of Washington's headquarters upon the plan of modern improvements, or grudge the care or money necessary to keep them in their original form?

One of the most interesting and most affectionately cherished of these relics of the past, is found at Newburgh, in the state of New York. The house was bought by the state in 1849, from a descendent of the Hasbrouck family, who were its original owners, who came from Holland in 1749, one year after which their family mansion was built, on the high banks of the beautiful Hudson, among the dense forests, where the red squirrels and red Indians were their most frequent visitors. Thirty years after, in 1779, the hospitable old house received the welcome and honored guest, whose name was, ever after, to be its glory. Washington was here frequently from 1779 to 1783, for the last year making it his permanent abode with Lady Washington, whose presence adds greatly to the interesting associations that cling to it.

It is an ancient stone cottage standing pleasantly on the high bank, overlooking the Hudson. Its steep, Dutch roof slopes over the front verandah or *stoop*, as its Dutch owners called it. The tiny panes of glass in the leaden casements, having needed repair some years ago, special tools had to be made on purpose to reset them in exactly the original manner. "From the rickety *stoop*, on the river front," says Mr. Lossing, in his Pictorial Field Book of the Revolution, "may be seen the historic grounds of Fishkill, New Windsor, Plumb Point, Pollopel's Island and the Beacon Hills; and through the mighty gateway in the Highlands, whose posts are Breakneck and Butter Hills, in height fifteen hundred feet, appear glimpses of distant West Point, and the amphitheatre of mountains which surround it."

A lovely restful scene to meet the eyes of the Commander-in-chief in the pauses of his anxious days of labor, when the future of the nation weighed upon his soul. A great arm-chair, in which he used to sit, is still shown in the house. Let us hope it was often drawn out upon the stoop, when a glorious sunset was lingering upon the woods and hills. It is pleasant to fill up the picture in our imaginations with the graceful form of the stately and lovely lady by his side. Here she sat alone sometimes, looking far down the river, to the misty West Point, where the Federal army was stationed, or tended her flowers on the lawn in front. The brick borders of her flower beds were still remaining within the memory of the historian of Orange County.

Let us look inside the mansion. The front door opens into a large, square saloon, used by Washington for his public audiences, and as a dining hall. It has seven doors and only one window. An immense fireplace, "in which a small bullock might have been turned upon a spit," occupies one side of the great room. In this are now some ancient stove tiles, belonging to an old stove once brought from Holland, and rudely carved with representations of Adam and Eve; also a pair of andirons, said to have belonged to the Washington family, whose simple dinner of corned beef and cabbage, was often boiled here, according to tha memory of an old soldier, the last of Washington's Life Guards, who lived here till 1850, and delighted to show to visitors the curiosities of the place, himself one of the chief. His name was Uzal Knapp, and, when, at last, he died, at the great age of ninety-seven, he was buried on the lawn, and a handsome monument erected to his memory by the Newburgh Guards.

One of the seven doors in the saloon opens into the General's sitting room, another to his bedroom, the three rooms being all of the house which was occupied by his family, the Hasbroucks remaining in the rest of it.

This part has been carefully preserved in its original condition. There is no ceiling of plaster, the heavy beams being completely exposed, after the fashion of the day, and assound as ever.

Many curiosities of the Revolution are here: a scrap of brocade silk from a dress of Lady Washington, old muskets, autograph letters of Washington and other generals, and part of the *cheaux de frise*—tha iron obstructions sunk in the Hudson, near Newburgh, in 1780, to obstruct the passage of British ships—a link of the chain also that was to have been stretched across it for the same purpose, but sank from its own weight, while being placed. These, and a great many more curious relics, are shown the visitor, by Mr. Woolsey, the present custodian, who has been, for twenty-three years, in charge of the old house, and claims to have seen more people than any one else in tha United States. He also claims relationship to the venerable ex-President Woolsey of Yale College, whose name he bears; and he is, indeed, quite a character in his way, and well fitted for the charge in which he takes so much pride.

A MAN who don't know anything will be sure to tell it the first time he gets a chance.

Home Correspondence.

"HAPPY NEW YEAR" to you MR. WORKMAN. Glad to welcome you, especially in your new dress. You bring us some good articles in your January number; so may you continue through the entire volume. I was much pleased with your notice of the great naturalist, Agassiz. It is to be hoped that his success, for the benefit of others, may induce many a young man to pursue, with equal ardor, some equally interesting, and useful branch of science. It is to be hoped, too, that his noble sentiment, "I have no time to make money," will also stimulate our youth to equally noble deeds.

I was interested, too, Mr. WORKMAN, in the reminiscences of the "Boston Tea Party." It shows how much moral and political power there is in *firmness*, even without violence. Only let us be sure we are right and then go ahead.

The success of the Hampton Students, in the singing line, will, we trust, urge others who may have no talent in that department, to develop their gifts in something equally useful and even more so. God has made a great variety of people, for a great variety of places; and any useful place is honorable and creditable, when it is honorably and creditably filled.

The plow-boy or shoe-black, who knows his trade and minds his business, is a far more respectable character, than the genteel loafer, who hangs around, eating the bread of other people's earning, and "waiting for something to turn up." If a stone is to be turned, the best way is to take hold and turn it. Don't be afraid of soiling your hands. Take hold and turn the stone. It will never turn itself.

I was much interested, too, Mr. WORKMAN, in your "Record of Ruin." Those "facts and figures" are worth pondering by our legislators and judges and by our citizens generally. A fearful responsibility rests somewhere. The law-makers may say, "It is not in me." The judge, who licenses the dealer, may say, "It is not in me." The dealer may wipe his mouth and say, "It is not in me." Even the poor rum-guzzler himself may, between his hiccoughs, mutter, "It is not in me." But, after all, there is a great, awful responsibility in the business of inflicting the country with 8,000,000 of paupers, and the destruction of $1,500,000,000 of the country's resources! What can be done? Every man and every woman can do something. Each one can save one. Let every man and every woman determine to save one, himself, herself, and the work is done.

SEVENTY-SIX.

Different Opinions.

Under the above title we propose to qnote the opinions of different people as taken from their lectures, sermons, or the standard newspapers. It should ever be distinctly understood that the SOUTHERN WORKMAN is not a political paper. It would urge its readers to be independent of party ties, and to think and vote for themselves; and that they may the better do so, we propose to give them, in this column, a chance to think and read.

ALEXANDER H. STEPHENS.

That was a very striking scene in the House of Representatives when Alexander H. Stephens, of Georgia, appeared and took his seat. The ex-Vice-President of the Southern Confederacy entered the hall on crutches. He looked feeble and emaciated, but no more so than for several years past. Few of the members recognized him, and of all those in the hall there were probably not more than five or six who were his contemporaries during any part of the fourteen years when he sat in the House, from 1843 to 1857. By a proper and graceful courtesy, Mr. Dawes, as the senior member of the House, and Mr. Stephens, on account of his age and infirmities, were allowed the privilege of the first choice of seats; the others had to abide the chance of the lottery. Mr. Stephens selected a prominent seat in front of the Speaker's desk.

During the swearing in of the members, Mr. Stephens stood leaning on one crutch supported on the other side by Mr. P. M. B. Young, ex-Major-general of the Confederate army. "Baring his white head," says a spectator of the scene, "and lifting his thin, ghostly hand, his eyes seemed to burn with a strange light as they fastened on the Speaker." He was the first really conspicuous Southern statesman of the period before the war who has returned to the national legislature. What memories must have crowded upon his mind while he stood there to take the oath! He had striven earnestly to prevent secession and avert war. With impassioned eloquence he had warned the people of the South against the folly into which they were rushing with blind and headlong haste, and pictured in glowing colors the greatness and growth of the nation, which, he said, was "the admiration of the civilized world," and represented "the brightest hopes of mankind." Drawn into the secession movement against his better judgment and against his choice, he was distinguished by the bold candor with which he avowed the principles on which the new government was to be founded. He denounced as fundamentally wrong the idea of the equality of the races. "Our new government," said he, in his well-known speech at Savannah, in March, 1861, "is founded upon exactly the opposite ideas. Its foundations are laid, its corner-stone rests, upon the great truth that the negro is not equal to the white man; that slavery, subordination to a superior race, is his natural and normal condition. This, our new government, is the first in the history of the world based upon this great philosophical and moral truth." This frank avowal had even more effect at the North than at the South, and served to quicken and strengthen the spirit of patriotism which saved the Union. Not the least strange of the circumstances under which Mr. Stephens takes his seat in Congress is the presence of several representatives of the very race whose subordination to the whites he so forcibly affirmed.

Mr. Stephens was born in Taliaferro County on the 11th of February, 1812, and is consequently nearly sixty-two years old at the present time. A newspaper correspondent writing from Washington says of him: "Mr. Stephens is afflicted with rheumatism of the severest type, which has thrown one hip out of place, and though he can hobble about the room with the aid of a cane, he has to use crutches on the street. Physically he is very feeble, but his intellect is as clear as ever. He eats animal food very seldom, and then sparingly. He is fearfully emaciated, and so colorless that his slender fingers seem almost transparent."

From the Virginia State Journal.

THE moral sentiment of indignation, which we regard as a healthy one, is being largely cultivated just now by the people of the country. Hatred of evil is not so much a vindictive sentiment as a vindicatory one, and there are times when the people can cultivate it to advantage, and hardly exercise it to excess. What is especially needed at the present juncture of affairs, is a good, hard, hot hatred for faithless public servants of every sort and description.

"Justice and mercy"—it was written of old—"have kissed each other!" Now let the magnanimity of the republicans in Congress, in passing a General Amnesty bill and repealing the "iron-clad" test oath, kindle the democratic membership of both Houses into sentiments of liberality toward the Republican party, and the people of the South into a better feeling toward the Federal Government. Of this last we think we perceive some evidences beyond the expression of the thing itself in numerous Southern journals.

THE *Virginius* has settled for us a perplexing question, namely, What shall we do with her? She was surrendered to the Spanish Government by us, because she bore the American flag; it was then declared by our Attorney-General that she was not an American vessel at all, her papers being fraudulent; thereupon came rumors of a demand by Spain on us for her return, out of which a supplementary quarrel might easily have arisen. It was very accommodating on her part, therefore, to founder off Cape Fear on her way to New York. There is some not unnatural suspicion that, as the boys say, "the accident happened on purpose," but we cannot think that there is any basis for this opinion. The recall of General Sickles, whose appointment to the Court of Spain, considering his private character and personal career, was not very creditable to our country, and the appointment in his place, of Mr. Cushing, appears to give universal satisfaction in all sections and to all parties.—*Christian Weekly.*

A TEMPERANCE SONG.

Why curse you the rich ruby wine?
Why turn from its beauty away?
I love the bright jewels that shine,
And glance on its glittering spray.
Then drink, O, my comrade, with me!
And your heart shall be light and free,
And your soul shall be singing, with melody ringing,—
The wine cup, the wine cup for me!

Sit beside me awhile, I will tell you
Why I curse the red wavelets of sin,
That lap the dark borders of hell,—
That dimmed all my days that have been.
They stamped on my own childish brow
This mark which is lingering now—
"Accursed"—and its stain must ever remain
As dark as the deadliest vow.

I'd a friend—aye, more than a friend;
Why fear to tell you his name?
There are hours in life that must lend
Some brightness to cover his shame.
For he was so manly and true,
So bright-browed and noble to view!
And his kind, gentle hand blessed my glad homefield band,
Ere the voice of the tempter he knew.

How changed was his beautiful home,
When the tempter came in at the door
And set up his shadowy throne,
To darken, alas! evermore.
For the form, once so noble and kind,
With passion and madness grew blind;
And he knelt at the throne, and worshipped alone
The "Rum King" that conquered his mind.

You ask me to drink of the wine,
You point me its wavelets at play,
And the bright beaded jewels that shine
And dance on its glittering spray.
I see but a sad, wasted life,
Besprinkled with darkness and strife,
And a serpent-like foe, bringing curses and woe,
To crush out the sweetness of life.

I see but the tears of a band,
When banished as aliens from home;
In the sad, dreary homestead I stand
And weep for the days that have flown.
I list for a fond mother's prayer
And her counsel, "My children, beware
Of the dark, ruby wine, and its terrible shine,
And its tempting and treacherous snare."

If the world were mine own I would cast
Its riches and glory aside,
For the bright, noble soul that has passed
To darkness and sin on its tide.
Embittered with sad, seething tears,
With heart-aches and shadowy fears,
And many a dream, with never a gleam
Of gladness to brighten its years.

Then turn, O, my comrade, with me,
To Him, who has power to save
From the tempter that revels in glee
On the sin-cursed, though beautiful wave.
And His arm shall enfold you, I know,
And shield you from every foe;
And your days shall be bright in radiant light,
That shines on His children below.

DON'T DRINK.

Men drink rum because they think with their stomachs instead of their heads. There is no element of reason in the practice, nothing but animal gratification. Following in the footsteps of their neighbors, they think it is unmanly to refuse that which unmans them. The first glass is distasteful and produces nausea, the second flies to the brain and weakens the will power, without which man is no more than the brute; the third and fourth glasses make him maudlin and full of quarrel; a few more drinks and he is helpless, and, the next day, unfit for labor. The rumseller's prescription is to take a glass to steady the nerves; the victim is suffering pain in the head and gnawing in the stomach, and concludes the rumseller is right; he drinks and, in nine cases out ten, gets drunk. Thus the appetite for liquor is created, and, in the end, rum is the master, and man, with all his God-given attributes, a slave to appetite. His stomach craves drink and his mind is too weak to resist. His resolution has gone; his reasoning faculties deadened, and self-respect fled; his utter ruin is then only a question of time. This is the record of a thousand lives, whose futures were pregnant with hope and rosy with promise, but who took the first fatal step upon the road which leads to shame and death. Don't drink! It is manly to refuse; it is cowardly to accept. You have higher obligations to society, your country, your family and your God, to become a good citizen, than you have to those who revile you because you will not lower your manhood and debase your nature with drink. When you are asked, say "I never drink," turn your back on the tempter; remember God's fiat against the drunkard; society, honor, the wretchedness of family, the poverty and the crime which it creates, and shun it as you would a viper.

African slavery bound the bodies of its victims; rum ruins the body and damns the eternal soul, makes man an object of jokes and jests, the most loathsome of God's creatures. Be temperate, be frugal, industrious and honest, and you are on the high road to success. Don't drink, and you have a clear head and strong arm, and are able to face the battle of life and win success.

There is enough money expended every year in this country, to build a school larger than ours, to endow it with all the appliances for education, and have a surplus beside. The present generation are setting an example for those who are to come after us. See to it that we shape our lives so that they may be worthy of emulation; and the first step in that direction is to banish intemperance in all its forms from our midst.

THE BEST LIQUOR.

"Give us a glass of your *best* liquor," said a drunkard the other day, as he entered a shop. The shopkeeper filled a glass and gave it to him. The toper, without noticing it, dashed it down his throat. He soon began to taste and taste, seemingly not exactly satisfied.

"What's the matter," said the shopkeeper, "wasn't it good?"

"Why, yes, it was good enough, but it seems to me it wasn't very strong. What kind of liquor was it?"

"*Cold water*," was the reply, "that's the *best liquor* we have in the shop, and I believe it is the best in town. As for any other kind, we have not got any, for I left off selling strong drink some time ago. So you've saved your twopence, and you'll feel better for it afterward."

"Well," said the toper, "if this isn't a regular take in; but I believe, sir, you're right for all that. And as you don't charge anything for your liquor, I have a good mind to be your customer, and see if I can't get rid of my headache and sore eyes."

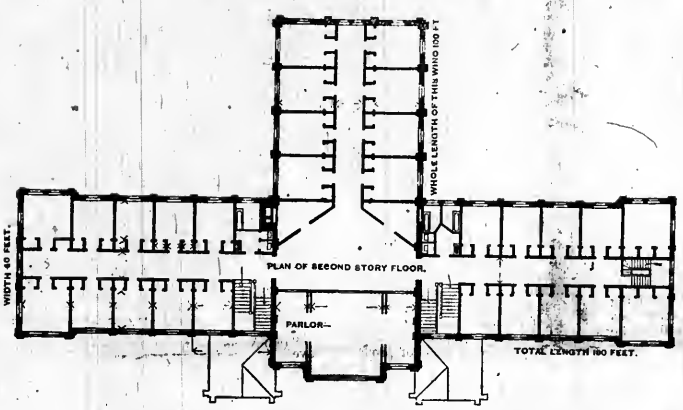
The shopkeeper, who was a warm-hearted Christian as well as a zealous temperance man, kindly encouraged him never to drink anything but the *best liquor* in future. God's beautiful sparkling water was the drink of Eden.

HOW YOUNG MEN SHOULD DRINK.

Stand up straight like a man, your left side to the bar, take the glass neatly and firmly between the thumb and forefinger of the right hand, letting the little finger drop down to near the bottom of the glass, swing the glass in a plane exactly corresponding with the top of the bar, until it is precisely before you. Just then throw the head back a little, push the chin forward, so as to leave the throat in a full, open, easy position. Compress the lips tightly, draw a full breath through the nostrils, and with a graceful curve raise the glass until the rim is within about three inches of your chin. Now is the supreme moment. Just here, turn your eyes upward, think of your mother, and open your hand instead of your mouth! If any one laughs, it will be an insult which you should resent by not going there again.

THE most impressive temperance discourse of the year of our Lord, 1873, is the dying speech of Driver, at Chicago, March 15. Taking hold of the fatal rope he said: "Just remember that rope if you go into a saloon and get tight. See what liquor will bring you to, as it brought me. Remember that now, and look out for yourselves."

VIRGINIA HALL.



VIRGINIA HALL.

The front elevation and second floor is faithfully represented in the cuts which we present to our readers. It measures one hundred and ninety feet front by forty feet in width, and has a wing running one hundred feet to the rear.

It will contain a chapel, with seating capacity for four hundred people, an industrial room for the manufactnre of clothing, and for instruction in sewing in all its branches; a dining room able to accommodate two hundred and seventy-five boarders; a large laundry and kitchen, besides quarters for twelve teachers and sleeping rooms for one hundred and twenty girls. The heating apparatus is to be steam, which will be applied to cooking. The kitchen and laundry are to have the best appliances for thorough work, and are to be as attractive and comfortable as any rooms on the premises. Everything will be done to dignify labor, by making its associations respectable.

Gas will be introdnced as soon as possible. The basement, eight feet in the clear, in height, will be well lighted, dry, and besides containing the printing office and being the publication office of the SOUTHERN WORKMAN, will be useful in many ways.

A competent engineer will care for the machinery, apply steam power to grinding meal, sawing wood, etc.; and hy making the many repairs incidental to an establishment like this, will, it is expected, save to the school an amount equal to his salary.

The friends of the school may be assured that the construction is well done. Only day labor is employed, and the work is np to the mark in every way.

Mr. Albert Howe, Farm Manager, an ex-Union soldier, is superintendent, and Mr. Charles D. Cake, a Hampton mechanic and ex-Confederate soldier, is foreman. The mechanics are about half white and half colored, are paid according to their labor, and are most harmonious, though equally divided in politics and in war record. The brains and hands employed are all local, yet Col. Thomas Tabb, of Hampton, feels justified in saying that it will probably be the finest building in Virginia. The architect is Mr. Richard M. Hunt, of New York city, whose reputation is national.

The institution is equally fortunate in the capacity and energy of Mr. Howe and in the mechanical skill and faithfulness of Mr. Cake, under whose care the well laid walls have gone up like magic—obedient to the call of a people's need. The material, it should have been stated, is brick, made on the Normal School premises, under the superintendence of Judge Oldfield, of Norfolk, an experienced brickmaker. About a million bricks and five hundred thousand feet of lumber will be used. The interior finish will largely be in native Virginia pine.

For months past, every nerve of the corps of Hampton's workers has been strained to secure funds for the completion of the beautiful building above named.

The walls are complete; the roof timbers are nearly all on, and the cost of finishing the whole shell, or exterior part is assured: this, at a time when every usual means of securing funds had been exhausted, when the panic was at its height, and there seemed no alternative but to stop work, and to leave uncovered walls exposed to the damaging severities of winter. The two friends who came to the rescne, desire no public record of their liberality.

The first $40,000 have been given and expended. The workers are now upon the home stretch. With no discouraging debt, with a consciousness that their efforts are in the line of a pressing need and of a great justice and humanity, and that the strongest signs of special Providential favor have been manifested, they will press the completion of the interior so that the dedication may take place on the 11th of next June. Virginia Hall, we have faith to believe, will then be devoted to the service of the Commonwealth, whose noble name it bears, and of the Divine Power, that has been in all its building and is entitled to all the glory of it.

Twenty-five thousand dollars more must be secured to prepare it for use next fall. We hope the General Assembly will lend its aid, since we have, in addition to this costly edifice for female instruction, to erect dormitories for our young men, all of whom are now quartered in tents or in recitation rooms. An additional outlay of $25,000 is required for their shelter.

The Hampton Institute aims to be equal to its work of supplying educators, whose discipline, not only of study but of labor and self help and self denial, will fit and insure them for the vast and lifelong toil that awaits them, and in which, we believe, they are destined to achieve great success. The Hampton Singers' campaign in behalf of this institute was fought through the whole, severe, disastrous season of the panic, and has been no triumphal march and no defeat. It has been a steady and successful push for a worthy end; dollar by dollar they have earned over ten thousand, and Virginia Hall, which was their inspiration, is now their monument.

Publisher's Department.

NOTICE TO TEACHERS.—Do you want a globe for school use? Send us, then, the names of six new subscribers to the SOUTHERN WORKMAN, and we will send you one free of any charges, securely packed in a strong paste-board box.

SUBSCRIBERS TAKE NOTICE!

Every subscriber, who will send us a new name and $1.00, will be entitled to one of our premium oil chromos, provided they make such a request, and designate the chromo they wish. For two new subscribers we will send "Returning Home" ready mounted. For five new names we will send the above picture nicely framed in black walnut and gullt. *We do not send premiums to those who do not request them.* When frames are sent, the receiver will pay the express charges.

SUBSCRIBERS wishing to have the address of their papers changed, should not only give the new address, but also the post-office, county and state of the old address.

THE new form and dress of the SOUTHERN WORKMAN proves a success. From kind friends in all directions we receive the most flattering compliments. A number of our generous-hearted readers have sent sums varying from one to ten dollars, requesting copies of the SOUTHERN WORKMAN sent to deserving families.

AGENTS WANTED.—Smart canvassers are wanted in every village throughout the South, to get subscribers for the Southern Workman. Good pay given. For terms, etc., address

J. H. LARRY,
Office Southern Workman,
Hampton, Va.

☞ A RED cross before this paragraph will indicate to the subscriber that HIS SUBSCRIPTION HAS EXPIRED.

THE
FREEDMAN'S
SAVINGS & TRUST
COMPANY.

The Seventh Annual Report of this Company has been published.

The year has been a prosperous one. The gain in deposits has been $1,227,927.67, being an increase of *fifty per cent.* on the balance due depositors at the close of the present year.

There are no stockholders in this Company, and all the profits, over and aboye expenses, go nt each interest day to the credit of the depositors as interest. The rate the past year has been six per cent. and the amount paid since March, 1871, has been $122,215.17. The past history of the Bank is a matter of just pride to all—trustees and depositors alike—and its future is full of promise. Before the next annual meeting we shall be able to report $5,000,000 due depositors.

The Bank pays six per cent. interest

on Savings deposits, compounded in January and July of each year, to be drawn by Pass-Book only.

Special arrangements made for receiving business accounts payable hy check, and bearing 4 per cent, interest.

Certificates of deposit issued bearing interest and nvailable anywhere in the United States.

ACCOUNTS TRANSFERRED.

at request of depositors, from Branches where kept to any other Branch without risk or trouble, and *without loss of interest.*

For full information about the Bank address the *Actuary* at Washington, D. C., or the Cashiers of the respectivo Branches. Copies of the Charter and By-Laws given or sent to any one on application.

Investments made in Government Bonds and real Estate Securities only.

The Central office of the Company is in Washington, directly opposite the U. S. Treasury.

Any information required may be procnred hy addressing the President, J. W. Alvord, Esq., or D. L. Eaton.

W. E. FOSTER & CO.,
Plumbers, Gas & Steam Fitters,
No. 111 MAIN STREET, NORFOLK, Va.

A full line of Gas Fixtures, Plumbers' Goods and Materials. Speaking Tubes, Bells and Pumps put up nt short notice. All work executed in a superior and workmanlike manner and warranted. Agents for the WILD CUCUMBER WOOD PUMP.

FREEDMAN'S
SAVINGS & TRUST
Company,

Chartered by Congress, March, 5, 1865.

PRINCIPAL OFFICE,
WASHINGTON, D. C.

Branches in all cities and large towns of the South and Southwest.

FIVE CENTS, or larger amounts, received on deposit, and Bank Books issued.

ALL PROFITS paid to depositors as interest, not exceeding seven per cent. per annum.

INTEREST on sums of ONE DOLLAR and upwards begins first of each month, and is payable on the 1st of January and 1st of July.

☞ *Every Account strictly confidential.*

THE NORFOLK BRANCH,
AT
NO. 116 MAIN STREET,
Is open daily from 9 A. M. to 3 P. M. and on Saturday Nights from 6 to 8 o'clock.

☞ DON'T WASTE MONEY! SAVE THE SMALL SUMS!

J. W. ALVORD, *President.* H. C. PERRY, *Cashier.*

HAMPTON, MARCH, 1874.

LABOR.

We call the dispensation of labor a curse from the Almighty's hand, who never showered aught but blessings upon mankind. It is rather the guardian of virtue and happiness; a pleasant companion, in whose absence we are lonely and ill at ease. It is a law of God's economy that man shall earn his bread by the sweat of his brow, and the breaking of this law brings evil consequences. As a law-abiding citizen should be respected, so should he who keeps this law of labor, unless he forfeits respect by misbehavior. There is no law, however, that brings men to any particular department other than their tastes and abilities; none which makes one man a producer and another a consumer, this an overseer and that an underworker.

What though the wheel of fortune suddenly, and to our surprise, lifts a poor man from poverty and places him in affluence? What though the name of one comparatively unknown suddenly becomes the by-word of the crowd—for a man to stand idly in the sun and dream of such reverses, waiting, Micawber-like, "for something to turn up," is to lean against a shadow for subsistence and support. Again, sudden fortunes and fame are not to be depended upon; a slippery path upon which money runs to our doors, generally leads on, and the money slips as easily away. Labor is the only price of success, and is the battle cry that leads the host bent upon victory. Let no young man, or old, be led by exceptions; let no vain dreams of sudden wealth and fame allure; for while you are dreaming, the unnoticed laborer by your side will outstrip you and win the prize.

Do not seek wealth and fame in the thought that labor is dishonorable. The contented laborer is envied by monarchs, by the care-worn, monied men of the world. King Amadeus has doffed the crown of Spain and put his hand to the plow, and speaks of the change with the greatest pleasure, feeling more like a king than ever before. What though some aristocrat may mincingly shake your hand, stained by labor. If your hand is honest, if it can handle others' money without speculation, you may shake hands with yourself in independent content. Can you envy a man who looks down upon you? Do you not pity such a one? He who looks down upon the laboring man or woman, simply because they are laborers, even he, who, in his *charity*, stoops to give, is a worm beside the honest worker. He, who, in his riches, allows his wealth to purchase for himself idleness and ease, forfeits his claim to fortune, happiness and character, and is regarded by sensible society as a drone in the hive.

Let the mason, with his jacket smeared with mortar, feel that it is as respectable as the merchant's broadcloth. Let the blacksmith feel that his hammer can be respected as much as the wand of office. Let the honest, respectable worker everywhere raise his head and assert his manhood by becoming an honor to his trade or profession. The pages of the world's history are brightest where they are illustrated with the deeds of working men. Take from Washington's history the compass and chain; from Franklin's, the printing press; from Lincoln's, the rail-splitter's axe, the pitch-pine torch and the well-worn book, and you rob them of half their glory. Don't sit and dream, but work, *work*, WORK! not to exhaustion, not by sudden starts, but keep up a constant pressure, a continual wearing and scouring, and you will find that wearing out is better than rusting out.

BOOK-KEEPING.

If there is any study that deserves the attention of teachers and scholars with a view to a more practical understanding, it is the science of accounts. There is a great desire on the part of young men to study it, and consequently schools devoted to this branch principally have sprung up all over the land. But the principles of this science are not so deep and intricate that they cannot be properly taught and learned in our district and other schools. The teacher, to make this study practical, must not confine himself to the text books, for the majority of these are no more than copy books for the scholar, and so far as a real knowledge is concerned, he might as well copy his father's old ledger. Every new thing should be thoroughly explained and illustrated in a familiar manner, and if it is convenient, an actual business can be carried on. Then the student can select a business that he thinks he would like, borrow or hire from the teacher a proper capital of home-made money, giving his note in proper shape, then studying into all the peculiarities of his business, carry on a fictitious trade with his fellow students. At the close of every recitation, or at such other times as may be thought best, the teacher can examine his books, see if the cash in drawer and the balance on the cash book agree, and correct such mistakes as may have occurred.

Many students seem to think that a simple knowledge of debit and credit is all that a clerk should understand. Aside from the habits of neatness and accuracy, the clerk should have a practical knowledge of those parts of arithmetic which relate to money affairs, such as interest, banking, discount, partial payments, equation of accounts, etc., etc. His handwriting should be plain and easy, but not full of flourish. He should have a knowledge of grammar and rhetoric, and be able to write a good commercial letter. This part of the science is not thought enough of. A good letter to a debtor or creditor will often effect wonders. And in recommending goods, good language goes far toward a sale.

PAREPA ROSA.

This great singer, whose matchless voice charmed so many audiences in this and other countries, died in London on the last Monday of January, in the present year. She was the daughter of Baron Georgiardes de Boyeskn, a gentleman of Wallachian birth. The father died in early life and left the mother and child without heritage. Being obliged to support herself and child, the Baroness adopted the stage as a profession. The child, Euphrosyne, under the fostering care of the mother, soon exhibited remarkable gifts of voice and love of music. From her earliest childhood she sang charmingly and spoke fluently English, French, Italian, German and Spanish.

Her first appearance in opera was at the early age of eighteen, as "Amina," in "La Somnambula," with marked success. She was universally loved and respected, and though she has charmed many a heart to raptures of joy by her exquisite singing, her own life had many sad cadences. In 1863 she was married to Capt. Carvil, a brilliant and promising officer, who squandered their united fortunes in speculation. He died in Lima in 1865, whither he went after but seven months of married life. Her child soon sickened and died, and doubly bereft she returned to the stage to repair her shattered fortune.

After a successful tour of this country she was married to Carl Rosa, the distinguished pianist. This was a happy union in every sense of the word; but just as she was quaffing again a mother's cup of joy she was called home to God. May we hear again that angelic voice among those who have come up through great tribulation.

A TEMPERANCE REVIVAL.

A most remarkable temperance movement has been started in Ohio, in the towns of Hillsboro and Washington, and is extending like a prairie fire through that state, and seems to be alike surprising to friends and foes of the noble cause. The women have been the leaders, under God, in this grand crusade. We say under God, for their greatest victories have been won through prayer. A Mr. Van Pelt, who resisted their prayers and entreaties for a long time, finally surrendered and is now hard at work trying to repair the damage he has done in the world.

The influence of this movement will be world-wide, as it is now *the* subject for the daily papers. It starts in a good time. King Alcohol has had such a fearful sway for the past few years, that the most stolid are beginning to think "What will be the end of this;" and again, the panic has set our people to thinking, and there is nothing like sober thought to bring people to their senses. Religious revivals are almost sure to follow hard times. May there be a time of refreshing at hand for our beloved country.

THE "HAMPTON STUDENTS."

Our Normal School Singers, who arrived Christmas morning, after a vacation of about six weeks are again on a musical tour. Having seen with their own eyes the completed walls of Virginia Hall and the steady progress of the work which they have done so much by their voices to forward, they will go forward with new zeal to the work of raising funds for its completion.

Before they left Hampton, a concert was given by them to the families of the subscribers of the SOUTHERN WORKMAN and their friends, who filled Assembly Hall to its utmost capacity, and manifested their enjoyment of the music by hearty and prolonged applause. For an account of the benefit concert given at the request of the citizens of Hampton, Old Point and vicinity, which netted the handsome sum of $151.50, we refer our readers to a communication from a Hampton correspondent, in another column. The terms of commendation in which their work in the Normal School was alluded to in the correspondence were highly gratifying to the officers and teachers.

The singers are now in New York state, having given concerts in Pennsylvania and New Jersey since they left Hampton, with good success, except where stormy weather has interfered with their receipts.

Different Opinions.

GENERAL BUTLER ON CIVIL RIGHTS.

"Equality!" We do not propose to legislate to establish any equality. I am not one of those who believe that all men were created equal, if equality is to be used in its broadest sense. I believe that "equal" in the Declaration of Independence is a political word, used in a political sense, and means equality of political rights. All men are not equal. Some are born with good constitutions, good health, strength, high mental powers; others are not. Now, we cannot by legislation make them equal. God has not made them equal, with equal endowments. But this is our doctrine: Equality, if I understand it and may be allowed for the moment to speak for the Republican party—and I will embody it in a single phrase, as the true touchstone of civil liberty—not that all men are equal, *but that every man has the right to be the equal of every other man if he can.* Let me repeat it. Every man has the inalienable, God-given right to be the equal of every other man if he can. And all constitutions, all laws, all enactments, all prejudices, all caste, all custom, in contravention of that right is unjust, wicked, impolitic and unchristian, and surely will be brought to nought. This bill of ours only removes all impediments to every man in making himself the equal of every other man if God has given him the power to become thus equal; and I think the exhibition of yesterday, (referring to Elliot's speech), showed that God has given to one of the negro race the power to be the equal, in all that makes a man, to the proudest man on this floor.

In a recent lecture on races, Wendell Phillips insists that the black man must carve his own niche in the temple of fame. With equal eloquence and truth, Mr. Phillips says:

"Suppose there comes a panic over the land, and Vanderbilt loses his forty millions, and the Secretary of the Treasury is driven nearly crazy at the situation, and nobody knows where the storm will stop, and there is not a brain powerful enough to drop the plummet into the profound history of the hour, and say, Here is the panacea! Let a colored man step to the front in such a moment. Perhaps he is worth a quarter of a million: and he says to the astonished world, 'Here is the path that will lead you out.' The world says, 'We doubt it.' He says, 'Follow me;' plunges into the path he indicates; the heavens clear up, the waters become clear, and he steps out worth fifty millions from that single speculation. Let colored men do acts like these, and the world will begin to look up a history for you. Until that time, you have to look it up for yourselves. The recognition of the colored race will never come from your claiming it; the world never yields to a claimant. The world worships but one thing—success. Go and do it. Go and do something that nobody else can do. Go and be something that nobody else can be. When you can do that, from that moment the world will recognize your race."

RECONSTRUCTION.

The Norfolk *Landmark*, of January 29th, after quoting the correspondence, which our readers will find on the 19th page of this paper, makes the following comments, in which we cordially concur:

"On looking at the names of the gentlemen to whom this note is addressed, it is gratifying to see that the two old armies are represented. The Federals and ex-Confederates, who held on valiantly to the end at Appomattox or Greensboro, are here united in a practical reconstruction, which conveys a good lesson to the political warriors (?) at Washington."

In this connection, the following extract, from a letter addressed to the Principal of the Normal School by one of the most eminent educators of Virginia, will be read with interest:

"I have from the beginning looked with deepest interest upon your school and its work. I think you are engaged in an experiment which has the closest and profoundest relation to the great question of the races in our country, and I regard the work which your school is doing, as more important for the colored race than any political legislation whatever.

Increased knowledge and intelligence—the knowledge and intelligence that add value as well as dignity to labor, and increase as well as justify the sentiment of personal self-respect; the experience that these gifts are to be acquired (for colored as well as white) only by effort, self-sacrifice, and personal worth; and the great lesson which you are teaching, that the *moral* enfranchisement and progress of the colored race can be won only through the colored race itself; these are truths that are worth more than any political doctrines; and your school is teaching them by example and by precept, in a manner that must make it a center of the deepest interest, alike for all educators and for all patriots."

Agricultural.

DEEP AND SUBSOIL PLOWING.

BY GEORGE DIXON.

In my paper on deep underground draining, I explained the advantage of getting the noxious ingredients in the subsoil washed out by the rain water in its passage down to the pipes. In order to facilitate this, we must loosen the subsoil as deeply as possible. Where shallow plowing has been practiced for many years, a hard "*pan*" is formed under the surface soil, almost impervious to water. The breaking of this crust is best effected by following the surface plow by a subsoil one; loosening it as deeply as possible, but not bringing it to the surface. In this way, the ground may be opened to the depth of sixteen or eighteen inches, into which the water will readily penetrate, and find its way to the drain-pipes, and be carried off *underground*, instead of gathering on the surface and carrying away the soil with it. Experience has proved, that letting the water down into the subsoil, without making a way for its escape by underground draining, increases the noxious compounds rather than diminishes them. While the pan remains unbroken, the roots seldom penetrate it, but obtain both their organic and inorganic food from the surface soil, which, without the addition of manures, rapidly deteriorates and becomes worn out. Modern science has established the fact, that vegetable life is sustained, not only by the leaves absorbing carbon from the atmosphere, but by the roots taking in oxygen from the same source. That this gas has a direct influence on the growing plant is proved by the fact, that seeds, buried deep in the earth, remain for years without germinating; but when brought near the surface, so as to come in contact with the oxygen of the atmosphere, sprout and develop into plants.

The soil is composed of organic and inorganic matter; the former has been obtained from the decay of animal and vegetable substances, and the latter from the disintegration or wearing down of the solid rocks. By allowing free access of air down into the soil, the decomposition of this animal and vegetable matter goes on much more rapidly, and it is more speedily resolved into those simple forms which are required for the healthy development of the growing crop. When the atmosphere is excluded, these decompositions not only proceed more slowly, but substances are generated which act injuriously on vegetation and retard its growth. Vegetable matter in decaying, if excluded from the air, takes oxygen from such earthy or mineral substances as it is capable of decomposing, reducing them to a lower state of oxidation; thus converting the peroxides of iron and manganese into protoxides, and reducing the sulphate of lime (gypsum) to a sulphuret. There is no doubt but these lower oxides are the ingredients that act injuriously on the plant, and make it sickly when they are reached by its roots; hence one great advantage in subsoil plowing is to allow free admission of the atmosphere to such decaying matter as requires oxygen for its decomposition; for by doing so we prevent the production of those pernicious oxides; or, if already produced, make a way for their obtaining the additional dose of oxygen from the air to restore them to the peroxide state, in which they are not only innoxious, but advantageous to the growing crops. The inorganic matter in the soil in this district, having been formed by the wearing down of the metamorphic, (now called pyroplastic) rocks, abounds in fragments of silica, mica, felspar, and hornblende. The direct influence of the air, and especially the carbonic acid contained in it, greatly facilitates the decomposition of these minerals; hence, the deeper we can allow the atmosphere to penetrate by plowing and subsoiling, the larger the amount of food both organic and inorganic presented to the roots of the plant.

Experience has convinced the British farmer that the increase in his crop is in proportion to the labor bestowed on his arable lands; and it stands by reason that such must be the case. The plant germinating and vegetating in a soil well plowed and thoroughly pulverized, has every chance to develop. The roots penetrate the soil freely in all directions without obstruction, and the air follows them with its life-giving oxygen; while in land undrained, badly plowed, unpulverized, and with a hard subsoil, the plant has its roots obstructed and shut out from much of the food that surrounds it, and is liable to come in contact with substances which are not only injurious, but sometimes destructive.

The English farmer is struck with the small amount of labor bestowed on the land in these parts, and the way in which weeds are allowed to grow among the standing crops. To throw seed on the land among the weeds and plow it in is a practice entirely unknown in Britain. As weeds take from the soil the organic matter which the cultivated plants require, great efforts are made to exterminate them. The first plowing after a crop is always the deepest; the object of which is to turn under and bury the stubble, weeds, leaves, seeds, and whatever may have accumulated on the surface, and leave them there to decompose. It is during this plowing that the subsoiling is effected, if the land requires it. The next plowing, or stirring as it is called, is crosswise of the first, and not so deep as to bring up anything turned under by the first plowing. A heavy harrow is now run over it, and should any hard masses still remain, they are broken by a clod crusher or heavy roller. The manures and fertilizers are spread evenly on this fine surface, and turned under by a very light plowing; after which the seed is put in, either by drill or broadcast, and a light harrowing finishes the operation. The farmer now feels that he has done his part, and trusts in a kind Providence to mature the crop. Let me add here, that drilling in the seed is always preferred to sowing broadcast, because it allows the hoe and cultivator to be used between the rows, to keep down the weeds and loosen the soil about the roots of the plants.

I greatly fear that those farmers who are trying to deepen their soil by the subsoil plow, unaided by draining, will be disappointed. It may and will open the soil for a time and check its washing away; and the roots may descend a little more freely, but there will be no permanent improvement; the ochrey pan will form again, and be as hard as before; the salts of iron and other minerals and noxious earths will still accumulate, and all the benefit of subsoiling will disappear. Whenever you hear of failures in the use of the subsoil plow, you may always trace the cause to the want of its auxiliary, the drain. In the deep drained lands of Mr. Smith, the inventor of the subsoil plow, and those of Alderman Mechi, at Tiptree, its beneficial use has been practically established. In underdrained lands, with the subsoil loosened, it is a great advantage, from time to time, to bring to the surface a portion of the under strata, as it not only deepens the upper soil, but adds to it many of the elements of nutrition which have been abstracted by constant cropping. Let us investigate this subject a little, and see in what way the surface soil may be benefited by this admixture. Every shower that falls sinks into the subsoil, carrying with it not only what it has brought from the clouds, but those soluble substances which it meets with in the surface soil; beside there are many substances *sparingly soluble*, such as carbonate of lime, sulphate of lime, (gypsum), and the silicates of potash and soda, so valuable to most of our crops, which settle down by their own gravity beyond the reach of the surface plow. These ingredients, which have been cut off from the growing crop, may be brought up again to great advantage. Turnips, potatoes, beans, peas, rape, clover, and all such green crops as feed largely on the atmosphere, and draw the little inorganic food they require from the soil near the surface, would be greatly benefited by such admixture. Sometimes deep plowing improves the surface soil mechanically as well as chemically. If the subsoil be clay, and the soil at the surface sandy or gravelly, a little of the clay from below would improve its physical condition. On the other hand, if the surface is stiff and tenacious, and the subsoil sandy, the admixture would also be advantageous. Where there is a marly subsoil or alluvial deposits of vegetable matter brought down from the uplands, deep plowing may be practiced with impunity. In all these matters, experience is the best and safest guide, where chemical knowledge is wanting. In the laboratory of the chemist the composition of the surface and subsoil can be ascertained, and calculations made to what extent the admixture will be beneficial.

Virginia has a beautiful climate, and the staple productions of the state would seldom fail, if the land was underdrained, the subsoil loosened, the surface soil thoroughly plowed and pulverized, and kept free from weeds, and sufficient fertilizing ingredients added to give the seed a good start. I am fully aware that the carrying out of these suggestions requires a certain amount of capital to be expended on the land, but it is a *safe investment*. The improvements may be gradually made, and extended from time to time; and if thoroughly done would add more than their cost to the value of the land. In England, land is very scarce and dear, and, to make it pay, it must be brought to the highest state of cultivation. In this state, land is plentiful and cheap, and the farmer endeavors to cultivate too large an area; losing sight of the fact that the same amount of labor is required for a good crop as a bad one. If by good husbandry we can obtain from one one-quarter of an acre as much as we otherwise could from an acre, it is evident we reduce the labor three-fourths, leaving the *increased quality of the produce* out of the account. Foreigners are constantly visiting the state to examine the capabilities of the land previous to emigrating; how important it is, that we should be able to show them, if it were only on a small scale, the productiveness of our soil under good cultivation.

Home Correspondence.

THE "HAMPTON STUDENTS."

These accomplished singers gave a free entertainment in the Normal School building on the evening of the 23d of January. Invitations had been sent to all the subscribers to the WORKMAN, and, at an early hour, the hall in which the performance was given, was filled to overflowing with the citizens of Hampton, Fortress Monroe and the surrounding country. Among the visitors we were happy to observe many of the most prominent and influential of our people. We have not time to speak of the music in the terms which it really deserves, but the following letter, addressed by our citizens, to Gen. Marshall a few days subsequently, indicates the manner in which it was appreciated by the audience:

TO GEN. J. F. B. MARSHALL:

Sir,—The citizens of Hampton, Old Point and vicinity, desiring in some way to show their appreciation of the work now being done in the cause of education by the officers and teachers connected with the Hampton Normal and Agricultural Institute, and wishing for an opportunity to acknowledge their indebtedness to the "Hampton Students" for the musical entertainments given to our community, hereby tender a benefit—the proceeds to go to the use of your Institution, the time and place to be chosen by you.

JANUARY 24, 1874.

To the foregoing letter Gen. Marshall returned the following reply:

HAMPTON N. AND A. INSTITUTE, HAMPTON, VA., *January* 26, 1874.

Gentlemen,—I have the honor to acknowledge receipt of your communication of 24th instant, and to assure you, in behalf of the officers and teachers of the Normal School, of our gratification at your endorsement of the educational work in which we are engaged, and your cordial expression of good will toward the institution.

I accept with pleasure your kind offer of a benefit concert, to be given by the "Hampton Students," in aid of our building fund, and would propose Friday evening next, at the "Bethesda Chapel" (Rev. Mr. Tolman's), as the most convenient time and place for the proposed entertainment.

I am, gentlemen, yours, very truly,
J. F. B. MARSHALL,
A. A. Principal.

To Jacob Heffelfinger, Esq., Col. J. C. Phillips, H. C. Whiting, Esq., Col. Thomas Tabb, Gen. Wm. F. Barry, Gen. Joseph Roberts, Capt. P. T. Woodfin, and others.

Accordingly a benefit concert was given at Bethesda Chapel on the evening of Friday, January 23d, the net receipts of which amounted to $151.50. As on the previous occasion, the house was literally packed, chairs having to be placed in the aisles to accommodate those who could not be seated in the pews. Every report that has reached us confirms the fact that all were highly entertained and even charmed at the exquisite manner in which the "Students" executed the pieces selected as the programme.

On the following night they gave a free entertainment at the Soldiers' Home.

On Tuesday evening, February 3d, they took passage on the Bay Line steamer for Baltimore, on their second tour through the North.

We bid them God speed in the noble work to which they are devoting their time and talents. While ministering to the pleasure of thousands, who honor them with a hearing, and perpetuating a style of music which, with all its eccentricities, we believe has no equal in simple melody, harmonious rythm, and genuine, heart-rending pathos, they are at the same time raising the walls of a building which shall be to them a "monument more durable than brass," and to their race a blessing beyond the reach of human calculation to compute.

Professor Fenner deserves great credit for the thoroughness of their drill and the perfection to which he has brought them, in the practice of an art, of which, scientifically considered, they knew nothing two years ago.

We cannot leave this subject without suggesting that, as a reward of their labors and an acknowledgement of their services, a stone tablet, with the name of each singer engraved thereon, be inserted in the walls of the most public hall of the new building, now in course of erection.

THE lower part of King street is now receiving its spring cleaning. The new shade trees are a great improvement and show laudable enterprise.

THE HOLLY TREE.

BY ROBERT SOUTHEY.

O, reader! hast thou ever stood to see
The Holly tree?
The eye that contemplates it well, perceives
Its glossy leaves,
Ordered by an intelligence so wise
As might confound the atheist's sophistries.

Below a circling fence, its leaves are seen,
Wrinkled and keen;
No grazing cattle through their prickly round
Can reach to wound;
But as they grow, where nothing is to fear,
Smooth and unarmed the pointless leaves appear.

I love to view these things with curious eyes,
And moralize;
And in this wisdom of the Holly tree
Can emblem see,
Wherewith, perchance, to make a pleasant rhyme,
One which may profit in the after time.

Thus, though abroad, perchance, I might appear
Harsh and austere,
To those, who on my leisure would intrude,
Reserved and rude;
Gentle at home among my friends, I'd be
Like the high leaves upon the Holly tree.

And should my youth, as youth is apt, I know,
Some harshness show,
All vain asperities I day by day
Would wear away,
Till the smooth temper of my age should be
Like the high leaves upon the Holly tree.

And as, when all the summer trees are seen
So bright and green,
The Holly leaves a sober hue display,
Less bright than they;
But when the bare and wintry woods we see,
What then so cheerful as the Holly tree?

So serious should my youth appear among
The thoughtless throng;
So would I seem among the young and gay
More grave than they,
That in my age as cheerful I might be
As the green winter of the Holly tree.

THE SEWING CIRCLE.

It seems scarcely necessary to attempt to offer any explanation of our this month's illustration, for surely there can be few people who have not had enough practical experience of sewing circles to understand the points of this pretty picture.

Almost every church in the country has connected with it some organization of its female members, who meet together at regular times to sew and make up such articles, useful and ornamental, as are likely to find a ready sale, while, in addition, they usually have one or more special objects for which they work: as, for example, certain poor families, or missionary clergymen, or impoverished churches, etc. It is astonishing how much such societies as these can accomplish when they are properly managed and have energetic, hard-working members, for they not only greatly assist the needy and suffering by the timely gift of garments, bedding, etc., but they can often contribute largely in ready money toward the support of the pastor, the furnishing and repairing of the church, and such necessary expense of a parish. In one small congregation, of which we know, where there is a membership of only seventy-three, the sewing society of ladies never nets less than two hundred dollars per annum, and, often, with the help of fairs, runs its profits up to six or seven hundred dollars, besides doing much other work not represented by a direct money value. Now, if there are any churches, to whose members the SOUTHERN WORKMAN comes, which have not yet established these helpful, pleasant associations, we beg of their influential women to begin the experiment at once, and see how much they can accomplish in the course of a year. Fortnightly meetings at the houses of the different members in turn, which last from three o'clock until nine and are regularly attended by *workers*, will be quite sufficient, and when once begun will be found to be play as well as work, for the quiet meeting of friends, all filled with the desire to labor for one and the same good object, has much in it to brighten everyday life and renew the interest in the charitable work of the church. These, too, there are very few church societies that have not need of the money which is made by the busy hands of the members of the sewing circle, and even when the yearly sum seems very small it is pretty sure to be a welcome help toward the minister's salary, or a new carpet for the church, or a Bible for the pulpit. So to people who are trying to make the most of their resources, and have hard work to keep up their church and support their clergymen, we say, "Organize a sewing society, and you will find that you have opened a new field of usefulness to your women, and added a new means of support to your church."

REFRIGERATORS.

The zinc-lined ice chests, ordinarily known by this name, are invaluable for household use, where the ice to fill them can be obtained as required from ice-houses, but refrigerators on a much larger scale are coming into fashion, and will be found especially useful in southern climates. Large houses are built of rough stone, two stories high, with peaked roofs. The upper stories, which are supplied with exceptionally strong floors, are filled with ice, while the lower stories are fitted up with shelves, drawers, hooks, etc., and in them may be kept, a whole season through, fruit, vegetables, choice meats, poultry, cider, etc. Barrels of pears and apples, baskets of peaches, plums, grapes or any of the smaller fruits, may be kept far into the winter, while almost any kind of vegetables will be found as fresh in April as when put in the autumn. One such house as this is sufficient for the use of a whole village, and as the original cost is comparatively small, each family can preserve its own fruit, putting in herrels or boxes, or filling a shelf or a drawer, and paying a specified sum to the owners of the house. Exact particulars of such a building can be had by applying to the SOUTHERN WORKMAN, and when properly carried on, the system is undoubtedly successful.

ROBERT SOUTHEY.

In our February number we spoke in connection with the life of Wordsworth, of what is known as the "Lake School" of English poets, and we desire now to introduce to our readers another member of that school, Robert Southey, who, born at Bristol in 1774, died in 1843, at Keswick, one of the towns of the Cumberland Lake district. From his earliest childhood he was devoted to poetry, and, it is said, that before his thirtieth year he turned more verses than he ever published, while his whole life was one of very remarkable industry.

He was expelled from school, as a boy, for writing a satirical article on corporal punishment, at that time a universal custom, and, as a young man, was distinguished at Oxford for his liberal ideas in politics and religion. He married young, traveled considerably in Spain, Portugal and Holland, but, for the most part, lived in England and in the country, for the city was hateful to him, and all his later years were spent in the house in which he died, Greta Hall, near Keswick. He took at one time an office under government, but soon resigned what he called "a foolish office and a good salary," and thereafter devoted himself unceasingly to literature which was his first and only love. From this time onward he describes his routine of life as follows: "I write three pages of history after breakfast (equivalent to five in small quarto printing), then transcribe a copy for the press, or make my selections and biographies, or what else suits my humor, until after dinner time; from dinner till tea I read, write letters, see the newspaper, and very often indulge in a siesta; after tea I go to poetry and correct or rewrite and copy till I am tired, and then turn to anything else till supper; and this is my life, which, if it be not a very merry one, is yet as happy as heart could wish."

He was connected with several periodicals, was poet-laureate, received a handsome pension from government, and was offered a baronetcy, which he refused, having little of that kind of ambition. His kindness of heart was remarkable, and he was always ready with substantial assistance and warm sympathy for those who were in need, while his domestic life was one of great tenderness and purity. His wife died in 1837, and soon after began that slow mental decay, which was the result of his severe and protracted brain work. He married again in 1839, but his faculties never regained their power, and for a year before his death, were almost totally extinguished. He left four children and a handsome property, with one of the most curious private libraries in England, collected during his indefatigable literary researches.

It is impossible to give more than the outline of his immense labor, for there was scarcely a department of literature in which he did not engage. He translated from the Spanish and Portuguese, wrote the lives of Nelson, Bunyan and John Wesley, with several histories, volumes of essays, etc., and in all of these exhibited his remarkable erudition.

Of his poems the most important are "Thalaba, the Destroyer," an Arabian tale, "The Curse of Kehama," founded upon fables of the Hindoo mythology; and "Roderick, the Last of the Goths," the subject of which is the fall of the Gothic dominion in Spain. His ballads and minor pieces are numberless, but "The Holly Tree," which we give in our present number is one of the most beautiful.

Perhaps no sketch of his life could be so complete as his own *resume* of his character, and his words are these: A man "impatient of all oppressions under the sun," with projects sufficient "for many years or many lives."

"Be good, sweet maid, and let who will be clever,
Do noble things, not dream them all day long,
So making life, death and that vast forever,
One grand, sweet song."

DAVID LIVINGSTONE.

AUGUST 15, 1873.

A tent beneath a palm tree—far and near
A glow of tropic color, strange wild birds
Flash back the sun-rays from their shining wings;
A dreadful splendor clothes the heavy flowers,
No ripple stirs the smooth, brown river's calm,
And the hot air is faint with perfumed death.
At the tent door a grim, barbaric group
Stand, stilled with the silence of a mighty awe,
For close beside them, as they dimly know,
A soul is passing to its God and theirs.
A tender, humble, brave and noble soul,
Whose work is finished in this wilderness,
Is struggling through its last long hour of earth.
Alone, ah, God, how awfully alone!
. . . . . O, martyr spirit, no,
Such souls as thine are never left alone;
The God who trod with thee thy blood-stained path,
The Christ who led thee to this distant death,
Come close and closer, till thy fear is gone,
And upborne by the very present Love
Thy tried heart passes softly into peace.

DAVID LIVINGSTONE,

Missionary and Explorer.

On the 15th of August, 1873, in the midst of an African jungle, exhausted by labor and exposure, there passed from earth to heaven one of the noblest souls that God ever sent as His messenger to the sons of men. Of such a soul it is no easy task to speak, and the life that was so heroically laid down, was so full of devotion, so humble and yet so great that its story should be told with the reverence which a martyr's name commands.

David Livingstone was born near Glasgow in Scotland, in 1817, where his father was so poor that the children were all obliged to work, and the boy David's early years were spent in the cotton mills, though his natural love of books was such that he studied by night until he fitted himself to enter the University of Glasgow, from which he graduated with the intention of becoming a missionary. As, however, no suitable opening offered, he began the study of medicine, supporting himself for several years by his own labor, until, when his medical studies were finished, he made application to the London Missionary Society for a position as agent in their African Mission. He was accepted, ordained and at once sent to Natal, although the desire of his heart was to go to China, a desire which was overruled, as we see now, for the good of humanity. Port Natal was the starting point of his life of exploration, and we heartily wish that every eye which sees these lines could be enabled to follow that life in its wonderful detail of travel, labor, hardship, disappointment, discovery and success. His first effort was the exploration of the great Kalahari desert, and the discovery of the Zouga river, down whose waters he paddled in a canoe until he reached Lake Ngami, the southernmost of that great chain of lakes which occupies the center of Africa.

Returning, he took his wife and children and struck out once more for Lake Ngami, but the sufferings of his family were so terrible that he went back with them to Koldberg, where he was warmly greeted by the natives and made many conversions. This was in 1849, and in 1851 he started again, reached Lake Ngami, and then struck off to the right, over barren salt plains to Linyenti, a town whose inhabitants were very friendly to him, and where he rested for some time, to be rewarded shortly after by the discovery of the great Zambeze river, the chief stream of southern Africa. Here he was seized with the idea of opening up the Zambeze by means of steamers of light draught, and thus introducing the missionary influence and the advantages of commerce to the country through which the river runs. Without delay he returned to Koldberg, broke up his home there, took his family down to Cape Town, and laid his plan before his official superiors, proposing to devote himself for the next two or three years to exploration and the study of the language.

Their hearty consent was given, his family sent back to England, and he, himself, supplied with the necessaries which enabled him to start in March, 1852, on this unparalleled journey. For four years he traveled, turning westward from Linyenti into the trackless, tropical forests, and wandering for two years, till almost mad with fever, he reached the valley of the Cussarge, and followed it down to the Portuguese city of San Paolo de Loando. Here he found British men-of-war cruising to put down the slave trade, and could have with them returned to England, but he would not desert his band of native followers, and went back with them to Linyanti, from whence he marched down the Zambeze to the Mozambique See, where he found H. M.'s Cruiser, *Frolic*, and in it went to the Mauritius, and thence to Europe. In England he was overwhelmed with honors, and received an almost royal welcome; but after publishing, in 1857, an account of his travels, he returned in the following year to the African wildernesses, whose attraction he could not resist. He now explored the Zambeze and its tributaries with steam launches, discovered Lakes Nyassa and Shirran, and did much hard work, but owing to the hostility of the Mussulmen and the Portuguese, and the unwholesome climate, the expedition was not so successful as he had hoped, and was recalled to England in 1863.

Dr. Livingstone was received as before, with unexampled honor, and half England flocked to see the portrait of this true soldier of Christ, who was as modest and simple as he was brave and daring; but his wife was dead and Africa called to him to come back to her fever haunted shores, so in April, 1865, he left England for the last time. Two years passed without any intelligence from him, and in 1867 an expedition started on his track and succeeded in obtaining a letter from him, though no Englishman saw him again until he was found near Ujiji by Mr. Stanley, the correspondent of the *New York Herald*. From that time again no news was received from him until an expedition, sent out by the English government, found him, last summer, dying of dysentery, brought on by a journey, during which he had for hours waded in water waist deep.

For thirty-five years this devoted man had labored continually, suffered tortures and renounced every worldly good—for what? That the terrors of the slave trade in Africa might be brought to an end, and that vast unknown country, with its wild millions, be opened to the influences of Christian civilization.

With that purpose his life began, with that purpose it ended, and it is too soon for any of us to say how infinite may prove to be the results of his work. But already this much is certain, that while white men everywhere may fitly sound the praise of his whole life, it is for Africa's children to love and cherish forever the name of David Livingstone, the man who lived and died for Africa.

THE SEA OF GALILEE.

The sea of Galilee, or sea of Tiberias, or lake of Genesareth, is a sheet of water formed by the expansion of the bed of the Jordan. It is about twelve and a quarter miles from north to south, and at its broadest part, six and three-quarter miles from east to west. But its width is by no means regular, its shape being that of a pear, or a leg of mutton, the broadest part toward the north, and the more projecting side toward the west, the eastern shore being by comparison straight, except near the lower end. It is full of fish. Its waters, thick and muddy at the extreme north, become clear and bright as they approach its narrow end; for the Jordan, which flows into a foul stream, leaves the lake a pure and sweet river. The surface is from six hundred to seven hundred feet below the level of the Mediterranean. The climate is genial in the winter and not excessively hot in summer. With shores that rise but gently in most parts from the basin, and whose color is uniformly brown where seen above the foliage of their bases, the scenery would be tame were it not for the fine hills including the snowy tops of Hermon, which can be seen all around through the transparent ether, and for the innumerable effects of light and shade. Shrubs and blossoms add to the beauty of the coasts, which vary continually, being sometimes backed by broad plains, showing at others the opening of long gorges, and elsewhere, especially to the north, being broken into many and charming bays. Volcanic action appears to be energetic; there are hot springs in the basin of the lake, and very serious earthquakes often occur. Wild boar are to be found on a plain to the northeast.

Those who have formed a mental picture of this sea, so often recurring in sacred history—as who in childhood has not?—have, no doubt, imagined a water covered with ships and boats, resounding with the cries of sailors and fishermen, and flanked by many prosperous cities rich in merchandise and glorious to the sight. Alas for such visions! The cities and the men and traffic were there, but they have disappeared so completely that the waters of the lake may be said to sleep amid a solitude. As for the famous cities, of most of them it cannot be said with certainty where they were, and this survey now first begins to give us some reliable data for identifying their ruins. One or two remain, but not as cities; small, dirty Arabian villages alone represent those busy towns wherein were done "mighty works," such as would have overcome the sinful obduracy of Tyre and Sidon. Tiberias is but a poor collection of houses, chiefly inhabited by Jews who have returned to Palestine. Its filth and vermin have become a proverb. About four miles north of this, a heap of ruins, now named Mejdel, marks the sight of Magdala where Mary Magdalene had her home. North of this, again, is the plain of Genesareth, an area of great beauty and fertility, along which, sad to say, are several heaps of rubbish, denoting, probably, the place of old towns end villages wherein our Lord taught.—*Massachusetts Ploughman.*

THE FAMILY QUARREL.

An Old Story in a New Dress.

BY MRS. SOPHIA P. SNOW.

Once on a time, a cabin stood
Upon the borders of a wood;
And in its walls a pair were found
Whose fame had spread for miles around;
Each tried the other one to sway,
And both would fight to win their way.
One morning, so the story goes,
Old Uncle Nathan early rose,
And sauntered off into the wood,
To find what little game he could;
But scarce an hour had passed, not more,
When Betsy, from the open door,
Espied her husband coming back,
And bringing with him something black.
When he, his domicile, drew near,
These taunting words fell on his ear:
"Before that I would hunting go
And bring back nothing but a crow."
"A crow?" said Nathan with a scowl,
"Why, Betsy, don't you know an owl?"
"Well, I should say you'd got one's eyes,"
Aunt Betsy in a pet replies,
"If you can call that sable fowl,
At all related to an owl."
And thus they had it all day long,
Each one declared the other wrong,
Until at last, it came about
The quarrel ended in a rout,
When both rushed out the cabin door,
Resolved they'd enter it no more.

Now when two weeks were at an end,
By the entreaties of a friend,
Old Uncle Nathan and his wife
Agreed to settle up the strife,
Provided never more a word
About the crow or owl be heard;
So to the cabin both returned,
To profit by the lesson learned,
And be it to their honor told
They dwelt like lambs within the fold.

Now when twelve months had passed away,
Since that eventful parting day,
Aunt Betsy, like her parent Eve,
No longer could the apple leave;
And as that night they sat at tea,
"How very foolish 'twas," said she,
"For you and me, one year ago,
To get so mad about that crow!"
"That crow?" came forth with deaf'ning howl,
"Of course you meant to say that owl."
"I mean exactly what I said,"
Quoth Betsy, tossing back her head.
And thereupon a contest rose,
Not only waged in words, but blows,
For this time, mops and tongs and broom,
Went swiftly flying round the room;
Indeed it would be hard to tell,
How long they would have fought, how well,
Had not there happened in a friend,
And to the contest put an end.
But then so fierce had been the strife,
That both resolved to part for life!

MORAL:

This teaches us that it is best,
To let a quarrel settled, rest,
Take warning from these erring souls,
And never overhaul the coals!

THE BOY WHO WORKED.

BY ROSWELL SMITH.

It was a beautiful day in the early spring of 18—. I lived at the West then, in one of those half rural cities for which the West is so famed. I had started out for a drive.

The air was balmy as June. The mud in the streets had dried up, the birds were going mad with joy; the hum of bees, and the fragrance of blossoms mingled with the song of the birds.

Soon I was gaily speeding along the graveled road; down through Dublin, as we called the poorer quarter of the town (though the real Dublin is a handsome and well built city), out into the country. The horses seemed to share my pleasure and enthusiasm in the drive, as I have no doubt they did. Their sleek, glossy coats glistened in the sunshine, and they arched their necks and moved proudly, knowing well the hand that held the reins, and loving the tones of the voice behind them.

Just ahead of me I saw walking on the road a very small boy. He was dressed in plain clothes, known as Kentucky jean. On his head he wore, even thus early in the spring, a plain straw hat; over his shoulder he carried a bundle, tied up in a red silk handkerchief, and slung upon a stick. In his hand he held his great heavy shoes, whilst he tugged on manfully and wearily, sore of foot, and sore of heart, I had no doubt.

I drove quickly past, and then stopped and looked back, and waited until the little fellow came up.

"Hallos," I said, "don't you want a ride?"

"To be sure I do," said he.

"Then, why didn't you ask me?" said I.

"Because," said he, "I had asked so many times, and been refused so often, that I had got discouraged, and I didn't think *you* would let me," with some emphasis on the "you."

"Well," I said, "get in." He stood looking hopelessly up into the cushioned and carpeted buggy, and down at his bundle and his stick, and his heavy soiled shoes.

"I am afraid I sin't very cleau," he said, at last.

"O, never mind!" I said. "Get in; this vehicle was made for use."

"I'd better leave my stick," he said.

"O, no!" I answered. "You may want it again."

And so he climbed in, and the bundle was stowed away under the seat, and the stick put down between us.

"I never rode in such a nice carriage before, and I don't think I ever saw such horses," he went on, and his eyes fairly sparkled.

"Do you want to drive?"

"May I?"

"Yes, if you know how." And so I gave him the reins, and we were friends at once.

"Who did you ask to let you ride?" I asked.

"O! all those men in the great farm wagons."

"And what did they say?"

"If they had a load they said they couldn't, and if they had no load, they only smacked their great whips, and rattled by the faster, or yelled at me to get out of the road."

"And you didn't ask me. Did you think because I had nice horses, and a fine carriage, and wore good clothes, and looked like a gentleman, that therefore I wasn't one?" I said laughingly.

"Well—yes—I'm afraid I did; but," he continued, looking me square in the face, "do gentlemen always let boys ride, when they want to?"

It was my turn to be a little bit puzzled; and I said, "I don't think they do; but a gentleman is one who always does all he can to help others and to make them happy."

"Well," said he, "I think you are a gentleman, at any rate."

And so I said, "Will you tell me who you are, for I think you are a gentleman also?" and, yet, he hadn't said "thank you," in words once, all this time.

Then he told me his story. His mother lived in a log cabin, in a little clearing in the woods, in Boone county. His father was dead. They were very poor. He had worked for a good Quaker farmer the summer before, who was very kind to his boys, and he was going to work for him again. He had walked more than twenty miles that day, and had five miles farther to go. His feet had become very sore, and so he had taken off his shoes and stockings, putting his stockings in the bundle, and carrying the shoes in his hand.

"But you haven't told me your name, yet."

"My name is Richard—they call me Dick for short; but I never could find out why. I don't like nicknames. Do you?"

"No, I don't. Almost everybody has a nickname, however; but why Richard is called Dick, is one of those things one can never find out."

"Mr. Hollyhead, the farmer I am going to work for, always calls me Richard. He's a real good man, only I don't get use to the thees and thous, yet."

"Got any girls?" I asked.

He looked at me a moment to see if I was making fun, but I kept a sober face, and thus reassured, he said, "I guess he has. He has got one."

"*Guess!*" I said, "don't you know?"

"Well, I think I ought to. She's just as pretty as she can be; and I like her first rate, 'cause she calls me Richard, too, and that makes me feel like a man."

"Do you live far from the railroad?" I asked.

"Close by," he answered.

"Why didn't you come on the cars, then?"

He hesitated a little, then said, "'Cause *'twouldn't pay.*"

"What do you mean by that?" I asked.

"May be you didn't have the money."

"*Yes, I did.* Mother gave me the money, and she said may be I could come at half price, as I did last year; but, you see, I don't begin work until to-morrow, and I wanted to see the country, and—and—and—well, I just thought I'd walk. Mother put me up a nice *snack*, and so I laid the money in the leaves of the big Bible, right at the thirty-seventh Psalm, that mother made me promise to read next Sunday—for I knew she would read it at the same time—with a little note pinned to it saying I would walk. But I didn't know it was so awful anuddy all through the woods, or I don't believe I should have done it; but I'm glad I did; for, if I hadn't, I shouldn't have met you; and I might never have known a real gentlemen in all my life."

"But," I said, "isn't the man you work for a gentleman?"

"Well, yes. I suppose he is; but he isn't like you."

"No," I said, "there are a great many real gentlemen and ladies in the world. I think this Quaker farmer is a gentleman, and that your mother is a lady. It is said 'fine feathers make fine birds,' but fuss and feathers, fine manners and fine clothes, and fine horses and carriages, and houses and farms don't make gentlemen and ladies. Only God can make a gentleman.

"Did you ever read the story of Jacob?" I asked. No, he hadn't; but he knew about Joseph.

And so I made him promise to read about Jacob, who went out from his father's house with only a stick and a bundle, or wallet—much as he had done—and slept with a stone for a pillow; and I asked him to be sure to find out what Jacob saw there that night as he lay out under the stars, and what wages Laban paid to Jacob when he hired out to him, which I knew would be a little difficult, as Laban changed his wages ten times. Then I asked him what wages he had.

He said nine dollars a month, which I thought was very good pay for a small boy.

And so we rode on together, talking about the wages the devil pays to those who work for him, and the yoke Christ gives us to bear, until we came to the farm-yard gate, where I turned in. He dismounted with his stick, and bundle and shoes. I lingered a moment longer and he bade me good-bye, and tramped briskly down the road.

One evening in the December following—it was almost Christmas time—I sat by a glowing wood fire in my parlor; it was raining and freezing without. I drew nearer to the embers as the door was opened, and a great blast of cold air came rushing in, without so much as saying, "By your leave;" and with it came my friend Richard.

He had grown a great deal. He was neatly dressed, and was so glad to see me, and I was so glad to see him, that all embarrassment was taken away at once.

I introdneed him to my wife and my boys, and together we recalled the story of the drive; but it was evident Richard had come with a purpose. There was something in his manner which meant business.

And so I said, "Well, Richard, what is it? Have you and the pretty little girl at the farm had a quarrel?"

"Not exactly; but I—I have given her up."

"Ah! how was that?"

"You see, one day she told me she wished I wouldn't speak to her when there were other girls there, unless I had on my best clothes, for I was such a small boy, and worked for her father, and the girls laughed at her about me; and I said I wouldn't, and I didn't, and I haven't spoken to her since, and I have given up farming, too."

"Given up farming," I said. "Why, what are you going to do?"

"Well, I'm going to try to be a gentleman," he answered.

"Can't a farmer be a gentleman?" I said, thinking what foolishness I must have put into the boy's head, by my talk during that ride.

"*Yes*, I s'pose he can; but you said there were different sorts of gentlemen, and you see I want to try and be another kind. When you told me what a gentleman was, I thought I'd like to be one; but I didn't find it as easy as I expected. Then I remembered you said only God could make a gentleman. I didn't know exactly what you meant, but after I had got almost discouraged trying, it came to me to ask God's help, and so I am trying harder than ever."

"Well, what sort of a gentleman are you going to be?" I asked.

"That's it," he said. "You see I'm so little, I thought may be I could do more to help others, and take care of mother, if I tried something else beside farm work."

"You want I should help you, do you?"

"*No;* I don't want any help, I only want advice."

And so we talked it all over. He hadn't been to school much, and he needed more education, and yet he wanted to help support his mother, and finally we decided that he should go in the morning to the office of *The Daily Blunderbuss*, and see if he could get employment there, and learn type-setting. I told him he might refer to me.

The result was, Richard got a place in the printing office, and I used to see him occasionally at work, with his sleeves rolled up, his face and hands smeared with ink, but at night and on Sundays he was neatly dressed, and he and my boys became great friends.

After he had been with me nearly a year, I one day asked him suddenly, "What sort of a gentleman do you mean to be?"

"That's it," said he. "I haven't got education enough, and I want to go to school and work half the time."

So I got him a situation as a book-keeper in a bank, and he worked and went to night school, and finally fitted himself for college. It was a long and hard struggle, but a few years since he graduated with honors at the Michigan State University, and went to Chicago, where he soon obtained a position on one of the daily papers of that city, and got a home for himself and for his mother.

When the great fire came, his business was swept away, but the cottage where his mother lived, "on the west side," was mercifully spared. In the meantime I had moved to the East, and had lost sight of Richard, except as I occasionally heard from him by letter, or heard of him from others.

Fortunately, his capital was in his brains, and a great conflagration could not destroy that; and he was soon at work again.

Soon after, Richard was married; and now it is the Christmas time again. I have just received a letter from him, in which he says, "We have returned from our wedding tour. My wife is a *real lady*, if there ever was one, I am sure.

"We found a double surprise awaiting us. First, an invitation to me to take the position of editor-in-chief of the *Daily Chicagonian*, one of our largest papers here, which I have accepted.

"It had been agreed that we were to come back to mother-in-law's, to spend a few days, before going to my own home. When we reached the house, we found my mother there,

and everything arranged to make it a permnnent home for us all.

"Mother-in-law said she could not live in the house alone.

"We spent a pleasant, social evening together, and gathered in the back parlor for prayers.

"On the table lay mother's big, old, well-worn Bible. I opened to the thirty-seventh Psalm, and there was the money, pinned to the note in my boyish handwriting, just as I had left it twenty years before. It seems mother could never, in her darkest hour, make up her mind to use that money. I tried to read, but my voice faltered, and then I broke down entirely. Mother and Esther knew what it meant; then mother told Mrs. Gwynne the story of the walk and drive, and we all wished that you were here to share our heppiness."

Thus it was that the boy who worked came to be a real *gentleman* at last.

OUR DUMB ANIMALS.

Children are often requested to speek kindly to their relatives and friends, but I would go a step farther and advise them to speak kindly to all dumb nnimels. I remember when a child, a mnn who used to drive n large ox team by my home, and the oxen always looked fat and sleek, and worked nicely together. They obeyed every motion of the gead, though I never knew him to punish them with it. Others thrashed thoir oxen and goaded theu with less success. Now the first driver was deaf and dumb. If silence with kindness was so effective, how much more could hays been effected with kind words.

See how frightened are the horses represented in the picture, by the threatening aspect and harsh words of a mere boy. How much more pleasant would the scene be if he was feeding them and kindly talking to them. A horse much resembling the black one in the picture, passes my door every day, and his driver is always kindly chatting with him. It is really wonderful to see how this horse understands his driver's words and tone; he obeys more promptly and seems to understand better than many human beings. We print below a sketch, taken from the *Christian Weekly*, mentioning one whose kindness to dumb animels has made his name a household word. For our illustration we are indebted to John L. Shorey, of Boston.

"A few months ago, as the writer was passing up Broadway, opposite Union Square, he saw a tall, fine-looking man, dressed in dark-bluo military costume, pass quickly into the street end seize an omnibus horse hy the head nt the same time commending tho driver to descend from his box. The mnn grumblingly obeyed. Bidding him unharness the horses, the gentleman told the passengers that tho coach would go no farther, and directed them to alight and take nnother. They too, obeyed. A crowd had hy this time gathered. The writer stepped to the gentleman who acted with so much nuthority, and asked his reason for this strange proceeding. 'Look,' he said, with indignation, 'at thnt horse's foot.' Tho cause was npparent enough. The hoof was swollen, had burst open, and was an offensive, running sore. 'Mey I ask, sir, who you are?' He handed mo his card, and on it was the well-known name, 'Henry Bergh.' The horse was sent to tho stuble. The coach remained in the street till nnother team arrived. The drivor was arrested nnd fined. We all felt it was a just act. Fivo years ago this could not have been dono. No lnws were then enacted to reach the case. Beasts were left to the mercies of owners and drivers. They hnd no rights which men were required to respect. Mr. Bergh, n gentlemen of fine culture end benevolence, impelled by a tender regard for helpless dumb creatures, inaugurated measures for preventing cruelty to animals. A society was incorporated in New York, April, 1866, and has extended its influence until now nineteen states and the dominion of Canada hays incorporated societies of similar character. Its object may be inferred from section 1 of the statute under which it operates:

"'If any person shall over-drive, over-load, torture, torment, deprive of uecessary sustenance, or unnecessarily or cruelly beat, or needlessly mutilate or kill, or cause or procure to be over-driven, over-loaded, tortured, tormented, or deprived of uecessary sustenance, or to be unnecessarily or cruelly beaten, or needlessly mutilated or killed, as aforesaid, any living creature, every such offender shall, for every such offense, be guilty of a misdemeanor.'

"To carry out this lnw, which his efforts have secured, Mr. Bergh has given his undivided time and enorgies. He receives no salary, nor has ever received any. His only compensation is to 'see the compassionate instincts of man's nature manifested toward the helpless and unoffending, be it man or beast.' Upon the success so far achieved he looks with satisfaction, and says, 'I may be pardoned for believing that I hnvo not lived for nothlng.' Especial attention is given to tho treatment of horses; the transportation of cattle, sheep, cows, poultry, stc., used for food; careful inspection of their condition before slaughter, that no diseased meat may be sent to tho markot; examining tho state of milch cows, kept in the city for puhlic supply of '*pure Orange county milk*;' stopping brutal sports; breaking up dog and rat pits; enforcing n degree of privecy in the slaughter of animals, that children may not be made familiar with scenes of blood, providing facilities for anpplying cattle with abundance of fresh water; and doing everything possible to develop kindness and prohibit all forms and tendencies to cruelty.

"A driver and conductor of a city line were recently arrested for allowing forty persons inside end sixty outside on the platforms of the car, one hundred in all. To drag this prodigious load, which, with the car, is estimated to have weighed 21,000 pounds, up a severe grade, there were two feeble horses, one of whom was so distressed that his breathing could be distinctly heard the distance of a block.

"Mr. Bergh succeeded in breaking up Kit Burns' femous dog and rat pit, in Water street. With a strong police force, he entered tho den, end arrested thirty-four of the choice spirits in the very heigbt of their *refined sport*.

"Fountains, so combined as to supply pure, fresh weter to men, horses and dogs, have been erected in various parts of the city under the Society's direction. And now, all over the city of New York, may be witnessed the drinking fountain, where man nnd beast meet to assunge their common thirst.

"Thanks to Mr. Bergh, the community is more and more responsive to appeals of humenity. He is in the prime of life, and we trust that years of useful labor are yet before him."

OUR "GOLD DUST."

"First, I am going to write to mother," said Thomas, with his eye on the clock, parcelling out Wednesday afternoon; "next, two hours' play; next, come in and study my algebra lesson; after supper, go and hear that man lecture on Africa."

Did he? For boys, as well as men, meke capital plans, which they do not always execute.

No sooner said than Tom took his writing materials and sat down to write. There was a great hurrah in the street, but he never got up to look out. He went once for the dictionary, to learn how a word was spelled.

"Do you care when you are only writing home?" asked one of Tom's cousins, who was waiting for him.

"I always care," answered Tom.

The letter was finished, well done for a boy of his age, in about three-quarters of an hour, and he was ready to be off. And so tho afternoon was filled up as promptly as that letter was filled np. This is a specimen of Tom.

"Uncle," said Tom, ono day, "it seems to mo your things don't look as well as they might."

They were in tho garden, and "the things" the boy had his eye on were the currant hushes.

"I don't expect they do," replied his uncle; "I'm no great hand at a garden. Well, sir, what can you improve?"

"I can *try* on tho currants," said Tom. "They want to be thinned ont, and tho wood cut off, and the right suckers trained. Don't you ever dig around them, and pnt ashes on the roots?"

His uncle never hed dono one of these things; did not know they ought to be donc. He thought, he said, currants took cere of themselves.

"But they can be cared for," said Tom, "and do all the better."

"Suppose you try, boy," said his uncle.

Tom's uncle gave him a home for two years, to attend the high school and prepare for college, and so gave him time to try the bushes. In the autumn he dug around their roots, pulled up the grass, separated the large old bushes, and put out new ones. It took time; but ho tugged hard at it. In the spring he loosened the soil, laid on coel ashes, watched the young shoots, kept some, and cut down others. His uncle did not believe much would come of it. All at once, it seemed to him, for time goes fast to an old man, his bushes were loaded with fruit, fine large currants, such as his garden had not seen for many n dny, if ever before. Peoplo exclaimed:

"What splendid currants you have!"

"That boy knows how to take care of his gold dust," said his uncle often to himself and sometimes aloud.

Tom went to college, and svery account they heard of him he was going ahead, having a solid foundation for the future.

"Certainly," said his uncle, "certainly. That boy, I tell you, knows how to take care of the gold dust."

"Gold dust!" where did Tom get gold dust? He was a poor boy. Ho has not been to California. He never was a miner. Where did he get gold dust? Ah, he had the seconds and the minutes, and these are the "gold dust" of time, specks and particles of time, which boys and girls and grown-up people are so apt to waste and throw away. Tom knew their valuo. His deceased father, a poor minister, had taught him that every speck and particle of time was worth its weight in gold; and his son took care of them as if they were. He never spent them foolishly, but only in good bargains; "for valne received" was stamped on all he passed away.

It is a mistake to suppose that miners and the mints have all the "gold dust." You, children, have some of infinitely greater value than the richest mines can yield. God does not give it to you in gold bars, a key, a month, n year long; nobody can be trusted with so much time all at once; but God wisely deals it out in seconds and minutes, so that you can mnke the most of it. If you are robbed of one, or lose it, the loss is comparatively small. It cannot, to be sure, ever be made up; tho whole world cannot ever make up for a minute lost; but to teach you to be thoughtful and careful of the rest, you will, by and by, be rich with the golden years of e useful and happy life.

Teke care of your "gold dust," children.—*Exchange.*

THE MEN WHO CAN BE SPARED.

When trade becomes dull, and but little work is in the factory and not much prospect of more coming, employers ask themselves, Who can be most easily spared? One or more men must be discharged, and those most easily spared ere the ones marked out for e discharge, in the knowledge that those most easily spared ere the very men who can be most easily replaced. The men we are most loth to discharge in dull times are those who have been long in our employ, who heve always been attentive to our interests by a faithful discharge of duty, and toward whom wo havo learned, from long association, to entertain a feeling of interest and friendship. Snch men will be retained under any and all circumstances, while the shiftless, eye-serving, afraid-of-doing-too-much class will be "shipped" at the first opportunity they can be spared. The same result extends to all branches of trads, and he who would succeed in the battle of life must meke himself master of his business, or be reckoned among those who can be spared.

Young mnn, remember that the men who can be easily spared are not the ones sought after when responsible positions are to be filled. Would you like to gauge your own fitness for a position of prominence? Would you like to know the probabilities of your gettlng such a position? Inquire within! What are you doing to make yourself valunble in the position you now occnpy? If you are doing with your might what your hands find to do, the chances are ten to one that you will soon becoms so valuablo to that position that you cannot easily be spared from it; and then, singular to relate, will be the very time when yon will be sought ont for promotion to a better place. Be content to grado among tho men who can easily be spared, and you may rest assured that nothing will "spare" you so certainly and easily as promotion.—*The Manufacturer and Builder.*

LEAF PHOTOGRAPHS.

A pretty amnsement, especially for those who have completed tho study of botany, is the taking of leaf photographs. One very simple process is this: At any druggist's get a dime's worth of bichromnte of potash. Put this into a two-ounce bottle of soda water. When the solution becomes saturated—that is the water has dissolved as much as it will—pour off some of the clear liquid into a shallow dish; on this float a piece of ordinary writing paper till it is thoroughly and evenly moistened. Let it become nearly dry in the dark. It should be a bright yellow. On this put the leaf; under it a piece of soft black cloth and several pieces of newspaper. Put this between two pieces of glass (all the pieces should be of the same size), and with spring clothespins fasten them all together. Expose to a bright sun, placing the leaf so that the rays will fall on it as nearly perpendicular as possible. In a few minutes it will begin to turn brown, but it requires from half an hour to several hours to produce a perfect print. When it has becomo dark enough, take it from the frame and put it in clear water, which must be changed overy few minutes, till the yellow part becomes perfectly white. Sometimes the venstition of the leaves will be quito distinct. By following these directions, it is scarcely possible to fail, and a little practice will make perfect. The photographs, if well taken, are very pretty as well as interesting.—*Massachusetts Ploughman.*

A WELL-TO-DO CLASS.—We hazard tho assertion that no class of equal average means lives so well as American farmers. One of these, possessing a farm and hnilding worth from five to ten thousand dollars, will gather about him and enjoy more real comfort than could be obtained from tho incomo of a hundred thousand dollars in New York. He may live in a more commodious dwelling than a metropolitan citizen having ten thousand dollars annual incomo. Ho may havo his carriage and horse. His tahlo may be supplied with overything fresh in its season. His labor is less wearing than the toil of counting rooms and offices, and ho has more leisure.—*Scribner's Monthly.*

The Household.

ROAST OYSTERS.

There is no happier frolic for an evening, when oysters ere plentiful, than an impromptu "roast" in the kitchen. There the oysters are hastily thrown into the fire by the peck. You may consider that your fastidious taste is mervelously respected if they are washed first. A bushel basket is set to receive the empty shells, and the click of the oyster knives forms a constant accompaniment to the music of laughing voices. Nor are roast oysters amiss upon your own quiet supper table, when the "good man" comes in on e wet night, tired and hungry, and wants "something heartening." Wash and wipe the shell oysters, and lay them in the oven, if it is quick; upon the top of the stove, if it is not. When they open they are done. Pile in a large dish and send to table. Remove the upper shell by n dextrous wrench of the knife, season the oysters on the lower shell with pepper-sauce nnd butter, or pepper, salt and vinegar in lieu of the sauce, and you have the very eroma of this pearl of bivalves, pure end undefiled.—*The Farm and Fireside.*

FRIED OYSTERS.

Use for frying, the largest and best oysters you can find. Take them carefully from the liquor, lay them in rows upon a clean cloth, and press another lightly upon them to absorb the moisture. Have ready several eggs, and in another dish some crackers crushed fine. In the frying pan bent enough nice butter to cover the oysters entirely. Dip each oyster first in the egg, then into the cracker, rolling it over that it may become completely incrusted. Drop them carefully into the frying pnn, and fry quickly to a light brown. If the butter is hot enough, they will soon be ready to take out. Test it by putting in one oyster before you risk the rest. Do not let them lie an instant after they ere done. Serve dry, and let the dish be warm. A chafing dish is best.—*The Farm and Fireside.*

NEW MODE OF WASHING.

The ill effects of soda on linen have given rise to a new method of washing, which has been extensively adopted in Germany and introduced in Belgium. The operation consists in dissolving two pounds of soap in about three gallons of weter, as hot as the hands can bear, and adding to this one tablespoonful of turpentino and three of liquid ammonia; the mixture must then be well stirred and the linen steeped in it two or three hours, taking care to cover up the vessel containing them as nearly hermetically as possible. Tho clothes are afterward washed out and rinsed in the usual way. The soap and water may be reheated, and used a second time, but in thet case half a teaspoonful of turpentino and a tablespoonful of ammonia must be added. The process is said to cause a great economy of time, labor and fuel. The linen scarcely suffers at all, as there is little necessity for rubbing, and its cleanliness and color are perfect. Tho ammonia and turpentine, although their detersive action is great, have no injurious effects upon the linen; and while the former evaporates immediately, the smell of the latter is said to disappear entirely during the drying of the clothes.—*The Farm and Fireside.*

CHAPPED HANDS.

Teke common starch and grind it with e knife until it is reduced to the smoothest powder, put it in a clean tin hox, so as to have it continuelly at hand for use. Then, every time thet the hands are taken from the suds or dishwinter rinse them thoroughly in clear water, wipe them, and while they ere yet damp, rub a pinch of the starch thoroughly over them, covering the whole surface. The effect is magical. The rough, smarting skin is cooled, soothed and heeled, bringing and insuring the grentest degree of comfort and freedom from this by no means insigoificant annoyance.—*The Farm and Fireside.*

SETTING THE TABLE.—Do not be afraid to be n little extravagant in your fresh tahlo cloths, when soap, water, and n little labor are all you have to pay. Will you, having the best china, do with stoneware every day? Or will you pay yonrselves the respect usually reserved for company? Clearly, you are yourselves the persons to whom it is of the most importance. Will you sit down to odd plates and cracked saucers six days that you may enjoy gilded china on the seventh? By no means. Have plain whito French china, which can always be matched when brokon, and sit down to it every day. In tho same way bring out the best knives and plated or silver forks, also napkins or hutter plates, and partake of food with a sense of your own deserts.—*The Manufacturer and Builder.*

For the Southern Workman.

AN INVOCATION.

O, distant hills of blue and gold,
O, purple pastures far away,
Where One has gathered to His fold
The star that led my wandering way.

Could I but climb your glorious steeps,
Or roam amid your fadeless bloom,
No longer should I vainly weep,
Where grief untired is wrapped in gloom.

O, precious Christ, who bled and died
To bring immortal life to light;
Be Thou my strength, support and guide,
Until I cross death's vale of night.

I see the shining hills afar,
Beyond the valley, dark and cold;
I see the glory of the star
That gleams above my darling's fold.

O, keep my way-worn feet aright,
Help me to strive and pray and wait,
Until I rise above the night,
And pass through morning's pearly gate.

BERTIE BLAIR.

KNOCKING, EVER KNOCKING.

BY HARRIET BEECHER STOWE.

"Behold I stand at the door and knock."—Rev. iii. 20.

Knocking, knocking, ever knocking!
Who is there?
'Tis a Pilgrim, strange and kingly,
Never such was seen before.
Ah, sweet soul, for such a wooder
Undo the door.

No, that door is hard to open;
Hinges rusty, latch is broken;
Bid Him go!
Wherefore, with that knocking dreary,
Scare the sleep from one so weary?
Say Him no.

Knocking, knocking, ever knocking!
What! still there?
O, sweet soul, but once behold Him,
With the glory-crowned hair,
And those eyes so strange and tender,
Waiting there:
Open! open! Once behold Hoo,
Him, so fair.

Ah, that door! Why wilt thou vex me,
Coming ever to perplex me?
For the key is stiffly rusty,
And the bolt is clogged and dusty;
Many fingered ivy vine
Seals it fast with twist and twine;
Weeds of years and years before
Choke the passage of that door.

Knocking! knocking! What! still knocking?
He still there!
What's the hour? The night is waning—
In my heart a drear complaining,
And a chilly, sad unrest!
Ah, this knocking! It disturbs me,
Scares my sleep with dreams unblest!
Give me rest!
Rest—ah, rest!

Rest, dear soul, He longs to give thee.
Thou hast only *dreamed* of pleasure,
Dreamed of gifts and golden treasure,
Dreamed of jewels in thy keeping,
Waked to weariness and weeping;
Open to thy soul's one Lover,
And thy night of dreams is over.
The true gifts He brings have meaning
More than all thy faded dreaming!

Did she open? Doth she? Will she?
So, as wondering we behold,
Grows the picture to a sign,
Pressed upon thy soul and mine,
For in every soul that liveth
Is that strange, mysterious door.
There the pierced hand still knocketh,
With the sad eyes true and tender,
With the glory-crowned hair—
Still a God is waiting there.

VICTORY OVER TEMPTATION THROUGH CHRIST.

Whitefield gave a military commander, as a motto for his banner, "Nothing is to be despaired of with Christ for leader." A noble motto this—so conformed to God's truth, so radiant with heaven's light. In our spiritual warfare let the same motto be written, as it were, in golden capitals on our every banner. Though we be in ourselves, weak as water, quivering as a leaf in the wind, but as a feather before the tempest, nothing is to be despaired of; all the powers of earth and hell cannot prevail against us with Christ for leader.

One of our rich men, pointing to a drinking saloon, said to a friend, "Give me the resolution to pass that open door, and I will share my wealth with you to-morrow." He felt that his terrible appetite for liquor was so overmastering him, so dragging him down into the gutter, that he would freely give his thousands for the vigor of resolution to overcome it. But such vigor of resolution was not to be bought with money; was not in the power of any fellow mortal to bestow.

GOD IS ABLE.

God is able of these stones to raise up seed to Abraham.

Able also to save them to the uttermost that come unto God by Him.

What He has promised He is able to perform.

Able to make all graces abound toward you, that you, having all sufficiency in all things, may abound to every good work.

I commend you to God, and to the word of His grace, who is able to build you up and give you an inheritance among all them that are sanctified.

Able to keep that which I have committed unto Him.

Able to keep you from falling, and present you faultless before the presence of His glory, with exceeding joy.

Able to succor them that are tempted.

Able to keep all whom the Father hath given Him, so that He will lose not one.

Able to do exceeding abundantly above all that we ask or think.

Believe ye that He is able to do this?

HOME INFLUENCE.

Rev. Dr. Cuyler, in one of his articles, talks in this wise of family topics:

"If the father generally talks 'money, money' at home, he generally rears a family in worship of the almighty dollar. If he talks mainly horses, games and races, he breeds a batch of sportsmen. If fashion is the family altar, then the children are offered up as victims upon the altar. If a man makes his own fireside attractive, he may reasonably hope to anchor his own children around it. My neighbor Q—— makes himself the constant evening companion of his boys. The result is that his boys are never found in bad places. But, if the father hears the clock strike eleven in his clubhouse or the playhouse, he need not be surprised if his boys hear it strike twelve in the gaming-room or drinking-saloon. If he puts the bottle on his own table, he need not wonder if a drunken son staggers in, by and by, at his front door. When the best friend that childhood and youth ought to have becomes their foe, the homes become the 'starting posts' for moral ruin."

A SILENT TEACHER.

A city missionary was visiting in one of those courts in a city where the houses are crowded with inhabitants, and where every room is the dwelling of a separate family; and in a lone room, at the top of one of these houses, he met with an aged woman whose scanty pittance of half-a-crown a week was scarcely sufficient for her bare subsistence.

He observed, in a broken teapot that stood at the window, a strawberry plant growing. He remarked from time to time how it continued to grow, and with what care it was watched and tended,

"Your plant flourishes nicely; you will soon have strawberries upon it."

"O, sir!" replied the woman, "it is not for the sake of the fruit that I prize it; but I am very poor, too poor to keep any living creature, and it is a great comfort to me to have that living plant; for I know it can only live by the power of God; and, as I see it live and grow from day to day, it *tells me that God is near*."

LEGEND FROM THE TALMUD.

Alexander the Great arrived with his victorious army before a town inhabited only by women, and prepared for the attack. The women sent him this message: "Why dost thou wage war against us? If thou vanquishest, thou wilt have no glory, for the world will say, 'This great hero has conquered women.' And if the battle end in our triumph, then thy shame will be greater, since thou wilt have fallen by the hand of women." Alexander offered unto them an honorable peace and asked for provisions. The women brought unto him gold bread in gold plates. "Why," said the king, "do they eat gold in this country?" "Certainly not," answered the shrewd women, "but is there no bread in thy empire, that thou hast come to seek bread in our land?" Then Alexander departed with his soldiers; but before starting, he wrote these words on the gate of that town: "I, Alexander, of Macedonia, was heedless and without prudence, until I came to this African country, and learnt wisdom from the women."

USEFUL PROVERBS.

Waste nothing—neither time, money, nor talent.

Always tell the truth; you will find it easier than lying.

He, who gives a trifle meanly, is far meaner than the trifle.

A heart full of grace is better than a heart full of notions.

Men looking at the faults of women should shut their eyes.

If we seize too hastily, we may have to drop as hastily.

Experience is a torch lighted in the ashes of our delusions.

Prosperity is a blessing to the good, but a curse to the evil.

Let everything have its place and every business its place.

Better be upright with poverty, than be wicked with plenty.

The tenderest heart loves best the bold and courageous one.

He, who laughs at cruelty, sets his heel on the neck of religion.

Time never sits heavily upon us, but when it is badly employed.

Whatever you dislike in another take care to correct in yourself.

Resolve to perform what you ought and perform what you resolve.

The stupid great man, like the clown, gets up only to tumble down.

SPARKS.

Felt Slippers.—Those felt by children in their rude young days.

Dakota has been doing sums and finds that she has only three-eighths of a white man to an acre of ground.

Cooing is well enough before marriage, but the billing doesn't come till after; and then it comes from the tradesmen.

An Ohio paper calls the attention of the Legislature to the fact that there is not a single man in that state who is legally married. Do you see the point?

A plumber had an Irish lad in his employ, and one day having occasion for a piece of zinc ordered him to get one twelve inches square. "Yes, sir," said Pat, "Twelve inches square, but how long?"

A man left a bony steed on Main street last Saturday, and, coming back a short time afterward, discovered that a funny youth had placed a card against the fleshless ribs bearing the notice, "Oats wanted—inquire within."

A remarkably dirty man stepped in front of a small boy sitting on a fence, expecting to have some fun by chaffing him. He said, "How much do you weigh?" The answer was, "Well, about as much as you would if you were washed."

An old German while on his way from Indianapolis to Lafayette, frozo his nose. While thawing the frost out of that necessary member he remarked, "By jinks! I no understand dis ting. I have carry dat nose forty years and he never freezed himself before."

"I don't like these shoes," said a lady customer, "because the soles are too thick." "Is that the only objection?" blandly asked the salesman. "Yes," was the reply. "Then, madam, if you take the shoes, I can assure you that the objection will gradually wear away."

In a Minnesota town one evening last week a spiritualistic lecturer, seeing a woman in mourning about to leave the hall, called her back to inform her that the spirit of her husband was present. The lady had no doubt on the subject, as her husband was quietly waiting for her at the door.

An Irishman, newly engaged, presented to his master one morning a pair of boots, the leg of one of which was much longer than the other. "How comes it, Patrick, that these boots are not of the same length?" "I really don't know, sir; but what bothers me most is that the pair down stairs are in the same fix."

Temperance.

THE BROKEN ALE JUG.

The old farmer sat down to his supper tired and hungry. His joint of meat was before him, which would relish all the better, he thought, with a drink of ale to wash it down.

"Go, my boy," he said, "and fetch me home a jug of ale from Dick's."

Thomas went. The shop was full of idle fellows, and among them his older brother, who lived more in the beer shops than he lived at home; more on beer than on bread; more on others than on himself; so that all he was good for was good-for-nothing, which is a sorry sort of excellence. Drink, *strong* drink made him quarrelsome, and the sight of Thomas with his mug full of foaming ale, as it soon was, quickly excited him.

"Give me a swallow!" he cried roughly.

"No, you don't," said Thomas, "this is father's," and he was hastening out of the door, when Jed caught him by the arm; a tussle followed, ending, not only in spilling the ale, but in breaking the jug also, which fell on the floor and cracked its bottom out. Thomas caught it up and hurried home with the story to his father. "Bottom's ont, is it," said the old man, after a moment's thinking. "Well," he said, bringing down his hard fist with a bang upon the table, as if it meant something, "well, then, that's the best ale jug for me. Put it down."

"Yes, father, but it will not hold anything."

"Thomas, that makes it the very best ale jug for me, I say. If it had been the kind I had always used, your brother might never have been the poor creature he now is."

That is so. And if this is the best ale jug, it is the best whiskey jug; and if it is the right pattern for a whiskey jug, is it not the best pattern for a gin bottle, and a brandy bottle, and a wine bottle? Perhaps it is not exactly in style; but why not let reason and conscience and health and industry and Scripture sometimes set the fashion? I think they could be trusted, and in this matter we should, I doubt not, find them on the side of the old farmer's jug.

Another thing which Newman Hall has done is to declare boldly that the working classes in America are much better off than the same classes in England, because they are more temperate. He clearly states his conviction that there is much less drunkenness here than in England; and estimates that more than half the distress in London is chargeable to drunkenness. He denies that teetotalers say it is *wicked* to drink a glass of wine or beer, or that alcohol may not be sometimes useful medicinally; but insists that their doctrine is that all who can do so ought to abstain for the public good, and their own.

A Quantity of whiskey was seized at Newton not long ago, which was compounded of ten gallons of kerosene, three pounds of potash, and one ounce of strychnine, mixed with soft water. It was not labeled "warranted sure death," but ought to have been.

A military officer, who had often tried to resist the temptations to strong drink, only to fail, became so convinced of his own weakness, and of the true source of his strength, that when he put his name to the temperance pledge, he appended to it the blessed words, "By the help of Jesus," and by this help he prevailed. And so may we prevail over temptation in its every form, and unite at last in the triumphant song, "Thanks be to God, who giveth us the victory, through our Lord Jesus Christ."

Scientific and Mechanical.

LITTLE ENGINES.

There is no difficulty in making a small steam engine. Snch a device has commonly been the first *chef d'oeuvre* of the ambitious machinist'a apprentice, and a California mechanic at a recent fair in San Francisco, mounted upon the top of a post a motor with a three-quarter inch cylinder, made from the first silver smelted in Nevada. We speak now of bona fide engines, those with side valves and other essentials, not of the small toys that of late have been sold for $1, and proved how interesting for amusement a scientific and useful fact may be. But there is no good reason why a little engine of some kind should not be found a paying article in every household. In cities it should drive sewing machines, and in rural regions operate the churn and the wood saw.

There is, indeed, much more attention now given to this matter than was the case a few years since. Not long ago, the French technical jonrnals described a petroleum furnace with a self-adjusting wick, giving a uniform heat to a small tubular boiler which fed steam to a small steam engine. One of the exhibitors at the American Institute Fair, has introduced a machine on a somewhat similar plan for sewing machines. In this, petroleum burners heat a vertical boiler, and an oscillating cylinder connects its piston rod direct to a crank on the shaft of a machine. Doubtless many modifications of the principle may be made, and the presenl low price of petroleum would seem to encourage the use of this fuel for small motive power. But the objections to steam are manifest, and although not insuperable, are of sufficient weight to render it well worth while to consider whether some other means cannot be used In its stead for giving the moderate power now a decided desideratum for many purposes.

In this the employment of illuminating gas, mingled with atmospheric air, has attracted attention for a third of a century past. For several reasons, perhaps among others the accumulation of sooty deposits from imperfect combustion, this has not met with much favor. Possibly the cheapness with which, it is alleged, hydrogen gas may be manufactured hy novel processes, may supply a. snperior snbstitute for carburretted hydrogen, and Brown's gas engine of forty years ago (dependent for its operation upon the explosion of mixed hydrogen and air, and proved a failure on a grand scale in pumpling and boat propulsion) be revived again with more of practical utility, but less of sanguine notoriety than of old.

It has been claimed hy manufacturers of hot-air engines that a caloric motor of small size would "fill the bill" in the matter under consideration. But if we may judge of the inordinate size in proportion to the work done, of those used in coffee and spice warehouses for grinding in sight of the public, the assertion referred to may well be doubted. The safety of this motor is a strong recommendation for it, and it is to be regretted that no one has yet seen fit to test the capabilities of a hot-air engine occupying a space of, say one cubic foot, and heated hy a petroleum flame.

There remains, in addition to the methods mentioned above, the use of electricity as a motive power; a matter debated with much ridicule on the part of those adverse to its use and with much earnestness on that of those who believe in its final success. On the one hand the cost of running an electric motor and the failnre of many an apparently promising project are urged as unanswerable arguments against the feasibility of electricity for any such function; on the other, it may be pointed out that long ago Professor Page ran a heavy locomotive at nine miles an hour with mechanism imperfectly put together, and that there is no limit to the possibilities of applied science and practical mechanics. Between the two the impartial observer may be justified in saying, "Wait and see;" but none can deny that a light motor is one of the needs of the times, and that, consequently, it is the duty of some one to produce it.—*Newark Manufacturer.*

PREVENTION OF BOILER EXPLOSIONS.

The daily papers contain all kinds of euggestious in regard to this subject, as that certificates of inspectors should accompany bills of sale, that the seller should be made liable for all damages resnlting, that the maker should be punishable if damage was the resnlt of defective construction of design, etc. This is all nonsense. Simply let all those who use a steam boiler employ an engineer who knows at least as much, or more about it than the hoiler inspector; and this indeed is not requiring a great deal. It is objected that such men require too high salarics; it is simply caused hy the fact that there are not enough of them. Increase the supply hy proper and more universal instruction in the right kind of subjects, and the price will come down to a reasonable standard, say five or six dollars a day; and it is worth all that, if it guarantees us against such losses in life, limh and property as we have had to deplore during the past few years hy unpardonable boiler explosions.—*Manufacturer and Builder.*

FINDING THE LATITUDE AT SEA.

Commonly the seaman trusts to observation of the sun to give him his latitude. The observation is mads at noon, when the sun is highest above the horizon. The actual hight is determined hy means of the instrument called the sextant. This instrument is so devised that the observer can see two objects at once, one directly and the other after reflection of its light; and the amount by which he has to move a certain har carrying the reflecting arrangement, in order to hring the two objects iuto view in the same direction, shows him the real divergence of lines drawn from his eye to the two objects. To take the sun's altitude, then, the observer takes the sun as one object and the horizon directly below the sun as the other; he hrings them into view together, and then looking at the sextant to see how much he has had to move the swinging arm which carries the reflecting glasses he learns how high the sun is. This being done at noon, with proper arrangements to insure that the greatest hight then reached by the sun is observed, at once indicates the latitude of the observer. Suppose, for example, he finds the sun to be 40° above the horizon, and the *Nautical Almanac* tells him that, at the time the sun is 10° north of the celestial equator, then he knows that the celestial equator is 30° above the southern horizon. Ths pole of the heavens is, therefore, 60° above the northern horizon, and the voyager is in 60° north latitude. Of course, in all ordinary cases the number of degrees is not exact, as here for simplicity is supposed, and there are some niceties of observation which would have to be taken into account. But the principle of the method is sufficiently indicated hy what has been said.—*Popular Science Monthly.*

WASH FOR ROOFS AND BUILDINGS.

Slake lime in a close box to prevent the escape of steam, and when slaked, pass it through a sieve. In every six quarts of this lime, add one quart of rock salt and one gallon of water. After this boil and skim clean. To every five gallons of this add hy slow degrees, three-quarters of a pound of potash and four quarts of fine sand. Coloring matter may be added if desired. Apply with a paint or white-wash brush.

This wash looks as well as paint, and is as durable as slate. It will stop small leaks in roofs, prevent the moss from growing over and rotting ths wood, and render it incombustible from sparks falling in it. When applied to hrickwork it renders the hricks utterly impervious to rain; it endnres as long as paint, and the expense is a mere trifle.—*Country Gentleman.*

To take Bruises out of Furniture.—Wet the part with warm water; double a piece of hrown paper five or six times, soak it in warm water, and lay it on the place; apply on that a warm, but not hot flatiron till the moisture is evapo.ated. If ths hruise be not gone, repeat the process. After two or three applications, the dent or hruise will be raised to the surface. If the bruise be small, merely soak it with warm water, and hold a red-hot iron near the surface, keeping the surface continually wet; the hruise will soon disappear.

ACKNOWLEDGMENTS.

The Treasurer of Hampton Normal and Agricultural Institute gratefully acknowledges the following donations of material for the use of the school during the present term:—

Ladies of Cong. Soc. Wolcottville, Ct., 2 bbls. clothing.
U. S. Bunting Co., Lowell, Mass., 1 flag for Virginia Hall.
American Bolt Co., Lowell, Mass., bolts for Virginia Hall.
Through Mrs. Pitcher, Melrose, Mass., 1 bbl. clothing.
S. B. Chittenden, New York, 2 pieces Kentucky jean.
Seth B. Hunt, New York. 1 piece Cadet melton.
Audrew Lester, New York, 1 piece woolen goods.
H. J. Libby & Co., New York, 1 piece woolen goods.
Messrs. Jeffreys & Co. New York, 1 piece woolen goods.
Owen Paper Co., Housatonic, Mass., 1 case writing paper.
Parsons Paper Co., Holyoke, Mass., 1 case writing paper.
J. Carew & Co., S. Hadley Falls, Mass., 1 case writing paper.
Hampshire Paper Co., S. Hadley Falls, Mass., 1 case writing paper.
Hurlbut Paper Co., South Lee, Mass., 1 case writing paper.
Social Manufactnring Co., Providence, R. I., 1 case hleached sheeting.
Hon. Oliver Warner, Secretary of State, Boston, Mass., Public Documents.
Through H. H. Grosvener, Pomfret, Ct., 71 volumes books.
Merrick Thread Co., Holyoke. Mass, 1 case thread.
D. R. Emerson, Boston, Mass., 1 case buttons, etc.
Through Abby W. Johnson, N. Brookfield, Mass., 1 bbl. bedding for Virginia Hall.
Greenough, Jones & Co., Boston, Mass, Directories.
Sampson, Davenport & Co., Boston, Mass., Boston Almanac and Directories.

J. F. B. Marshall, *Treasurer.*
Hampton, *February* 16, 1874.

Publisher's Department.

Notice to Teachers.—Do you want a globe for school use? Send us, then, the names of six new subscribers to the Southern Workman, and we will send you one free of any charges, securely packed in a strong paste-board box.

SUBSCRIBERS TAKE NOTICE!

Every subscriber, who will send us a new name and one dollar, will be entitled to one of our premium oil chromos, provided they make such a request, and designate the chromo they wish. For two new subscribers we will send "Returning Home" ready mounted. For five new names we will send the above picture nicely framed in black walnut and gilt. *We do not send premiums to those who do not request them.* When frames are sent, the receiver will pay the express charges.

Subscribers wishing to have the address of their papers changed, should not only give the new address, but also the post-office, county and state of the old address

We would call the attantion of all persons interested in collecting specimens of Natural History, to the advertisement of George Dixon, which may be found in another column. A rare opportunity, is offered to those who are interested in conchology. We know that these collections of shells have been made with great care hy one eminently qualified for the task.

OUR PREMIUMS.

Wide awake teachers take notice. Our prize globe is given to every teacher who sends us six subscribers and six dollars.

A box of mathematical instruments to every one sending four new subscribers and four dollars.

A compound microscope for ten snbscribers and ten dollars.

A toy steam engine for six snbscribers and six dollars.

A photograph of the "Hampton Students," the singers from Hampton Institute, for two subscribers and two dollars.

Teachers will never have a better chance to secure apparatus, books, etc.

British, Marine, and Land and Freshwater Shells,

COLLECTED IN GREAT BRITAIN, IRELAND (east and west coast), ORKNEY, SHETLAND, HEBRIDES and CHANNEL ISLANDS, also from DOGGER BANK (many of them by deep sea dredging), on sale or exchange for American Shells, Flowering Plants, Ferns, or specimens of Natural History, suitable for a museum.

Catalogues of the Species will be sent on application to GEORGE DIXON, Agricultural Institute, Hampton, Va.

EXPEDITION FOR LIBERIA.

TWO INDUSTRIOUS AND WORTHY PEOPLE of color desirous of removing to Liberia, The American Colonization Society will give a passage and subsistence on the voyage—made in about forty days—and support for the first six months after landing. Single adult persons get ten acres, and families twenty-five acres of land. These are all gifts—never to be repaid. Those wishing to remove to Liberia shanld make application, addressed to William Coppinger, Corresponding Secretary and Treasurer of the American Colanization Society, 450 Pennsylvania Avenue, Washington, D. C.

REMOVAL.—The undersigned wishes to inform his many friends and patrons that he has removed his

PHOTOGRAPHING BUSINESS

from Mill Creek Bridge to

CHESAPEAKE HALL,

Cor. WILLARD & MELLEN STS.,

Where he is getting nicely fitted up for the different kinds of Picture Wark usually found in our best galleries. He will keep a select stock of CHROMOS, ENGRAVINGS, CRAYONS, LITHOGRAPHS, PHOTOGRAPHS, etc.,

for the benefit of his customers. Also a choice lot of STEREOSCOPIC VIEWS, both foreign and domestic. STEREOSCOPES, FRAMES, and a variety of cases constantly on hand. A better quality of work than heretafore will be guaranteed, as he has a light second to nane in the state. Thanking the public far past favor, he most respectfully solicits a continuance thereof.

W. F. LARRABEE.

JAMES LEFFEL'S

Improved Double

TURBINE WATER WHEEL.

POOLE & HUNT,

BALTIMORE,

MANUFACTURERS FOR THE SOUTH & SOUTHWEST.

Nearly 7000 now in use, working under heads varying from 2 to 240 feet! Twenty-four sizes from 2 3-4 to 36 inches.

The most powerful Wheel in the Market, and most economical in use of Water.

Large Illustrated Pamphlet sent post free.

MANUFACTURERS, ALSO, OF

Portable and Stationary Steam Engines and Boilers, Babcock & Wilcox Patent Tubulous Boiler, Ebaugh's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.

SEND FOR CIRCULARS.

FREEDMAN'S

SAVINGS & TRUST

Company,

Chartered by Congress, March, 5, 1865.

PRINCIPAL OFFICE,

WASHINGTON, D. C.

Branches in all cities and large towns of the South and Southwest.

FIVE CENTS, or larger amounts, received on deposit, and Bank Books issued.

ALL PROFITS paid to depositors as interest, not exceeding seven per cent. per annum.

INTEREST on sums of ONE DOLLAR and upwards begins first of each month, and is payable on the 1st of January and 1st of July.

☞ *Every Account strictly confidential.*

THE NORFOLK BRANCH,

AT

NO. 116 MAIN STREET,

Is open daily from 9 A. M. to 3 P. M. and on Saturday Nights from 6 to 8 o'clock.

HAMPTON, APRIL, 1874.

REFORM SCHOOL FOR COLORED YOUTH

We have so frequently expressed our views upon the subject of reform schools and prison discipline in general, that it is scarcely necessary at this time for us to preface the following account by any reiteration of our convictions in regard to the need for both public and private action in the interests of the pauper children of the state; but we desire in this instance to ask the careful attention of our readers, and to remind them once more of their own responsibility in this respect.

The citizens of Baltimore have long felt the need of supplying some protection other than the penitentiary and city jail, for their pauper and criminal youth of the colored race; and the project for the establishment of a State Colored Reform School was adopted, some years ago, by several gentlemen of that city. In 1870 they obtained an act of incorporation, the conditions of the charter being "that $5,000 should be paid out of any inappropriated money in the treasury for the aid and benefit of the 'House of Reformation' for the period of two years, the managers being required to furnish proof that $30,000 had been collected by private subscription, before the comptroller could issue the first quarterly payment." An address was issued appealing to the public for assistance, while an agent, Mr. Noyes, was employed to collect funds by personal application. Some time elapsed before the stipulations of the charter were conformed to; but finally the sum of $38,822 was raised, the larger part of it being given by Mr. Enoch Pratt, in the shape of the "Cheltenham" farm of seven hundred and fifty acres, valued at $22,600. In 1872 the legislature of Maryland granted a further appropriation of $20,000 provided an equal amount could be raised from other sources, and this was supplied by an appropriation from the city of $10,000 for 1872 and the like sum for 1873.

In the fall of 1872 the buildings were begun, and while these were in process of erection, the work was fully commenced by the reception of two boys into the old farmhouse which was fitted up for the purpose. From this beginning the increase has been rapid until now that a portion of the buildings required for the work have been completed and occupied. The inmates number about eighty, ranging in age from seven to nineteen years, and the present condition of the Reformatory is so satisfactory that we are glad to be able to give our readers an official description of it. "The system of the Reformatory is what is known as the 'Family System' and the plan includes five separate buildings, of which four are alike, being designed for the accommodation of fifty boys each, with dormitories, schoolroom, playroom, etc., and four rooms for solitary confinement, while the central building (with a length of one hundred and forty-eight feet), contains the general dining-room and kitchen, laundry, storerooms, sewing rooms, superintendent's residence, chapel, etc. It would be difficult to overestimate the value of this Reformatory, for its benefits do not stop with the amelioration of the condition of its inmates, but affect society at large, for its results are to check and restrain vicious lives, and turn into the paths of honest industry and virtue those who, if left uncared for, would assuredly become criminals, or at least paupers, and thus prey upon the community. A visit to our penitentiary shows that hundreds of colored persons are incarcerated there, many of whom are very young, and these children will in all probability become criminals, some of them dangerous ones, except for the interposition of such institutions as this Reformatory, which takes them out of the unwholsome influences of penitentiary life, and away from the temptations of a large city, to make them inmates of a happy home, where they are taught to become honest and useful citizens."

Once more we ask who can estimate the value of such work as this, or who can fail to desire its continuance? We can heartily congratulate our sister state upon the step she has taken in making this provision for her colored youth, and earnestly hope that her noble example may be followed throughout the South where the need of such institutions is too well known to require any mention here.

WORKINGMEN'S ASSOCIATIONS FOR MENTAL IMPROVEMENT.

Education makes the man, no matter what position in society he may be called upon to occupy. It is as essential to the mechanic as to the professional man, the statesman, or the legislator. If legislation is needed at all in reference to the advancement of our mechanics and mechanical industries, it is required to remove that barrier which shuts our own sons out as apprentices from our workshops, and fills the places which they should be trained to occupy, with foreign mechanics, while our own boys become idlers or something infinitely worse. If our mechanics ever intend to advance their own interests and the true interests of their families, they will abolish the system at once, of excluding their sons from American workshops, and afford them every facility to become good mechanics. A trade to a city youth is equal to, if not better, than the possession of a farm by a country lad.

The question of establishing model workshops and training schools for young men, to fit them to enter successfully upon the business of a mechanic, is now attracting, to some extent, the attention of the press, and only requires the co-operation of a united effort on the part of our mechanics and workingmen to secure for it that success which its merits and the necessities of the case demand. England, France, Germany, Austria and Switzerland are just now coping with each other in a noble effort to educate their youth and fit them for the mechanical trades, under a conviction that success in their manufactures depends largely on securing a higher standard of skilled labor. Adults already pursuing their trades, and especially those engaged in carpet, cotton, woolen and mixed woolen and cotton and printed manufactures, are also encouraged in every effort to advance their mental training in those branches where a knowledge of drawing, the blending of colors, draughting, and architecture are required. Shall our own youth and mechanics allow themselves to be outrivaled, and permit our cotton and woolen manufactories and workshops, where educated skill and scientific knowledge are required, to be filled by workmen selected from abroad because of their superior fitness for the places? In a petition to the Massachusetts Legislature by some of the most prominent manufacturers in that state, we find this language:

"At the present time no wide provision is made for instruction in drawing in the public schools. Our manufacturers, therefore, compete under disadvantages with the manufacturers of Europe; for in all the manufacturing countries of Europe free provision is made for instructing workmen of all classes in drawing. At this time *almost all the best draughtsmen in our shops are men thus trained abroad.*"

This is a state of things that ought to be remedied with the least possible delay. Not that we wish to exclude the foreign artisan, but that our own youth shall be made to equal the best importer of skill.

Mechanics' institutes ought to be organized and liberally patronized in every city and town throughout the Union, with reading rooms, evening schools, and weekly or semi-weekly lectures throughout the winter. They are important auxiliaries to the other means of education, afford valuable entertainment during the winter evenings to mechanics and their families, and attract hundreds who would otherwise spend their evenings and their money in the "sample rooms" of city or village restaurants. Combinations and associations of mechanics to support a lyceum or a mechanics' institute or debating club, are always attended with good results, and could, by adding a library containing a few judiciously selected books, on the different branches of the mechanic arts, a reading room with a number of well selected magazines and a daily paper or two and half a dozen weeklies, including scientific journals, become a source of much practical information. The evening school and course of lectures would soon follow, and a small beginning, properly managed by a few interested mechanics, would grow into an institution creditable as well as useful to the community.—*Republic.*

NOTHING TO DO!

A cry too often heard, yet not always true. One would suppose from the frequency of its repetition that there was a general scarcity of work throughout the world, and that this same world was getting to be in a "shaky" condition and contracting its operations preparatory to a long suspension or a general crash. This cry is sometimes heard from the lips of the old, but most frequently from the young. Nothing to do! so they hang around bar rooms and grog shops and gambling houses, and little by little acquire the love of strong drink and the habit of gaming, and then begins a downward career to terminate finally in a pauper's funeral or a drunkard's grave. Nothing to do! and then they associate with the idle and the vicious, and then too easily are they persuaded into the practice of habits that lead to the chain gang and the penitentiary. Nothing to do! and they go home to be supported in idleness and luxury by their aged and hard working parents, while they themselves are waiting for another offer. Nothing to do! so they rig themselves out as sportsmen and then, from dawn till dark, they tramp, tramp, tramp over marsh and meadow, field and forest to return at last with an empty bag and an emptier stomach. Nothing to do! then it is because you *will do nothing.* There is work everywhere, at all times, and for everybody; profitable, important, indispensable work—work that will employ your hands, improve your mind, enrich your purse, and beautify your home; work too, at your very doors, if you will only consent to perform it. Suppose you are a baker, is that any reason why you should refuse a job to mix plaster? Because you are a carpenter, is that a reason why you should refuse to labor a day in the brick-yard when you have nothing else to do? Away with this foolish notion that because you cannot work at your own trade and your own price, you must therefore not work at all! Away with the false pride that restrains you from engaging in any honest labor that will help you to a support! If you are the right sort of man you will engage in any sort of labor, and dignify it. No man was ever disgraced by work, but many a one has come to disgrace through idleness. It is an old saying that "An idle brain is the devil's workshop," and it might well be added that idle hands are his best tools. There is nothing that tends more to elevate a young man in the estimation of the older and soberer heads of a community than the exhibition of a cheerful readiness to accept anything that offers itself rather than sit down in idleness.

Honestly, and without exaggeration, a man had better work for nothing and find himself than to spend his time in idling and loafing. Indolent habits lead very naturally to bad ones. Stand in the lane of idleness, and unless you are wilfully blind or fatally nearsighted, you will see crime and vagrancy at the other end. From the records of courts and asylums, and hospitals and almshouses, may be gathered a condensed volume of confirmatory evidence to the fact that idleness is the beginning of pauperism, vagrancy, debauchery and crime. Avoid it then, as you would a pest house. Plow, hoe, ditch, grub; do anything rather than do nothing.

Different Opinions.

The following are articles from different sources discussing the question whether the freedmen are in danger of becoming Roman Catholics:

"Observation shows that the Romish Church is working mightily and skillfully to win the colored people to her fold; noiselessly as well, like all the greatest forces. It shows also that the colored people are easily drawn towards her, because of natural constitution, inherited tendencies and present circumstances."

"A deep seated belief in the marvelous makes them excessively superstitious. Nothing is beyond credence, if it be incomprehensible and picturesque. Here Rome entrenches her position, substitutes the worship of saints for that of lower fetiches; and new miracles and wonders take the place of the old.

"Love of display, a passion for sensuous brightness and beauty—an appreciation of the dramatic and awe inspiring, make Rome's pageantry peculiarly fascinating to this susceptible people. Rome perceives the want and knows well how to meet it."—*American Missionary.*

"Of the dangers to which they are exposed, that of their going over to the Church of Rome is not one. Roman Catholicism has no charms for descendants of African races. The Catholic Church has been established in Florida and South Carolina for two hundred years and it is no larger to-day than it was thirty years ago. It takes no hold of the colored man."—*Rev. H. J. Fox in Methodist Quarterly Review.*

"Communion with God direct is the corner-stone of his religion. It is his life. What knew he of priests? of churches? of creeds? of liturgies? What knew he even of the ordinances? What knew he of the Bible itself? But he did know of God and of his mighty Spirit. Upon the wings of the wind came to him the story of the Cross, and he believed it. A religion that puts God so far off, as does the Roman, will never succeed with him, whose God is an ever present Spirit. The prayer said to have been made by an old bondman in distress, explains the philosophy of the faith upon which we, as a people, act: 'Don't send Gahriel; don't send Michael; don't send any of them angels, but come yourself.'"—*Christian Recorder.*

Agricultural.

THE NATURE AND COMPOSITION OF THE SOIL.

BY GEORGE DIXON.

The importance of agriculture is at once seen, when we take into consideration the fact, that one thousand million living beings are depending upon the fruits of the ground for their daily sustenance. In making provision for this vast multitude, it is calculated that nine-tenths of the fixed capital of the world is embarked, and employment given to over two hundred million men.

When countries are first settled, and the inhabitants are few in number, a very defective system of agriculture will produce all the food they require: and if the soil is productive, a considerable surplus for exportation. When the population becomes more dense, this careless system has to be abandoned, and one adopted which will extract from the soil the largest amount possible; not only from the good land, but from every portion susceptible of cultivation. In Virginia the former condition holds good; the system of tillage being pretty much the same as the one adopted by the early settlers. In Great Britian, art, science, and the accumulated experience of generations, have been brought to bear on the cultivation of the soil. Let us look at the result. One hundred years ago the British Isles had only nine million inhabitants; they have now four times the number, thus increasing the consumption of food fourfold. The area of the land is the same, yet, by the improvements in agriculture, there are less importations of bread-stuffs *to-day* than there were one hundred years ago; and should these improvements continue, England may eventually become an exporting country. I wish in these papers to show how these improvements have been brought about, in order that the farmers of this state may be benefited by the experience of the British farmer. I am quite aware that differences in soil and climate have much to do with the successful raising of crops, but the process of vegetation is the same all the world over. The plant requires the same kind and the same amount of organic and inorganic food, and the same physical condition of the soil, in a warm climate as in a cold one. It requires water, but it will not grow in water alone. It requires soil, but it will not germinate if the soil is hard and impervious to its roots. It requires the elements of nutrition, but it cannot assimilate these elements, if they are wanting or mixed with noxious ingredients. In order, therefore, that the farmer may carry on his operations in the way best suited to meet all the requirements of the plant, it is necessary that he should not only know the best modes of preparing the soil, but also its composition, to enable him to add those elements of fertilization which are wanting, or not sufficient in quantity. Before entering upon this subject, I would supply an omission in my paper on deep and subsoil plowing. In it I endeavored to point out the best methods of preparing the land for *autumn sowing only*; but when the first plowing after a crop is in the fall for a *spring crop*, there is an advantage, particularly in undrained clay lands, in plowing, to expose as much surface as possible to the action of the air, the sun's rays, and the frost. The water in the soil expands in freezing, which, when thawed, leaves numerous openings through which the atmosphere penetrates, not only increasing the evaporation, but giving those salts which require it an opportunity of obtaining an extra dose of oxygen. When the time arrives for putting in the crop, the soil is found loose and friable, and much more easily pulverized than it would have been had the first plowing been deferred till the spring. But to return to our subject, the composition of the soil. The earth is made up of about sixty-four bodies. They are called *simple* or elementary because they have never yet been divided or decomposed. Of these, fifteen only are found in animal and vegetable structures. They are as follows: oxygen, hydrogen, nitrogen, carbon, potassium, sodium, calcium, magnesium, aluminum, iron, manganese, phosphorus, sulphur, silicon and chlorine.

The four first are the most important. If all the oxygen, hydrogen, carbon, and nitrogen were taken away from the largest tree there would remain nothing but a few grains of ash. If these four elements were removed from the body of the largest animal there would remain nothing but its bones and a few grains of ash. Hence, oxygen, hydrogen, nitrogen, and carbon have been termed the organic elements, or *organogens*, (generators of organic structure), and the eleven remaining the inorganic elements. The organic elements are combustible, and have been obtained from decayed animal and vegetable matter. The inorganic elements will not burn, and have been produced by the disintegrating or crumbling away of the solid rocks. They unite with oxygen when placed in certain states of combination, and are capable of being dissolved in water and taken up by the roots of growing plants, and fixed in their tissues. Oxygen, hydrogen, and carbon exist in *all* vegetable and animal textures; and nitrogen is present in most of them; but each different kind of organic substance has a different kind of ash. The bones of animals contain lime (calcium); straw contains flint, (silicon); and wood contains potash, (potassium). Bone is, however, an exceptional illustration of the employment of a subordinate ingredient amidst the essential ones of organic structure; four-fifths of the substance of bone are made up of a salt of lime. *Other structures* do not contain more than one or two parts of ash in each fifty parts of the essential ingredients. Hence we see that plants get their fixed mineral ingredients from the water in which these ingredients are held in solution, which they imbibe from the ground through their roots, and animals get them from the vegetable matters they consume as food. The eleven mineral ingredients found in organized structures are important elements, but they are of subordinate consequence to the four essential principles with which they are associated. The fixed mineral ingredients are essential to the particular structure they assist to form, although not essential to organized structure viewed in the abstract. Bones cannot be formed without *lime*; straw cannot be made without *flint*, and wood cannot be constructed without *potash*; but straw and wood can be made without lime. These various mineral ingredients are, in fact, the *additional substances* that are worked up with the universal oxygen, hydrogen, nitrogen and carbon, to render their combination the *special texture* in each case. A small quantity of one is selected as suitable to convert the compound into one kind of structure, and a small quantity of another to make it into something of a different sort. The inorganic elements are always in their natural state in the soil, and are always found (with one exception) combined with oxygen. They are only obtained pure and uncombined, when they have been separated from the oxygen in the laboratory by the skill and ingenuity of the chemist. Three of the inorganic elements form *acid compounds* when combined with oxygen. They are *sulphur*, *silicon* and *phosphorus*. The acids which they form are called respectively *sulphuric*, *silicic* and *phosphoric* acids. The sulphuric and phosphoric acids are formed whenever sulphur or phosphorus is burned in contact with air (which contains oxygen). Silicic acid exists naturally in certain mineral substances; rock crystal is an impure form of silicic acid, opal is the same nearly pure. Seven of these inorganic elements form remarkable *non-acidulous* compounds when they combine with oxygen. They are *potash*, *soda*, *lime*, *magnesia*, *alumina*, *oxide of iron*, and *oxide of manganese*. The elements which the chemist procures from these oxides, when he has deprived them of their oxygen are *potassium* *sodium*, *calcium*, *magnesium*, *aluminum*, *iron* and *manganese*. The last three are metals; the first four are of a metal-like nature, but with the metallic characters less distinctly marked. The first and second (potash and soda) are classed together as alkalies; the third and fourth (lime and magnesia) are oxides; classed together as *alkaline earths*; possessing some of the properties of alkalies, though found as native earths. The fifth (aluminum) is also found in a native state. The ruby, emerald, amethyst, and sapphire are crystals of nearly pure alumina. We have named above the three inorganic elements forming acids, and the seven forming oxides, but in addition to these ten there is the eleventh, *chlorine*, which generally stands aloof from the oxygen compounds, but which is capable of taking the place of the oxygen in them, under special circumstances. Thus, common salt, found native in the earth in some places, is a compound of chlorine and sodium (*chemically speaking, a chloride of sodium*). It is soda with the oxygen replaced by chlorine. Chlorine, in its simple state, is a gas of greenish hue; it is not found free in nature.

The various constituents of the soil are mostly in the condition of *ternary neutral compounds*, that is, members of the acid series chemically united with the members of the oxide series; when this has been effected, the body formed ceases to be like either of the compounds that are united in it. It is neither acid nor alkaline, but becomes what is termed a *neutral salt*, and receives its generic name from the acid forming it, and its specific name from the oxide with which the acid was united. Thus the salts of *carbonic*, *phosphoric*, *sulphuric*, and *silicic* acids are called *carbonates*, *phosphates*, *sulphates*, and *silicates*; so that we understand by *carbonate of soda*, *phosphate of lime*, *sulphate of magnesia*, *silicate of potash*, that the oxides, *soda*, *lime*, *magnesia*, and *potash* have been united with the acids formed by the union of *carbon*, *phosphorus*, *sulphur*, and *silica*, with oxygen. Some of the neutral salt compounds are *soluble* in water, and others are *insoluble* in this fluid. Powdered carbonate of lime settles from water, in which it has been diffused by shaking, because it is insoluble; but powdered carbonate of soda remains invisibly dissolved in this fluid under like circumstances. Most of the *neutral-compound* constituents of the soil being *insoluble*, are not at once washed away by the rain that percolates through the ground; from this cause, a supply of nutritious matter is husbanded and kept stored in the ground until it is required for the food of plants. If a quantity of soil be well stirred up in a vessel of water, and allowed to settle, not more than two per cent of it will be found to have remained in solution. This two per cent., however, contains all the nourishment that is destined for the *immediate* support of vegetation. As this is removed from the soil by the roots of plants, more of the fixed constituents are reduced into the soluble condition to take its place. All nature's chemical operations, carried on in the ground, are directed to the double end of keeping a fixed store of material for nutriment on hand, and of converting just so much of this fixed store as is required for use into a soluble state when it is needed. As the nutritious matters consumed by plants are carried into their rootlets by water, we see the necessity of having the soil *permeable to water* by the methods laid down in my previous papers, in order that this liquid may be able to search out the nutritious matter it has to take up for conveyance into the plant. Two of the most essential elements, oxygen and carbon are conveyed into plants as gaseous carbonic acid, through the pores of the leaves directly from the air; but the same elements are also taken up from the soil by the roots as soluble carbonates. I shall leave the further consideration of the organic elements to my next paper on "*The Food of Plants.*"

WHY CLOVER IMPROVES THE SOIL.

Professor Tockler thus explains the action of clover increasing the fertility of soil:

"All who are perfectly acquainted with this subject must have seen that the best crops of wheat are produced by being preceded by crops of clover grown for seed. I have come to the conclusion that the very best preparation, the best manure, is a good crop of clover. A vast amount of mineral manure is brought within reach of the corn crop, which, otherwise, would remain in a locked-up condition in all the soil. The clover plants take nitrogen from the atmosphere, and then manufacture it into their own substance, which, on decomposition of the clover roots and leaves, produces abundance of ammonia. In reality, the growing of clover is equivalent, to a great extent, to manuring with Peruvian guano."

Take for instance red clover, the best of all green manures. The great English chemist, Professor Way, of the Royal Agricultural College at Cirencester, made a perfect analysis of of dry, red clover and found every one hundred parts as follows:

Silica	0.50
Lime	22.62
Magnesia	4.08
Oxide of Iron	0.26
Potash	36.45
Soda	90.00
Chloride of Potassium	2 39
Chloride of Sodium	2.53
Carbonic Acid	23.47
Phosphoric Acid	6.71
Sulphuric Acid	1.35

A CORRESPONDENT of the *Country Gentleman*, formerly of England, thinks that cheap labor alone cannot explain the large profits of English farmers, and says they can only be accounted for by the great amount of live stock kept and fed, thus producing a great quantity of plant food, and producing in turn heavy crops.

Hampton Normal School.

RECORD OF GRADUATES.

We give below a list of the graduates of Hampton Normal and Agricultural Institute, with their addresses and occupations when last heard from. A copy of this paper will be sent to each, and all are requested to keep the editor informed of their movements. Not only the officers and teachers of the Normal School feel a great interest in the career of the graduates, but all the friends of the Institute are desirous of knowing how those, who are sent forth from this school upon their life-work, are prospering. No nobler mission is given to this age than theirs, and we all bid them Godspeed in their labors.

CLASS OF '71.

Edward Bowman, teaching near Suffolk, Va.

D. A. Ellet, teaching in the Lincoln School, Hampton, Va.

James A. Fields, principal of the Lincoln School, Hampton, Va.

Harrison Lewis, 12 Rose Street, Baltimore.

Calvin D. Johnson, Hampton, Va.

George W. Lattimore, teaching at Tappahannock, Essex County, Va.

W. H. Lee, Carrsville, Va.

Caleb J. Nelson, teaching at Ottersville, Bedford County, Va.

Henry C. Payne, teaching at Charleston, Kanawha County, W. Va.

George Taylor, teaching in Lincoln School, Hampton, Va.

Walter R. Watkins, teaching in Wytheville, Wythe County, Va.

S. C. Windsor, Oberlin, Ohio.

Joseph Giles. (No report.)

Joseph P. Weaver, U. S. Revenue Office, Murfreesboro, Tenn.

Julia Gibbs, teaching in Columbia, S. C.

Nancy Ellison Wallace, teaching in Clarksville, Mecklenburgh County, Va.

Eliza Jackson Pindle, Staunton, Va.

H. J. Bullard, studying in Brattleboro, Vermont.

Sarah J. Brown, teaching in Wilmington, N. C.

CLASS OF '72.

J. M. Beckwith, teaching in Smithfield, N. C.

J. K. Britt, teaching in Jerusalem, Southampton Co., Va.

J. H. Carter, teaching in Liberty, Bedford County, Va.

Andrew Davis, Old Point lighthouse, Fort Monroe, Va.

James A. Dungey, teaching in Charlimont, Bedford County, Va.

T. E. Hines, teaching in Wytheville, Wythe County, Va.

Hutchins Inge, singing with "Hampton Students.

L. B. Phillips, teaching in Princess Anne County, Va.

George L. Pryor, Hampton; has been teaching in Wytheville.

Talbot Wallace. (No report.)

David Dee Weaver, Winton, N. C.

Wm. H. Wilkins, teaching in Portsmouth, Va.

Everett Williams, teaching in Princess Anne County, Va.

J. W. Williams, cadet U. S. Military Academy, West Point.

L. D. Williams, in the Navy Yard, at Portsmouth, Va.

Alice R. Bayne, married to —— Stephens, living near Eastville, Va.

M. L. Chisman, married to L. B. Phillips of '72, teaching in Princess Anne Co., Va.

M. L. Elliott. (No report.)

Isabella L. Howe, teaching in Wilmington, N. C.

Florence L. Newsome. (No report.)

Eliza G. Nottingham, teaching in Southampton.

Mary C. Robinson, teaching at Thaxton's Switch, Bedford County, Va. (Left or soon to leave.)

Julia A. Rutledge, teaching at Princess Anne C. H., Va.

CLASS OF '73.

Charles S. Boston, teaching at Big Lick, Bedford County, Va.

W. P. Brown, teaching at Old Church, Hanover County, Va.

Thomas Cayton, studying at Norwich, Ct.

J. H. Lamb, teaching at Thaxton's Switch, Bedford County, Va.

George W. Lane, teaching at Big Island, Bedford County, Va. (About to leave.)

L. B. Langford, teaching in the Butler School, Hampton, Va.

Peyton M. Lewis, teaching in Liberty, Bedford Co., Va.

Joseph Pritlow, teaching in Southampton County, Va.

James W. Richards, studying at Oberlin, Ohio.

James M. Ricks, teaching at Graham's Forge, Wythe County, Va.

Albert B. Roberts, teaching at Land of Promise, Black Water, Princess Anne County, Va.

Clement J. Spencer, teaching at Cannelton, W. Va.

Frank Trigg, studying at Norwich, Conn.

William A. Yancey, teaching at Swansonsville, Va.

Mary F. Boyd, teaching at Snow Hill, Maryland.

Brittannia C. Cabel, teaching at Liberty, Bedford County, Va.

Alice B. Davis, teaching at Thomasville, N. C.

Lethia E. Jackson, teaching at Chester, S. C.

Several of our undergraduates are also teaching school, among whom are Stephen A. Ricks, Tazewell Court-house. Merritt K. Wallace, Clarksville.

ANSWER TO A CHILD'S QUESTION.

COLERIDGE.

"Do you ask what this birds say? The sparrow, the dove,
The lionet and thrush say, 'I love and I love!'
In the winter they are silent—the wind is so strong;
What it says, I don't know, but it sings a loud song;
But green leaves and blossoms and sunny warm weather,
And singing, and loving—all come back together.
But the lark is so full of gladness and love,
The green fields below him, the blue sky above,
That he sings, and he sings; and forever sings he,
'I love my love, and my love loves me!'"

HUMANITY THE MOTHER OF CHARITY.

Frail creatures are we all! To be the best
Is not the fewest faults to have:—
Look thou thoo to thyself, and leave the rest
To God, thy conscience and the grave.

He prayeth best who loveth best
All things both great and small;
For the dear God who loveth us
He made and loveth all.

—*Ancient Mariner.*

COLERIDGE.

We wish our space permitted us to give our readers the whole of either of the two poems, which, if Coleridge had written nothing else, would have made him famous; but unfortunately both "Christabel" and the "Ancient Mariner" are too long for our columns, and we must be content with advising all who are interested in English poetry to get these two and read for themselves. The genius of the whole Coleridge family is so remarkable, that it is hardly possible to speak of one member without introducing the others, while their peculiarities, which are almost as great as their genius, make it very difficult to give a just idea of their lives. Samuel Taylor Coleridge, the greatest of the name, was born in Devonshire, in 1772, being the son of a learned clergyman, who died before his boy was ten years old, and left him, his mother being also dead, to the care of friends by whom he was sent to Christ's Hospital, a large charity school in London, where he received most of his education. Going from there to the University of Cambridge, he distinguished himself in both places as a scholar, but being strongly republican in his opinions, he became much excited by the French Revolution, and left Cambridge very suddenly, wandered about for a few days, and then, having given his last penny to a beggar, enlisted in a cavalry regiment, under an assumed name. After a short service he became known to the captain of his troop and was returned to his friends, but soon after becoming intimate with Southey and Lovell, a young Quaker, the three resolved to emigrate, and found on the banks of the Susquehanna River, a community from which all the evils of life arising from selfishness or vulgarity, should be shut out; but owing to a want of money, they were unable to put their schema into execution, and the three friends married three sisters and settled themselves for life upon English soil. From this time on Coleridge wrote regularly and preached frequently as a Unitarian clergyman, until after a visit to Germany he joined Southey at Keswick, and became a royalist and a member of the Church of England. The great misfortune of his life now fell upon him, for he began the terrible habit of opium eating, and all his journeyings in search of health, to Malta, Sicily and Italy, were only in vain, as he never would or could renounce his fatal appetite. In 1810 he went to London, and in 1816 placed himself under the care of a physician hoping to be cured, and with this gentleman, Mr. Gillman, he spent the last nineteen years of his life, writing and publishing more or less, but passing the greater part of his time in forming plans for vast undertakings which were never carried out. While his genius, his actual mental power, was immense, he accomplished only a tithe of that of which he was capable, because his will was by nature weak, and his indulgence in opium undermined his whole character. Therefore, although he has left us much in his legacy of beautiful poems and earnest prose (for he was an ardent theologian and metaphysician), yet his supreme power was only known in conversation, when for hours he would hold a listening circle fascinated by an eloquence of speech which has never been equalled since Pythagoras.

His life faded away in painful incompleteness, and there is little pleasure in contemplating the record of a magnificent intellect, shattered by the sins which a weak and morbid nature permitted; though the work that he accomplished must always command the admiration of the world.

FIG TREES.

There is probably no tree and no fruit to which more frequent allusion is made in the Bible than the fig tree and the fruit which it bears, a fruit that in the times when the Bible was written was used in a great many ways, and which still is in warm countries one of the most delicious products of the soil. The fig tree likes a sandy soil and a warm sun, and on these conditions will grow to a large size with great spreading branches under which a large number of people or of animals may shelter themselves to partake of its fruit.

In the Bible "sitting under the fig tree" is used as an emblem of peace and safety, and when God wanted to punish His people He would dry up the figs, as in *Jer.* viii: 13, where He says, "There shall be no grapes on the vine, no figs on the fig tree, and the leaf shall fade," which would be a heavy trouble to the Jews, who depend so much upon those fruits for wholesome nourishment.

Early in the spring the fig trees begin to sprout, their fruit ripening before the leaves come, for when the latter unfold it is a sign of summer, as our Lord said, "Now learn a parable of the fig tree; when his branch is yet tender, and putteth forth leaves, ye know that summer is nigh" (*Matt.* xxiv: 32). There are three kinds of figs in the East, the untimely fig, the summer fig and the winter fig. The first of these begins to put forth its fruit as soon as winter is over, the second begins to grow about the middle of June and is ripe in August, and the third ripens about the end of November, and is longer and of a deeper brown than the others. As we know, many of these figs are dried, packed and sent off to other countries, where they are esteemed a delicacy, and are familiar to us all, though perhaps few of us have seen the beautiful sight of a fig tree with its broad, rich green leaves, and tempting, green or purple fruit.

ON THE WAY TO PITTSBURGH.

Our picture this month is of a scene on the Pennsylvania Railroad, a few miles from Altoona, at a point known as the "Great Bend" in the Alleghany Mountains. An artist sent out by the illustrated paper *Every Saturday*, to make sketches for its pages, stands in the cab of the locomotive in the picture, and we cannot do better than to use his description of the wonderful ride of which we see a part. He says, "We were at Altoona when the 'Pacific Express' (i.e. the through train from New York to San Francisco), came along, and by the kindness of the superintendent, we were consigned to the forward locomotive, which helps draw the train over the summit. Of that inspiring ride up the mountain, around rocks and over precipices, I cannot hope to give an idea. The novelty and possible danger of the situation had a wild joy of their own; and then the crowning rapture of all was the mad rush through the tunnel, the uncoupling from the puffing locomotive and thundering train behind us, and the pinning on ahead in the darkness. Finally a man stepped forth from some cave or grotto in the rock, as it seemed, and, in the dusky light of his lamp, swayed with one hand an iron bar, and we were switched quietly aside, and the train shot out of the tunnel away in its swift course. After that the detached locomotive was at our disposal, and we went on at our ease until a train coming up behind us, forced us to run for our lives. Of this race, of which we were manifestly the winners, you have on another page the picture as it appeared to us on the Great Bend itself, framed in the wooden arch supporting the roof of the cab of our locomotive. Out of danger again, the engineer slackened speed, put us off above Kittanning Point, and hurried on." The illustration gives a very fair idea of the beauty of the scenery among the Alleghany Mountains, which are still almost as wild as when they were known only to the native Indians and the wild animals; and a traveler who, starting from New York on this same "Pacific Express," runs across the continent to San Francisco, passing across this eastern coast chain, over the great central table-land of the continent to the huge, snowy peaks of the Rocky Mountains, to come at last in sight of the blue Pacific waves, may be sure that his eyes have looked upon some of the most glorious scenery which the world can show. How tremendous are the difficulties which such railroads as these have to overcome, is shown to some extent in this "On the way to Pittsburgh," and certainly we have a right to be proud of the skill and ingenuity to which they bear witness. In the face of such a work as the Pacific Railroad it seems unsafe to say that anything is "impossible."

CHESAPEAKE BAY.

This beautiful sheet of water forms the largest bay on the United States coast, and is consequently one of the largest in the world. It enters Virginia between Cape Charles and Cape Henry, and extends into Maryland, with a length (following the curve) of two hundred miles, and a breadth of from four to forty. There is sufficient depth of water for the largest ships to ascend the main bay, almost to the mouth of the Susquehanna River, and the harbor which it forms where it opens into the Atlantic Ocean, is one of the finest on the coast, Hampton Roads being a secure anchorage and refuge from ocean storms.

The Chesapeake is remarkable for the vast number of creeks, arms and smaller bays irregular in size and shape, which indent its shores, some of these serving as outlets for the various rivers of Virginia and Maryland, while others are only breaks in the coast without any outlet. Fortress Monroe, which commands and protects the entrance to the bay, is famous in American history, and the waters of the Chesapeake have many interesting associations with the past, while the beauty and fertility of the whole region are very great, and offer a large field for enterprise, agricultural or commercial.

For the SOUTHERN WORKMAN.

"DOWN IN A COAL MINE."

J. ENDECOTT LINDEN.

It is always a pet ambition of a boy's heart to see for himself how the black rock which we call coal is dragged from its dark storehouse in the earth, to supply the enormous demands of a heat-needing nation. So, one bright summer's morning, finding myself in the very heart of one of the great coal fields of Central Pennsylvania, I resolved to make the descent. Armed with credentials from a leading coal merchant, I started alone for one of the mines, which were everywhere scattered over the mountain sides.

All that one sees of the establishment above ground, is a wooden building called a "breaker," in which, by strong stamps, the coal as it comes from the ground is broken up, and shot out upon an inclined plane of sieves, which sort the coal into great heaps of the different sizes, ready for market. These sieves, supported by trestlework, and the great piles underneath, together with the wooden shed containing the breaking-up machinery, constitute the "colliery," the mine proper lying far underneath, in the heart of the mountain.

Being courteously received by the superintendent, a man was detailed to "show the gentleman over" and *under*. After one contemptuous glance at my "city clo's" he directed me to divest myself of my outer garments, and, for a consideration, induced a stalwart old miner to lend me a coat and overalls, which certainly sustained a deeper incrustation of dirt and coal dust than anything I had ever seen before. In fact, one couldn't help speculating on their probable value as real estate. However, it was no time for squeamishness, and on they went—worlds too large—and he capped the climax (and myself) with an old felt hat, the front of which bore the traditional miner's lamp, shaped like an insane teapot with the wick coming out of the spout, and the whole concern flaring and smoking fearfully, and smelling most abominably.

Thus equipped and feeling like a full fledged miner, we were ready for the descent. Underneath the "breaker" a low, arched tunnel is sunk into the mountain side either perpendicular or slanting, as the case may be. The former are called *shafts* and the latter *slopes*. Across these, as soon as coal is reached, are dug large galleries or *levels*, at different depths, along the sides of which the coal is cut out. In this mine a slope was used, and large cars called "gunboats," drawn by a stationary engine at the top, ran up and down a railway laid on the slope, the empty car going down as the other went up full. These cars were then so hung that they could not take us down; or rather we could not wait for one, so we made the descent on foot.

There was a staircase running down by the railway, and my guide started carefully down, telling me to follow.

For the first ten steps we had daylight, then twilight, then darkness, then total darkness, then a *blackness*, whose utter intensity cannot be described or conceived of but by the scriptural language, "Darkness that may be felt."

It seemed as if one had left earth and humanity behind, and the old stories of men who had visited the infernal regions with some ghostly guardian came to remembrance with a rather chilly sense of reality.

But the good-natured old Irish miner didn't act in the least like a ghost. "Mind your head sir, here's a beam;" and "Look out for that step, it's rotten!" rang out so constantly that, after I had tripped and struck my head sufficiently, I roused myself to attend to his warnings and explanations.

The roof was never more than four feet high, and sometimes lowered so that we had to sit down and crawl through; the ceilings dripped incessantly, and the lamps sputtered and hissed. Just as my back began to get very tired of stooping so long we reached a level place where there appeared to be no top nor sides, but just open darkness. This the guide said was an old "level," about fifteen feet wide and twenty high, which, after working awhile, they had deserted and gone deeper. We walked along it for a hundred feet, and came to a large wooden wall, running right across, and higher than our heads. We climbed to the top and looked over, and I was considerably startled to see underneath me a pitchy black expanse of water as far as the faint gleam of our lamps could reach. He explained that the miners had struck an underground stream, which had flooded the level and would have drowned out the mine, but they had dammed it up, and set up a little engine which pumped it out as fast as it ran over. I listened, and in the intense stillness could hear the continued puff-puff of the busy little pump. It was a relief to turn from the awful profound quiet of that lonely sheet of black water, which never felt a ripple nor ever saw a sunbeam, to the little engine, faithfully and busily working away in the darkness. It was the first thing like life I had met with in the mine, and I felt better for it.

Then back to the slope again, and down, down, still deeper, crawling and winding till my back ached and my head reeled; presently a miner came down after us on the full run and passed us without a word, his footsteps echoing and his light glimmering till we lost him in the darkness. Then we came to a door which was shut. The guide "pounded," but no answer. He was equal to the emergency, and told me that we had got to a *working* level, and that the man who had passed us had told the boys that there was a stranger coming down who would "stand drinks" all round.

As I had been warned to take some "change" down, I told him to have the door opened—and *such* a sight! We were in a large gallery some fifteen feet high and as many broad, the walls and ceiling of solid coal lit up and flashing with light; and right in front were a score of forms, their faces streaked with black and gleaming with sweat, leaping and yelling like so many fiends, while the lamps in their hats dancing up and down, helped the illusion till you might have fancied them demons from the pit—which seemed not so very far off by this time. But they meant no ill will, and instead of howling for my soul, they only wanted ten cents apiece, and then were ready for any amount of information and fun, while the staid old guide's eyes twinkled at the boys' "larks." We stood still so long that I wondered why, when I began to hear a low rumbling noise, which increased rapidly. I could think of nothing but that the stygian pool above us had broken loose, but the guide only nodded and smiled at the inquiry, and told me to stand back close against the wall; and presently along a railway I had not noticed before, came a train of mules at full gallop, drawing two empty cars; it stopped, we all pitched in anyhow, and on we rushed, the echoes rattling and roaring as our ears thundered on; then we came to the very end of the gallery; then we got out and watched the plan of operations. Along the walls of the gallery were smaller tunnels, opening about eight feet from the floor. These slanted upward, and in each a man was at work with a pick, detaching huge blocks, which rolled into cars stationed under the mouth of each tunnel, and which, when full, were dragged by the mules back to the slope, and dumped into the great gunboats to be carried to the surface. Then we walked back along the gallery; sometimes we could see the roof, while sometimes it would be twenty feet high.

Near the slope were the stables for the mules. These poor animals feed and sleep under ground, and never see the light from the time they are taken down till they die; and, in fact, some of them were said to have been born in the mine. And worse still, the boys who drive and take care of them share their fate, and see sunlight scarcely oftener than their four-footed companions. As we turned away one of the men said, "P'raps the gintleman would be afther iolkin' to see thim blastin,'" and the "gintleman" eagerly assenting, the good-natured fellow led the way, wading through mud, dirt and water, to the very end of the still unfinished level, which gradually narrowed till we could just creep. We passed through this narrow opening into a chamber where a man was at work with a crowbar, drilling a hole in the ceiling of coal. Another was preparing a charge of gunpowder to fill it with.

When the hole was finished the blast was put in, and we all crowded behind a crag of coal rock to await the result. One man was left to light the fuse. Soon we heard his step echo as he ran down the gallery, and we sat and waited. Then the first feeling of fear came over me. So far away from help, suppose the blast should stop the little opening we had crawled in by, put out our lights or bring down the ceiling on our heads; suppose that dam should burst now! The strangest fancies suggested themselves; unphilosophic doubts of the thickness of the earth's crust, and the molten fire within; and then thoughts of the home and friends so very far away.

Then came a rush of air, and a roar that seemed to beat in our very ears, a whir of rocky masses flying in all directions, and a suffocating smell of brimstone and coal dust. When the smoke cleared away we looked around. The entire gallery was changed. Huge boulders lying about, great seams and rents in walls and ceiling, bore witness to the tremendous power of the charge.

The men were instantly at work with pick and shovel. After watching them for a few moments, as they vigorously cleared away the debris, we turned to go.

They crowded around to bid good-bye,

praised the pluck of the first stranger who had ever ventured down their mine alone, (they did not know how often he had wanted to run away), and begged me not to forget them and to tell the "city people," whom they had never seen, how hard the cool miners worked in the dark and cool to supply them with heat and light.

Then a long, long climb up that steep staircase, and we stood once more in the pure, clear air, blinking like owls in the bright sunshine.

And often since, sitting by some cheerful, glowing fire, the picture comes back of those hard-working, simple-hearted miners, and I seem to live over again that bright summer day, spent

"Down in a coal mine."

A LETTER FROM SHANGHAI.

From an interesting letter communicated to the SOUTHERN WORKMAN by Mr. John DeWitt, of Old Point, who has just returned from a voyage around the world, we make the following extracts, regretting that the limits of our columns do not permit us to print it in full, and hoping that he will favor us with some more notes from his journal of travel. A number of interesting curiosities from foreign countries, which he has presented to the Normal School cabinet, are described in another column.

SHANGHAI, CHINA, *August* 28, 1873.

My Dear Will,—I wrote you that we had been in a terrible typhoon, and that after roughing it and standing at the pumps for several days—watch and watch—we succeeded in reaching the port of Shanghai in a dismasted and leaking condition. We anchored off the mouth of the Yangtsz Kiang (kiang means river in English), and set the Union Jack at the fore for a pilot; the next morning one came aboard and we immediately got under way, and with the wind aft, and a fair swift tide started for Shanghai. The Yangtsz is about a mile wide and the banks low and marshy. After sailing up it for thirty miles we arrived at Wu-sung, a small Chinese town at the mouth of the Wu-sung River. Here we were taken in tow by the tug *Foo Lee*. We passed a Chinese gunboat, a large vessel unpainted, with the exception of two large eyes painted on either bow. Brass cannon protruded from her side, and her decks were crowded with pig-tailed Chinamen, and heads could be seen at every visible port-hole. But at Wu-sung my mind was brought nearer home, for there I saw at anchor, inside the bar, the U. S. men-of-war, *Hartford*, *Monocacy* and *Palos*, with their decks crowded with officers and men, the officers in their white linen caps and suits presenting quite a contrast to the sailors in blue. The Wu-sung River is very winding in its course, but as it is only fifteen miles from Wu-sung to Shanghai, we had the pleasure of dropping our anchor off "American Town," at eight in the evening of the 17th.

Shanghai is a large city. It is divided into four parts, namely, American Town, English Town, French Town and China Town. The number of European inhabitants is about three thousand, of which only about two hundred and twenty-five are women. There are about two hundred and eighty-five thousand Chinaman. Shanghai and, in fact, the whole of China, is divided up by creeks and streams, and, I am told, that one can go from one end of China to the other in boats.

One of these creeks separates American Town from English Town, and is crossed by numerous bridges. American Town is where nearly all the Americans live. Here you see nearly all the wharves, dry docks, machine shops, the offices of several of the consuls, and the best hotels, and what you see in every American town, the jail. There is also a pretty Episcopal church, and the minister is a gentleman from Virginia, a Mr. Nelson. English Town is the prettiest part of the city, and has the finest residences and principle business houses. Another creek separates it from French Town, where you see some fine wharves and handsome dwellings. It is separated from China Town by a stone wall about ten feet in height, in which is a door through which people pass. In China Town some of the streets are so narrow that two men cannot walk abreast through them comfortably, and so horribly dirty that no one would want to repeat his walk.

On the first evening of our arrival I heard that two more American men-of-war were lying in the stream; the *Lackawanna* and *Iroquois*, and the former was to sail in the morning. As she passed us we saluted by dipping our ensign, and she returned the salute. I went on board the *Iroquois* and met some very pleasant officers. By the kindness of several American gentlemen in the town, I was made a visiting member of the Shanghai Base Ball Club during my stay.

The principal vehicle in Shanghai is called a trap, and is drawn by one horse. It is something like a doctor's gig, only that the back is open, and there is a second seat on which people sit with their backs to those on the front, and get in and out from the back. In front sits the "mafoo," or horse-boy. Private carriages are usually sedan chairs, which are more comfortable. Then for the fun of the thing I have ridden in a *wheelbarrow*. You will be surprised at this mode of travel, but this is the most common way that the Chinamen ride, and the streets are filled with coolies with wheelbarrows. They run up to the foreigners and in their broken English say, "Wantee sit down?" You can ride for a mile or so and only pay about four and a half cents. They are trying now to introduce a Japanese vehicle called a "jin rickshaw." It looks like a baby carriage on a large scale, and is very fancifully painted. It holds one person and is drawn by a coolie, who gets inside the shafts and runs very fast with it. The wheelbarrows are flat with a board running lengthwise through the center, and will hold two.

The other day while going to the base-ball ground with a friend, I noticed a great number of mounds scattered over all the fields we passed. He told me these were Chinese graves. Shortly after, I saw a coolie digging some up as the ground had been sold. They put the bones into jars and numbered and named them.

One evening a Chinese comprador (ship chandler) asked me to go to the Chinese theatre with him. He went first to his house and put on a white coat, which reached nearly to his feet. It was buttoned on the right side with four gold buttons. He carried a big fan in his hand and wore no hat. We stopped at a *chow-chow* or eating house, where we were joined by another Chinaman, sat down at a small table and had supper. Each of us was provided with a pair of chop-sticks (small ivory sticks which are used in China instead of knife and fork, and which foreigners find it almost impossible to use), a Chinese pipe and Chinese tobacco. I knew they were all watching me, and I had never used chop-sticks before, but I did as the rest did and got along quite well. The supper was elegant; but what the names of most of the dishes and what they were made of was a conundrum to me. The Chinese pipes hold only a small pinch of tobacco; but as the Chinamen inhales the smoke and swallows it into his stomach, a very little is enough. At some of the tables I noticed that two of the Chinamen, after they had finished, would clasp hands and commence to talk loud and fast. The compredore told me they were counting, and the first who made a mistake would have to pay for the whole table. The liquor drunk by the lower classes in China is called Samshu, and is worse than American whiskey.

After supper we went to the theatre. It was a large, plain building. The lower floor was covered with tables, at which sat numbers of Chinamen, drinking tea, smoking and talking. Above this was a gallery into which we went, and sat down at one of the tables, where we were furnished with tea, pipes, sweetmeats and cooked watermelon seeds. The play had begun when we arrived, at eight o'clock, but as we did not leave till two in the morning, I had rather more than enough of it. The actors were magnificently dressed in silk and ornaments of real gold, and the acting was good; but their voices were pitched in a painfully high key, and whenever they came to a stop the gongs came in with a horrible crash. There is no scenery, and the musicians sit on the back part of the stage, and raise a most dreadful din. The instruments are principally Chinese fiddles, gongs, and now and then, a trumpet.

One afternoon I took a "trap" and rode out into the country. The mafoo showed me a peculiar looking building, which he told me was a josh-house, (literally, god-house, a Chinese temple). On our way back we met an immense religious procession, about a mile long, carrying banners and gongs, and then a wooden god over seven feet high, seated in an open sedan chair. Then came priests, with high peaked hats and long grey coats, and then an immense dragon with a large head and open mouth and covered with spangles. Its body was made of round hoops, covered with cloth, and it was supported on long poles carried by over twenty men, more than twenty-five feet apart. They would frequently swing the poles from side to side, and this would make the dragon move and look as if it were in a terrible rage. Following the first dragon were thirteen more like it, with gong men between, who banged away on their gongs, or as the Chinamen call it "*chin-chin* for Josh." Along the road crowds of Chinamen watched the procession.

I am going to send this letter by steamer *New York*, to connect with the San Francisco steamer at Yokohama, Japan, and, as it starts to-morrow, will have to close; and, old fellow,

THE DOG THAT LIKED CATS.

with the hope that you will find something to interest you in this, I remain, as ever,

Your sincere friend,

YOUNG AMERICA.

TOUCHING ANECDOTE OF A SPIDER.

Mr. Moggridge in his studies in natural history has been in the habit of immersing, for preservation, his different specimens of spiders and ants in bottles of alcohol. He saw that they struggled for a few minutes; but he thought that sensation was soon extinguished, and that they were soon free from suffering. On one occasion he wished to preserve a large female spider and twenty-four of her young ones that he had captured. He put the mother into a bottle of alcohol, and saw that after a few moments she folded up her legs upon her body, and was at rest. He then put into the bottle the young ones, who, of course, manifested acute pain. What was his surprise to see the mother arouse from her lethargy, dart around to, and gather her young ones to her bosom, fold her legs over them, then again relapse into insensibility, until at last death came to her relief, and the limbs, no longer controlled by this maternal instinct, released their grasp and became dead! The effect of the exhibition upon him is a lesson to our common humanity. He has never since repeated the experiment, but has applied chloroform before immersion.

Judging from the above, the spider is certainly superior to the human animal, in the fact that alcohol does *not* destroy her natural affection.—*Our Dumb Animals.*

Translated from the French for the SOUTHERN WORKMAN.

PAWS AND CLAWS.

What One Dog Got for Liking Cats.

Tray used to frolic with Tabby;
Not growling or biting, as comrade, no worse;
For dogs are good fellows, above acting shabby,
They say cats are quite the reverse.
Though Tabby, she swore by her claws
To play always with velvety paws.
Naughty Tabby (alas! for my story is truth),
In the skin of a friend thought it excellent fun
To plunge—for *amusement* 'twas done—
Sometimes a call, sometimes a tooth.
Such play must soon come to an end.
"What, Tray, would you make up a fuss?
Know you not 'tis a fool, not a friend,
Who can't take a joke with good grace?
Am I not thy dear friend, Master Tray?"
"Take the name thy malign nature matches;
Tabby be nothing half way;
An enemy honest in fray
I prefer to a friend who *scratches*."

H. W. L.

THE DOG THAT LIKED CATS.

Tasso is a beautiful dog. He is very lively and good natured, and never barks nor bites.

He was brought from New York when he was a very little puppy, and could hardly run about, because his legs were so short, and he was so fat.

Tasso is very fond of cats. He will run up to Prince, our great Maltese pussy, and jump round him, and poke his nose into Prince's fur. Then Prince will growl, and look very angry, as if he were saying, "You are a very impertinent fellow."

Once we had a little black and white cat, and we called her Winkie.

Winkie and Tasso were almost always together and seemed to enjoy their play very much; but at night Winkie slept in her basket in the kitchen, and Tasso slept on his little master's bed.

One morning when Tasso went down stairs, he missed Winkie: so he went to her basket and looked in; and there lay Winkie, sound asleep, with three cunning little kittens cuddled up in her soft warm fur.

Tasso looked at the kittens for a little while; and then he put his paw into the basket, and gave Winkie a little poke on the head to make her wake up. Then Winkie opened her eyes; and, when she saw Tasso, she began to "purr" so loud, that you could hear her all over the kitchen.

Tasso seemed very much pleased with the kittens; and when Winkie got out of her basket to get her breakfast, Tasso jumped in, and began to cuddle the kittens as Winkie did.

After that, whenever Winkie left the kittens, Tasso would take care of them until she came back.

When the kittens were large enough to run about, Tasso would take them in his mouth, and carry them into a corner and lie down with them, all the time holding them with his paw to make them lie still.

If you could have seen the good care which Tasso took of the kittens, it would have pleased you very much.

Some dogs do not like cats, but will chase them and worry them; but it is not difficult to train dogs to be good to them, and to behave toward them as Tasso did.—*Nursery.*

MY WIFE'S VISION.

A True Ghost Story.

At the time of which I write I was master of the brig *Argonaut*, sailing between Portland and Rio Janeiro, a matter of from sixty to seventy days' length.

I had been married about two years to Emily Hasbronk. My wife was a young woman of uncommon good sense, and had waited quietly at her mother's house in Cambridge until I was made master of the *Argonaut*, and my worldly goods became sufficient wherewith to endow a wife, when we were married, after a long trial of mutual love and faith.

Between Emily and her mother there existed an unusual affection and intimacy. The two women were all that were left of a once large and prosperous family. Little by little the property had vanished, one by one the sons had died, and when old Captain Hasbronk was lost down in the Gulf, his widow and one little child were left alone and poorly provided for. Like most New England women, Mrs. Hasbronk knew how to make a little go a great way, and Emily was well educated. Mrs. Hasbrouk was like a mother to me always, and when I took Emily away on my first voyage after we were married, I think I was almost as near crying as my bride at leaving the old lady and the snug little home.

Emily was a wonderful sailor, and made the voyages with me like an old tar, never being in the least affected by weather or waves, and always bright and cheerful. "The captain's lady" was greatly admired by the crew for her strength of mind and "sea-worthiness," and to me she was, of course, a great joy and comfort, for I have always pitied the lonely sea-

faring men who have to leave their wives ashore.

On the 3d of August we were preparing for another trip, and Emily and I went down to Cambridge to bid her mother good-by. We had a happy day together, and Mrs. Hasbrouk was looking so well and bright that I spoke of it, and complimented her on her good looks.

"Yes," George," she said, "I have never felt better, and if it were not that you are going to take Emily away again, I would say I never felt in better spirits. I only hope, my dear children, that we may all meet again in this way when you come home," she added, with something of solemnity in her tone.

Emily kissed her, and told her that we all meant to be just so well and happy when we met again. "And don't mind, mammy dear, about writing to me, for George says there can be no communication between this and Rio before we shall be on our homeward trip."

"I can not hear from you, my darling, before I see you?" Mrs. Hasbrouk asked, as she walked to the little gate with us.

"Not unless my wraith should visit you," Emily said, laughing thoughtlessly as she gave her mother a final embrace.

Mrs. Hasbrouk's farewell to me was very loving and tender, as she blessed me and bade me take care of her darling child. She always put Emily under my protection in this way, just as she had done at the time of our commencing the voyage of life together, so that I was perpetually having renewed the pride and humility of a new-made husband when I was bidding Mrs. Hasbrouk farewell.

When we were in the cars, bound for Portland, Emily said to me, "It is such a comfort to me, George, to have seen mother looking so well before I sail." I was glad too, and we started on our outward course with fine weather and light hearts.

We had a month of undisturbed, clear sky. The wind blew especially for our benefit, and we were making an uncommonly swift passage. The crew had hardly enough work to occupy them, for the vessel almost sailed herself. Emily sat on deck most of the time, and did no end of worsted-work and light reading, and in the moonlight nights she would keep out till midnight sometimes, singing and watching the waves in the shine, and the phosphorescence on the water.

We were prepared through all this easy time for the foul weather to come, and when the wind shifted, and a little cloud no bigger than a man's hand began to rise, "We're awaitin' for the blow," said Jack Salt; and sure enough we had it for forty-eight hours, heavy and strong, and then it calmed down somewhat, and we took a run of rainy days, not fit for any but men to be out in.

Emily staid below, except once she put her head out of the companion-way, all tied up in a hood, and, smiling and nodding at me, she said, "Ugh! how wet and nasty everything looks! even the sea looks more watery than it was before. I think I had better go down again, George. I shall not do for a deck hand." So she disappeared into our cabin.

On the night of Thursday, the 29th of September, five days out from Rio, I staid on deck rather later than usual, talking with the mate. It was a quiet night, drizzling a little, but the sea smoother than it had been in some time. Mr. Myles, this mate, who was rather a queer fellow, had been telling me some stories bordering on the supernatural, and had tried his best to make me give in to his belief in the communication of departed spirits with this world. I turned down the cabin stairs with an incredulous shake of the head, and left him on deck with his watch.

I had bade Emily good-night at least two hours before, when I left her to go on deck, and expected to find her asleep in her berth. It was eleven o'clock when I left Myles at the ladder head, and I descended softly, not to disturb Emily. As I opened the door I could see that she was not in her berth, but it was not till I was fairly in the cabin that I saw her.

My wife was standing in the middle of the room, her black hair streaming round her. Her hands were clasped, and held a little in front of her bosom; her face was as white as snow; her eyes were staring and blank, as though they saw nothing around her. Never have I beheld such awful anguish as her whole aspect showed.

"Emily! my wife!" I cried.

She gave a sort of gasp.

"George, I have seen my mother!—my mother is dead!"

I caught her as she fell forward in a swoon.

When my dear wife returned to consciousness I tried to keep her as quiet as possible, but it seemed that she must unburden her mind of the awful revelation that had been made to her. I sat by her all that night and held her trembling hand in mine; and at last she told me how it had come.

My wife said: "I was ready to go to bed, but the ship rolled so little to-night that I thought I would read a while before I turned down the light. I suppose I had read about fifteen minutes, when suddenly I began to think of mother. I often do this; for, somehow, when I am thinking of other things, mother comes into my mind, and then I always say, 'She is thinking of me now, or talking about me to some one.' Gradually I took my eyes off the book, and raised them toward the door of the cabin, and there my mother stood before me. She was very pale, as though she had been through some illness, and her hands were crossed upon her breast. I spoke to her: 'Mother, what is it?' She smiled, and waved her hand to me, and disappeared. I know that she is dead, and that I shall never see her again."

Emily was strangely moved and excited throughout this recital. At first I was frightened, for I thought her mind must be affected in some way. But at last she became so calm and sad that I saw she really believed her mother to be dead. And I believed it too. Why should not two hearts, so closely bound together as were Emily's and her mother's be able to communicate to each other such a great change as the leaving the world? I believed Mrs. Hasbrouk's spirit had found means to tell her faithful daughter of its flight.

When we reached Rio Emily caused mourning to be prepared, and our homeward voyage was not gladdened by my wife's songs. She was quite subdued by her sorrow and loss.

We reached Portland on the 20th of December, late in the afternoon. Emily found that a train left for Boston at four o'clock, and finally persuaded me to go with her to Cambridge.

"You can get back to Portland early enough in the morning, George dear," she said; "and I feel that I can not rest till I have been to the dear old home, though it will be so changed and sad."

I tried to dissuade my wife from going until we had heard some particulars of the condition of her mother's house; for there might be strangers in it, and I thought it would be less trying to her to visit it by daylight, and after her mind was somewhat prepared to meet new people in her mother's place.

We went to Boston, however, and, taking a carriage, drove out to Cambridge. It was nearly ten o'clock when we reached the street on which Mrs. Hasbrouk's house stood.

My wife was shivering, more with restless dread than cold, as we drove up to the once happy little home. She was very quiet, though I knew she was powerfully affected.

The house seemed quite dark in front.

As we knocked (Emily had insisted on getting out of the carriage, and stood close to me) —as we knocked, the lock turned, and the door was thrown open. The hall was filled with light, and in the doorway, as bright and well as ever, stood Mrs. Hasbrouk, the same happy lady we had left nearly five months before.

Emily, of course, went back to colors. We have never had the affair satisfactorily explained but certainly Mrs. Hasbrouk was perfectly well during the whole time of our absence, and she had nothing to do with the appearance of her own ghost.

I think that Mr. Myles, to whom I afterwards told the story, has disliked Mrs. Hasbrouk from that time.

EDUCATION.

The subject of popular education has found some place in the consideration of the present Congress, but it has scarcely received the attention which its great and fundamental importance demands. The speech of the Hon. Mr. Hoar, in the House of Representatives, on this subject, reveals some startling facts, which should rouse both Congress and the nation to a new departure on this question. He states that "one quarter of all the voters of today are unable to read and write," and that "for the next ten years thirty-two senators, and one hundred and four representatives will be elected by states one half of whose voting population have not sufficient knowledge of reading and writing to make it available in the transmission of information!" And this state of things is, in the opinion of those best qualified to judge, growing worse instead of better! That some substantial measure for curing this evil should be early adopted seems too obvious for argument. The bill at present proposed would apply one half the proceeds of the sales of the public domains to the support of popular education, this fund to be distributed for the next five years among the several states in proportion to their illiteracy. The sum estimated to be realized from the annual sale of public lands is about two millions of dollars. One million is to be divided immediately among the states, of which the South will get by far the greater proportion, and the other million is to be put at interest as a permanent national educational fund, the interest of the same to be divided among the states annually upon the same basis. Such substantially are the provisions of the bill now pending. It is certainly a movement in the right direction, and should be urged forward with all practical dispatch.—*Republic.*

INFORMATION WANTED.

Information wanted of my three children, William Edward Highland, Eleonore Highland and Charles Lafayette Highland.

These children and myself were the slaves of John Wylie Farrell, formerly of Head of Chester, or Millington, Kent County, Maryland, where he carried on a wholesale dry goods business.

Mr. Farrell freed all the adult slaves. The children were to be freed on coming of age. By the removal of Mr. Farrell from Kent County, many years before the war, my children were separated from me. When last heard from one was in St. Louis, Mo., one in Philadelphia, and an another somewhere in the State of Illinois.

Address information to

MRS. FANNIE HIGHLAND,
1632 Arch St., Philadelphia, Penn.

INFORMATION WANTED of a woman by the name of Jennie, who was sold by John Hockenhull, of Dorsenville, Dorsen County, Georgia, to a man by the name of Jack Nichols, a slave-trader. He sold her next to Doctor Hill of Mobile, Alabama, a little while before the war. Any information respecting her will be thankfully received by her son, who belonged to the same John Hockenhull.

ALEXANDER PASCO,
No. 24 Tyler Street, Patterson.

Alabama and Georgia ministers will please favor me by inquiring for my poor old mother.

INFORMATION WANTED of my mother Eliza Long, my brother and sister, George and Charlotte Long, and my uncle Dock, all of whom were slaves in Jackson, Mississippi, to the same master; my uncle Terma and Aunts Patience and Rosa who were slaves to Mr. Scruggs and Mr. Thomson.

When I last heard of my mother she had been sold to Louisiana, the rest of the family were at Jackson. Any information of the above persons will be thankfully received by an anxious daughter and niece, Mary Long.

Address answers to the above inquiry to MARY LONG,
Milwaukee, Wisconsin,
Care Rev. C. S. Jacobs, 327 Cedar St.

(Ministers will please read the above card in their congregations.)

I, Henry Brown, was born in Versailles, Woodford County, Kentucky, (a slave) belonging to the Subletts family. My mother's name was Rebecca and my father's Samuel Brown. He was always free. I am eldest of four children. Samuel and David are the names of my two brothers, Anna is the name of my sister. My mother and her family were moved to Shelbyville, Shelby County, Kentucky, between twenty and thirty years ago. At the expiration of two years she was removed to Jefferson County, near Louisville, having with her David and Anna. It has been twenty-three years since I have seen any of them. If any person or persons can give me any information of the whereabouts of the above named persons, through the *Christain Recorder*, or by letter, I will be under obligations to the said person or persons.

I am respectfully,
HENRY BROWN,
Lincoln, Nebraska, Box 36.

INFORMATION WANTED of a family by the name of Moxley. The mother belonged to Mr. Warren, of Fredericksburg, and was sold South in 1854, with three children, Adlia, Martha and Alice. My father was Daniel Moxley. I had two brothers, John and Daniel, also other sisters. Any person knowing of their whereabouts will greatly oblige me by writing to James A. Jones, 183 St. Julian Street, Savannah, Ga., for me. MARJOURI M. MOXLEY.

Temperance.

The following valuable statistics are taken from the Virginia School Report for 1873. Dr. Ruffner the worthy superintendent, deserves much credit for his report on this subject.

"The statement which I made in my annual report two years ago, to-wit: That the consumption of liquors in Virginia, for all purposes, was probably in the neighborhood of $19,000,000, excited surprise at the time; but it has never been seriously controverted, and it never can be, except by either denying the accuracy of the liquor statistics of the United States Bureau of Statistics, or by denying that the people of Virginia are average customers as compared with the people of the country generally.

"In Virginia during the fiscal year 1872 the United States revenue officers collected from retail liquor dealers for license $71,400, and as each dealer pays twenty-five dollars for license, it follows that there were two thousand, eight hundred and fifty-six retail liquor shops in the state. The average annual sales of liquors by each shop in the whole United States is $3,723. Assuming this as the correct average for Virginia, the aggregate sales from these shops would be $10,622,888. Add to this the amount indicated by the extra tax collected on sales exceeding $25,000 which is $1,235,600, and we have from this source $11,867,488. It is possible that the sales of our retailers do not reach the average for the whole United States; but it is certainly not unreasonable to suppose that when we add to the retail sales what is sold to drinkers by our one hundred and forty wholesale dealers, by druggists, under the name of medicine, and by those who sell without license, and what is imported by consumers, we may feel sure of being within the mark, when we put the liquor drunk in the state, *as a beverage*, at $12,000,000 every year. The surplusage, be it more or less, may go for medicinal, mechanical and manufacturing purposes.

"So far as used for these latter purposes, the alcoholic spirits may be a means of increasing wealth; but so far as used for drink, it is as perfect a destruction of wealth as is affected by fire and flood. If a bushel of corn be eaten by man or beast, it gives strength for the production of an increased quantity of corn or other form of wealth. If it be made into three gallons of whiskey, it still has value, but when drunken as a beverage, it is destroyed, and that much of public and private wealth as thoroughly annihilated as if the whiskey had been poured on the ground; and the value thus destroyed is greater than if the corn had been burned. In order to aid our minds in grasping the extent of this annual destruction of our resources, let us illustrate it by comparison with substantial values. For example, we will compare it with the annual agricultural production of our seven top counties. Total value of all farm productions, including increase of live stock and value of improvements made during the year, according to the census of 1870, in the counties of Augusta, Albemarle, Bedford, Fauquier, Loudoun, Pittsylvania and Rockingham, was $11,312,778. By these figures it is seen that the gross annual product of our seven best counties is not sufficient to pay for the liquor consumed by our people.

"Again, the wheat crop in Virginia in 1870 was in round numbers 8,000,000 bushels, which, at one dollar and fifty cents a bushel (which is more than the farmers got), was worth just the cost of our drinkables. Hence if the entire wheat crop of Virginia should every year be burnt in the stacks, it would not inflict as great a loss of wealth upon our people as do our drinking habits.

"The total value of the live stock in Virginia of every description is something over $28,000,000. If sold to pay our liquor bills, it would all be gone in two years. Once more, the total value in gross of *all farm productions* in Virginia, including increase of live stock and value of improvements in 1870, was something over $51,060,000, nearly one-fourth of which sum was required to pay for our drink the same year."

THE RIPENED SHEAF.

We bent to-day o'er a coffined form,
And our tears fell slowly down;
We looked our last on the aged face,
With its look of peace, and its patient grace,
And hair like a silver crown.

We touched our own to the clay-cold hands,
From life's long labor at rest;
And among the blossoms white and sweet,
We noticed a bunch of golden wheat,
Clasped to the silent breast.

The blossoms whispered of faded bloom,
Of a land where fall no tears;
The ripe wheat told of toil and care,
The patient waiting, the trusting prayer,
The garnered good of years.

We knew not what work her hands had found,
What rugged places her feet;
What cross was hers, what darkness of night—
We saw but the peace, the blossoms white,
And the bunch of ripened wheat.

As each goes up from the fields of earth,
Bearing the treasures of life,
God looks for some garnered grain of good
From the ripe harvest that shining stood,
But waiting the reaper's knife.

Then labor well, that in death you go
Not only with blossoms sweet;
Not beat with doubt and burdened with fears,
And dead, dry husks of the wasted years—
But laden with golden wheat.

—*Selected.*

CHARLES SUMNER.

We deeply mourn the loss of this distinguished senator. Much as we esteemed him for his great talents and learning, we esteemed him more for those higher and nobler qualities, for which he was so pre-eminent.

Think, for example, of his incorruptible honesty. In these days of so much official corruption, of such abounding treachery and fraud, we rejoice in the fact that whoever has fallen, he has stood; whoever has sunk, he has risen; that out of every furnace of trial, he has come forth as gold; proving himself during the twenty-three years of his connection with Congress of such inflexible, unbribable integrity as to compel the admiration of his bitterest foes. In the language of Gov. Washburn, "His aims were high, his purposes were pure. His voice was that of an honest man, his endeavors were those of an upright statesman." His moral integrity stands out as a sublime figure in these later years. While the atmosphere around him was foul with corruption, no stain of suspicion ever fell upon him. However other public servants prostituted their positions for selfish ends, we all felt sure that Charles Sumner would not be smirched by any disclosures or investigations. This simple fact alone is enough to crown him with glory."

Think, in particular, of his heroic stand for what he regarded as the rights of the colored race. However others might differ from him in opinion as to what those rights were, none could question his boldness in the advocacy and defense of his own convictions.

Said the late Joshua Giddings, of Ohio, "I've seen hard fighting with clubs and bullets; I've seen men falling all around me, but I tell you it takes more courage to stand up in one's seat in Congress and say the right thing, than to walk up to the cannon's mouth." For such courage Charles Sumner was remarkable, being a noble example of that which he so eloquently urged upon others. Some twenty-five years ago he besought Daniel Webster, called "The Defender of the Constitution," to stand up for the oppressed, saying, "The aged shall hear witness of you; the young shall kindle with rapture as they repeat the name of Webster; and the large company of the ransomed shall teach their children and their children's children to the latest generation, to call you blessed; while all shall award you another title, not to be forgotten in earth or heaven, *Defender of Humanity*," the very title which this successor of Webster, in the Senate, so richly earned for himself. He espoused the cause of the oppressed before it had become popular, in its darkest and weakest hour; being willing not only to do, but to suffer in its behalf; to suffer the bitterest reproach and scorn; to suffer unto blood; to suffer next to actual martyrdom. So severely was he prostrated by the assault upon him in the Senate chamber, some eighteen years since, that for more than four years he did not resume his seat there. But when he did resume it, he showed that, however he had been prostrated physically, he was not in the least prostrated morally. He came back to his place where he had been so terribly stricken down, to lift up his voice again for the despised and oppressed, with the same unflinching, unfaltering boldness.

Thus through evil report and good report, in the sunshine and the storm, in face of difficulties and dangers, the most appaling, did this apostle of liberty hold on his way until the last; charging his friend Judge Hoar, with his dying breath, to take care of the Civil Rights bill.

Many years since in a public convention at Worcester, Mass., the deceased plainly told his fellow citizens that three things were needed for the times: "The first is backbone; the second is backbone; the third is backbone." Would that more of that backbone for the right, more of that moral heroism which cannot be flattered or frightened from the way of duty, might be granted to us who survive; ever keeping in view his own noble words, "Aloft on the throne of God, and not below in the footsteps of the trampling multitude of men, are to be found the sacred rules of right, which no majorities can displace or overturn."

I care not to dwell upon the faults of the deceased: faults as visible as the flaws of the diamond, or the spots of the sun—his imperious manner, which sometimes repelled those whom he might otherwise have won; his decision which seemed occasionally to degenerate into stubbornness; and other faults which grew out of his habits as a close and indefatigable student—I care not to dwell upon these in view of his shining virtues.

Charles Sumner is now beyond the reach of our praise and our blame. On Wednesday P. M., March 11th, at the age of sixty-three, he who could not be bought nor bribed, drawn nor driven from his convictions of duty, this fearless champion of the oppressed, this gifted orator and statesman, suddenly passed away, leaving behind him the memorial of public services more durable than any monument of granite or of marble.

His appropriate epitaph would be the following lines of Whittier:

Oh! when above my weary breast
The gloomy turf lies dark and chill;
The feverish spirit lulled to rest—
The pulse now throbbing cold and still!
One single legend, let the stone
Tell in all time above my grave—
"*He bore reproach and hate and scorn
That others might for the outcast slave.*"

"THE BREVITY OF LIFE."

To the young it does not seem short; it seems very long. To the boy of fourteen the man of forty seems a long way off, and he of sixty removed by an age almost illimitable. But as time passes on, the aspect of life changes. The man of forty thinks forty not nearly as old as he thought it when he was fourteen; fifty appears to him but the prime of life; sixty far from aged. When, at length, increasing years admonish him that his life-work is ended, and that he can enter on no new undertakings, and he looks back to reflect upon what he has accomplished, he wonders to see it so little, and is amazed to find the road so short in traveling, which appeared so long in prospect. He then understands, as he never did before, the meaning of Scripture simile. "Yes," he says to himself, "it is indeed true. Life is as a tale that is told, and as a dream when one awaketh."

A moment's careful reflection will suffice, however, to convince the thoughtful that the old man's estimate is right, and the young man's wrong. The time is short, very short, in which to achieve anything for God, for humanity, or for ourselves.

The average length of human life is stated to be thirty-three years. This average, however, includes an estimate of all those who die in infancy. The statement of the average life of a healthy man may be enlarged somewhat. But it is perfectly safe to say that it is not over fifty years. Some live on to threescore years, or even to threescore years and ten, but more never reach the half-century.

Of this fifty years, the first twenty are taken in learning how to live. Something the young can accomplish; but youth is the time for receiving, not imparting—for preparing to achieve, not for achievement. Thirty years may be fairly accepted as the average limit of the working life.

But no man works the full twenty-four hours. Rest, recreation, food, sleep, Sabbath and the enforced idleness which occasional illness compels, reduce the period two-thirds. Eight hours a day are as many as the brain or muscle can ordinarily stand. Some work more, but few to the best advantage. Year in and year out eight hours may be taken to represent the working day. The working life, then, is not thirty years; it is but ten.

And of these ten years how much is necessarily absorbed by the drudgery of toil, by the gathering of grain that dies in the harvesting, and is never garnered into storehouses? How much in getting clothing to be put on and worn out, in getting food to be consumed in use, in building houses to crumble and fall into decay, almost as soon as their owners? How much, too, of this time is lost in plans that come to naught, in sowing that never ripens, in fighting battles that are defeats? When we have taken from our life what time is necessary for preparation, what is required for rest and recreation, and what is absorbed in failure and transient success, the fragment that is left is very small—two, three, or five years at the most.—*The Christian Weekly.*

Boys, Read This.—Fred Douglas has said some good things to his colored brethren in Louisville, Ky., good for people of any color in any climate, in any community. Here is a sample: "When I ran away and came North I worked for nine dollars a month and saved money. For twenty-five years, or nearly so, I worked for $400 p.r year, and I saved money; and every man in this country, who is a man, can save money if he will. But he will not save it by walking the streets and smoking cigars. He will not save it by playing billiards in one of your back streets. I dislike a miser, yet a miser is more respectable than a spendthrift. It is not necessary that every black man should be a rich man, but he must have a respective class at any rate. There must be an actual number of respectives of intelligent and wealthy men. Save a dollar a week, put it at interest, let it grow, and with ordinary good luck you cannot fail of acquiring a competency. But don't wait till you can make ten dollars a week—the time may never come."

GEMS.

In character, in manner, in style, in all things, the supreme excellency is simplicity.

A humble duty faithfully performed is a sweet morsel forever.

Unwounded patience is necessary to hear not only with ourselves, but with others, whose various tempers and dispositions are not congenial to our own.

In all affliction seek for patience rather than comfort; if you preserve that, this will soon return.

A man has no more right to say an uncivil thing than to act one; no more right to say a rude thing to another than to knock him down.

Kind looks and smiles so loving,
And duties promptly done;
Oh, these will make the home-nest
As cheerful as the sun.

It is good to be humbled for sin, but not to be discouraged; for though we are poor creatures, Jesus is a complete Saviour.

The only reason why the Lord seems to delay what he afterward grants, is that the best hour is not yet come.

The quiet prayer-meeting at the river's side led to the conversion of Lydia, the imprisonment and release of Paul and Silas, the conversion of the jailor. Never say, "It is only a prayer-meeting."

SPARKS.

When the rain falls does it ever rise again? Yes, in dew time.

What is that which makes every person sick but those who swallow it? Flattery.

What is that which has a mouth, but never speaks, and a bed in which it never sleeps? A river.

A young husband handed his wife a dozen buttons, the other day, and asked her to put a shirt to them.

A Sandusky mother recently reproved her three-year, oldster for eating icicles. The analytical infant replied, "I didn't eat 'em, mamma; I only sucked the juice out of 'em."

Ranney was a college student who unfortunately could not pronounce the letter R, but used the letter W. Going down town one day, he was witness to a fracas of some sort. Rushing to the society of his college mates, he exclaimed, in tones of great excitement, "Boys, there's a *wiot* down town!" "A what?" "Why a *wow!*" "A what?" "Why, a *wumpus*—can't you understand anything?"

The Senate debate on the repeal of the salary grab was enlivened by this story told by a Western member: "Two boys were out hunting, and came upon a wild boar. One ran off and climbed a tree, but the other, not being able to reach the tree, was overtaken by the boar, which ran between his legs. The boy caught him by both ears, and, after holding on for sometime, cried out to the one in the tree, 'John, come here.' 'What do you want?' cried John. '*Why, I want you to help me let this hog go!*'"

A little six-year-old boy was asked by his teacher to write a composition on the subject of water, and the following is the production: "Water is good to drink, to swim in, to skate on, when frozen. When I was a little baby the nurse used to bathe me every morning in water. I have been told that the Injuns don't wash but once in ten years I wish I was an Injun."

It affords us pleasure to call the attention of our readers to the advertisement, in another column, of Messrs. Poole & Hunt, Baltimore, Md., whose reputation as manufacturers of first-class machinery is pre-eminent in the South, and second to none in the United States. For nearly a quarter of a century they have been prominently before the public, year by year strengthening their claim to public confidence, until, to-day, with an immense establishment, as perfect in its appointments as experience and mechanical skill can make it, they can send forth every article of their manufacture perfect and accurate in all its parts, as tested by the fixed and high standards by which their work is regulated. They who have used their machinery can best vouch for the truth of what we have asserted.

"Hampton and its Students,"

BY

Mrs. M. F. Armstrong and Helen W. Ludlow;

WITH

SLAVE SONGS,

Arranged by T. P. FENNER.

FOR SALE AT THE OFFICE OF THE

Treasurer of the Normal School.

NOTICE.

A NUMBER OF THE STUDENTS OF THE Hampton Normal and Agricultural Institute desire to go north to work this coming vacation. If they can obtain situations. Those desiring good, faithful young men for the months of July, August and September will do well to correspond with this office, stating wages, &c.

FOR SALE.—A GOOD

HEAVY DRAUGHT HORSE,

Suitable for farm or road.

JAC. HEFFELFINGER,
Hampton, Va.

THE WORKINGMEN'S SONG.

Whom do we call our heroes?
To whom our praises sing?
The pampered child of fortune,
The titled lord or king?
They live by others' labor,
Take all, and nothing give,
The noblest type of manhood
Are those that work to live.

CHORUS.—Then honor to our workingmen,
The hardy sons of toil,
The heroes of the workshop,
The monarchs of the soil.

Who spans the earth with iron?
Who rears the palace dome?
Who creates for the rich man
The comforts of his home?
It is the patient toiler:
All honor to him, then;
The true wealth of the nation
Is in her workingmen.

For many barren ages
Earth hid her treasures deep,
And all her giant forces
Seemed bound as in a sleep;
Then labor's anvil chorus
Broke on the startled air,
And, lo! the earth in rapture
Laid all her riches bare.

'Tis toil that over nature
Gives man his proud control;
It purifies and hallows
The temple of the soul:
It scatters foul diseases,
With all their ghastly trala,
Puts iron in the muscle,
And crystal in the brain.

The great Almighty Builder
Who fashioned out this earth,
Has stamped His seal of honor
On labor from her birth.
In every angel flower
That blossoms from the sod,
Behold the master touches,
The handiwork of God. —*Exchange.*

Scientific and Mechanical.

As a precaution which may be used in lessening the tendency to catch fire in buildings, which are not in their nature actually non-inflammable, or intended to be so, it is very desirable, wherever timbers are exposed, to cover them with a coating of common whitewash, which acts doubly as a preservative, both by excluding air from the timber and from its non-conducting power. This will of course be of no use when a fire has once been kindled and got to a head; but in case of fire, seconds of delay in kindling it or communicating it are of vital importance. In many a workshop or factory, if the floor and roof timbers were kept well whitewashed the risk would be much diminished. Special precaution should be taken about the floors and fireplaces; there is frequently great carelessness in trimming joists and fixing ground for skirting, etc. It would be very desirable always to skirt chimney breasts in cement or plaster, and to fill the place under the hearthstone with cement concrete. Ceilings, again, should be formed with much stronger laths and better nailed; and if about two inches of rough mortar, the coarser the better, were laid over the laths between the joists, it would be found very difficult to set fire to them—they would resist for a considerable time even a fierce fire underneath. Again, all rooms should have a good hight, otherwise the constant operation of gas-lights is to prepare the timber of the ceilings for combustion on the most rapid scale, if the opportunity be once given. As regards all stoves, great attention should be paid to their being so arranged as to avoid all risk arising from the heat of the stove itself, its flue-pipe or its ash-pan; no stove should be considered safe the flue-pipe of which cannot be heated to redness with perfect safety to the building. But in all ordinary buildings the most important point to attend to is the staircase: it should be, if circumstances will admit, closed at top or bottom, cut off from the passages leading into the rooms, and, in the construction of it, it is very desirable to lath the soffits with extra strong laths, and fill in from the upper side with concrete, so that all the space at the back of the riser and under the tread shall be a solid mass of non-inflammable material. Such a staircase would probably stand and bear the weight of persons ascending and descending under circumstances where an iron or a stone staircase would be destroyed or useless.—*The American Builder.*

MAKING LEAD-PENCILS.

The wood most commonly used in this country in the manufacture of lead-pencils is the Florida red cedar, except an inferior grade, chiefly for the use of carpenters, which is made from white pine. The lead is the well-known "plumbago," or graphite, of the best quality of which there is now only one available mine, that being in Asiatic Siberia. Hence the limited supply and the high price. Many pencils are now made by grinding and cleaning what was formerly regarded as refuse in working the plumbago, and making a paste by mixing it with clay. In mixing the clay and graphite great care must be taken in selecting and cleaning the clay and getting the proper proportions. The mixture, after being well kneaded, is placed in a large receiver, and and forced out through a small groove at the bottom in the shape of a thread of the thickness and style required —either square, octagonal, or round. This thread, or lead wire, is cut into bars of the proper length, then straightened, dried at a moderate heat, and packed in air-tight crucibles and placed in the furnaces. The grade of the lead depends upon the amount of heat it is exposed to, the amount of clay used in mixing, and the quality of the plumbago. The lead is colored by various pigments. The wood, after being thoroughly seasoned, is cut in thin strips and dried again, then cut into strips of pencil length. These strips are grooved by machinery, then carried on a belt to the gluing-room, where the lead is glued in the groove, and the other half of the pencil glued on. After being dried under pressure, they are sent to the turning-rooms, and rounded, squared, or made octagonal by a very ingenious little machine which passes them through three sets of cutters, and drops them ready for polishing or coloring; the former is done on lathes by boys, and the latter by machine which holds the brush and turns the pencils fed to it through a hopper. After the pencil is polished, it is cut into an exact length by a circular saw, and the end is cut smooth by a drop knife, the pencil resting on an iron bed. The stamping is done thus: A hollow die is heated, the gold or silver foil is laid on the pencil, which rests on an iron bed, and the die is then pressed on it by a screw lever. The pencils are then ready to be packed for the market.—*Harpers Weekly.*

THE following is commended as the best and cheapest process of bronzing articles made of iron wire: Clean the wire perfectly, and then immerse it in a solution of sulphate of copper (blue vitriol) until covered with a coating of metallic copper. Then wash and immerse the articles in the following solution: Verdigris, two ounces; sal-ammoniac, one ounce; vinegar, one pint, diluted with water until it tastes only slightly metallic, then boiled for a few minutes and filtered. The articles are steeped in this liquor at the boiling point, until the desired effect is produced; but do not keep them in too long. When taken out, wash carefully in hot water, and dry.—*The American Builder.*

A CORRESPONDENT of the *English Mechanic* says that he has used the following recipe with the greatest success for the cementing of iron railing-tops, iron gratings to stoves, etc., and with such effect as to resist the blows of the sledge hammer: Take equal parts of sulphur and white lead, with about a sixth of borax; incorporate the three so as to form one homogeneous mass. When going to apply it, wet with strong sulphuric acid and place a thin layer of it between the two pieces of iron, which should then be pressed together. In five days it will be perfectly dry, all traces of the cement having vanished, and the iron will have the appearance of having been welded together.

A CURIOUS NEEDLE.

A very curious needle is in the possession of Queen Victoria. It was made at the celebrated needle factory at Redditch, and represents the column of Trajan miniature. This well known Roman column is adorned with numerous scenes in sculpture, which immortalize Trajan's heroic actions in the war. On this diminutive needle scenes in the life of Queen Victoria, are represented in relief, but so finely cut, and so small, that it requires a magnifying glass to see them. The Victoria needle can, moreover be opened. It contains a number of needles of similar size, which are equally adorned with scenes in relief.

Publisher's Department.

NOTICE TO TEACHERS.—Do you want a globe for school use? Send us, then, the names of six new subscribers to the SOUTHERN WORKMAN, and we will send you one free of any charges, securely packed in a strong paste-board box.

SUBSCRIBERS TAKE NOTICE!

Every subscriber, who will send us a new name and one dollar, will be entitled to one of our premium oil chromos, provided they make such a request, and designate the chromo they wish. For two new subscribers we will send "Returning Home" ready mounted. For five new names we will send the above picture nicely framed in black walnut and gilt. *We do not send premiums to those who do not request them.* When frames are sent, the receiver will pay the express charges.

OUR PREMIUMS.

Wide awake teachers take notice. Our prize globe is given to every teacher who tute, for two subscribers and two dollars. Teachers will never have a better chance to secure apparatus, books, etc.

SCRIBNER'S MONTHLY,

THE SUMMER CAMPAIGN BEGUN.

"Another Great Literary Sensation,"

The Modern Robinson Crusoe,

With 150 Beautiful Illustrations.

Messrs. SCRIBNER & Co. have secured for serial publication in SCRIBNER'S MONTHLY, M. Jules Verne's Latest Story

"The Mysterious Island,"

in which, not content with the old stories of "ROBINSON CRUSOE," the "SWISS FAMILY ROBINSON," the writer undertakes to show how a party of men, cast upon a mysterious and desert island, may live by their scientific resources alone, without the aid of any wreck to draw upon for the materials of life and comfort.

The party are Americans who set out from Richmond, Va., during the seige, in a balloon. M. Jules Verne unites with an accurate scientific knowledge, an exuberance of inventive genius that has

FASCINATED THE WORLD.

The theme of the present story affords the author the finest opportunity for the display of his peculiar gifts. The story will be profusely illustrated, and is begun in the April number.

For Sale by all News Dealers and Booksellers.
Price, $4.00 a Year, 35 cents a Number.

SCRIBNER & CO.,
654 Broadway, N. Y.

By John B. Roberts, Auctioneer, Hampton, Va.

FIRST CLASS HOTEL PROPERTY FOR SALE. The HYGEIA HOTEL, FORTRESS MONROE, VIRGINIA.

Will be sold on Thursday, the 9th day of April, 1874, at 11 o'clock, A. M., on the premises, the *Hygeia Hotel*, Fortress Monroe, Virginia. This is one of the most superior *summer resorts* of the country, located immediately at the confluence of Hampton Roads with Chesapeake Bay. The bathing is not surpassed along the Atlantic Coast, and the scenery is magnificent.

The Hotel Buildings are constructed in the best manner, and are capable of accommodating two hundred guests. All the appointments of this establishment are of the first class. It is furnished throughout in the most elegant manner.

The Premises pertaining to this property are of very great value, being entirely free from all taxation whatever, and virtually exempt from all competition.

The Hygeia Hotel is not only a Summer Resort of great popularity, but can be conducted most profitably during the entire year.

Immediately after the sale of the Hotel, will be sold the Furniture, consisting of black walnut bedsteads, wardrobes, marble-top bureaus, Brussels carpets, piano, mirrors, billiard tables, and everything usually found in a first-class Hotel. The furniture is really most superior, and has been used but very little.

TERMS: *For the Hotel*—One-third cash, the remainder in two equal instalments of five and eighteen months: the purchaser to execute negotiable notes with approved endorser, and bearing interest from the day of sale, at the rate of six per cent. per annum. The same to be secured by a lien upon the Hotel.

For the Furniture—All articles removed from the Hotel, cash; and for such as remain in the Hotel, upon the same terms upon which the Hotel is sold.

H. PHOEBUS,
THOMAS TABB,
G. S. GRIFFITH, JR.,
Trustees.

Fortress Monroe, *February 27, 1874.*

British, Marine, and Land and Freshwater Shells,

COLLECTED IN GREAT BRITAIN, IRELAND (east and west coast), ORKNEY, SHETLAND, HEBRIDES and CHANNEL ISLANDS, also from DOGGER BANK (many of them by deep sea dredging), on sale or exchange for American Shells, Flowering Plants, Ferns, or specimens of Natural History, suitable for a museum.

Catalogues of the species will be sent on application to GEORGE DIXON, AGRICULTURAL INSTITUTE, HAMPTON, VA.

EXPEDITION FOR LIBERIA.

TO INDUSTRIOUS AND WORTHY PEOPLE of color desirous of removing to Liberia, THE AMERICAN COLONIZATION SOCIETY will give a passage and subsistence on the voyage—made in about forty days—and support for the first six months after landing. Single adult persons get ten acres, and families twenty-five acres of land. These are all gifts—never to be repaid. Those wishing to remove to Liberia should make application, addressed to William Coppinger, Corresponding Secretary and Treasurer of the American Colonization Society, 450 Pennsylvania Avenue, Washington, D. C.

REMOVAL.—The undersigned wishes to inform his many friends and patrons that he has removed his

PHOTOGRAPHING BUSINESS

from Mill Creek Bridge to

CHESAPEAKE HALL,

COR. WILLARD & MELLEN STS.,

Where he is getting nicely fitted up for the different kinds of Picture Work usually found in our best galleries. He will keep a select stock of

CHROMOS, ENGRAVINGS, CRAYONS, LITHOGRAPHS, PHOTOGRAPHS, etc.,

for the benefit of his customers. Also a choice lot of STEREOSCOPIC VIEWS, both foreign and domestic. STEREOSCOPES, FRAMES, and a variety of cases constantly on hand. A better quality of work than heretofore will be guaranteed, as he has with a second to none in the State. Thanking the public for past favors, he hopes respectfully solicits a continuance thereof.

W. F. LARRABEE.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. III. HAMPTON, VA., MAY, 1874. NO 5.

MAY.

MAY.

The sunshine and blossoms of the May time are with us once more, and busy hands are once more sowing seed, gathering fruit, tending the ripening crops and in numberless ways preparing for the fierce heats, which we know are to follow the sweet mild breezes of these early summer days. In our picture the fair young girl who looks at us over her beautiful burden of green branches and bright flowers, brings to mind the pretty English customs of choosing a May Queen, and going a-maying; customs so ancient that that they are traced back to the old heathen days, when gods and goddesses were worshipped, and this month of May was specially set apart for all sort of festivities in honor of the goddess Flora, who was believed to have the care of fruits and flowers. Choosing a May Queen consisted in the children of a neighborhood choosing some young girl from their number, whom, with great ceremony, they crowned Queen of the May, giving her a crown of May blossoms and a throne, and paying her all honor for the short day of her reign. It is easy to see how such an election might be as closely fought and as full of rivalry as any election for town or county office is in our day, and doubtless the various candidates for the position of May Queen tasted the sweets of success, or the bitterness of disappointment, just as truly as if they had been twenty years

(See page 36.)

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, RICHARD TOLMAN, J. H. LARRY, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

The Southern Workman should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.
To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.
For further information, address

Southern Workman.

HAMPTON, MAY, 1874.

The political horizon is cloudy. There are unmistakable indications of a coming storm, that will end either in the complete disruption of the present party organizations, or in new combinations of the elements which compose them. Old issues, upon which glorious battles have been fought and won, are dead. New issues have arisen and are arising, in which the leaders, as well as the rank and file of existing parties differ among themselves. Although this is not a political journal, it is within our province to note the signs of the times, and to discuss new measures touching the public welfare.

Prominent among these questions, is that of "inflation," as it is called, or additional issues of irredeemable currency by the government. When an issues of paper money was decided on by Congress, to meet the necessities of the war, that should be a legal tender, though not redeemable in gold or silver, the act was justified only by the great emergency, and the assurance was given that a return to specie payment should be made as soon as the emergency should cease. The good faith and honor of the country was pledged to this resumption, but now, nearly ten years after the close of the war, a bill has passed both houses of Congress, which, instead of being a measure for a resumption of specie payment, provides for an additional issue of irredeemable paper currency. Against such a violation of the public faith the best minds of the country have constantly and earnestly protested, and movements have been set on foot in several States for the purpose of forming Leagues throughout the country, to unite the people in demanding that our government shall redeem every pledge it has given regarding its financial promises, and to make clear to the people that a fixed standard of value is vital to every department of labor and trade; that self-interest equally with common honesty demands that the promises to re-establish a specie basis for currency shall be kept. In the appeal addressed to the citizens of Massachusetts by a convention, of which that eminent patriot, and clear headed financier, William Gray, was chairman, in which the famous motto of Andrew Jackson, in regard to the Constitution, paraphrased to read "*The Public Faith: it must and shall be preserved,*" is taken as the watchword of the hour, it is stated that "the sole object of this organization is to secure a fixed standard of value and the maintenance of national good faith, and no efforts shall be spared to rescue our country from the evils of a debased currency and the impending disgrace of ultimate repudiation. The aim is to give form and expression to the public sense of wrong. We believe that the people are justly incensed at that shameful and reckless indifference to the plighted faith of the country which characterizes many of our public men. This question of the finances is the supreme question of the hour, and must be carried to the polls. Let us henceforth consider ourselves the political opponents of all public men who are not with us, or who are even undecided upon the matter of the public faith, and resolved to support no such men for any office whatever. We invite the serious attention of earnest men, and appeal to all to join us in maintaining these principles."

On this great question, so vital to the honor and welfare of our great republic, men, who have hitherto been leaders of both the present political parties, are at variance among themselves. The veto of this bill by the President has, for a time at least, averted the threatened national dishonor, and while it has alienated many who have been prominent members of the republican party, it has rallied to his support the ablest financiers and statesmen of all parties, and strengthed the credit of the government at home and abroad.

Other important public questions are arising upon which new political combinations will doubtless be made. Prominent among these are the Grange movement, woman's suffrage and free trade. But transcending all these in importance, and on which, more than all others, depends the honor and stability of the republic and the real welfare of its citizens, is that of maintaining public honesty and good faith, by redeeming the promises of the government.

MUSICAL ENTERTAINMENT.

The Hampton Normal School has been placed under very pleasant obligations to General Barry, for his kindness in affording a rare musical treat to its teachers and students, and a welcome addition to its building fund, by the concert—given on Monday evening, April 13th, by the excellent band of the Artillery School under his command. The concert was given in the assembly room, which was well filled by an audience numbering about three hundred and fifty, of whom nearly one hundred were from Hampton and vicinity. The selections were from the most eminent composers and were admirably rendered, the lofty ceiling and pillars of the hall giving a fine effect to the music, which would have been overpowering in a smaller room. The crowning feature of the evening's entertainment was the "Plantation Quickstep," composed by Giachetti, the talented leader of the Band, and dedicated to the Normal School, which was played in public for the first time at this concert, and which was received with tumultous applause. It is arranged from the familiar melodies sung by the school, and so popular at the North, as rendered by the "Hampton Students" at their concerts. "Babylon's Fallen," "De Winter'll Soon Be Ober" and "I've Been Listening All the Night Long." The piece is admirably arranged and very effective, and repeated encores were requested, which were good naturedly responded to by the Band, the whole school joining with their voices in the third repetition. The school fully appreciated the compliment thus paid them, and will not soon forget Gen. Barry's thoughtful kindness in providing for them such a pleasent evening's entertainment. During the intermission Mr. Larry entertained the audience with a few select readings.

THE FARM.

Cowslip and Buttercup.

WHAT I KNOW ABOUT TWINS.

In the fall of 1871, Mr. Paran L. Foote, an eminent breeder, of Lee, Mass., sold to the Normal School Farm a pair of twin heifers, making a liberal donation at the same time of one-third their value. These twin cows are so nearly alike that it is difficult to distinguish them and are remarkable for their beauty, and aside from their good looks, if judged by the proverb "Handsome is that handsome does," it would be hard to find their match for comeliness on that score. Buttercup calved February 20th and Cowslip, March 31st, and since that time, the Normal School undergraduate, whose pleasant duty it is to milk them, has never done so without opening his eyes to their utmost extent at the bountiful yield. A few evenings ago the milk from the two cows was carefully measured, with the following results: Buttercup, sixteen quarts, Cowslip, fifteen quarts; and it wasn't a very good evening for milk either. Mr. Howe, the farm manager, says these lovely twins attend strictly to their business, are not high fed or over particular about their meals, and that during the month of April, after Cowslip came to her full yield after alving, the two have averaged full *fifteen gallons a day* of good rich milk. These remarkable twins are grade Ayrshires, i. e. Ayrshire and Berkshire both. It is perfectly understood by the employes on the Normal School farm that if they desire to get the good will of the farm manager, they are not to begin by abusing those cows. There are other good cows in the herd of pure stock, but for beauty and good behavior—indeed in all the qualities that go to make up an unexceptionable cow character, Buttercup and Cowslip stand pre-eminent.

MAIKELA.

In this issue we give the first of a series of familiar letters from Mr. Knox, who is so pleasantly remembered here as principal of the Butler and teacher of music and penmanship in the Normal School, two years ago. Mr. Knox is studying music at the Royal Academy, London, where he expects to stay a year or two, and has promised to write for the SOUTHERN WORKMAN occasionally. His first impressions of the Old World will be interesting to all our readers, and especially so to his friends and former pupils in the Normal School.

Old Point, Va.

From The Norfolk Landmark.

Literary Merit Recognised—Presentation Speech by Major General Barry—Reply by Professor Larry—Annual Examination.

FORTRESS MONROE, VA., April 20th, 1874.

On Saturday evening the officers and soldiers of the garrison, and residents of Old Point, spent an hour very pleasantly listening to the admirable reading of Prof. J. H. Larry, of the Hampton Normal and Agricultural School, whom it was our pleasure to hear for the first time.

This gentleman is a minister, and has frequently held religious services in the school-room on Sunday afternoons during the past winter; has delivered an excellent lecture on temperance, and on one occasion gave a select reading in the evening. As he would accept no pecuniary compensation for his services, and being highly appreciated by his friends, they decided to present him with some suitable testimonial, and selected a large, handsomely bound Bible as the most appropriate. Accordingly, it was procured and an invitation extended by Gen. Barry, Commandant, to Prof. Larry to favor us with another reading on Saturday evening. The hop room was selected and the band of the Artillery School occupied the platform and discoursed choice selections during the intervals. The hall was literally packed with the friends of Prof. Larry, and even standing room was not to be had.

The first selection was Whittier's "Barbara Fretchie," which was rendered in a most effective manner, followed by "Sheridan's Ride," and "Father Phil's Collection." At this juncture General Barry ascended the platform and spoke as follows:

"I ask the indulgence of the audience to permit me to interrupt the regular course of the evening's entertainment by a little episode which is not, so to speak, nominated in the bond.

"*Prof. Larry,* On no less than six different occasions, during the past winter, you have most kindly given your time and valuable services for the entertainment, instruction, and moral and religious improvement of the soldiers of this garrison and of their neighbors and friends.

You have most generously refused all pecuniary compensation, although it was spontaneously and repeatedly offered. The audiences whom you have interested so much by your readings and teachings have felt, and now feel, that something more than mere thanks, cordial and sincere as those thanks truly are, is due to you from them. It is in this connection that a number of those whom you have obliged so much have subscribed for a testimonial, which they have requested me to present to you to-night.

"In the name of these subscribers, therefore, I ask you to accept this evidence of their appreciation of your services.

"As commanding officer of this post I feel, furthermore that it is no less a duty than a pleasure, to offer you my personal thanks for the amusement and benefit which you have conferred upon the soldiers of my command.

"In the name of the subscribers and in the name of the soldiers generally, I tender you very hearty wishes for a long life of health, happiness and usefulness."

Gen. Barry then handed Prof. Larry the testimonial, which was a very large family Bible, handsomely bound and profusely illustrated with fine steel engravings, and many of Dore's pictures.

Prof. Larry made a brief reply, thanking the soldiers for their testimonial and giving his reasons for not being willing to accept any pecuniary consideration for his services. He then read "Betsy and I Are Out," followed, by request, with a humorous poem "Darius Green and His Flying Machine," which was highly enjoyed by the audience, and closed with an extract from Burns, "A Man's a Man for A' That."

The annual examination of the class on duty at the Artillery School has been completed and the order announcing the standing of the different officers will be issued this week.

Captain L. A. McLean, with the Heliotrope, has gone down to replace the can buoy on Willoughby's Spit, which drifted a mile and a half southeast of its proper position on Friday night last.

FOR THE SOUTHERN WORKMAN.

THE CITY BY THE SEA.

The annual message of Mayor Ludlow, of Norfolk, Va., to the City Councils, contains facts of interest to all Southern workmen, who realize that they cannot expect full wages until the communities in which they live become prosperous. Since 1865, Norfolk, in common with other Southern cities, has been as feeble as a man who has just passed through a dangerous illness. Before the war, the city had reached the stature permitted by a system, which proved hostile to manufactures, to immigration, to popular education, and to all interests except those of the rich. Possibilities of large growth depended on the destruction of slavery, and the history of the Norfolk of the future may well commence from emancipation day. The old borough was incorporated in 1736, and required one hundred and twenty years to reach a population of 16,000. By the census of 1870 her population was 19,728, and her taxable property over thirteen millions. With such a start, and with the aid of Portsmouth, what may we not expect from the next twenty years, when her cramped energies, long repressed, shall find themselves unfettered at last.

The message of Mayor Ludlow shows that the city affairs are already assuming a healthy condition. His Honor calls attention to the fact that, at the beginning of 1873, the treasury was deficient $3,811. He states that in January, 1874, notwithstanding an appropriation of $1,500 to the Memphis sufferers there was a surplus of $20,467, and that the resources in January, 1875, will exceed the expenditures by

over $53,000. He therefore recommends a decrease of twenty per cent. in license charges and a reduction of twenty-five per cent. in taxes on real and personal property. The names of twelve streets are given on which over two and a quarter miles of new pavement have been laid. It is gratifying to observe that most of this work was on important public thoroughfares, outside the shadow of the rich men's houses. Perhaps the most striking evidence mentioned, of the approach of a new era for Norfolk, is the completion of the water works and the introduction of an abundant supply of the best obtainable water, for the moderate charge of from two to four cents per hundred gallons. His Honor states that the works have been in successful operation since July, 1873. And it can only be attributed to the fact that the few enterprising men of Norfolk, who have means, are so fully occupied in other directions, that advantage has not been taken of the increased facilities afforded for manufactures by the supply of pure water. So entirely inadequate are the resources of Norfolk to her opportunities, that, in common with many other Southern cities, she is compelled to be idly waiting the touch of capital from abroad. But this role of Sleeping Princess is quite an involuntary one and disapproved by a majority of her people, especially by the poorer classes who are anxiously seeking honest work. With a moist climate, which is said by experts to be peculiarly fitted for cotton spinning, and with a mean annual temperature of sixty degrees, free from the extremes of heat or cold which render the expenses for heating so great in Northern factories, the advantages of Norfolk as a manufacturing center cannot be much longer overlooked. The report of the Mayor shows that the receipts of cotton at Norfolk, during 1873, reached the enormous figure of 412,000 bales. She has therefore unsurpassed facilities for obtaining the raw material. Her supply of cheap labor, both white and colored, is practicably unlimited, and the careful tests of the water recently introduced, show no perceptible deposit in steam boilers, and an entire freedom from corrosive action.

Pure water, cheap fuel, water ways to numerous and enlarging markets, invite manufacturers of chairs, sash and blinds, boots and shoes, and fertilizers, besides cotton mills, sugar refineries and chemical works. The absence of a rope factory and a dry dock, signify not so much a lack of enterprise as a deficiency of capital to enter upon a tithe of the avenues which Norfolk presents for investment.

Accompanying the message are statements of the commercial status of the port. The tonnage of vessels arriving in 1873, was 1,235,747, and of vessels clearing was 1,021,376. Forty-four steamers are named, plying regularly to the port of Norfolk, exclusive of the European steamers, of which there is a regular fortnightly line, established in 1872, besides many occasional visitants.

Taking Norfolk as a representative city of the South, her convalescence, as shown by the Mayor's message, is an encouraging fact to Southern workmen, that they will not have to expatriate themselves in order to find remunerative employment.

Correspondence.

LONDON, *Nov.* 28, 1873.

In the old world at last! I can hardly believe that my long cherished wishes are fulfilled and that it is I, myself, treading the streets of London, traveling the Strand, Piccadilly, Regents Park and all the places whose names are so familiar, but which are all so new and strange to me. I often find myself recalling some of the scenes in Dickens' stories, and though I have always thought his characters must be overdrawn, I am sure I have met many of them already in real flesh and blood. Our voyage was rather long, but very pleasant. I am not a much better sailor than when I went to Hampton, by steamer, from Boston, two years ago, therefore I retired to very private life soon after we lost sight of the wharf and the crowd gathered there to speed the parting ship. This was on the morning of Tuesday, Oct. 21, 1873. On the next Sunday, however, I made my appearance on deck again, good as new, and with appetite sharpened to the point of enjoying my five meals a day till the end of the voyage—just one week from that date. We had generally pleasant weather and a smooth sea; one evening, however, towards the close of the second week, a heavy sea struck us, upsetting candles and smashing the plates and dishes just set for tea. We were all in the cabin and for about five minutes confusion and consternation reigned supreme. The ladies "en masse," slid from one side to the other and back again. I seized a falling candle, and performing an impromptu waltz among and over tables and chairs, brought up against the side only to roll over into a corner, smashing up a game of checkers and finally seating myself, candle and all, in the lap of an elderly Englishman, who was calmly viewing the scene from this point, where he was securely wedged in. Order was soon restored, however, the table reset and we calmly sat down to tea.

We made Queenstown Saturday morning; did not enter the harbor, but a small steamer came to take off the passengers and mails. The sail that day along the Southern coast of Ireland, with its rocky shore and lovely green hills beyond in full view, was delightful and we had a glorious moon to light our way along the British Channel.

At about 11.30 P. M., the *Java*, homeward bound, passed us, after which we "turned in" for our last night at sea—to wake up and land at Liverpool the next morning in a cold, dreary rain. I had intended to go directly to London, but having made some very pleasant friends on board the steamer, who resided in Liverpool, and who very kindly urged me to stop there, I was very glad to do so, and greatly enjoyed one day's sight seeing in that quaint old city. We visited St. George's Hall, chiefly interesting to me on account of its large organ, played by Wm. T. Best, said to be in fact as well as in name, the *best* organist in the world—the Public Library and Royal Museum, in which I saw, among other wonders, mummies that were embalmed thousands of years before Christ, and yet the features, eyes, nose and mouth can be distinctly seen, and even the hair still on the head—fearful looking things, indeed, they were. In the Natural History Rooms is a very splendid collection of animals well preserved and stuffed. The museum also contains a model of Rome, about eighteen by forty-five feet, all carved out of wood, in which all the noted buildings were most delicately done. We went across the ferry to Birkenhead to visit the docks, which are miles and miles in extent; went into the yard where the rebel privateer, *Alabama*, was built and launched.

I came to London on Tuesday, just two weeks from the day I left Boston. This is, indeed a wonderful city, nothing seems more strange and foreign to me than the different conveyances and modes of travelling. The cabs (hansoms, they are called, perhaps because they are so ugly) are like an old fashioned chaise, with the driver behind. The horse-cars have a second story, with a spiral flight of steps at each end, by which to reach it. The donkey carts are ridiculous-looking affairs. I saw one with three hogs in it, and the donkey was no larger than either of them, in fact, it looked as if he would go up should they happen to move to the back part of the cart. The street railways are all underground; think of riding fifteen miles, as you can do, all over, or rather all under the city. There are stations at frequent intervals, where you go down stairs to take the cars, and under all the principal streets the trains, with locomotives, are moving ten times faster than any horse cars, and make no noise to be heard above ground. Coming from Liverpool, the cars were very comfortable, although without stoves, instead they have long, iron, flat tubes, filled with hot water, on which to rest one's feet. The engines have no bells, but a most unearthly whistle. They are ugly-looking machines, the one we had has driving wheels eight feet in diameter. There is no shelter whatever for the driver. The stations everywhere beat our American ones all hollow. They are splendid, great buildings, and the railroads run to the center of the city by tunnels, thus crossing no streets, in fact the English railroads are walled in like our carriage roads, and even in the country all roads cross the railroads either by bridges or by going under the track, never crossing on grade, so that it is almost impossible for collisions or run over accidents to occur. I was somewhat disappointed in the scenery on this road, though there were glimpses of some beautiful views, and many of the bridges were covered with beautiful ivy, in such thick masses that sometimes the original stone could hardly be seen. I staid one week at the Euston hotel, at the terminus of the railroad, as I knew nothing of the localities here, except by name, and had not the slightest idea where I should be likely to settle myself for the two years or thereabout, which I hope to spend, here. I have been fortunate, however, in finding another Boston boy, a student in music, like myself, who is very glad to have me join him in the occupancy of a suite of rooms, just vacated by two young men, who are about returning to America, so I am now trying to feel myself at home in St. John's Wood, a very pleasant northwestern suburb of London. I have walked about the city a good deal, taking my bearings from my map, and am becoming somewhat familiar with its vast labrynth of streets, lanes, places, squares and terraces, though I have once or twice found myself miles away, and travelling still farther from the place at which I aimed and which I thought myself to be steadily approaching.

I have registered at the American Exchange, 449 Strand. By paying an annual fee of five dollars, you are entitled to the privileges of the reading room, sitting room, lavatory, etc., can see all the American papers, and have any letters or packages forwarded to you wherever you are. The Exchange is in the very heart of London, exactly opposite Charing Cross, and is a very convenient place to stop at on my way to or from anywhere, if I have a few moments leisure in which to read up on America. I have not done much in the way of sight seeing as yet, but hope to make myself familiar with all the notorieties here during my stay. I have been to the Royal Academy and made arrangements for entering the next term, January, in the mean time shall practice and study diligently, in order to pass the examination, a pretty rigid one, and be admitted to an advanced class.

I dined on our Massachusetts Thanksgiving day with some American friends in Brompton Square, who were my fellow passengers, and went in the evening to the Royal Albert Hall, to hear the oratorio of Israel in Egypt. The music was splendid. Sims Reeves' great solo, "The enemy said: I will pursue," too magnificent to be described. The hall is about six times as large as Music Hall, Boston, with the organ (as large as three of the great organ of B.) at one end. It is oblong, or rather egg-shaped, that is the floor and ceiling are curved. If the Hall were turned over on its side, the dimensions from floor to ceiling, and from side to side, would be the same. The chorus numbered about twelve hundred, and the orchestra was also very large.

On Tuesday last we had a real London November fog, the fog is sometimes so thick here that the "busses" are stopped and all carriage travel suspended, street lamps are lighted at noon day, and you walk in a dark haze until you come within about three feet of a gas light and then you can see your shadow thrown distinctly upon the fog as upon a wall. Yesterday, Thursday, November 27th, was one of the pleasantest days I ever knew anywhere, as I walked across Regents Park, the grass was fresh and green, the sky blue and a soft breeze made it altogether lovely. I can hardly realize that it is late in November, and that in New England the first snow has fallen. K.

PLEBE LIFE AT WEST POINT.

BY A NORMAL SCHOOL GRADUATE.

When the candidate arrives at West Point, he sees the cadets walking around with such curious looking suits on, and notices their very harsh manner of speaking to those whom they suppose to be candidates, and having heard so much talk about the way all candidates are treated by them, his heart seems to fail him. He does not know whether it would be best for him to return home then, or to throw himself in their hands with the determination to take what comes and not to be offended at what they may say to him, knowing that it would be useless. Finally, after having been persuaded by his friends to try it, notwithstanding the many remarks they make about him, as they make about all who enter the Academy, he ventures to try the experiment, although it goes very much against the grain. He, however, turns his steps towards the Adjutant's office to register his name, give his age and the state and county from whence he came; all of which is done as if he were signing a death warrant. He then stands, as did the children of Israel at the Red Sea, when pursued by Pharaoh, to see what would next befall him.

The adjutant touches a small bell which he keeps on his desk, and very soon in comes a young man dressed in soldier clothes, his coat being trimmed all over the breast with white tape, or something similar, whom this poor miserable "beast," as cadets sometimes call "candidates" or "plebes," might have taken to be the Superintendent, but the Adjutant addresses him as orderly. He directs him to conduct the "plebe" to the barracks, which he enters very reluctantly, fearing that he may meet some cadets, who will take him as their prey, and sure enough he is met by several of them, under whose charge he is to be placed for a while.

"Now for fun," say one of them, and they immediately begin on their new prey to see which one can devour him first. Mr. A comes up to him and very roughly asks him several questions and tells him to knock at the office door, after a short conversation between those inside the office, Mr. B says to him, "Come in."

The "beast" walks in, as a person naturally would, with his hat in his hand, whereupon Messrs. A, B, C and D all together burst out in a great laughter, while one of them steps up to him, seizes his hat, throws it in the hall outside, and very soon he is seen following it.

The "plebe," not liking such treatment, but remembering that he could expect no better from them, regrets that he had ever accepted his appointment; he longs to be once more out of their hands and with those who would treat him with more respect.

He would willingly exchange places with some one who desires to be there, and gladly would he send in his resignation to get free, but it was a little too late; they had him in their hands and there were no means by which he could escape for some time to come.

After he has learned how to enter the office properly, Mr. A tells him once more to knock at the door, then he is told to come in, this time he is more successful, but if any one should ask him concerning it, he would probably say that it was worse than before.

I shall endeavor to state here some of the many things which these cadets do and say to the "Beast," after they have succeeded in getting him into the office properly. For instance, one of them takes a hammer and a tack; this tack he drives in a post directly in front of the "beast," if there is not one already there, and going up to him, asks him if he sees it, if so to keep his eyes on it continually, not to move them for anything and answer every question which they might ask him promptly, taking great care to add the word "sir" at the end of each answer. They then ask him every foolish question that they can think of, and if he should smile, or should he omit the word "sir," once, on account of not being accustomed to using that word in such a place, so often they would act as though he had killed some one, or as though they would cut him up as fine as mince meat, at the same time they do not allow him to open his mouth.

After asking him a few questions concerning his place of residence, they tell him to get out and go with the orderly. This orderly has been directed to conduct him to the hospital, where he not only has to undergo a physical examination, but to meet with a great many more cadets there who are glad to have the oportunity to speak to a "beast" in their harsh and rough manner, but he has to take it all as calmly as a lamb if he wants to get along well with them after all this is over. After leaving there he returns to the office which he first entered, and from there he is sent to the barracks in order that those over him might assign him a room. After giving him a few instructions about how the room should be kept, and things in general, they leave him alone, or with some one who has just been along a similar road.

Now, thinks he, it is all over, but his roommates assure him that the cadets had done nothing towards plaguing him yet, but persuade him to stay and take it all like a clever fellow.

Very soon a drum is heard, and immediately after the voice of Mr. A, who orders the candidates to turn out. Now, all of them are seen rushing down the stairway as though they were pursued by several bears, then they fall in two ranks and are marched to dinner or supper, as the case may be; everthing goes very well with them until they return to the barracks, when they have to pass through another storm of remarks from other cadets than those over them, in addition to their usual allowance during the day. They are thus treated until the "setting-up drill" commences, this drill being conducted by cadets of the third class, the poor "beast's" treatment is changed from bad to worse; they are drilled before crowds of spectators in the most severe and rough manner. These drills are similar to gymnastic exercises and are known as "First Exercise," "Second Exercise," "Third Exercise," etc., and are continued until the latter part of camp every morning and evening. The "Beast" is now considered a fourth-classman, and is respected; being hardened by rough treatment.

PILOT.

A COLORED MAN'S ACHIEVEMENT.

We have just seen what we consider one of the most wonderful trimphs of modern invention, in the shape of a printing press. It was invented by Mr. Joseph E. Hayne, a colored gentleman of Charleston, South Carolina. The first striking peculiarity about this press is, that it has a bed at each end, and one revolution will print both sides of a newspaper as large as the New York *Tribune*, or for that matter larger; so that a perfect newspaper comes from the press by one united motion of its complicated, yet simply acting, machinery.

It is a self-feeding, perfecting platten press: that is, it takes up the paper without the aid of a human feeder after it is once laid on, the roller and the shifting agencies turn the paper from one end of the press to the other, while, at the same time, they turn the paper over after it receives its first impression, to take its second and last impression. The completed work is then lifted and dropped by self-action of the press into a box made to receive it. The second peculiar feature is, that it does bookwork as thoroughly and as expeditiously as it does newspaper work.

The plate forms at each end can be so adjusted that any size of chase can be put upon them, and the action upon them is as accurate as Adams' press, which has heretofore been considered as without a rival for bookwork, just as Hoe's press has been considered without competition for newspaper work.

The minor advantages of the Hayne press are: 1st, that one man can manage the press. 2d, it can print 70,000 impressions a day. 3d, it can be built for two thousand dollars, whereas any other press which can do as much work will cost from $25,000 to $30,000; and, 4th, that it saves labor—requiring but one man to attend to it, while a Hoe ten cylinder, which prints but ten thousand copies per hour (only a few more thousand per day than the Hayne press), requires ten men to work it and will cost in the neighborhood of $50,000.

Mr. Joseph E. Hayne is a man of unmixed African blood, about twenty-five years of age, and a native of Charleston, S. C. He is a gentleman of medium height, of pleasing and gentlemanly address. His well-formed head and intellectual face give earnest of still higher achievements in the profession which he has marked out for himself. Already his talents have enlisted the warmest sympathies of such men as Col. J. W. Forney, Judge W. D. Kelley, Col. A. M. Clapp and others, who are lending him every assistance towards realizing the pecuniary rewards of his masterly invention.—*New National Era.*

MAY.

(Continued from page 33.)

older, and struggling for some more substantial honor.

Going a-maying in the days long ago must have been a pretty sight to see and a pretty thing to do, for it meant that all the boys and girls in a village would get up soon after mid-night on May morning and, accompanied by music and the blowing of horns, would betake themselves to some neighboring wood, and breaking down green branches of trees, would wind and twine them with nosegsys and wreaths of flowers, taking them home at last, about sunrise, to decorate the doors and windows of their houses, thus making the streets as fresh and bowery as the woods themselves. We are told by old historians that even the kings and queens of England used to join in this celebration of May day, and would themselves go out with the people to gather the May early in the morning, a practice much less harmful to their dignity than are some of the amusements of modern sovereigns. So we can look at our picture and fancy that the little maiden has been a-maying and is just now going home to the cottage that we see in the distance, to trim it gaily with the green boughs she has gathered, or, we can honor her pretty face still further by believing that it is just now bright with the hope of a joyful day, because her young companions have lovingly chosen her to be their "Queen o' the May."

THE CLOUD.

SHELLEY.

I bring fresh showers for the thirsting flowers,
From the seas and the streams;
I bear light shades for the leaves, when laid,
In their noon-day dreams.
From my wings are shaken the dews that waken
The sweet buds every one,
When rocked to rest on their mother's breast,
As she dances about the sun.
I wield the flail of the lashing hail,
And whiten the green fields under,
And then again I dissolve it in rain,
And laugh as I pass in thunder.

I sift the snow on the mountains below,
And their great pines groan aghast;
And all the night 'tis my pillow white,
While I sleep in the arms of the blast.
Sublime on the towers of my skyey bowers,
Lightning, my pilot, sits;
In a cavern under is fettered the thunder,
It struggles and howls at fits;
Over earth and ocean, with gentle motion,
This pilot is guiding me,
Lured by the love of the genii that move,
In the depths of the purple sea;
Over the rills, and the crags, and the hills,
Over the lakes and the plains,
Wherever he dream, under mountain or stream,
The spirit he loves remains;
And I all the while bask in heaven's blue smile,
Whilst he is dissolving in rains.

The sanguine sunrise with his meteor eyes,
And his burning plumes outspread,
Leaps on the back of my sailing rack,
When the morning star shines dead.
As on the jag of a mountain crag,
Which an earthquake rocks and swings,
An eagle alit one moment may sit,
In the light of its golden wings.
And when sunset may breath, from the lit sea
Beneath,
Its ardours of rest and of love,
And the crimson pall of eve may fall,
From the depth of heaven above,
With wings folded I rest, on mine airy nest,
As still as a brooding dove.

That orbed maiden, with white fire laden,
Whom mortals call the moon,
Glides glimmering o'er my fleece-like floor,
By the midnight breezes strewn;
And wherever the beat of her unseen feet,
Which only the angels hear,
May have broken the woof of my tent's thin
roof,
The stars peep behind her and peer;
And I laugh to see them whirl and flee
Like a swarm of golden bees,
When I widen the rent in my wind-built tent,
Till the calm rivers, lakes and seas,
Like strips of the sky, fallen through me, on
high,
Are each paved with the moon and these.

I bind the sun's throne with the burning zone,
And the moon's with a girdle of pearl;
The volcanoes are dim, and the stars reel and
swim,
When the whirlwinds my banner unfurl.
From cape to cape, with a bridge-like shape,
Over a torrent sea,
Sunbeam proof, I hang like a roof,
The mountains its columns be.
The triumphal arch through which I march,
With hurricane, fire and snow,
When the powers of the air are chained to my
chair,
Is the million-colored bow;
The sphere-fire above its soft colours wove,
While the moist earth was laughing below.

I am the daughter of earth and water,
And the nursling of the sky:
I pass through the pores of the ocean and shores;
I change, but I cannot die.
For after the rain, when with never a stain,
The pavilion of heaven is bare,
And the winds and sunbeams with their convex
gleams,
Build up the blue dome of air,
I silently laugh at my own cenotaph,
And out of the caverns of rain,
Like a child from the womb, like a ghost from
the tomb,
I arise and unbuild it again.

PERCY BYSSHE SHELLEY.

Of all the modern English poets there is probably not one whose life is so complex, whose character so difficult to understand and do justice to, as Shelley's. His genius was great and his heart large and tender, but practically his life was a series of mistakes (to use no harsher word), ending in a tragic catastrophe. He was born in the county of Sussex, England, in 1792, and while a school-boy began to give evidence of power, and an originality which at times, and on some points, laid him open to the charge of actual crime. He declared himself to be an atheist, and was ultra-liberal in his political views, denied the validity of or necessity for the marriage contract, and opposed himself intensely to many existing institutions which he believed to be unjust or unreasonable. His life was spent in wandering in England, Ireland and on the continent, and he married at nineteen, a girl of sixteen, with whom he lived only two years, re-marrying some three years later, after his first wife had drowned herself. His second wife was Mary Wollstonecraft Godwin, a woman of great intellect and cultivation, who wrote, among other things, the famous novel "Frankenstein," and with her he lived for a time in England, removing, however, in 1818 to Italy, whence he never returned. He was not allowed to keep his children, on account of the laxness of his moral and religious views, and this misfortune cast a gloom over his whole life, which the few warm friends who remained with him were never able to dispel. While boating in the Bay of Spezia, in 1822, he was drowned by the upsetting of the boat, and as the quarantine regulations of Tuscany require that everything drifting from the sea should be burned, for fear of introducing the plague into Europe, his body was reduced to ashes on a funeral pile, after the ancient custom. Lord Byron, Leigh Hunt and another friend were present, and saving the precious ashes, took them to the burial ground at Rome, where they now lie, near the tomb of Keats, another famous English poet. His longest and most important productions are Queen Mab, Adonais, Alastor, Revolt of Islam, Prometheus Unbound, Julian and Maddalo, The Cenci, The Witch of Atlas and Hellas. Of his minor poems perhaps the most beautiful and best known are The Sky Lark, The Sensitive Plant and The Cloud, which last we give herewith.

Of the man it has been well said that his conduct was better than his creed, for he was remarkably tender, charitable and sensitive to the wrongs of others, while his own life was made miserable by the accusations constantly made against him of immorality and impiety. We cannot even yet judge of him completely, and his life would be painful to contemplate, and terrible in its suggestions, if it were not for the faith that makes us sure that in a happier world, he has found the solution of all that so perplexed him here.

SLAVERY IN AFRICA.

We trust that our readers take sufficient interest in this question to be glad to hear from time to time of the efforts which are being made to suppress the slave trade in the Nile provinces, and throughout the interior of Africa. Darfur, which is a country lying to the east of Soudan, with a despotic government and a people who are mussulmans in religion, carries on a considerable trade with Egypt, Mecca and the inland countries of Africa, bartering slaves, ivory, ostrich feathers and hides for silks, cottons, glassware, trinkets and firearms. The population is estimated at 200,000 and trading caravans go forth frequently from the struggling town of Kobbe, its capital. Quite recently the king of Darfur sent out an army of ten thousand men with three cannon to assist the bands of slave dealers, which army was met by the forces of the Khedive of Egypt, and completely beaten, all its flags and its three cannon being captured, and its general killed by the victors. This defeat is of interest as showing that the Khedive is in earnest in his endeavors to suppress the slave trade in Egypt, for the latest advices state that the Egyptian troops, after their victory, were continuing their advance into the Darfur territory, pursuing and dispersing the organized bands of slave dealers in all directions. Such vigilance and persistence as this strike at the very root of the fatal trade in flesh and blood, and is one great step in the civilization of the African continent. Indeed, little can be done in other directions until this first step is made sure, and the difficulties which lie in the way of all exploration will be vastly lessened when the explorers have no longer anything to fear from the rapacity and inhumanity of the slave dealers. The whole interior of Africa is now disgraced and kept in hopeless degradation by the system of barter and sale which exists therein, and its people will have little chance for permanent improvement until the civilized nations of the world succeed in putting down forever this terrible traffic. If the Egyptian government persists in its praiseworthy attempts, a road will be opened by which entrance can be peaceably effected into those regions which are at present the most deeply barbarized, and then we may hope to see some real change in the condition of the African people.

ANCIENT TOMBS AND BURIAL CUSTOMS.

Among all the civilized nations of ancient times the customs of burning and embalming the bodies of their dead prevailed extensively, and we still find many curious relics secured to us by means of this practice. The millions of tombs which line the banks of the Nile are merely caves dug in the soft rock, and the gigantic Pyramids themselves are masses of masonry enclosing the mausoleum of some royal personage. In the neighborhood of the city of Rome are many well-preserved tombs and mausoleums, some of them extremely beautiful. The fortress of St. Angelo, which protects the city, having been built originally as the tomb of the Emperor Hadrian, though to-day it is merely a magnificent circular fort, overlooking the river Tiber and forming one of the most striking features of the "Eternal City." Some of the most interesting of these tombs are the "columbaria," which are excavations in the hill sides lined with masonry and having their walls honeycombed with little recesses like pigeon holes, in which urns containing the ashes of the dead, or their skulls and bones, were placed for preservation. Some of our readers may have seen that much is being written just now in our papers and magazines about the revival of this ancient custom of burning the bodies of the dead. "Cremation," as this rite is called, is thought by many people to be a more reasonable manner of burying our dead than any other, inasmuch as it does away with the necessity for large cemeteries, and all the risks attendant upon the placing of dead bodies in the ground, while it is just as solemn and revcrential as an ordinary funeral custom, and to some minds is full of suggestion of that day, when "this corruptible shall put on incorruption." But so important a matter as this, surrounded as it is by so much solemn interest, will not be lightly decided upon and it is probable that many years will pass before there will be any general change in our present burial customs, for if such a change as this proposed should ever come, it will come very gradually and with much opposition. Undoubtedly the burial of the dead in the close vicinity of cities and towns, is hurtful to the living, and the natural decay to which human remains, in common with all living organisms, are subject, makes it necessary to consider carefully in what manner we can most wisely and solemnly put our dead away from us. In any case we shall only be returning to the customs of our fathers, for, as is evident from the ruins and records which still exist, cremation, embalming and various other forms of burial were practiced for centuries before our modern customs arose, and may not improperly outlast them.

CHARLES SUMNER.

We are sure that a condensed statement of the facts of this great man's life will be acceptable to all our readers, for his personal history is so closely interwoven with the history of the nation that it must necessarily be of more than common interest, while his individual character was especially attractive and admirable. He was born in Boston, Mass., on the 6th of January, 1811, and being the son of a lawyer, was educated to his father's profession, graduating at Havard College, and studying in Cambridge Law School under Judge Story.

In 1834 he was admitted to the bar and soon after began his public career by lecturing before the law school, where he showed especial interest in matters of International and constitutional law. At this time, too, he was the editor of the *American Jurist*, and from 1837 to 1840, he traveled in Europe, visiting England, Germany, Italy and France. Some five years later he began to interest himself actively in politics, and on the 4th of July, 1845, when the country was strongly in favor of the Mexican war, he distinguished himself by an oration, in which he denounced the entire war system and strongly advocated all reasonable peace measures. His first anti-slavery address was delivered at Faneuil Hall, Boston, in November, 1845, and was called forth by the question of the admission of Texas into the Union, Mr. Sumner being, from that time on, a formidable opponent of slavery, a thorough and uncompromising abolitionist.

When, in 1850, Daniel Webster left the Senate to take a place in the cabinet of President Filmore, Mr. Sumner was elected to Webster's seat in the Senate by a coalition of democrats and free soilers, and promptly took ground against the iniquitous Fugitive Slave Bill; in one of his speeches on this subject, making the well known point, "Freedom is national, slavery is sectional." In 1856 he delivered a two days speech on "The crime against Kansas," and on the following day—May 22d—while writing at his desk in the Senate chamber, he was attacked by Preston S. Brooks, who struck him on the head with a gutta percha cane, continuing his blows until his victim was insensible. For a long time Mr. Sumner's life was despaired of and the years of 1857 and '58 were spent in Paris, under the care of various eminent surgeons, who, by means of numerous painful operations succeeded in accomplishing a cure, and sent their patient back, in 1859, to the United States, to prove, by his eloquent speech on the "Barbarism of Slavery," that his great suffering had not impaired his intellectual or oratorical powers.

He was prominent during the first Lincoln Presidential contest, and in 1861 was appointed chairman of the committee on foreign relations. He spoke frequently and among his later efforts may be mentioned his eulogy on President Lincoln in 1865, and his proposal to remove, from all public buildings, the war flags captured from the Confederate States, and from the regimental flags the names of battles fought during the war of secession, which latter speech brought down upon him much bitter criticism, though he lived to see his motives justified.

Mr. Sumner was an orator of the first rank, being not only eloquent, but more than usually polished and refined in his address, and while opinions differ as to his ability as a stateman, there can be no doubt that he was a brave and honest man.

As Americans, we have reason to be proud of his record, and it is certain that few men of our own day have left behind them warmer friends and truer mourners than Charles Sumner.

A FIRE EXTINGUISHER.—Dissolve four ounces of pearlash in a little warm water, then add to a bucketful of cold water. Discharge this on the fire with an ordinary garden pump. If used in the start it will have wonderful effect and will extinguish a fire almost immediately.

EACH MOTHER'S CHILD THE BEST.

As I walked over the hills one day,
I listened and heard a mother sheep say:
"In all the green world there is nothing so sweet,
As my little lamby, with his nimble feet;
With his wool so white,
And his eye so bright,
Oh, he is my darling, my heart's delight!
The robin, he that sings on the tree,
Dearly may dote on his nestlings four,
But I love my one little lambkin more."
So the mother sheep and her little one,
Side by side, lay down in the sun,
And there let them lie on the hill-side warm,
While *my* little lamby lies here on my arm.

I looked in the kitchen, and what did I see
But the old grey cat and her kittens three:
I heard her murmuring soft, said she,
"My kittens with tails all so cunningly curled,
Are the prettiest things I have seen in the world;
The robin, he,
And the old ewe, she,
May love their babies exceedingly,
But I love my kittens from morn to night,
The malty, the grey, and the black-and-white;
Which is the prettiest I cannot tell,
Which of the three, for the life of me,
I love them all so well.
I'll take up my kittles, the kitties I love,
And we'll lie down together beneath the warm stove."
So let them sleep under the stove so warm,
While *my* little kitten lies here on my arm.

I went to the bara yard, and saw the old hen
Go clucking about with her chickens ten.
"The cat loves her kittens, the ewe loves her lamb,
But they cannot know what a proud mother *I* am.
You may hunt the full moon, and the stars, if you please;
But you never will find ten such chickens as these.
You dear, downy darlings, you sweet yellow things,
Come nestle now cosily under my wings."
So the hen said,
And the chickens sped
As fast as they could to their soft feather bed,
And there let them snuggle in feathers so warm
While *my* little chick nestles here on my arm.
—*Songs for the Little Ones.*

MR. HASTLE'S LESSON.

BY MARIETTA HOLLEY.

It was a very good dinner, nicely cooked; but still a comfortless air surrounded the table, a chill atmosphere, radiating, I suppose, from the foot of the table, where Mr. Hastle sat.

Mrs. Hastle, behind the tea-tray, was a meek, gentle-faced woman, with the look of a house plant that had grown in the shade, but was by nature peculiarly dependent upon the sun to give it warmth and color. I imagine Mr. Hastle was the sun she looked to, and he did not give out sunshine and warmth enough to sustain his drooping parasite, for she looked wilted and drooping.

Alice, the daughter, was an energetic-looking young damsel of nineteen. From her father's family, I imagine, she had inherited her straight-forward, brown eyes, and the decided contour of her rosy-tinted chin.

Mr. Hastle's hair was smoothly brushed up and braided across the top of his head. He had on an immaculate shirt, and his clean gingham cravat was tied in a very precise and exact bow. He wore his second best suit of cloths, and his well-brushed hat lay on the side-table. You think, do you not, that Mr. Hastle was going somewhere? You are right. Mr. Hastle was going to the village. A meeting of the trustees had been called, for some church business. He felt that he was one of the pillars and must be there to sustain the weight of the church, lest, haply, it should fall and tumble into ruin. Mr. Hastle had signified to his wife his desire that dinner should be upon the table at precisely half-past eleven, and she had, at some inconvenience to herself, gotten it on the table at precisely that moment; and while dinner was progressing, in the very heat of the battle, as we may say, while she was in the greatest hurry of her preparations, he had entered the house and called for his clean shirt. Mrs. Hastle had hurriedly washed her hands; she was making the dressing for the lamb, but she dropped the pepper-box, the sage and the bread crumbs, and hied away, as upon the wings of the wind, to obey his commands. And she brought out the snowy linen, with its glossy bosom and cuffs bearing witness to the hard labor she had bestowed upon them. Again she had become engrossed in the preparations for dinner, when the imperious summons came from the bed-room, "Sally, come and button my shirt-sleeves." Again the willing and obedient slave ran to do him service. "He couldn't make the confounded thing catch any way!" She worked zealously, but not so deftly as of old, for her fingers, which had been so supple and delicate when they had first commenced to toil for him, were now coarsened and made clumsy by hard labor. But, at last, by many turnings and twistings of the farmer's brawny wrists, and much hard breathing on Sally's part, she succeeded in buttoning them, and was rewarded by the mandate, "Hurry up the dinner, Sally." She had gotten it nearly ready, was just putting her tea to steep, when again the summons came, "Sally, come and tie up my cravat! It looks like the Old Scratch, the best way you can fix it." Never did a monarch's trustiest slave obey more swiftly. And then his hair must be parted straight, and Sally must part it; and Sally must brush his coat, and his hat because she always had, I suppose. But take it altogether, with the hurry of getting the dinner on the table, and the labor of preparing "father" to appear creditably among the other pillars that afternoon, Sally looked tired out as they sat down to the table; and as the meal drew near to a conclusion, instead of looking rested, she looked more flushed and worried and uneasy. Something seemed to be on Sally's mind. Finally, she spoke, as she handed her husband his third cup of tea.

"The tea is all gone, father. You will have to get some to-day."

"The tea all gone!"

If Mrs. Hastle had told him that his barn had sunk into the depths of the earth, and a mountain had risen over its ruins, he couldn't have manifested any deeper surprise and dismay. "The tea all gone! How long is it, I should like to know, since I got half a pound."

Receiving no solution to this deep conundrum, Mr. Hastle continued, in a sterner, more majestic tone:

"How long is it, I would like to know, since I got half a pound of tea?"

Mrs. Hastle said nothing, but nervously rattled her teaspoon.

"It does beat all how things go here. I believe they are wasted. But I suppose I must get some." As, indeed, he had intended to do all the time. And he evidently smothered his regret as he tasted the sweet cherry pie, his favorite pastry, and which Sally had prepared for the express purpose of propitiating him.

But though Mrs. Hastle's nerves were strung upon wire, and the wire was waving in the wind, and her spirit fainted within her, she was a mother, and what mother will not dare all and suffer all for her child's sake? The picnic, so soon to come off, was to be a large affair, and all the young girls of her own age were to wear white muslin dresses, and Alice had none. So the weak voice was raised again.

"Father, guess you will have to——"

"What? Mrs. Hastle, what now?"

This he said in such terrible tones, that meek little Mrs. Hastle dropped the words immediately, as a boy will drop the stolen peaches when the farmer seizes him by the collar.

"Alice wants a new summer dress; a white one."

"A new summer dress! A white one?"

But we will hasten out at once on to the quiet piazza, or stroll round in the door-yard, while Mr. Hastle gives relief to his outraged feelings in regard to "summer dresses." Before the speech was half done, however, Alice left the table with a red flush on her cheek, and a flashing light in her brown eyes, and Mrs. Hastle alone listened to his closing words, which she knew, from long experience, would come after his lecture had concluded.

"I can get her a summer dress, I s'pose, but I shall pick it out myself, and get something that will wear and be durable."

"She picked out the piece she wanted at the corner store," said Sally, pleadingly. "She's got her mind set on a white muslin. All the girls are going to have one."

"Because every other girl is a fool, does it follow that our girl has got to be one? I guess her father's judgment is better than hern. White muslin! Catch her death-cold in it, and no wear to it at all.

"In all the green world there is nothing so sweet,
As my little lamby, with his nimble feet."

I shall get her one that I think will be durable, and do her some good."

Mrs. Hastle dared venture no more remarks. But it was with a sinking heart that she helped him into his overcoat, picked up his gloves, and followed him out to the gate with his handkerchief, which, as usual, he had forgotten.

Now, Alice, the daughter, was not a martyr; she had no vocation in that direction; she was warm-hearted and generous; but a reasonable and reasoning human being, who saw quickly and felt deeply an injustice. When Mrs. Hastle re-entered the house, Alice had not returned to her work up stairs, but was clearing off the table, with an unusually quick movement even for her; while her brown eyes still sparkled with indignant fire, and a red flush burned steadily into each cheek.

"Mother!" she broke forth. "I will not stand it much longer. I will leave home! I will——"

"Leave home!" cried poor Mrs. Hastle, feeling that her back was indeed the back of a camel, and that the last straw was being lifted upon it."

"Yes, leave home! Aunt Martha wants me to come and live with her. There she is, as rich as a Jew and good-hearted, too, as she can be; and, now, since Emma is married, and she is alone, you know just how she is urging me, every time she sees me, to come and stay with her; and I will go! I will not endure father's tyranny much longer. He makes home a perfect torment."

"Don't talk so, Alice. Your pa means well. He is dreadful hard to get along with, but he means well."

"And my dress! I won't wear it, mother, and you will see that I won't. He will bring home some great sun-flower looking delaine, see if he don't. He may wear it, if he does; make it into pantaloons and vests; I'd like to have him. Suppose we picked out his clothes, mother, and insisted on his wearing them. I would, mother, if I were you; see how he would like that! Maybe that would teach him to let our dresses alone. And look at the parlor paper, that he would get; it makes the parlor look like a perfect fright; and the parlor wood-work a bright yellow. Suppose we made him paint his new barn to suit us."

Here a sudden flash of light, as from a new thought, lit up the sparkling, bright, brown eyes. And when her mother put in her voice again, "Father means well, but he don't think," the light grew still brighter, as Alice said, impulsively, standing up in front of her mother, "What do you say to making him think?"

"What do you mean, Alice?"

"Well, there is one plan we can try, if you will help me, mother. You know father has got to go to grandfather's, pretty soon, to be gone a week, and——"

Well, just as sure as I live, they have gone into the pantry and shut the door; they are pretending to wash the dinner-dishes; but, in reality, they are discussing that plan.

Shall we listen at the key-hole, as Sammy is doing, and try to overhear their conversation? No! We scorn the ignoble suggestion! We will wait patiently till Alice's plan develops itself, or till she tells herself. A woman never can keep a secret for any length of time—that we know.

At night, Mr. Hastle returned. Alice's dress was, as her boding fears had suggested, a thick delaine, a bright yellow ground-work (a favorite color of Mr. Hastle's), on which green and red nose-gays disported themselves.

"A good, sound piece of cloth," he said, admiringly, as he unrolled it, "one that will last her for years. None of your flimsy, white muslins, that will tear to pieces if you touch it. Good for summer or winter, and strong enough for a man's wear."

In fact, it was an uncommonly thick piece of rep delaine, for morning dresses. Its gorgeous coloring had taken his eye, and its fine texture had endeared it to his heart.

Alice said not a word as he held its flaming folds up before her. But her poor mother watched her face anxiously. Had it not been for the mysterious words uttered in the pantry, she would have felt assured that this affair would have ended in the departure of her child. But the anxious mother, watching, saw a flash of light gleam over the pretty face, once during her father's remarks, when he said "it was strong enough for a man's wear."

As we have said, Alice said not a word, but poor Mrs. Hastle gave utterance to the sad, long complaints that household martyrs are wont to indulge in, as the gridiron heats and the faggots blaze beneath them, and that ended with "What will folks say to see her with such a dress on to the picnic?"

"What will folks say!" Never did Sally call down on her devoted head a longer lecture than she did then. "An old woman like her, old enough to be sensible, if she was ever going to be, and a church-member, too, to think of what other folks would say. Why didn't he care for what folks said? He had a mind of his own. He cared nothing at all for what folks said about his clothes. And he didn't care nothin' at all about his clothes himself, only to have them whole and sound that was all he wanted. Why couldn't wimmin foller his example?"

We will kindly draw a veil over the suffering Sally's efforts to get Mr. Hastle into his best clothes, and safely started the next morning; and over all the proceedings of the mother and daughter during the week that followed, we also draw a veil. But on the afternoon of Mr. Hastle's return we will go out and meet him, for he thought he would walk from the depot, and we will walk along by his side,

invisibly, of course, like a guardian spirit.

Mr. Hastle had completed the business satisfactorily. He was in a serene state of mind. He had left his valise at the depot, to be sent for, and he was walking along, happily, with his hands folded across his respectable back. As he neared his house, he took out his watch. "A little past supper time," he said, "but, of course, they'll wait for me; they always do." He had been gone nearly a week; of course, they would have something extra good—cherry pie, may be. Wrapped in these pleasant reflections he entered his dwelling. His wife and daughter met him pleasantly though, to tell the truth, Sally's eyes wore a somewhat frightened look.

But no well-spread supper-table met his longing vision.

"Why, isn't supper ready, Mrs. Hastle?" he cried.

Before her mother could speak, Alice said, with an astonished looked:

"Supper! Why, we have eaten supper an hour ago."

"Well, then, get me some as quick as you can, for I am half starved."

Poor Sally, at this, half rose from her chair, but, glancing at Alice, she sat down again, and repeated, much as if she were saying a lesson,

"The fire is all out. It would be a sight of trouble to build one."

Neither his wife nor daughter stirred; and Mr. Hastle grew frightened.

"Are you sick, Sally?"

"No," said Sally, meekly.

"Then why don't you get me something to eat?"

"Because the fire is out," said she in a weak voice.

Mr. Hastle put his hand to his brow, with a look of helpless wonderment, that was too much even for Alice to endure, and she said:

"I suppose we shall try to get you some."

At this Sally, with a look of relief, hastened out into the kitchen, to prepare the extra good supper she had cooked expressly for him.

She had just got the white table cloth in her hand, when a voice came from the bed room:

"Sally, where is my every-day vest? I can't find it."

"I can't leave off to find it. I am busy setting the table," said Sally, evidently denying this request with more readiness than she had any of his others. But Alice spoke up at once:

"We have made you a new one, father. We thought you needed one."

"Wall, I didn't need another every-day vest. The idea of your dictating to me about my clothes! Where is my old vest?"

"Just see your new vest, father," said Alice, demurely, as she brought it foward and spread it out before him, with an air of great satisfaction. It was made of that identical cloth that he had bought for Alice's dress. It was made rather long and had a fold of the same round the edge.

"Because it would wear better," Alice explained. "Braid wears out so quick, and we had heard you say so many times that you cared nothing for fashion, at all. You know you said that this cloth was durable; good for summer or winter; strong enough for men's wear. That put it into our heads to surprise you with a nice new vest made of it. You know," she added, sweetly, "that you are always making just such surprises for ma and me."

Mr. Hastle opened his mouth wide enough to give utterance to the largest words in Webster's Unabridged, but no words came, at first. Finally he found voice.

"Do you suppose I am ever goin' to put that lookin' thing on to me?"

"Why, yes," said Alice, demurely; "You know you don't care anything about looks, if it is only good cloth and wears well."

"Why, folks would say I was a natural born fool, or else as crazy as a loon."

"But then, father, you know you don't pay any attention to what folks say or think of your clothes."

Mr. Hastle made no reply, for the good reason that he had, at the time, nothing to say. So he put on his hat, and walked out of the kitchen door. He evidently wanted to be in the fresh air for a moment. But as he stepped his foot on the platform a sight met his eyes, that would, I am sure, have made his hair stand perfectly erect upon the top of his head if he had had any to stand up. There stood his new barn, the pride of his eyes, in which he had taken a pride, that we fear was sinful; there it stood, painted entirely yellow on the end, fronting the kitchen; and he supposed, of course, the whole of it was.

"Isn't it pretty, father? There won't be so pretty a barn in the neighborhood. As I told mother, women don't often have their say about such things; but if they did, things would look a sight better."

No audible words were spoken in reply. But memory was whispering loudly to Mr. Hastle. These were the very self-same words that he had uttered in relation to that bright yellow paint and gorgeous wall paper in the parlor. The tables were turned upon him. For the first time he realized how it seemed, to have his own personal affairs controlled by those who had no business with them; how it would seem to be dictated to, unreasonably, concerning his own out-door affairs; now it would seem to have his own clothing selected for him, regardless of his own preferences; how it would seem to have his reasonable household requests met with grumbling and granted grudgingly.

Mr. Hastle was naturally a just man, and a sensible one, one who only needed to have his duty pointed out to him, in order to follow it. He walked into the house, ate his supper, put on his old coat, and proceeded to do his barn-chores. He retired early to bed. And what thoughts visited him as he lay upon his pillow, I know not. But that he thought deeply and sensibly, I am certain, from the result.

The next morning old Sorrel stood by the gate ready to convey Mr. Hastle to the village after his valise, and to transact other needful business.

Mr. Hastle's countenance looked subdued yet dignified. There is no dignity to be compared to the dignity of a new and noble purpose. But Sally looked nervous especially, as Mr. Hastle was about rising from the table, and Sally had to mention some small article that she or Alice wanted at the store. Then did the meditations of Mr. Hastle in the night watches become manifest.

"Look here, Sally: if you think that I don't understand what all that tom-foolery you and Alice had last night was for, then you take me to be a bigger fool than I am. I ain't a going to say but what I have been in the wrong on it. But one thing I will say, that in the future there is going to be a new leaf turned over. I calculate to manage my out-door affairs for myself, and you and Alice must manage the in-door affairs to suit yourselves. There is old Sorrel, and you and Alice can be carried to the store any time you say the word, and what you buy will be paid for; but as for me—I have picked out my last yard of calico."

TIMBER FOUR THOUSAND YEARS OLD.

Probably the oldest timber in the world which has been subjected to the use of man is that which is found in the ancient temples of Egypt. It is found in connection with stone-work which is known to be at least four thousand years old. This wood, and the only wood used in the construction of the temple, is in the form of ties, holding the end of one stone to another in its upper surface. When two blocks were laid in place then it appears that an excavation about an inch deep was made in each block, into which an hour glass-shaped tie was driven. It is, therefore, very difficult to force any stone from its position. The ties appear to have been the tamarisk or shittim wood, of which the ark was constructed, a sacred tree in ancient Egypt, and now very rarely found in the valley of the Nile. Those dove-tailed ties are just as sound now as on the day of insertion. Although fuel is extremely scarce in the country, these bits of wood are not large enough to make it an object with the Arabs to heave off layer after layer of heavy stone for so small a prize. Had they been of bronze, half of the old temples would have been destroyed years ago, so precious would they have been for various purposes.

The Teachers's Table.

We intend to devote this column, in future, to such practical information, hints and suggestions as we think may be of use to those graduates of Hampton and others, among our readers, who are filling the important position of teachers. Every one who accepts such a position, conscientiously, is soon thankful for all the assistance he can secure, and we hope to make this department increasingly useful to these earnest workmen.

How to Secure the Attention of Pupils.—I know of no more potent or effectual way of securing the student's attention than by giving him full credit for whatever talent he may display or possess, and thus raising his aspirations. It not only reflects credit upon the teacher, in the manifest good effects of their instruction, but it confers likewise an unspeakable blessing on him, by raising his thoughts to the attainment of greatness, which can never be reached but by the high road of virtue and rectitude. S. W. Pease.

Specimen Object Lessons for Primary Schools.—Such simple lessons from natural objects as those we find below, will be found very useful in primary schools, and we recommend them to graduates from Hamptnn and others. They interest children, keep their attention, and while they cannot entirely take the place of text books, they perform a valuable service in educatinn, which text books alone cannot; training the eye and all the powers of observation in the most practical way, and relieving the hard work of study by the pleasure of putting to use at once the principles learned. We will give other specimen object lessons from time to time, in this column.

Lessons on Length—The Foot.

Lesson 1st. Look at this rule, all of you; it is a foot long, and is called a foot rule; any thing just as long as this rule is a foot long; any thing twice as long is two feet long; anything three times as long is three feet long. Now see me measure this stick. (The teacher is provided with half-a-dozen straight sticks, one, two, three, four, five and six feet long respectively.) How long is it? Answer: One foot long. We will measure another; one, two. How long is this? Answer: Two feet long. Now, another; count while I measure. One, two, three. How long is it, then? Answer: Three feet long.

Thomas, come here and measure one, carefully. The rest count for him. One, two, three, four. How long? Ans.: Four feet long. Let me measure the other two. How long is this? Ans.: Five feet. And this? Ans.: Six feet.

So you see these sticks have different lengths. I will mix them all together. Now, John, find the one that is a foot long. Right. William, pick out the one three feet long. Is that the right one, class? Answer: No, sir; that is four feet long. (William tries again.) Is that right? Answer: Yes, sir.

Let the class practice in this way, till they can select readily any measure called for.

Lesson 2d. Thomas, you may lay all the sticks on the table, beginning with the shortest. The rest may watch him and call the length of each as he lays it down.

Now, we will measure something else. Guess the length of this table the long way. Answer: Four feet. Willinm, take the rule and measure it carefully. One, two, three, and a half over. How long? Answer: Three feet and a half. How long is the table the short way? Answer: Two feet. I will measure. One, two, and a half, again; how long? Answer: Two feet and a half? Listen, the long way of the table is its length, and the short way is its width. How long is it? Answer; Three feet and a half. How wide is it? Answer: Two feet and a half. Here is a board, which way is its length? And which way is its width? Guess how long it is. Answer: Five feet long. Measure it; not quite five feet you see. How long is it? Answer: Four feet and a half. Now tell me which way is the length of this door. Answer: Up and down. Which way is its width?

Exercise the class in this way in guessing and measuring the various objects in the room.

Lesson 3d. Where is the bottom of the door? Answer: Where it touches the floor. Where is the top of it? Well, which way is the length of the door? Answer: From the bottom to the top? Yes, and that is called its height. The length of anything upward, from where it stands is called its height.

Guess how many feet high the door is. James: Five feet. Susan: Six feet. Let us measure. It is seven feet high. How wide is the door? Answer: About three feet. Yes, exactly three feet wide.

In this manner teach the height and width of the window, the room, &c. The children may guess each others height, each case being settled by the foot rule.—*From Object Lessons prepared for Teachers of Primary Schools by A. S. Welch, Principal of Michigan State Normal School.*

What a School-Room Ought To Be.—An example of what a school-room ought to be is given by Mr. Jolly, Inspector of Schools, in his general report on Church of Scotland schools for the last year: "The room itself," he says, "is scrupulously clean, being regularly washed and swept, and no dirt lurks in the corners. The seats and furniture are bright and clean, the walls white-washed and the windows clean as glass can be. The sunshine makes itself known by its brightness and reflection, and not by screaming with difficulty through a dusty fog. The walls are hung with maps, colored pictures, good prints and illuminated sayings of the good and great tastefully arranged. Festoons of leaves mingled with flowers hang gracefully on the wall, and are regularly renewed all the year round. The desks are free from littered hooks and bonnets. The books are placed on shelves below, and such as are on the desks are evenly arranged above each other. Every child has his own part of the shelf for books and his own nail for bonnet and cloak. Flowers growing in pots stand in each window—a bouquet adorns the teachers desk, the gift of a scholar in the morning, and another is on the mantlepiece; for the children vie with each other in bringing them, and the room is never without their fresh, sweet influence. The children themselves are clean in hands, faces and dress, their hair is neatly combed and their shoots still show the morning polish. Every child reflects the tidy and cheerful look of the master. The forms of the classes, when seated, or standing on the floor have regularity and symmetry. No boy is seen lounging on the desk or lazily leaning on his neighbor's shoulder, or laid with shoe-out feet against a desk or wall. The attitudes of the children are erect and active, and have not a little grace. Even the books and slates are held with neatness and grace." Not one point in the above picture is from fancy. Mr. Jolly "has seen it all." Why, he asks, should it not be true in every case?

Pictures and maps are perhaps the only items of this list of attractions that are not absolutely within the reach of every teacher. Cleanliness, order, leaves and wild flowers, cost only time, patience and taste.

Here is a bright little "piece" for a boy to speak on examination day. To be effective it should be given with spirit, entering into the very various feelings represented, and this is, indeed, the great secret of all good speaking.

THE WAY TO DO IT.

BY M. M. D.

I'll tell you how I speak a piece:
First I make my bow;
Then I bring my words out clear
And plain as I know how.

Next I throw my hands up *so!*
Then I lift my eyes—
That's to let my hearers know
Something doth surprise.

Next I grin and show my teeth
Nearly every one;
Shake my shoulders, hold my sides,
That's the sign of fun.

Next I start and knit my brow,
Hold my head erect;
Something's wrong, you see, and I
Decidedly object.

Then I wabble at my knees,
Clutch at shadows near,
Tremble well from top to toe:
That's the sign of fear.

Soon I scowl, and with a leap
Seize an airy dagger.
"Wretch!" I cry. That's tragedy;
Every soul to stagger.

Then I let my voice grow faint,
Gasp and hold my breath;
Tumble down and plunge about:
That's a villian's death.

Quickly, then, I come to life,
Perfectly restored;
With a bow my speech is done,
Now, you will please applaud.

—*St. Nicholas.*

LEARNING TO READ.

Newspepers in Schools.

One of the English Inspectors of Schools, the Rev. G. Steel, reporting this year, on Lancashire, states that in regard to reading, it is his custom to examine the first class in the newspaper of the day. The children stand in a semi-circle, and pass the newspaper around, and he requires them to read in such a manner that he and all present can both hear and understand, and then he asks questions. He does not generally enter much into politics, but contents himself with the children's understanding who such persons as Mr. Gladstone, Mr. Disraeli, Mr. Forster and M. Thiers are. The Inspector says he almost always gets correct answers about the Queen and Royal family. Accidents, fires and suicides excite the keenest interest, but he often gets very fair answers to such questions as these: What is a telegram, a

locomotive, an ironclad, a telescope? What do you mean by Prime Minister, Judge, Coroner, M. P., M. D.? Once to his question, what do you mean by P. M.? a little boy sharply answered "Past morning," which was not bad. It showed far better teaching and learning than that mere mechanical system of which Inspectors so often complain as only an exercise in sound and not in sense.

Agricultural.

THE FOOD OF PLANTS.

BY GEORGE DIXON.

Before entering upon the consideration of the food of plants, it seems necessary to enquire a little into their composition, and the methods by which, from dead earth, they have been elaborated into living bodies. On the very threshold of our inquiry, we are met with the mystery of life, which we cannot penetrate. It first manifests itself in the *germ* of the seed, which the parent plant has matured, and surrounded by the material necessary for its sustenance, till it can convert dead mineral matter into living organisms. In certain conditions the seed continues at rest and torpid; but, when placed at a proper depth in the soil, and exposed to the joint action of the sun's rays, moisture and air, it expands and gives off carbonic acid gas, by which a new substance is formed, called *diastase*, a kind of ferment, which possesses the property of converting the *insoluble* starch, stored up in the seed, into *soluble* sugar. Diastase is, at first, formed in very small quantities, and in close contact with the germ; supplying food to the young plant as fast as it is required; enabling it to expand and form a *radical*, which it sends downward for a root, and a *plumule*, upward to the surface, to form a leaf. The first growth is evidently at the expense of the material already laid up by the parent plant in the seed. The germ has the power to *transform* and *appropriate* this store of material, and prepare the plantlet to construct those organs, by which it can draw its own nourishment from the elements by which it is surrounded in the earth and air, and become an independent living structure; but the maturing and healthy developement of its system depends upon two conditions, *a supply of suitable food to its roots*, to enable it to build up its various parts, and meet those changes of internal composition and decomposition, which living organized bodies are continually undergoing; *and external influences*, such as are best adapted to stimulate the living organs to perform their appropriate work of change, and convert this food into their own substance.

I stated before, that the almost insignificant residue of white ash, which remains when vegetable matter of any kind (wood, straw, leaves, seed, etc.), is burnt in an open fire, exposed to the air (four-fifths of which is nitrogen and one-fifth oxygen gases), is the *inorganic* part of the plant; the elements of which are all found in the soil, which has been chiefly formed by the wearing down and decomposition of our most common rocks and minerals. The large portion, which has disappeared in the burning, is the *organic* matter, of which the living, growing plant is mainly constituted; the elements of which are oxygen, hydrogen, nitrogen and carbon. The first three are gases; the carbon is a solid. It is pure in the diamond; plumbago or graphite, known as black lead, used in polishing stoves, and the manufacture of drawing pencils, is carbon in another of its forms; it is also found combined with lime and other minerals in the earth, and with oxygen as carbonic acid gas in the atmosphere.

If heat is applied to vegetable matter confined in an iron vessel or oven, with only a small opening, or covered up to keep it from contact with the atmosphere, the gaseous elements are driven off, and a black mass is left, which we call charcoal. This is the carbon with the mineral ash distributed through its substance. The charcoal, though blackened and reduced in bulk and weight, is not changed in its outward appearance; we can still recognize in it the stem, branches, knots, bark, pith and even the grain and texture of the wood; from which we arrive at the conclusion, *that carbon is used in building up the whole plant.* In round numbers, about fifty per cent. of the whole produce, including roots, stems, leaves and seeds, is carbon; twenty-five per cent., water and inorganic mineral matter; and the remaining twenty-five per cent., other organic substances. Let us endeavor to find the sources from which the plant gets its carbon. All productive soils contain *mould*, which is formed of decaying organic matters, which have fallen to the ground after the death of the living structures, of which they once formed a part, and mingled with the mineral substances.

A great diversity of textures are added to the soil in this way; composed principally of the four organic elements. The mould of the soil consists chiefly of two parts; one in which traces of organic structure are still visible; another in which all such traces have disappeared. The first part is made up of fibrous fragments, which have not been destroyed by decomposition. The rest is a dark brown substance, that has lost all fibrous appearance by being thoroughly decomposed. It is designated *humus*, and is the first form of simplified condition, in which the elements of organized structure are found, after they have been freed of the rule of life, and restored to the domain of uncontrolled chemical power. Humic substance is always possessed of acid properties, and when it is first formed, out of the fibrous matters, each complex atom is found by analysis to contain within itself forty atoms of carbon, fourteen atoms of hydrogen, and twelve atoms of oxygen. There is no nitrogen in humic substance, because the entire quantity of this element, which is separated from decaying structures, remains united with hydrogen as ammonia, and is taken up by the alumina of the soil. Humic substance, on exposure to the air, continues to lose carbon and hydrogen, which are converted into carbonic acid and water, and to acquire oxygen. It is finally entirely resolved into carbonic acid and water, which is the last stage of decomposition, and is now ready to be absorbed by the roots of plants. At the extremities of the thread-like fibrils of the roots, are *spongioles*, fine tubes terminating in suckers, which draw in water, with the humus, mineral and gaseous elements in solution. This fluid is carried by capillary attraction through minute vessels in the stem and branches, as ascending sap, up to the leaves. The spongioles, when examined by a powerful microscope, are found to be protected by a closely fitting sheath, which answers the double purpose of making a way for the sucker, and filtering the fluid before entering its tube. As fast as the outer layers of the sheath become worn and withered by forcing their way through the soil, they are as rapidly renewed by new layers at the inside, by the growing point.

Let us look a little to the sources from which the plant can obtain the large amount of carbon required in building up its various parts. Is the whole of it taken up by the roots from the soil, or has the plant some other way of obtaining it? Mr. Laws and Dr. Gilbert, who have for many years carried on an experimental farm at Rothamstead, in England, have proved by carefully weighing the cereal crops, that they contain on an average 1,600 pounds of carbon per acre. The plant has no power of creating carbon, lime, potash, iron, etc., and therefore it must obtain them from matter in which they previously exist. Until about thirty years ago the prevalent notion was that the carbon of vegetables produce was furnished to the plant by the humus formed by the decomposition of pre-existing vegetable matter. Eminent agricultural chemists, in both France and England, expressed doubts of this theory; but it was not exploded till the year 1840, when the celebrated German chemist, Liebig, proved the inadequacy of the humus to supply all the carbon required by the plant. He did not doubt, but that there might be lands, so rich in carbon, as to contain the quantity required; but it was a settled fact, that it must be formed into humus before it could enter the the spongioles of the roots. Humus is exceedingly insoluble in water; and Liebig made this curious calculation, that if all the rain that falls upon the land during the time the crop is growing, from seed time to harvest, was to remain upon the land, and dissolve as much of the humus as it was capable of dissolving, so as to become thoroughly saturated with it; and that the water so saturated did not drain away or become evaporated, nevertheless there could not be dissolved in this water, a sufficient quantity of humus, to furnish the carbon ultimately found in the crop. Of course this does not demonstrate that the plant can not get its carbon from the humus of the soil; it only proves that it cannot get it by the only process of absorption of which we have any knowledge. Laws and Gilbert established an important fact, that a crop may be more than doubled by adding *artificial fertilisers containing no carbon, whatever.* The dispute was finally settled by the French chemist Bousingault, who matured plants from seeds in artificially prepared soils, which had been subject to a red heat, from which the whole of the organic carbonaceous vegetable matter had been burnt out; although the fertilizers added to these soils contained no carbonaceous matter, yet the plant when matured was found to contain its usual amount of carbon. Experiments have also proved, that plants do not use up the vegetable matter contained in the soil in which they grow, but very much increase it, so that the more vegetation we can get from the surface, the more humus we accumulate in the soil. Hence, so far from humus being the cause of vegetation, vegetation is the cause of humus, seeing it is chiefly produced from the decay of vegetable matter. (This will be further discussed in our article on ploughing-in green crops).

Having clearly proved that the carbon of the plant cannot all be derived from the soil, the query seems to arise, does the atmosphere contain carbon, and if so, by what process does the plant extract it?

I stated above that the atmosphere was composed of one-fifth oxygen and four-fifths nitrogen, but very careful analysis has proved it to have invariably a trace of carbonic acid gas in its composition; amounting to four parts in 10,000. This may seem small at first, but when the immense extent of the atmosphere is taken into consideration, it really becomes enormous, and we are led to the conclusion, *that the atmosphere is the great storehouse of carbon.*

The weight of the air overlying every square inch of the earth's surface, is fifteen pounds, or 2,160 pounds to the square foot, and at the rate of 4 pounds in ten thousand, makes one and a half pounds of carbonic acid gas to each foot, which is equivalent to half a pound of solid carbon. Then reckoning from feet to acres, we arrive at the astounding fact that there are continually suspended over every acre of land, about 20,000 pounds of carbon. Laws' and Gilbert's experiments proved that the average amount of carbon in a crop of cereals is 1,600 pounds per acre; so that the carbon in the atmosphere is not only enormous but far in excess of the wants of vegetation; and far in excess of the carbon in all the living beings, both plants and animals, existing on the surface of the earth; as well as all the combustible carboneceous minerals buried under its surface; for coal is simply vegetable matter buried in the earth, with the greater portion of the elementary gases driven off during the lapse of ages; a certain quantity of inflammable hydrogen only being left in combination with the dense carbon. Each atom of carbonic acid gas contains within itself one atom of solid carbon, and two atoms of oxygen gas, united together in some unknown plan of arrangement. When charcoal is burnt and turned into carbonic acid gas, two atoms of oxygen seize upon each atom of dense carbon and fly away with it into the atmosphere in the gaseous condition.

Carbonic acid gas is much heavier than the atmospheric air, and would remain on the surface of the ground, if it was not for the law of diffusion, by which gases mix with each other irrespective of their specific gravity. Hence we find the proportion of carbonic acid gas in the atmosphere the same on the level of the sea as on the tops of the loftiest mountains. The air brought down by Gay Lussac, in his balloon, from the greatest height he was able to ascend was found to have carbonic acid in its composition. Our investigations, then, have brought us to the conclusion that by contact with the air, plants, at any rate, are afforded the opportunity of getting that carbon, which constitutes so large a portion of their structure. The question now is, do they avail themselves of the opportunity afforded them? Do they actually absorb carbonic acid gas from the atmosphere, and extract its carbon? Priestly, Saussure and Senebier, at the end of the last century, discovered that growing plants when exposed under the influence of the sunlight, to air containing carbonic acid gas, absorbed it and discharged only its constituent oxygen into the air; the necessary inference being that its other constituent, carbon, was taken up by their tissues. Bonsingault by rigid and correct analysis established this fact. He confined a growing plant in a glass vessel, exposed to the sun's rays, through which a current of air was made to pass; by a careful analysis of the air before it entered the vessel and after it left it, he found the carbonic acid gas had diminished and the oxygen increased. These experiments have been frequently repeated with the same results. The chemist can convert carbon into carbonic acid by burning it in the atmosphere or oxygen gas, but by no known process can he resolve it into its constituent elements; all his attempts to extract carbon from carbonic acid gas have utterly failed. Nature does in this respect what man fails to do. She makes a laboratory of every little leaf; takes into it from the atmosphere the invisible carbonic acid gas; with the sunbeam for her reagent, separates the two gases, sends the oxygen back into the air, retains the carbon, and by uniting it with a few grains of mineral or earthy matter, clothes the earth with a luxurant vegetation, from the tiny moss to the gigantic oak of the forest, supplying grass for cattle and herbs for the service of men."

Although carbon, as before stated, enters into the composition of all plants in the proportion of 50 per cent. of their whole mass (exclusive of watery vapor and inorganic matter), there is no danger of the supply failing; whatever the plant has taken from the humus in the soil by its roots, or from the carbonic acid gas of the atmosphere through its leaves, it restores again to one or the other of these sources.

Carbonic acid gas is a constant product of the burning or decomposition of carbon in whatever combination it may be. It is carried up the chimney from every coal or wood fire; it is given off from all decaying animal and vegetable matter; it is exhaled from every breathing lung. It would accumulate in the atmosphere, in consequence of the abundance of its supply from these sources, until it reached a noxious amount, if it was not for the infinsuce of vegetable life. By this influence it is abstracted from the air as fast as it is produced, so that the medium proportion of 4 parts in 10,000 is permanently preserved. Oxygen, by its affinity for the atoms of carbon, becomes its carrier; growing plants are fixed in the soil and cannot go in pursuit of their food as animals can, so it is brought to them by a singularly beautiful contrivence. The all-present, energetic oxygen, enters the lungs of animals, rushes into the furnaces and fires where fuel is being consumed, and all places where decay is going on, seizes upon the loosening atoms of dense, solid carbon, and converts them, as it were, by a touch, into a subtle elastic gas, which the passing breeze wafts away and brings in contact with the smallest vegetable pores. This brings me to the consideration of the structure and chemistry of the leaf.

TO BE CONTINUED.

THE FLORA OF HAMPTON.

A botanist sends us a list of the plants he has found growing wild in the neighborhood of Hampton this year; arranged according to their time of flowering. We give the English name in italics:

JANUARY.

Draba verna—*whitlow grass.* Lamium amplaxicaulis—*hen-bit.* Capsella bursa-pastoris—*shepherd's purse.*

FEBRUARY.

Senebiera didyma—*carpet cress.* Stellaria media—*chick weed.* Taraxacum dens leonis—*dandelion.* Poa annua—*early pasture grass.*

MARCH.

Oxalis stricta—*yellow wood-sorrel.* Houstonia cerulea—*innocence.* Acer rubrum—*red maple.* Asarum virginicum—*wild ginger;* Epigœa repens—*trailing arbutus.* Vinca minor—*smaller periwinkle.* Viola cucullata—*hooded violet.* Amelanchier Canadensis—*shad bush.* Ranunculus bulbosus—*bulbous buttercup.* Autenaria plantaginifolia—*mouse-ear everlasting.* Prunus Americana—*wild plum.* Muscari moschatum—*grape hyacinth.* Fragaria Virginiana—*wild strawberry.* Arabis thaliana —*rock cress.* Vicia sativa—*partridge pea.* Fumaria officinalis—*fumitory.* Cardamins hirsuta—*hairy cardamine.* Carastium viscosum—*sticky chickweed.* Barbarea vulgaris—*winter cress.* Salix Babylonica—*weeping willow.* Viola tricolor—*pansy.*

APRIL.

Zephyranthus atamasco—*amaryllis.* Veronica arvensis—*field speedwell.* Ranunculus aquatilis—*water crows-foot.* Ranunculus sceleratus —*celery crows-foot.* Nepeta glechoma—*ground ivy.* Luzula campestris—*wood rush.* Pinus tæda—*old field pine.* Benzoin odorifarum—*spicewood.* Podophyllum peltatum—*mandrake.* Myrica cerifera—*bayberry.* Vaccinium corymbosum—*blue bilberry.* Veronica serpyllifolia—*thyme leaved speedwell.* Allium, striatum—*streaked garlic.* Gnaphalium purpureum—*purple everlasting.* Gelsemium sempervirens —*yellow jessamine.* Cerastium vulgatum—*mouse-ear chickweed.* Lithospermum arveuse —*gromwell.* Rumax acetosella—*sheep sorrel.* Sonchus asper—*sow thistle.* Potentilla Norvegica —*cinquefoil.* Ranunculus abortivus—*spearwort.* Populus tremuloides—*aspen poplar.* Viola blanda—*smooth sweet violet.* Viola palmata—*hand-leaved violet.* Cynoglossia Virginica —*spring beauty.* Sassafras officinalis—*sassafras.* Cornus Florida—*dogwood.* Pyrus arbutifolia—*choke berry.* Senecio tomentosus—*woolly groundsel.* Listora convallarioides— *purple tway-blade.* Iris vernata—*vernal iris.* Narcissus poeticus—*poet's narcissus.* Pyrus coronaria—*sweet-scented crab tree.* Cercis Canadensis—*Judas tree.* Ranunculus acris—*buttercup.* Valerianella olitoria—*lamb lettuce.* Plantago Virginica—*lesser plantain.* Rubus trivialis—*southern dewberry.* Nyssa uniflora— *swamp tupelo.* Trifolium repens—*white clover.* Anthoxanthum odoratum—*sweet vernal grass.* Krigia Carolininna—*dwarf dandelion.* Lucanthemum vulgare—*ox-eye daisy.* Plantago lanceolata—*rib wort.*

Hampton Normal School.

We are always glad to hear from our graduates and students, who are engaged in teaching. The following extract of a letter from Mrs. Wallace (Nancy Ellison), who with her husband were students in 1870, will be read with interest:

"Mr. Wallace and I are teaching the same school in Clarksville with eighty scholars. Mr. Wallace's health is declining from constant teaching. He has lost twenty pounds within eighteen months. Two physicians have advised him to resort to some other business, though the county superintendent and trustees are unwilling to give him up.

"The colored people, in general, are advancing. There are five or six prosperous colored merchants in the town. The finest church in town is owned by the colored people. It is built on a hill and its spire can be seen and bell heard for miles around. Good ministers and teachers are what they need most. A great many are buying land in small quantities and building on it. We enclose a slip taken from *The Roanoke Valley*, a paper edited here, etc. The colored free school opened last Monday, with Mr. R. Wallace teacher. Mr. Wallace taught at two different schools in the Boydton township the past year and gave general satisfaction. His school numbers about sixty scholars."

YELLOW JESSAMINE.

In tangled wreaths, in clustered gleaming stars,
In floating, curling sprays,
The golden flower comes shining through the woods
These February days;
Forth go all hearts, all hands, from ont the town
To bring her gayly in,
This wild, sweet princess of far Florida—
The yellow jessamin.

The live oaks smile to see her lovely face
Peep from the thickets; shy,
She hides beneath the leaves her tender hnds
Till, bolder grown, on high
She curls a tendril, throws a spray, then springs
Herself aloft in glee,
And, hnrsting in a thonsand blossoms, swings
In wreaths from tree to tree.

The dwarf palmetto on his knees adores
This princess of the air;
The lone pine, barren, stands afar and sighs,
"Ah! come, lest I despair;"
The myrtle thickets and ill-tempered thorns
Quiver and thrill within,
Ae through their leaves they feel the dainty touch
Of yellow jessamine.

The garden roses wonder as they see
The wreaths of golden bloom
Brought in from the far woods with eager haste
To deck the poorest room,
The rich man's honse, alike; the loaded hund
Give sprays to all they meet,
Till, gay with flowers, the people come
And all the air is sweet.

The Southern lapd, well weary of its green,
Which may not fall nor fade
Bestirs itself to greet the lovely flower
With leaves of fresher shade;
The pine has tassels, and the orange-trees
Their fragrant work begin—
Spring has come—has come to Florida,
With yellow jessamin.

—*Constance Fenimore Woolson, in Appleton's Journal.*

Scientific and Mechanical.

Compressed Air.—Professor Tyndall has compressed alr to one-eighth of its original volume by means of a column of water two hundred and sixty feet in hight. When he allowed lt to escape it expanded so violently and rapidly that it produced most intense cold. The moisture in the room was congealed in a shower of snow and the pipe became covered with lcicles.

Electric Clocks.—Some paper has suggested the formation of time companies, that shall run clocks by electricity, laying wires along the principal streets and supplying the true time to honses along the street at a small cost. This Idea might, at first thought, seem impracticable, bnt we doubt not it will finally be tried and prove a success. This will give citizens the correct time without the trouble of winding up the clocks every day or week.

American Invention.—Dnring the past year 12,371 patents have been issued. One patent to every 3,116 of the popnlation. New York leads the list with 2,826, while Idaho and New Mexico have received bnt one each. Connecticut, the land of brass clocks and wooden nutmegs, leads in the true sense, having had one patent to every 860 of her population. Our own State has received seventy-six patents.

The liability of glued articles to come to pieces when exposed to the action of water, especially hot water, is familiar to every one. By adding to the water, with which the glue is mixed when required for use, a small quantity of bichromate of potash, and afterward exposing the part to which it is applied to light, the glne is rendered insoluble, and articles fastened with it resist the action of the water. The proportion of bichromate of potash to be taken must be determined by experiment, bnt for most purposes one-fiftieth of the amount of glue employed will be sufficient.
—*The Popular Science Monthly.*

POISONOUS QUALITIES OF BROMIDE OF POTASSIUM.

Bromide of potassium has of late years, been a great favorite with the medical profession on account of the many virtues it is said to possess in cases of nervous diseases, and cerebral affection. We are, however, in a recent medical thesis, solemnly warned of various ills that have attended lts use, such as a decrease of strength, muscular weakness, trembling of the hands emaciation, loss of appetite, and many other evils. These, however, are said, on the other hand, to depend, probably, on the excessive use of this substance, or on lts application in cases where the general symptons would properly forbid its employment.

The Pin Machine.—This machlne is the closest approach that mechanics have made to the dexterity of the human hand. It about the hight and size of a lady's sewing machlne, only much stronger. On the side at the back, a light belt descends from a long shaft in the ceiling, that drives all the machines, ranged in rows on the floor. On the left side of the machine hangs, on a peg, a reel of wire, that has been straightened by running through a compound system of small rollers. The wire descends, and the end of it enters the machine. This is the food consumed by this voracions little dwarf. He pulls it in and bites it off, by inches, incessantly—140 bites to the minute. Just as he seizes each bite, a little hammer with a concave face, hits the end of the wire three times, and "npsets" it to a head, while he drives it to a counter-sunk hole between his teeth. With an outward thrust of his tongue he then lays the pin sideways In a little groove across the rim of a small wheel that slowly revolves. By the external pressure of a stationary hoop, these pins roll in their places as they are carried under two series of small files, three in each. These files grow finer towards the end of the series. They lie at a slight inclination on the pins, and by a series of cams, levers and springs are made to play like lightning. Thus the pins are dropped in a little shower in a box. Twenty-eight pounds are a day's work for one of these jerking little automatons. The machine rejects crooked pins, the slightest irregularity in any of them being detected.

IMPROVED METHOD OF TAKING PLASTER CASTS.

As some of our readers may be interested to know a method by which plaster casts of objects in natural history can be taken most conviently, we present some instructions lately published by Mr. Boyd Dawkins, an English naturalist of much eminence.

The best material for the mould in which casts are to be taken is said to be artist's modelling wax, a snbstance similar to that used by dentists. When softened and applied to any object it takes the most delicate markings with perfect exactness. The object whose figure is to be taken is first coated with a thin powder of steatlte, or French chalk, which prevents the adhesion of the wax. After the wax has become softened, either by immersion in warm water, or from exposure to the direct heat of the fire, it is to be applied to the orginal, and carefully pressed into all the little cavities. The edges of the wax are then to be carefully trimmed all around, if the form of the object be such as to require the mould to be in one or more additional pieces in order to complete its contour. Powdered steatite is again to be used to prevent the several portions of the mould from adhering to each other, and the original is to be taken ont of the monld before the latter becomes perfectly cold and rigid. After wetting the moulds to prevent bubbles of air lurking in the small interstices from appearing in the object, plaster is to be poured in; or, if the monld is in two pieces, it is generally better to fill each with the plaster separately, and then put them together. In this way the weight of the material will be redneed, and the cast itself will form a shell of greater or less thickness.

The plaster casts are next to be dried, wholly or partially, and may be then painted of any desired color; or the color may be mixed with the plaster before it is introduced into the mould. After the cast is thoroughly dried it is to be steeped in paraffine, the ordinary candles answering this purpose very well. When the cast is cold, it may be polished by hand with steatite, and the result will be found to be much superior to that ordinarily attained by the old fashioned methods. It is stated that flint implements, fossil bones and teeth can be imitated in this way so that they can scarcely be distingnished from the originals.

Publisher's Department.

Notice to Teachers.—Do you want a globe for school use? Send us, then, the names of six new subscribers to the Southern Workman, and we will send you one free of any charges, securely packed in a strong paste-board box.

SUBSCRIBERS TAKE NOTICE!

Every subscriber, who will send us a new name and one dollar, will be entitled to one of our premium oil chromos, provided they make such a request, and designate the chromo they wish. For two new subscribers we will send "Returning Home" ready mounted. For five new names we will send the above picture nicely framed in black walnut and gilt. *We do not send premiums to those who do not request them.* When frames are sent, the receiver will pay the express charges.

OUR PREMIUMS.

Wide awake teachers take notice. Our prize globe is given to every teacher who sends us six subscribers and six dollars.

A box of mathematical instruments to every one sending four new subscribers and four dollars.

A compound mieroscope for ten subscribers and ten dollars.

A toy steam engine for six subscribers and six dollars.

A photograph of the "Hampton Stndents," the singers from Hampton Institute, for two subscribers and two dollars.

Teachers will never have a better chance to secure apparatus, books, etc.

SCRIBNER'S MONTHLY,

THE SUMMER CAMPAIGN BEGUN.

"Another Great Literary Sensation,"

The Modern Robinson Crusoe,

With 150 Beautiful Illustrations.

Messrs. Scribner & Co. have secured for serial publication in SCRIBNER'S MONTHLY, M. Jules Verne's Latest Story

"The Mysterious Island,"

in which, not content with the old stories of "ROBINSON CRUSOE," the "SWISS FAMILY ROBINSON," the writer undertakes to show how a party of men, cast npon a mysterions and desert Island, may live by their scientific resonrces alone, without the aid of any wreck to draw npon for the materials of life and comfort.

The party are Americans who set ont from Richmond, Va., during the setge, in a balloon. M. Jules Verne nnites with an accurate scientific knowledge, an exuberance of inventive genius that has

FASCINATED THE WORLD.

The theme of the present story affords the author the finest opportunity for the display of his peculiar gifts. The story will be profusely illustrated, and is begun in the April number.

For Sale by all News Dealers and Booksellers.
Price, $4.00 a Year, 35 cents a Number.

SCRIBNER & CO.,
654 Broadway, N. Y.

"Hampton and its Students,"

BY

Mrs. M. F. Armstrong and Helen W. Ludlow;

WITH

SLAVE SONGS,

Arranged by T. P. FENNER.

FOR SALE AT THE OFFICE OF THE

Treasurer of the Normal School.

NOTICE.

A NUMBER OF THE STUDENTS OF THE Hampton Normal and Agricultural Institute desire to canvass in York this coming vacation, if they can obtain situations. Those desiring good, faithful young men for the months of July, August and September will do well to correspond with this office, stating wages, &c.

FOR SALE.—A GOOD HEAVY DRAUGHT HORSE,

Suitable for farm or road.

JAS. HEFFELFINGER,
Hampton, Va.

JAMES LEFFEL'S
Improved Double
TURBINE WATER WHEEL.

POOLE & HUNT,

BALTIMORE,

MANUFACTURERS FOR THE SOUTH & SOUTHWEST.

Nearly 7000 now in use, working under heads varying from 2 to 240 feet! Twenty-four sizes from 5 3-4 to 96 inches.

The most powerful Wheel in the Market, and most economical in use of Water.
Large ILLUSTRATED Pamphlet sent post free.

MANUFACTURERS, ALSO, OF

Portable and Stationary Steam Engines and Boilers, Babcock & Wilcox Tubulous Boiler, Ebaugh's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.

SEND FOR CIRCULARS.

British, Marine, and Land and Freshwater Shells.

COLLECTED IN GREAT BRITAIN, IRELAND (east and west coast), ORKNEY, SHETLAND, HEBRIDES and CHANNEL ISLANDS, also from DOGGER BANK (many of them by deep sea dredging), on sale or exchange for American Shells, Flowering Plants, Ferns, or specimens of Natural History, suitable for a museum.

Catalogues of the Species will be sent on application to GEORGE DIXON, AGRICULTURAL INSTITUTE, HAMPTON, VA.

EXPEDITION FOR LIBERIA.

TO INDUSTRIOUS AND WOETHY PEOPLE of color desirous of removing to Liberia, THE AMERICAN COLONIZATION SOCIETY will give a passage and subsistence on the voyage—made in about forty days—and support for the first six months after landing. Single edult persons get ten acres, and families twenty-five acres of land. These are all gifts—never to be repaid. Those wishing to remove to Liberia should make application, addressed to William Coppinger, Corresponding Secretary and Treasurer of the American Colonization Society, 450 Pennsylvania Avenue, Washington, D. C.

REMOVAL.—The undersigned wishes to inform his many friends and patrons that he has removed his

PHOTOGRAPHING BUSINESS

from Mill Creek Bridge to

CHESAPEAKE HALL,

Cor. WILLARD & MELLEN STS.,

Where he is getting nicely fitted up for the different kinds of Picture Work usually found in our best galleries. He will keep a select stock of

CHROMOS, ENGEAVINGS, CEAYONS, LITHOGRAPHS, PHOTOGRAPHS, &c.,

for the benefit of his customers. Also a choice lot of STEREOSCOPIC VIEWS, both foreign and domestic. STEREOSCOPES, FRAMES, and a variety of cases constantly on hand. A better quality of work than heretofore will be guaranteed, as he has a light second to none in the state. Thanking the public for past favor, he most respectfully solicits a continuance thereof.

W. F. LARRABEE.

FREEDMAN'S
SAVINGS & TRUST
Company,

Chartered by Congress, March, 5, 1865.

PRINCIPAL OFFICE,
WASHINGTON, D. C.

BRANCHES in all cities and large towns of the South and Southwest.

FIVE CENTS, or larger amounts, received on deposit, and Bank Books issued.

ALL PROFITS paid to depositors as interest, not exceeding seven per cent. per annum.

INTEREST on sums of ONE DOLLAR and upwards begins first of each month, and is payable on the 1st of January and 1st of July.

☞ *Every Account strictly confidential.*

THE NORFOLK BRANCH,

AT

NO. 116 MAIN STREET,

is open daily from 9 A. M. to 3 P. M. and on Saturday Nights from 6 to 8 o'clock.

All persons wishing to open accounts will please call at the Bank, corner of Main and Nicholson streets.

Southern Workman.

HAMPTON, JUNE, 1874.

In this article we propose giving a brief description of this section of the state.

The peninsula of Virginia, so famous in both the great wars of this country, is embraced hy the waters of the York in the north, the James on the south and the Chesapeake Bay on the east, and comprises the counties of Charles City, James City, York, Warwick and Elizabeth City, the latter being situated at its southeastern extremity. No section of equal territory in this broad Union is richer in historical interest than this. It was at the now deserted village of Jamestown, that John Smith effected his first landing and planted the seeds of American civilization in 1607; and yet, not even a dwelling attracts the traveler's gaze, and hardly a ruin marks the spot. It was at Williamsbnrg, the ancient capitol of the Old Dominion, that the clarion tones of Patrick Henry, then just emerging from the obscurity which snrrounded his early life, roused the resentment of the American people to open resistance to British oppression; and at Yorktown, the conflict inaugurated by the tongue of Henry was terminated hy the sword of Washington. In looking over the list of great men furnished to the country, we find the names of Nelson, Wythe, Warrenton, and Tyler, beside many others of a less national reputation. It was at Big Bethel, nine miles from where we write, that the first pitched hattle of the late war was fought on Virginia soil. Across this narrow peninsula, stretching from Yorktown to Warwick River, the little army of Magruder blocked the way to Richmond against McClellan, and Johnston, retreating, turned at Williamsburg to open that bloody and fluctuating campaign with a trial of strength. At Harrison's Landing, McClellan songht the shelter of his gunhoats at the close of the "Seven Days' Battles," while Lee turned his army to the invasion of Maryland. Fortress Monroe was the great depot of supplies and rendezvous of federal troops.

But our space will not allow us even to mention the many places of inviting interest, or record the list of honored names belonging to this favored locality.

Our object is rather to set forth the agricultural advantages which this peninsula offers to settlers in our midst. Bounded on three sides by deep water intersected every few miles with streams and rivers, navigable to steam and sail craft, a great railroad projected and in fair prospect of completion, through its very centre, it requires no close observer to perceive the extraordinary facilities for transportation to market which this country affords. With a climate as balmy as sunny Italy, and a soil almost as generous as that of the Nile, it stands unrivaled in its attractions as a home for emigrants, either foreign or from more northern states. The extremes of heat and cold are both tempered by the action of the salt water on the atmosphere, and consequently, we have neither the torrid summers of the south nor the frigid winters of the north. During the past winter, there was not a fall of snow which whitened the ground for an honr, and perhaps, not fifty natives of Elizabeth City ever rode in a sleigh. Garden peas, lettuce, onions and cahhage grow all winter: Irish potatoes are frequently planted in the middle of February, sweet potatoes and corn in March, and other vegetahles in the nsual order of succession. Two, and sometimes three crops are grown upon the same soil in one year, each one yielding a good return. The lands on the water fronts are usually of a rich, light soil, admirahly adapted to the growth of potatoes, corn, oats and garden vegetahles, while those more inland are better adapted to wheat, rye, tohacco and grass. Fruits and herries are produced at little trouble and expense, the black and whortleberry growing wild in lavish profusion. Daily steamers ply up and down the York and James, to and from Baltimore, Richmond and Norfolk; aud a tri-weekly line runs from Norfolk to New York, Boston and Philadelphia.

The trucking interest has become of snch importance in the vicinity of Hampton, that the Old Dominion steamship company has recently had a new steamer huilt for the express purpose of transporting freight to Norfolk. Fifteen years ago all the garden vegetahles in the county, raised for market, did not amount to as mnch as is now frequently produced on one farm; and every year witnesses an increased acreage in the cultivation of garden peas, asparagus, snapbeans, berries and such like articles. All the markets of the coast are easily accessible in from one to three days time; while telegraphic communication to Fort Monroe affords ready information as to the daily range of prices.

The oyster beds of James and York rivers, are almost inexhaustihle in their supplies; while fish of great variety and excellent quality are always to be had.

So great are the advantages of this section of the country, that a gentleman who settled here during the late war, has been heard to say that if the farmers of Massachusetts would give away their lands and make this their home it wonld be the best day's work they ever did.

We would like to see emigrants pouring in here hy the hundred, and feel assured that they could make no better choice of locality for the investment of their capital and expenditure of their labor.

AROUND TOWN.

May 15, 1874.

We are glad to note continued improvements in our pleasant town. Our friend Darling, the miller, is putting up a fine two-story French-roof house 35x37, with a wing 15x27. It will have all the modern improvements, hot and cold water, etc., etc. The tin roof and plumbing are in the hands of Woodward, who has also the tin work of Virginia Hall in charge.

Mr. Darling was quite fortunate in the selection of a location, which is on King Street, near the wharf, and almost opposite the new "Wythe Hotel."

Bickford & Co., have for a long timo, been remodeling their establishment, and it is now nearly finished. Their trade is still going on, and a new stock of dry goods is fast going off.

The County and Circuit Courts have moved from the old Court-honse and taken up quarters at Greble Hall. The Connty Court will meet there on the 30th.

The Hampton and Fort Monroe Railroad will soon become a reality, we hope. The hill incorporating has passed the Legislatnre of Virginia, hut as the road will have to pass over Government land, the bill will have to pass Congress. It has passed the House, and is favorably reported in the Senate. The amendment tacked on by the Legislature does not allow the company to huild their road in any street in Hampton, or in the County road, so we snppose they will have an air line.

The National Home is to have an additional building, costing about ten thousand dollars. The delegation of managers who lately inspected the affairs of the Home, expressed themselves as very much pleased with the superintendence of Captain Woodfin, and put their appreciation in practical form, if we may judge hy the promotion which came to him a few days after. A person who visits Hampton and does not go upon the grounds of the Soldiers' Home, loses a fine view of displayed taste and comfort and careful management.

Wheu the *Mystic* was first put on her route, there were those who douhted whether it would ever pay. We hope their faith in the trade of Hampton grows hrighter as they see the new and elegant steamer *Hampton*, plying up and down the creek. We congratulate Captain Schermerhorn upon his new charge, and hope he may live to see the day when the *Hampton* will not be large enough to accommodate the trade of the town whose name it bears.

Professor Tucker seems to have found the tonsorial art remunerative, and has caught the spirit of improvement, having had his quarters enlarged and improved.

Captain Armistead has opened a store on Main Street; opposite Colbert's, for the sale of meat, poultry and vegetahles. The notice there of "Ice for sale" is quite refreshing.

We hope another walk will develop still other improvements.

THE BUTLER SCHOOL.

Thinking our readers would like to hear more of the Butler School, we made it a visit this morning (May 20th), with the view of taking a few notes. This schoolhouse was huilt under the direction of General B. F. Butler, with funds furnished hy the Government; and in 1863 it was opened with six hnndred pupils under the charge of Rev. Charles A. Raymond, chaplain of the military post. It is now under the charge of George and Eunice Dixon, well known through this country and England as friends of the freedmen. They are ably assisted hy Mr. Langford, a graduate of the Hampton Normal School, and Miss Rosa Hazard, who received a fine education in New England. The visitor, on opening the door, is greeted hy a little sea of hright faces. Mrs. Dixon has wrought a wonderful change in the dress and deportment of these children. She has no objection to patches, hut a perfect ahhorrence of dirt, and doubtless all the scholars have found this out. The Bible holds an honored place here. When we entered, the scholars were repeating scripture texts with a clearness of enunciation that did credit to those who taught reading. Then came reading from the New Testament, in which the scholars took part, each spelling a word and the whole school repeating until all the words in the chapter had been properly spelled and pronounced. Mr. Langford's class in reading, many of which did not know their letters last Novemher, read the hard words of the chapter with little difficulty.

The classes in arithmetic and geography were very creditable, superior, in fact, to any in similar schools we have visited.

Miss Hazard deserves credit for training their youthful voices in singing, and it is considered quite a treat to hear this school sing the old slave songs.

We hope the Dixons will hold the "Butler" in charge for a long time to come, for they are missionaries in the best sense of the word.

BLIND BEN.

The friends of Benjamin Stevens, the colored boy from Caroline county in this state, whose remarkahle arithmetical powers have surprised and interested the students and teachers of the Normal School, will be glad to learn of his welfare and prospects. He is now at the celebrated Institution for the Blind at Boston, Massachusetts, where his education and support have been provided for hy a lady of that city, to whose munificence many young men and women of the south, of both races, are indebted for the means of obtaining an education.

Blind Ben, who has never heen to school, has extraordinary natural gifts, and now that he is to have an opportunity to cultivate them hy study, his progress will he watched with deep interest.

OBITUARY.

The European mail of March 9th, brought us intelligence of the death, in Glasgow, Scotland, February 20th, of Mrs. Laura Cravath White, wife of Professor George L. White, Treasurer of Fisk University and Musical Director of the Jubilee Singers. Among the early teachers of the freedmen in Nashville, Tennessee, was Mrs. White, then Miss Cravath. She assisted in the organizing of Fisk School, now known as Fisk University. While teaching, she made the acquaintance of Mr. White, who was then the instructor in music. After their marriage, they continued their connection with the institution, and have heen closely identified with its history. Mrs. White was an earnest, faithful teacher, and possessed excellent judgment and rare tact.

To her no sacrifice was too great to he made for the race seeking advantages and privileges which had heen so long denied. During the darkest days in Fisk, she was ever hopeful and earnest, and had words of good cheer for her associates. She was deeply interested in the mission of the "Jubilee Singers," and accompanied her husband and the singers to Scotland, and though in feehle health and with a family about her, she gave much thought to the singers, and her words or her presence always strengthened and encouraged them. She was a devoted wife, a tender, true mother, a faithful, earnest, consistent Christian. We are confident that Brother White and the three little motherless children, the Juhilee Singers and the relatives of the departed, will have the prayers and sympathy of the friends of the Association.—*American Missionary.*

ANNIVERSARY EXERCISES OF HAMPTON N. & A. INSTITUTE.

The Annual Closing Exercises of this institution will take place on Thursday, the eleventh day of next June.

The morning will be occupied with the usual recitations of the Jnnior and Middle classes, and with an examination of the Graduating class.

The afternoon exercises will consist of orations and essays by members of the Graduating class. It is expected that "Virginia Hall" will then be dedicated.

It is believed that the exercises will be of unusual interest, and that the meeting of friends of the school, from the North and South, will add to the pleasure of the occasion.

S. C. ARMSTRONG,
Principal.

ACKNOWLEDGEMENTS.

The Normal School fsrm has been the recipient during the present school year of various favors from friends of the school, such as discounts on purchases and donstious of implements, etc., which Mr. Howe, the farm mangger, gratefuliy acknowledges. They are as follows:

From Adrisnce Platt & Co., knives, etc. for the Buckeye mower nnd reaper.

From R. H. Allen & Co., horse hoe, harrow and revolving borse rake.

From Wheeler & Melick Co., discsnnt on thrasber and cleaner, and Ithaca sulky horse rake.

From W. D. Russeil, agent of Boston Steam Engine, discount on No. 3 engine.

Agricultural.

STRUCTURE AND CHEMISTRY OF THE LEAF.

BY GEORGE DIXON.

A plant is not an *individual*, distinct in itself, hnt a collection of myriads of Individuals, associated together and *structurally* connected. The spongiole of the root takes in the elements oxygen, hydrogen, nitrogen and carbon (in ths humus), with minuta traces of sulphur, phosphorus and such other of the inorganic elements as are required in its particular structure, and forms of them organic molecuics, to whicb chemists have given the name *proteine*. Several of these organic molecnles are placed sids by side, and cemented together in the direction of a thin layer, wbich, when exsmined by a powerful microscope, represents a film of bollow vescicles or csils; and, slthough no pores or holes can be detected in tbem, yet they each contain a fluid. The passage of this fluid throngh the cell-film is called *osmose*. The operation is attended hy the destruction of a prt of the substance of the organic film *by chemical action;* while other portions are being built up *by nutrition*. In this way, internal compositions and decompositions are continnally going on in living structures, whether animal or vegetable: while they are being nourished by food, they are, at the sams time, being wasted hy the action of life. Through the transparent film of the cell, ths microscope reveals granuiar points of matter floating in tbe fluid within. These are the elements, drawn in by the roots, being converted into organic molecules, which, in their turn, will hecome generators of organization. But the precise way in which this is effected, is one of the hiddcn secrets of the operations of *lifs*.

Having seen how the living cell is originated, let us investigata its mode of propagation. Beside preparing nntriment for its own structure, each cell is endowed witb the power of producing its own living offspring with great rapidity. Young cells are commonly produced in ths interior of old ones, hy the gathering togethsr of ths granular bodies named above. When these have matured, they hnrst ths parent cell and begin life on their own account. Some cells multiply hy forming partitions across their cavities, and splitting into two independent cells. Others increase in nnmber hy forming buds on their outer surface, which, after attaining a definite size, separate from tbe parent, and develop into mntnre cells. A living cell is a distinct nnd individnal creature. It springs from a germ; grows, msturcs, produces its kind, and dies; jnst as the most perfect plant or animsl does. Ths parent cell, in maturing its progeny, thickens its film by depositing dense material upon it, either as an inner or an outer cost; and although it ceases to be an organ of reprodnction, yet its remains form the fibers which determins ths shape and give stablity to every part of the plnnt. Hence, we see plants are simply an aggregation of dead and living cells, united by the mysterions forcee of life, into continuous and definits shspes. In psrennial plants, small projections msy be seen standing out, just shove the scars whencc ths old leavcs fall in the autumn. These are the leaf-buds, in which lis the embryo of a new stem and leaf, formed of livilg cell structure. Thsy are, indeed, merely little extensions of ths layer of young cell mattsr, that lie immediately beneath the bark, which are destined for the formation of new wood. They remain inactive and dormant, through the winter; but as soon as the genial warmth of tbe sun, in the spring, excites the forces of vegetable life, their individual celle begin to multiply, and so they get pusbed forth into shoots; each with growing points, from which leaves and blossoms are developed, and nltimately the seeds matured. The dead cells of previous years become elongated by pressure, and appear, like numcroue little drums, placed side by side and piled on each other in rows; their ends being pierced, they form continuous dncts or tubes, forming a direct communication between the roots and leaves. Whsn a yonng shoot is cut across, the orifices of these dncts mny be disccrned by the nsked eye. They are very perccptible, indeed, in a section of ths common cane. Ultimately these ducts become so thickened and lined with dense deposits, that they discontinue to convey sap, and act as merely mechanical supports for upholding the living organs. The bark is formed in the same way as the wood; the only difference is, that the old, outer ducts, which have become hard and glazed by the action of the sun and sir, do not remain, but slough off, and allow ths under snrface to take their place. But we hasten to the consideration of ths leaf, in which all the grand operations of vegetable life are carried on. A leaf consists of a skeleton of ranching fibers which issns from the footstalk, and which are mainly made up of bundles of hard wood-tubes, and of an expanded green blads, which extends from fiber to fiber and fills up the interspaces. This blads is composed of layers of tbin-walled, living cells, varnished over, externally, by a thin skin of dried mncilage, which effectually prevents all evaporation, except at the points where provision is made for this operation. At the underside of the leaf exhaling pores are placed between two crescent-shaped cells, which mcet hy their points, and form a vslve, bounded hy tbeir concave borders. Whenever ths sir and soil are very dry, and ths plant cannot afford to loose mnch moisture, the concave edges of the exhaling pores are pressed together, and the opening contracted. When, on the otherhand, the sir and soil are laden with moisture, the concave edges of the exhaling pores are curved away from each other, and the opening enlarged. These exhaling pores are therefore, really *mouths;* and on this account are called *stomata;* affording a regular communication with the exterior spaces of the leaves, snd the loose spaces left among the thin-walled leaf cells. The stomata are chiefly placed on the *under side* of the leaves, and are very numerous. Soms plants have as msny as one hundred and sixty thousand of them, on every sqnare inch of the surfacs of the underskin. No exhalation takes piace unless ths plant is exposed to the influence of the solar rays. If a plant is removed from the light into a dark room, exbalation is stopped instantaneously. Heat promotes exhalation, but it is unahls to effect it without the aid of light. The amount of wster in the sap, taken up hy the roots and carried to the leaves, is very large. It has been ascertained, that a plant of the common sunflower, exhsles from twenty to thirty ounces of water every day from its leaves; and an acre of grass land, as much as six thonsand, four hundred quarts in the twenty-four hours. Fifty ounces of water thus exhsled was fonnd very nesrly pure; not containing so much as ons grain of any other substance. When water is driven off from the sap contained in the cells of leaves (since nothing else is taken away with it), the remaining liquid is left thicker for the loss; just as syrup is thickened when a portion of its water is driven off by evaporation over a fire. This is the *first* great change that is brought about in sap, after it has been poured into the leaf cells; it is thickened, hy the evaporation of its thinner parts through the exhaling pores, under the influence of exposure to ths light and heat of ths sun. I would notice here, that the csuse of the coolness, felt under the shade of trees, arises from the sxhalations of the wster in the sap, through the stomsta of the lesves; in accordsnces with the law, that bodies in passing from a dense into a rarer state, sbsorb heat from ths substances with which they are surronnded; in this case ths vapor withdraws it from the atmosphere, thus reducing its temperature.

In our last psper, ws sbowed that plants not only had ths opportunity of getting the greatest part of the carhon, of which they are chiefly composed, from the atmosphers, hut proved tbat they embraced this opportunity. While exhaling ths watery vspor through the leaf-porcs, the crude sap drawe in ths carhonic acid, decomposs it, retaining ths carbon, and allowing the oxygen to return to the atmosphere. This solidification of carbon, is ths *second* great change that is effected in the sap, when it is exposed to sunlight, in the transparent leaf cells.

As ths complstion and consolidation of wood-substsnce takes plaes in the cells of the stem, oxygen gas must be disengaged therein, as well as in the leaf vesicles; hence, we find channels provided, for the purpose of conveying this gas hack to leaves. These are called *spiral vessels;* because they are tubes, lined inside by means of a dense depcsit, which is arranged like the thread of n fine screw. These spiral vessels are found in the midst of the fibers of the root, young wood and leaf; and they nlways contain air, with ten per cent. more oxygen in it than the atmospheric fluid has. This oxygen is really the superfluons gas that is set free, wherever the formation of organic matsrial is going on in the living vesicles of the plant, and it is on its way toward the stomata, the exhaling pores of the leaf, through which it is to be finally removed. Ths spiral lining of the vessels is, no doubt, provided as a means of preventing ths intrnsion of liquid. In plants of the fast growing kind, like the hop, balsam, etc., the threads of ths spires may be seen hy breaking the stems and pulling the parts asunder.

No part of ths vegetahls machine is so wonderful in its construction as the leaf. Ws bave seen that it is at once an organ of exhalation, digestion snd respiration; corresponding to the skin, stomach and lungs of animals. Shaped so as to expose the largest surface, it is mounted on a slender petiole, that it may he put in motion hy the slightest breeze, snd its contact with the air thus increased; while, at the sams time, it is constantly covered with a film of moisture, which is highly absorptive of carbonic acid. These conditions enable the foliage to withdraw this gas, from moving masses of air, in considerable quantity. Bousingault passed a rapid current of air through a glass globe containing a vine branch; when he fonnd that three-fourths of its carbonic acid was absorbed hy the leaves. We stated that the littis montbs or absorbent pores (stomata) are situated on the nnder side of the leaf. This may be proved hy taking ths leaf of a common cabbage, and applying the *under* side to a wound or cut; it will draw quite powerfully, inducing a discharge, while the upper surfsce will produce no such effect.

The leaf also possesses the power of decomposing water and ammonia, hy which hydrogen, nitrogen and oxygen are set free. These gases, combining with the mineral matters, brought up with the sap, in the leaf, furnish the materials for all ths countless vsriety of vegetable substances. The fruit snd farinaceous food for the supply of our tables; the linen snd cotton fabrics for our clothing; the materisl for building our houses, making our furniture, implements and machines; the fuel for cooking our food, warming our apartments, smelting ores, and rendering the stubborn metals fluid snd malleable—valuable medicines, enabling us to overcome disease and restore health—were all put together and endowed with their peculisr properties hy leaves. They sre the true builders—they organize and construct living snbstances from the desd mineral mstter of the cnrth and air. Whatever is derived, immediately or remotely, from the vegetable world, wss all produced hy the subtle chemistry of a leaf. We have seen, that the newly formed compounds in the leaf, are carried in the current of the descending sap, and dsposited in the system of the growing plant; forming a new layer of wood and bark; strengthening, extending and multiplying the stems and roots; prodncing a new hud in the axil of each lesf, ready to bc developed in the coming season; storing up in ths seed a new germ, and protecting it by a store of material for its support and growth in infsncy, till it can produce organs to enable it to hecoms an independent plant. When the leaf has fulfilled its mission, and cnn be of no further service, it withers and falls from the stem, and returns to the ground, from whence it originated, to be decomposed and form *humus* for a new generation of vegetation.

We have hitherto very much confined our observations to the cell-film and wood-substsnces, the resliy essential ingredients, for perfecting every kind of vegetable strncture (properly so called), found in plants, hnt there are in the juices and in ths cells of plants, other *complex substances* produced out of the sap, which are not really possessed of organized structnre. The chief of these are sugar, starch, oil, gluten and alhumen; the naturs and economic value of which ws shall investigats in our next paper.

For the SOUTHERN WORKMAN.

DRAINAGE AT NORFOLK, VA.

The young farmer, who is disposed to follow the advice of books, is liable to the most serious blunders, unless he remembers that each state and conuty, each farm and field have circumstances peculisr to themselves snd requiring separate study. Before obeying the books on any particular system of farm management, the beginner may well inquire where these writers gained their experience, and whether their lands, their temperature snd the distribution of their rains through ths season, be liks his own. Whst is good advics in one place may he very bad in another, as we propose to show by the following exsmple:

Peter Henderson, one of tbs highest authorities on gardening, near New York city, prsfers a subsoil of sandy loam. Where ths subsoil is stiff clay, hs writes tbat it is almost useless to attempt to grow early vegetables for market purposes.

Experienced men at Norfolk, Va., on the contrary, regard a retentive snbsoil, sufficiently stiff for brick making, as the best.

Here is a total disagreement in the rulee of skillful judges. The explanation depends partly on the climate, bnt mainly on the fact tbat at depths, varying from three to six feet below the surface at Norfolk, is a bed of sand wblch requires only occasional outlets to form a system of natural drainage so effective that where a subsoil of clay does not occur above the sand, the land is dry and leachy, and the strength of manure rapidly escapes.

The above-mentioned experience at Norfolk shows that it is possible that land may be too well drained. Probahly Mr. Henderson, on inspection of some of the leachy soils at Norfolk would admit that the snbsoil was too porous. And if he were shown that the open drains at Norfolk were made deep enougb to tap the ssnd; that the average temperatnre was ten degrees higher than at New York; that the ground was seldom frozen, and nsually dry enough to be plowed all wintsr—then, in view of these things, Mr. Henderson would doubtless recognize that the science of gardening was widely different at Norfolk from what it was at New York, and that under a southern sun, it was yet to be proved whether tile drainage would be an advantage, even on fields having a clay snbsoil.

But shonld a Norfolk farmer cross the sea and sttempt to convince Cousin John that any land with clay subsoil did not need tile drainage, what would hs his fate? How facts and figures, acts of Parliament, tracts on sonr soils and root-poisoning would be showered upon him; bow his dark state would be pitied, and how he would be regarded as seventy years behind his age, can be imagined hnt not expressed. For in England tile drainage is justly considered the first necesaity of the farmer. And why? Becanse that country is so cold snd damp, that even with the tils drains and southern exposures, it cannot ripen a crop of Indian corn.

A single season of British weather, if it could he transferred to Norfolk, Va., would be a lowering of average temperature of fifteen degrees, and would ruin all who depended on their crops of corn, peanuts, tomatoes or sweet potstoes. No grapes or figs would ripen, and ths fences would go for fire wood. Our supposed traveler, after seeing an English summer, might well qnery whether any English theories of agriculture, and especially of drainage, were applicable to his Norfolk farm, or valusble to him excepting as hints for experiment.

OBSERVER.

THE FLORA OF HAMPTON.

APRIL—CONTINUED.

Poa pratensis—*spear grass.* Potentilla Canadensis—*Canadian cinquefoil.* Quercus virens—*live oak.* Trifolium procumbens—*white clover.* Aspleneum ebensum—*ebony spleenwort.* Ariscema triphyllum—*Jack-in-the-pulpit.* Ranunculus pusillus—*slender crowfoot.*

MAY.

Azalea nudiflora—*early honeysuckle.* Vicia hirsuta—*hairy vetch.* Pteris aquilina—*brake.* Osmunda cinnamomea—*cinnaman fern.* Senecio aureus—*golden groundsel.* Salvia lyrata—*wild sage.* Salix nigra—*black willow.* Sagina Elliottii—*pearlwort.* Linaria Canadensis—*blue toad-flax.* Dactylis glomerata—*orchard grass.* Ranunculus parviflorus—*small-flowered ranunculus.* Malva rotundifolia—*round-leaved mallow.* Cirsium lanceolatum—*common thistle.* Sisymhrium officinale—*hedge mustard.* Lepidium Virginicnm—*wild pepper grass.* Polygonum hiftorna—*two-flowered Solomon's seal.* Onoclea sensihilis—*sensitive fern.* Cypripedium acaule—*low ladies' slipper.* Lonicera sempervirens—*perennial-leaved woodbine.* Trifolium pratanse—*red clover.* Galium trifidium—*ladies' bed-straw.* Msdeola Virginica—*Indian cucumber root.* Pyrus Americana—*mountain ash.* Oxalis violacea—*violet wood sorrel.* Carex straminea—*straw sedge.* Geranium Carolinianum—*Carolina crane's bill.* Cardamine hirsuta—*common bitter cress.* Nyssa multiflora—*many-flowered tupelo.* Juglans nigra—*black walnut.* Morus alba—*white mulberry.* Vaccinium stamineum—*deer berry.* Kalmia latifolia—*broad-leaved laurel.* Hieracium venosum—*vein-leaf hawkweed, bloodwort.* Asparagus officinalis—*asparagus.* Myosotis stricta—*forget-me-not.* Sisyrinchium Bermudiana—*blue-eyed grass.* Gratiola Virginica—*Virginia water hyssop.* Rubus villosus—*high blackberry.* Cerasus serotina—*black or wild cherry.* Alopecurus geniculatus—*floating foxtail grass.* Andromeda racemosa—*racemed andromeda.* Vaccinium corymbosum—*high blueberry.* Larix Amsricana—*tamarack, American larch.* Silens antirrhina—*snapdragon catchfly.* Rhus toxicodendron—*poison oak.* Trifolium procumbens—*yellow clover.* Smilax glauca—*green brier.* Silene Pennsylvanica—*pink catch-fly.* Helianthsmum Canadense—*cistus, rock rose.* Œnothsra sinuata—*evening primrose.* Quercus cinerea—*upland willow-oak.* Hordsum pusillum—*small wild barley.* Opuntia vulgaris—*prickly pear, Indian fig.* Gleditschia triacanthus—*honey locust.* Philadelphus inodorus—*false syringa.* Tradescantia Virginica.—*spiderwort.* Anagallis arvensis—*scarlet pimpernel.* Viburnum opulus—*guelder rose.* Daucus carota—*wild carrot.* Tricetum palustre—*three-awned bog grass.* Rumex crispus—*yellow dock.* Danthonia spicata—*Danthoin's oat grass.* Rumex verticillatus—*water dock.* Euonymus Americanus—*American burning bush.* Agrostis scahra—*hair grass.* Bromus secalinus—*cheat or chess.* Ilex opaca—*holly tree.* Smilacina racemosa—*clustered Solomon's seal.* Achillea millefolium—*yarrow milfoil.* Osmunda regalis—*flowering fern.* Aspidium acrosticholdes—*shield fern.* Centaurea nigra—*blue bottle, batchlor's button.* Avena præcox—*wild oat.* Elymus Virginicus—*wild rye.* Filago Germanica—*cudweed.*

VERSES

Supposed to have been written by Alexander Selkirk, during his solitary abode on the island of Juan Fernandez.

COWPER.

I am monarch of all I survey,
My right, there is none to dispute;
From the centre all round to the sea,
I am lord of the fowl and the brute.
O Solitude! where are the charms
That sages have seen in thy face?
Better dwell in the midst of alarms,
Than reign in this horrible place.

I am out of humanity's reach,
I must finish my journey alone,
Never hear the sweet music of speech—
I start at the sound of my own.
The beasts that roam over the plain,
My form with indifference see;
They are so unacquainted with man,
Their tameness is shocking to me.

Society, friendship and love,
Divinely bestowed upon man,
O! had I the wings of a dove,
How soon would I taste you again!
My sorrows I then might assuage
In the ways of religion and truth,
Might learn from the wisdom of age,
And be cheered by the sallies of youth.

Religion! What treasure untold
Resides in that heavenly word!
More precious than silver or gold,
Or all that this earth can afford.
But the sound of the church-going bell
These valleys and rocks never heard,
Never sighed at the sound of a knell,
Or smiled when a Sabbath appeared.

Ye winds that have made me your sport,
Convey to the desolate shore
Some cordial, endearing report
Of a land I shall visit no more.
My friends, do they now and then send
A wish or a thought after me!
O tell me I yet have a friend,
Though a friend I am never to see.

How fleet is a glance of the mind!
Compared with the speed of its flight
The tempest itself lags behind,
And the swift-winged arrows of light.
When I think of my own native land
In a moment I seem to be there;
But, alas, recollection at hand,
Soon hurries me back to despair.

But the sea-fowl is gone to her nest,
The beast is laid down in his lair,
Even here is a season of rest,
And I to my cabin repair.
There's mercy in every place,
And mercy, encouraging thought!
Gives even affliction a grace,
And reconciles man to his lot.

ALEXANDER SELKIRK.

About four hundred miles from the coast of Chili, in the South Pacific ocean, lies a little island, some fifteen miles in length by six in breadth, which is a garden of fertility and beauty. Rugged and mountainous though it is, it has numerous rich valleys and a pleasant and healthful climate, while its productions are varied enough to satisfy almost all the demands of the human appetite. Apples, figs, strawberries, melons and peaches grow side by side, while grain and the commoner vegetables grow plentifully; wild goats abound and the waters are full of excellent fish. This is the famous island of Juan Fernandes, which furnished the scene of the story that has more readers than any work in the English language, namely, the story of "Robinson Crusoe," written in the year 1719, by Defoe, an English author of renown. Juan Fernandez was, in the sixteenth and seventeenth centuries, a favorite resort of the pirates who then infested the waters of the Pacific; and, in 1704, Alexander Selkirk, a scotchman, who was sailing-master of the *Cinque Ports*, an English privateer, was put ashore here at his own request, being well supplied with clothing, instruments, arms and such necessaries of life as could be left with him in available shape. He remained here in solitude for five years, when he probably was satisfied with his strange experiment and was glad to return home in an English vessel, which happened to touch at his remote abode. It is generally supposed that his adventures formed the foundation of "Robinson Crusoe," though Selkirk has a rival in the person of Peter Serrano, a Spaniard, who was wrecked on an island in the Carribbean Sea, not far from the mouth of the Orinoco River, and who, living there for many years, in solitude, was finally taken off by a passing vessel, to share, perhaps, with the Scotch Selkirk the honor of supplying materials for Defoe's great tale. The poem which we give above is, as its title sets forth, supposed to have been written by Alexander Selkirk, while he was alone upon the distant island of Juan Fernandez, and is almost as well known as Robinson Crusoe himself. Surely, after reading its mournful verses, no one, however adventurous, could envy the solitary man who was "monarch of all he surveyed," and its description of the terrors of loneliness make us wonder at the courage of the self-exiled Scotchman, who was strong enough to endure even five years of complete separation from his kind.

WILLIAM COWPER.

The life of this poet was so sad; he was in many ways so set apart from his fellow men, while yet so dependent upon their sympathy, that it must always be a matter of surprise that he was able to accomplish so much valuable literary work in the midst of suffering and isolation. As a young man he studied for the law, but was indolent and fond of pleasure and hurdened with an extreme nervous timidity, which prevented him from attempting to fill any of the several public offices that were procured for him by his influential friends. When he was something over thirty years old the great trouble of his life fell upon him, for under the influence of various disappointments he became entirely insane, and, although a partial cure was effected, he was ever afterward subject to long returns of mental disturbance. He fancied himself to be destined to eternal misery, and this morbid state of mind induced him to shun all his near relations and friends, though they always watched over him with the kindest care, and supplied him with all that was necessary to his comfort. For some time he lived with the Unwin family, at Olney, occupying himself with religious exercises and active work among the poor, while, at the same time, he wrote many poems and translated Homer into blank verse. He was exceedingly fond of flowers and domestic animals and was gentle and courteous in his manners, but his clouded mind made him unduly sensitive, and his generous, kindly heart was torn by the agonies of mental doubt, so that his existence was one of protracted suffering and anxiety. The "Task" is the most famous of his poems, but perhaps the best known of all his works to the world at large, is the ballad of John Gilpin, which is a humorous account of the ride of

"* * * A citizen of credit and renown,
A train-band captain eke was he
Of famous London town."

Cowper's poems attracted so much attention that he received from the king a pension of three hundred pounds, and it is said that one publisher alone sold six thousand copies of "John Gilpin," but the poet himself derived no pleasure from his success, being never able to shake off the melancholy which shrouded his life. His best friend, Mrs. Unwin, died in 1796, and, after looking in speechless agony, upon her face for the last time, he turned silently away and never again uttered her name.

Four years latter, in the year 1800, he himself died at the age of sixty-nine, finding in death the repose which it was his Father's will should never be granted to him in life. His name adds one more to the list of famous men, whose sufferings have been in proportion to their genius, and his lot was one of those to which heaven alone can give us the key.

MINOT'S LEDGE LIGHTHOUSE.

The lighthouses and ships of our country are as well built and regulated as any in the world, and among them all there is none more remarkable than the "Minot's Ledge Lighthouse," which stands upon the outer rock of a ledge lying off the coast of Cohasset, Massachusetts. We are sure that the splendid view of it, which we are so fortunate as to be able to present to our readers this month, will interest them in the following account of the difficulties attending its construction and the skill with which they were finally overcome.

About eight miles east southeast of Boston Light a projecting point of almost entirely submerged rocks runs out about a mile and a half into the sea, and offers a formidable obstacle for vessels running in for Boston harbor. At low water the highest part of the rock, (a circle some twenty-five feet in diameter), is bare for a few moments only, and the difficulty of erecting a lighthouse upon this wave-swept circle, can scarcely be exaggerated, for to the unskilled eye it seems simply and wholly impossible. Many years ago the attention of merchants and mariners was drawn to the dangers of this point, and, in 1847, Congress made an appropriation for the construction of a lighthouse on this spot, the plans being for an iron pile structure at the top of which was to be the keeper's dwelling, the whole surmounted by a lantern enclosing the illuminating apparatus. The work was an octagon, with sides, at the base, of nine and a half feet, iron spiles ten inches in diameter, where they left the rock, being inserted five feet into it at each angle of the octagon and at its centre, the whole being firmly braced and tied together by wrought iron braces. At a height of fifty-five feet above the highest point of the rock the heads of the piles were firmly secured to a heavy casting. The work was completed in the autumn of 1849, and stood until April, 1851, when it was carried away by one of the most terrific storms that has ever occured on the Atlantic coast. The ice froze to the iron piles and thus increased the extent of surface against which the waves beat, while a second cause of the destruction of the light was somewhat curious. A hawser was fastened to the top of the structure, the other end being anchored in the sea, and against this hawser the waves, in their rebound from the lighthouse, struck with redoubled fury so that the effect of their blows was transmitted to the pyramid with very great leverage and an increased power, which produced dangerous oscillation.

In this fearful tempest the unfortunate keeper of the lighthouse was lost, and for four years no attempt was made to rebuild the much needed lighthouse. In 1855 the present building was begun, and our illustration shows it as it now stands. The base is thirty feet in diameter, and the whole height of the stone work is eighty-eight feet, the lower forty feet being solid. The remaining forty-eight feet is made up of keeper's apartments storerooms and the parapet, which encloses the pedestal of the lens apparatus. It is a splendid triumph of ingenuity and determination, and has already stood the test of so many severe storms, that there is every reason to hope that it will escape the fate of the building which preceded it upon this dangerous spot, and stand for many years to come a guide and warning to the fleets of vessels, whose ways lie within sight of its far-shining light.

THE MEASUREMENT OF TIME.

There is nothing of greater practical importance in the daily life of men; nothing, perhaps, more closely connected with the progress of the human race, than the art of measuring time; and from that distant period, when the lapse of time was marked only by the alternations of day and night, and the changes of the moon, down to the present day, when, for purposes of science, men measure the millionth part of a second, the improvements in the appliances for time-measurement has kept pace with the general progress of civilization.

We all understand that time must be measured by some regulated series of motions, and we know how, in a fashion of her own, nature marks time for us—by the setting of the sun, the crowing of cocks, the budding and falling of leaves, the tides of the sea, etc., all of which phenomena occur invariably at certain regular and familiar intervals; but very early in the history of our race, it was found that something more accurate than these natural changes, was required, and art soon came to the assistance of nature. The first artificial contrivances, for the purposes of telling time, were sun-dials, hour-glasses and clepsydræ. Sun-dials measured time by the course of a shadow over a rudely marked scale and were consequently useless in the night or in cloudy weather, but they were soon supplemented by hour-glasses, which mark time by the trickling of fine sand through a small opening between an upper and lower glass bulb, just one hour being required for the whole quanty of sand to trickle from one bulb to the other. The clepsydra was on the same principle as the hour-glass, employing water instead of sand, its simplest form being an upright cylinder large enough to hold several gallons of water, with a small opening at the bottom through which the water flowed slowly out. We are told "that the Assyrian monarch, Sardanapalus had a time-keeper of this description in his palace at Nineveh, and there was one also in every ward in the city. These were all filled at sunrise, and as soon as they were emptied, at a signal given by a man stationed upon a high tower, they were refilled, and a number of heralds sent forth proclaiming the fact through the town, so that the inhabitants might regulate their transactions, and know when to eat, to worship, to labor, and to sleep. The interval between the emptying and refilling in this case, like the rounds of the patrolmen, which were also anciently employed to measure time, were termed watches."

After a time, the flowing water of the clepsydra was made to turn a wheel, which carried an index hand round a dial plate, and thus marked the hours of the day. This was called a water-clock, and was used for two thousand years as a time-measurer, in the countries of the east, but was gradually improved by the substitution of falling weights for falling water, as the motive power. The oldest of these constructions, actually preserved, was made by Henry De Vick, a German, and set up in Paris, for Charles V., of France, in 1379. It was a thirty hour clock, with a weight and a train of wheels, giving motion to one hand, and the striking part was precisely the same as that still used." This curious old clock had a horizontal lever, with movable weights, so that the further out they were hung the slower would be the vibrations; and some three hundred years after the date of De Vick's invention, the last grand improvement in clocks was made, by converting the horizontal swing of the balance into the vertical swing of the pendulum, which was done by taking off one of the weights and hanging the balance in an upright position. From this clock, which was at first used only in the towers of churches, sprang the whole race of modern clocks and watches, whose history fills many a hulky volume, reaching, as it does, from the time when watches were the treasures of kings, till to-day, when few pockets are without them. In our next number we shall attempt to condense the main facts of the history of watches, in order to give our readers some idea of the growth of these indispensable friends of ours, from the beginning which we have already shown.

THE STRASBURG CLOCK.

The great clock of Strashurg (one of the cities ceded by France to Germany, during the late war) is one of the curiosities which all travelers visit and wonder at for the ingenuity and oddity of its mechanism. It stands in the beautiful old cathedral, and dates as far back as 1352, though since its first erection it has undergone many changes and repairs, the number of figures having been increased and their appearance improved by jointed limbs. The quarter chimes are struck by figures representing the four ages of man, which move in a circle round a skeleton mower. The hour bell is struck by an angel, a second angel at the same moment turning an hour glass, through the narrow neck of which sand is kept always running. Every day at noon a procession of the twelve apostles takes place round a figure of the Saviour, and each one in passing bows to the central figure, which, when the circuit has been made, extends its hands as in the act of blessing. During the procession a cock opens his beak, flutters his wings and crows three times. The clock not only tells the time of the day, but the day of the month, the month of the year, the signs of the zodiac, the Copernican planetary system, the procession of the equinoxes, solar time, and even marks the 29th day of February in every leap year, so that the citizens of Strashurg have good reason for the pride they take in their unique cathedral clock.

Trials make our faith sublime,
Trials give new life to prayer,
Lift us to a holier clime,
Make us strong to do and bear.

—*Cowper.*

IF WE KNEW.

If we knew our brother's struggles
'Gainst opposing wind and tide:
'Gainst the many bright temptations
Luring him on every side;

If we knew the cares and sorrows
Thronging ever round his life,
Would we wonder if he faltered,
Sometimes, in th' unequal strife?

If we looked beneath the surface,
Gilded o'er with graceful art,
We should find that smiles are often
Worn to mask a broken heart.

He who trusts to fickle fortune,
Builds his house upon the sand;
And the empty rainbow bubble
Bursts before it meets his hand.

If we lift the laurel tendrils,
Gathered by the hand of fame,
Thorns beneath each fragile leaflet,
Prove its joy, alas! the same.

If we knew that death were waiting
Just beyond, a little way,
Would we put off 'till to-morrow
That which should be done to-day?

Would we spend life's precious moments
In grumbling and bewailings,
And giving credence to each tale
Of others faults and failings?

Would we pass the time in grieving
O'er the past with bitter tears?
Or in gath'ring earthly treasures,
To enrich the fleeting years?

We must "bear each other's burdens,"
If we hope to meet above,
In that blissful, heavenly mansion,
Where we'll know that "God is love."

From the Little Sower.

FLIES.

The illustration on this page shows the hand of some kind-hearted person, engaged in rescuing a drowning fly from its perils. We fear many of our readers, who are beginning to be troubled by the swarms of flies so common in these summer days, will not appreciate this humane illustration. When the assertion is made that everything God creates is for some noble purpose, it often draws out the query, "What are flies made for?"

You know there is a law against shooting turkey buzzards, because this uncomely bird is such a friend; cleaning up all the putrifying carcasses around and thus helping to keep the air sweet and preventing disease. Now, the fly is engaged in a like occupation, and feeds on decaying substances in the air and all about us. If people would only be more careful and cleanly about their houses and grounds they would be less troubled by flies because they would be less needed. But even a fly may be a source of danger and even death. Guyot tells us that in the villages of Upper Egypt, he has seen children in their mother's arms, nursing, whose faces were invaded by such compact legions of flies that they looked like crawling black masks. It is a sad truth that insects sometimes cause death. After eating itself on a corpse a fly may vaccinate a live body with the germs of death.

LIFE-SAVING ON THE COAST.

BY WILLIAM H. RIDEING.

This is a talk about stormy nights and suffering men; about the ravages of wintry seas on a long coast, desolate with sand-hills and rugged with cliffs. Yet, as in all pictures, there must be light to produce shade, so in this there are many brave deeds to brighten it. You, no doubt, think that life in a light-house must be curious and grand,—poetical, some of the girls will call it; but as strange, as grand, as poetical and surely as adventurous is the life of the men stationed on the coast to aid vessels in distress. A hardy, courageous, practical set of heroes they are,—on duty night and day, peering seaward, from their lonely watch-towers, in search of whom they may save. Think, my children, how noble is the occupation that has saved two hundred lives in a single night, as when the "Ayrshire" went ashore near Long Branch, and that number of souls were safely landed through a terrible surf.

You ask me if these men are not sometimes called the coast-guard. In America we have no service under that name. In England the coast-guard-men are simply the policemen of the coast. They are employed by the government to prevent smuggling and to protect the revenue. But here we have the Revenue Marine Bureau,—a somewhat similar organization,—which has a large fleet of steamers on patrol around our coast. From this branch of the government grew the life-saving service of the United States; but for many years it was so neglected that the number of lives lost on the coast was a reproach to our humanity. Our shores were strewn with melancholy wrecks. Survivors, cast up by the sea, perished from cold or hunger, when timely assistance might have quickly restored them. Noble vessels, freighted with precious cargoes and more precious lives, went ashore, almost within sight of our homes, and, through the want of apparatus, no aid could be sent to them.

France had her "Central Society for Saving the Shipwrecked;" England, the "Royal National Life-Boat Institution;" Germany her "Association for Saving Seamen in Distress;" and here, along the great line of our coast,—from Maine to the Florida Reefs,—there were only twenty-four life-saving stations, and these were so poorly managed that they were worth little. But we are not a mercenary or cruel people; and when our mistake was seen we began to mend it.

Congress made appropriations for the purpose, the old life stations were rebuilt and supplied with new implements, and many additional ones were established. In all, there are now eighty-two, and in a year or two more the coast of the Atlantic States—from north to south—will be lined with stations only three or four miles apart. Out on remote points of land you will find them, sometimes miles away from other human habitations. The strongest timbers are used in their construction,—all as staunch in their fastenings as the timbers of the stoutest man-o'-war. Across their threshold, the frozen, wounded sufferers of a wreck find nourishment, warm clothing and medical treatment. Blessed are the men who attend them,—friends of ours we may proudly call them, because they are the friends of all the plucky fellows afloat. How well they do their duty, you may judge from this fact:

Out of two hundred and thirty-five lives imperiled in wrecks last year, the life-saving stations rescued two hundred and thirty-four. The only soul lost was an old man, who died from exposure.

I have only given you an idea of the extent of the service, thus far; and if you are determined to see a life-saving station you must start with me, on a frosty afternoon, from New York to Sandy Hook. In imagination, I mean, you must go over the journey that I made last autumn. The sail across the bay is cold and dreary; the land is wrapped in snow, and a savage wind is blowing. Some ocean steamships and a crowd of sailing craft are hurrying into port. The sea is already white and heavy with foam. Vast clouds are lowering and rolling at no great height. It is a threatening day, and at the signal-stations warning flags are hoisted. Sandy Hook looks deserted; the light-house, fortifications and telegraph station are bleak and lonesome. We pass, from here, down the coast some ten miles,—still a waste of sand, yellowish grass and straggling shrubbery,—until we come to Seabright. A pretty name, this, and a pretty place in summer; but now barren and forlorn. A wild child of the sea, with one of her father's fishing nets trailing behind her, is the only living creature we meet. Some distance away, we see a red building, with a flag raised above it. From our point of observation the surf seems to be beating up to the doors, but as we approach we find that it is several yards from the water limit. It is painted red, with a number in front, and, ugly as it is, it looks hospitable in the surrounding waste. This is Life-saving Station No. 3, in District No. 3, comprising the coast of New Jersey; Charles West, Keeper. Entering through a small door facing the sea, we reach the kitchen,—a rudely-finished apartment, in which the crew are stretched at leisure. Leisure, well earned, it is; for, passing into the boat-house, where the apparatus is kept, we find everything in the neatest order,—not a speck of rust or dust. The greatest space is occupied by the boat, itself—a wonder of durability and beauty, raised on a light carriage, by which it is drawn to the water's edge, and launched over rollers, into the surf. You also notice a curious object, which startles you by its resemblance to a torpedo boat. It is the life-car. The lower half is not unlike an ordinary open boat in form; but the upper part is covered by a convex deck, raised at both ends. In the middle you find a hole large enough to admit a man. Peep in, if you choose. It is like the inside of an empty steam boiler,—dark and unventilated; but people on the borders of Death-land do not demand a palace car to carry them into a place of safety; and into this queer vessel four persons are often crowded. Presently, we shall see how it is sent on board a wrecked ship to bring the passengers and crew ashore. But you must remember that all stations are not supplied with the life-car. It can only be used on a smooth beach, as at Seabright; and on the coast of Maine it is superseded by the "breeches buoy." What the "breeches buoy" looks like, you may guess from the name. It is simply a pair of water-tight trowsers, stitched up at the bottoms to prevent the feet from coming through. From the waist, upwards, the body is exposed; but the buoy is moved quicker than the life-car, as it is lighter and only brings one person ashore at a time. It is suspended to the line between the vessel and the shore by rings, and it is hauled in and out by the life saving men.

In a corner of the room, near the rocket apparatus, you see two bundles of what seems to be shapeless India rubber cloth. At our request, a man exhibits them and tells us that they are life-saving dresses invented by Captain J. H. Merryman, inspector of the service. He puts one suit on: first, the trowsers, and then the jacket. Inserted in the neck there is a small tube, with a mouth-piece, through which he fills his strange armor with air. his face is uncovered, but the head is protected by a hood, fitting so closely that the water cannot enter nor the air escape. In appearance he is now like a submarine diver. Out of the house, he leads us to the water's edge, and then he plunges into the surf. He is soon out of his depth, but the dress supports him—head and chest out of the water,—without interfering with his movements in the least degree. Two of the dresses are supplied to each station, and are used by the men in rescuing bodies from the water.

Over the kitchen and boat-house are the sleeping-rooms and storehouse. Here, too, all the fittings are staunch and comfortable, as it is necessary they should be, since neither the keeper nor the surfmen are allowed to leave the station-house during the winter months. At this isolated place they are constantly on duty, and very seldom unoccupied. From time to time they are drilled in the use of the apparatus and in the management of their boat in the surf. But they are not novices. Perhaps you observed some of the faces as we came through the kitchen,—ruddy with the bloom of a hundred storms. In fact, they are chosen for their recognized experience and valor as surfmen; and they are drilled simply to keep their joints from stiffening and their eyes from wandering. The many manœuvres of assisting a vessel in distress are practised at least once a month, and actual service is sometimes rendered as often. A log is kept of all events occuring in the surrounding land and water, and the beach is traversed day and night in search of wrecks. The day patrolman starts along the beach from his station-house until the signals of the next station are in view. The night patrolmen are two in number. One follows the beach towards the next station to the right of his own, and the other towards the next station to the left. Provided only with a lantern and red signal light, each man tramps along until he meets the patrolman of the next station. It is a terribly lonely mission. The surf is moaning at his feet with unalterable grief, and he hears no friendly voice until his duty is done. It is like entering some enchanted realm of darkness. On one side of him is the restless sea; on the other, wastes of sands; before him, the thin ray of his own lantern. Many a brave man would flinch from the terrors of such solitude; but the patrolman finds companionship in the steady flames of the light-houses, and even in the sorrows of the waves themselves. But when the sky and stars are hidden by black storm-clouds, and the wind shrieks into her ear, O, it is so lonely for him, my children! Yet it

may be his fate to find one lonelier and colder than himself. In his path he may meet a moist human form pressed into the sand,—some poor waif that has been lost at sea. Or in the threatening distance, far away over the foaming breakers, he may see a suffering vessel, piteously signaling for aid. Now his energies are braced for good work; now there comes to this hero the consciousness that the weary tramp has not been in vain, and that there are lives to save. For a moment, only, he delays to prove that he has not been mistaken. Eagerly he peers through his night glass, and discerns a ship, beached on a shoal, about three hundred yards away. Then the crimson signal in his hand shoots its splendor into the night, at once telling the watch at the station that there is work to do, and the shipwrecked, that succor is at hand.

The patrolman has been fully instructed and he hastens with all speed to assist in preparing the apparatus. As he hurries homeward, he faintly hears the excited shouts of his mates as they unhouse the boat, and frequently he sees the brightly colored Coston lights illuminating the isolated refuge on the sands, as they bear the messages to the adjoining stations. A fine display of fireworks, you would think them; but to the life-saving men they are imperative orders. First, a red, a white, and green light are burned in quick succession, to attract the watch at the next station, and as soon as one white light is seen in answer, a series of orders are given by the same beautiful means. Thus, a red light announces danger, and a green light that aid is required from the next station by the station signaling. A red and a green light in succession, mean "Bring your boat and equipments." A green and a red light—the previous signal reversed—mean "Bring your life-car and lines." A red and white light, Bring your rocket apparatus," and so on; different combinations of colors conveying different instructions.

The boat-carriage has very broad wheels to prevent it from sinking in the sand, and two stout horses gallop with it along the beach until they are opposite the wreck. Life-car, rocket apparatus and lines are ready. The men assemble, eager for service and urged on by their commander. All their nerves are strung, and all their devotion is stirred. The vessel is tossing and groaning in the sand, and every moment may be worth a dozen lives. Quickly the boat is rolled off the carriage on the shore. Her brave crew gather around her gunwale. They are dressed in heavy, oil-skin clothes, from which the water rolls harmlessly; and some of them have life-preservers around their waists. But these things interfere with the freedom of their movements, and they throw them aside and face the gale in their thick flannels. Most of them are in the prime of life. There is not an undersized man among them. Each is fitted by nature to contend with a giant, and beat him. Seven such fellows are not often seen together; and, as they brace themselves for work, you may well wonder if they can be matched. All our admiration is called forth by the strength they display as they bend to push their boat into the water, at the word of their commander. They do not tremble or bold back, yet the terrors of death are before them. The surf, roaring at their feet, taunts them with its power. As far as the eye can reach, the only prospect is a foaming waste, from which the spray rises in a thick mist. Can the boat live in such a surf? Undaunted, the men wait for a sea that will launch her. On it comes, proudly, defiantly, mightily. Its curling head is raised high. It leaps wildly forward, with the weight and force of an iron wall. The majestic crest bubbles in white wrath. It towers high above the ranks, like an invincible general leading his army to battle. The men hold their breath as it advances, and watch its motions with a steady eye. Onward it hurls itself, gaining volumes in its path; onward into the death struggle on the shore, until, struck by a savage gust of wind, it breaks and drives the boat away from it with an impetuous roar of scorn. The men are thrown, bruised and sore, on the beach. Still their courage remains, and they renew their attempts, until the commander decides that it is hopeless to contend longer. The life-car, alone, must be used.

The rocket apparatus has been arranged, and is firmly planted in the sand. It is a long tube, mounted on a tripod, and fired by a percussion cap. About four hundred yards of very light cord are smoothly coiled at the base, and one end is attached to the rocket. A small trigger is pulled, and the rocket leaps through the air, and over the distressed ship, bearing the line with it. Happily it falls across the deck, and is hauled in by the sailors on board. When the shore end is reached, a block, holding a stouter rope, and a board containing the following words in English and French, are found attached:

"Make the tail of the block fast to the lower mast, well up. If the masts are gone, then fasten it to the best place you can find. Cast off small line. See that the rope in the block runs free, and show signal to the shore."

The men on the beach wait patiently until a rocket or light is displayed in answer, and the life-car is then dispatched on its journey. It is suspended to the ropes by rings, and is hauled across the waters by the men on the shore. In ten or fifteen minutes it is alongside the vessel, and is filled with wrecked people. Again a signal is displayed, and the life-car makes its return journey,—sometimes riding over the waters; sometimes high and dry, and sometimes submerged by the heavy sea. It is so constructed that it contains enough air to give four people breath for at least fifteen minutes, but otherwise it is not ventilated. Here it comes gliding nearer the shore! "Steady!" the commandant cries to his men, who are pulling with all their might and main. "Steady!" The car touches the sand, and is dragged out of the reach of water. The trap-door is opened, and three women—wet, cold, terrified, but still alive,—are safely landed. Only thirty-one minutes have passed since the first rocket was fired, and, thereafter, lives are saved at the rate of over forty an hour until not a soul remains on the wreck.

At the stations, large fires are blazing, ready to welcome the survivors, who are also provided with warm clothing and other necessaries.

So far I have only spoken about surf-boats, which are not the same things as life-boats. Both are used for the same ends; but they are very different in other respects.

The surf-boat is built of cedar, and is so light that two men can carry it. The best life-boat is very heavy, and is built of iron. It is self-righting and self-bailing—that is to say, should it be capsized, it would right itself and throw off all the water that it had taken on board. Some very wonderful improvements have been made in boats of this kind, recently. I saw some experiments about two months ago, with a life-boat only twenty-five feet long, seven feet in beam, and three feet, three inches in depth. Twelve men stood on her gunwale, or at one side, and she did not take in a drop of water. Forty-seven men were then placed in her, and her sides were still nineteen inches out of the water. The men were next ordered out, and told to jump in hurriedly, as they would do in case of a sudden alarm; and the boat stood even that test without shipping more than a few quarts of water.

A smaller life-boat, of the same pattern, was then tried. She was dropped from a crane twenty-one feet high, into the water. She fell perfectly flat, with a noise resembling a clap of thunder, but, on examination, found perfectly buoyant, without a joint or rivet started. The boats of the life-saving institution of England saved 21,000 human beings from 1824 to 1872; and some of our American stations are furnished with patent boats of nearly the same model. But old surf-men are full of prejudice against new inventions, and work with more confidence in a simple boat of the old style.

All the cargo of a wrecked vessel is not lost, as you may suppose. After the lives of the passengers and crew are rescued; the next duty of the life-saving men is to save the cargo. Last year, property to the value of $832,230 was imperiled in their districts, and of this the value of $581,201 was recovered. But peremptory orders are given, forbidding any attempt to save merchandise until all human beings are out of danger; and the captain may throw overboard any articles brought into his boat which may imperil it or the lives intrusted to his charge. There are also professional wreckers, who raise sunken ships and secure the cargo. You must not confuse them with the wreckers of old, about whom you may have read in romances; for they are a very useful and honest class of men, and use large steamers and wonderful machinery in their operations.

The Teachers' Table.

GRAMMAR IN THE PRIMARY SCHOOL.

I believe that all our common school grammars, agree that "English grammar is the art of speaking and writing the English language correctly."

May we not, then, keeping this definition in view, all set about imparting to our pupils the ability to speak and write correctly?

Every one familiar with young children, must have observed how soon they recognize the grammatical forms and inflexions of the language.

Children in the lowest classes of the grammar schools and even in the primary schools recognize the regular forms of the degrees of comparison, of the plural of nouns, of the cases and genders of pronouns, and to a considerable extent, of the moods and tenses of verbs; and their chief mistakes arise from not knowing what words are irregularly inflected. Thus we hear *gooder, mans, runned, etc.*

We may begin, then, with the elementary combination of words—the simple sentence. Write on the blackboard, for instance, "The boy loves his mother." Now let the pupils exert their ingenuity in putting this in the form of a question. Then add the word "yesterday," and let the pupils change the verb to correspond. Then substitute "to-morrow" for "yesterday," and very young pupils may be taught to make the necessary change.

In this way, pupils acquire the power of forming sentences and changing them from the declarative to the interrogative form, and of using the principal moods and tenses.

An exercise similarly conducted may teach them the proper use of the several numbers, cases, and genders of the pronouns; and so nearly or quite every inflection in the language may be taught practically before pupils even suspect that they are studying grammar.

These exercises should be both oral and written, and, if the teacher has not time, it may be taken from the spelling lessons; for, while teaching this, by requiring the pupils to make sentences containing certain words, it will be the best spelling lesson that can be given.—*Massachusetts Teacher.*

ASKING QUESTIONS.

I send my method of asking questions to the "Teacher," hoping that it may help teachers whose scholars ask a great many questions.

The questions about the lessons are the most important ones to be answered. For them, raise the right hand.

Questions about leaving the room are next in importance. For them, raise the right hand closed with the exception of the first two fingers.

For questions neither about the lessons nor leaving the room, raise the right hand closed with the exception of the forefinger.

It is not always easy to judge whether a question is necessary or not till you know what the question is.

In schools where there are scholars who will take advantage of a teacher by asking the same question twice, I think that this method will be found very convenient.

The scholars in my room learned it very readily, and seldom make a mistake in raising their hands.

I have tried it three months and find that it saves me much time and talking, for I can tell at a glance what is wanted, without asking what the question is.—*Massachusetts Teacher.*

SPECIMEN OBJECT LESSON.

Sight and Sound Spelling.

When the children can draw and name all the letters with facility, they may begin to spell short words by printing them on the board.

Sight spelling is writing and naming in their order the letters that compose a written word.

Sound spelling is uttering separately and combining properly the sounds that compose a spoken word.

Sight spelling being addressed to the eye should be taught with the pen, pencil or crayon. The pupil should be required to write the word instead of merely naming the letters.

Sound spelling is addressed to the ear and should be made simply a vocal exercise, the teacher pronouncing the word and the pupil uttering and combining the sounds that compose it.

To beginners, sight and sound spelling must be taught by imitation and frequent repetition.

LESSON I.

Teacher—Spell ME.

Class—(Spelling by sound of letters), M-E, me.

T.—Now let us print this little word on the board. (Children print from a copy made by the teacher). What letters have we printed?

C.—M and E.

T.—Well, M stands for M (imitating the sound of the letter), and E (letter) stands for E (sound), and so M-E(naming the letters) spells me. Repeat—M-E, me.

C.—M-E, me.

T.—This is spelling by letters, now spell ME by sound again.

C.—(Spelling by sounds), M-E, me.

T.—Again by letters.

C.—(By names of letters), M-E, me.

(In this way exercise the class in HE, BE, AT, UP, NO, etc).

LESSON II.

Teacher asks for one of the boys' hats, and gives a brief object lesson on its kind, color, material, uses, etc.

He then has the pupils spell HAT by sound. He next prints HAT on the board for them to copy, and lastly teaches them to spell it by naming the letters.

Such exercises may be continued until the class can print easily any word of one syllable. The teacher may then teach words of two syllables in the same manner.—*Welch's Object Lessons.*

At Home.

CHEAP ORNAMENTS.—We saw, recently, some wooden bowls which had been bought for a trifle at a village shop, and painted black, which, being deftly covered with colored pictures, filled up empty spaces, and showed to advantage as a background to old china on an oak cabinet. We have long been fond of introducing flowers into our sitting-rooms. But in many of the large houses the corners of the drawing-rooms are filled up with small boughs in full foliage. Placed in water, in antique glass vases, they last some time, and give a very bower-like aspect to that apartment.

THE easiest and cheapest way of framing prints and colored pictures is to paste colored calico (red is the best) at the back, and turn it over the front some two inches, mitering the corners and attaching them to the wall with large, round flat drawing-pins at each corner. This gives the appearance of a frame with gold nails. In a boudoir many little pictures would look well done in the same way with red cotton velvet. So says one of the monthlies—and we have seen still simpler and cheaper and prettier picture frames made by sewing, or gluing dried mosses or lichens on to pasteboard cut into the proper shape, ovals, circles or squares to fit the picture. It costs very little after all to make one's home pretty.

DRIED POTATOES.—Lately, a trade has been developed among some Rochester shippers about which but little is known. It is the trade in dried potatoes. Potatoes are sliced up and dried much in the same manner as dried apples. One firm in that city has an order on hand now for 50,000 pounds of these dried potatoes, as well as for 1,500 bushels of onions, which are dried in much the same manner. They are intended for the navy. A bushel of potatoes dries away to about ten pounds. When ready, they are put into large tin cans holding forty pounds, and sealed.

LOOK TO THE CELLARS.—Now, as the warm weather is coming on, every one should look to their cellars. All the vegetable matter should be removed from them except potatoes, and they should have the sprouts rubbed off as fast as they appear. After being thoroughly cleaned of everything offensive in the vegetable or any other line, whitewash them with two coats, and you will have sweet cellars and run no danger from fevers and other illnesses arising from a neglect of these matters. Sinks about a house, which become very offensive in warm weather, should also have a thorough cleaning out, the water course opened, and all soil impregnated should be removed and used as manure. No careful farmer, no good housekeeper will allow any accumulation of filth of any kind to remain or to accumulate about the house.

MINOT'S LEDGE.

[See first page.]

Liko spectral bounds across tko sky
The white clonds scnd before the storm,
And naked in the howling night
The red-eyed llght-bouse lifts its form.
Tha waves with slippery fingers clutch
The massive tower, and climb and fall,
And, muttering, growl with baffled rage
Their curses on the sturdy wall.

Up in the lonely tower he sits,
The keeper of the crimson light—
Silent and awe struck does he hear
The imprecations of the night.
The white spray beats against the panes
Like some wet ghost that down the air
Is hunted by a troop of fiends,
And seeks a sheltar anywhere.

He prays alond—the lonaly man—
For avery soul that night at sea,
Bot more than all for that brave boy
Who nsed to gayly climb his knee,
Young Charley, with the chestnut hair
And hazel eyes and laughing lip.
"May Heaven look down," the old man cries,
"Upon my son, and on his ship!"

While thus with pious beart he prays,
Far in the distance sounds a boom—
He pauses, and again there rings
That sullen thunder through the room
A ship upon the shoal to-night!
She can not hold for one half hour,
Bnt clear tha ropes and grappling hooks,
And trust in the Almighty power!

On the drenched gallery he stands,
Striving to pierce the solid night;
Across the sea the red eye throws
A steady, crimson wake of light,
And where it falls npon tha waves
He sees a hnman head float by,
With long, drenched curls of chestnut hair,
And wild, but fearless, bazel eye.

Out with the hooks! One mighty fling!
Adown the wind the long rope curls.
Oh! will it catch? Ah! dread suspense,
While the wild ocean wilder whirls.
A steady pull.—It tautens now!
Oh, his old heart will hurst with joy,
As on the slippery rocks he pulls,
The breathing body of his boy.

Still sweep the spectres through the sky,
Still scud the clouds before the storm,
Still naked in the howling night
The red-eyed light-bouse lifts its form.
Without tha world is wild with rage,
Unkennoled demons are abroad,
But with the father and the son
Within, there is the peace of God.

FITZ JAMES O'BRIEN.

GOOD-BYE TO LIQUOR.

We ara slaves to you, no longer,
Massa Liqnor; good-bye!
We are daily growing stronger,
Massa Liquor; good-bye!
We shall work for you no more;
You may coax or you may roar;
But we've quit the grog-shop door,
Massa Liquor; good-bye.

Drink your drams, yon tippling topers,
Slaves of liquor; good-bye!
Go your downward way to horrors,
Slaves of liqnor; good-bye!
We are free, and free we'll stay;
You could be the same to-day.
Till you choose tha upward way,
Slaves of liquor, good-bye!

We have done with rags and tatters—
Signs of liquor; good-bye!
And with sundry other matters—
Signs of liquor; good-bye!
Blood-shot eyes and fiery noso,
Hats just fit to frighten crows,
Shoes that show the whole ten toes—
Signs of liquor; good-bye!

Though yon think the notion funny,
Liquor dealers; good-bye!
After this we'll savo our money,
Liquor dealers; good-bye!
Savo our money—that's tho plan—
Pay our debts to God and man,
While you rough it as you can,
Liquor dealers; good-bye.

COLUMBIA, S. C., 1874. FISK P. BREWER.

WHAT TO READ, AND HOW TO DO IT.

In our present state of civilization it is necessary to learn to read rapidly; we do not advise this as a rule, because scientific works in general must be read slowly, and sometimes it is necessary to read passages several times until they are fully understood. We, however, protest against the abusc of mechnical re-reading, alas! so customary in order to make children learn their lessons from the schoolbooks. By this method they often merely snceeed to memorize a succession of words and sounds without understanding their meaning; in this way we debase the young intellectual beings to mere parrots in human shape. Nobody should ever read without concentrating the mind on the meaning of what is read, and banishing all other thoughts, which, in an active mind, are continually creeping in; this is the true mental discipline we recommend, and which requires training and practice. The same may be said about attending lectures, sermons or conversation. No person unable to control his attention and concentrate it to what he hears, has a disciplined mind.

It is the same with seeing; how many persons walk about with their eyes open without noticing the most important details of that which surrounds them; they are similar to the donkey in the fables of the German poet Gelbert, who was sent traveling, and when he came home, after having seen a great deal of the world, he was a donkey still.

There is no branch of study so adapted to train the powers of observation, and teach people *really to see*, than the natural sciences, if practically pursued; chemistry, physics, natural history and its branches, practical astronomy, microscopy—either of these are equally adapted, and of more value to develop the mental faculties, than the study of languages, ancient or modern, to which for many years, our higher institutions of learning were so partial; but at last, the world is now commencing to see that they must be secondary to that culture so imperatively demanded in the modern state of civilization—the natural sciences.

It is with books as with men, a great many are not worth losing much time with; an acquaintance may often be useful and desirable, but it must not be at the expense of more valuable associations; in the same manner as a wise man treats this kind of acquaintances, he must do with books, and even more so, as many books which it may be useful to know, may be totally dismissed when we have read them. To this kind, many novels and stories of first-class authors belong, and the purely literary productions in general; those written by second and third-class authors, and much of the periodical literature, is scarcely worth reading at all, and we only deplore that the press caters so much to the perverted state of the illiterate public.

Literary productions, however, sometimes contain useful informntion concerning man, human society, laws, etc., and if at the same time they have an ulterior aim at reform of existing evils, they stand of course far above all other productions of the same class. At the head of snch authors in England stands Charles Dickens; in France, Eugene Sue; in Germany a host of authors of equal merit; and it is fortunate that in every nation men are found who turn their literary merits to account, and deserve the gratitude of posterity as well as of the present generation.

But for all this, such books need only to be read once and this rapidly; if well trained the reader is able to concentrate his attention in such a way on the facts presented that the eyes merely glance over the pages, and run through the lines with great speed; the mind remains calm, and notices even the details of different passages, only stopping here and there where it meets something which requires serious meditation; so we have often found persons who have finished the many pages of their daily paper in fifteen minutes, and are as well posted in all the news it contains as others who sit with the same paper for one or two hours.

Scientific books or journals like ours, containing on every page useful information, may be considered as concentrated mental food and therefore require to be read slowly, and sometimes perhaps even repeatedly, until comprehended. To the contrary, daily papers, literary periodicals and the majority of books, may be considered as a very diluted mental food, of which we must pick out only those parts which contain the mental nourishment we are in need of; and many even do not contain this; but it is sufficient to have read them once during our whole lives; while, in regard to certain other books it is even better never to have read them at all, in the same wny as there are classes of people, whose acquaintance is by no means desirable.—*The Manufacturer and Builder.*

EDUCATION IN SWITZERLAND.

No country in Europe can compare with this little republic in facilities for popular education, and the generosity of the provislon made by the governments of the different cantons for schools of all descriptions. Swiss children are obliged by law to attend school up to the age of fifteen, and at none of the schools does the expense exceed sixty cents a year for esch child, while in Berne it is reduced to twenty cents. After leaving the primary schools, the student can go to what are called "repetition schools," or the evening and Sunday-schools, and can obtain higher and special instruction at the industrial schools. These latter schools teach all branches of art and science, and train their scholars in many different trades, as for example, watch-making, modeling, wood-carving, etc., so that the graduates are able at the end of a three years course to earn their own livlihood without further preparation. Switzerland is in advance of America in its system of industrial and art schools, and in this respect we have much to learn, before we have any right to feel that our people have all the advantages which a rich and powerful nation should give to her children.

Correspondence.

From Our London Correspondent.

The University Boat Race—English Scenery, Etc.

LONDON, *March* 28, 1874.

Cambridge bas won! Yesterday, after Academy lessons, Ned and I started for Richmond; we took the 5.20 train from Finchley Road station, on the London and N. W. Railway, and, after a very pleasant and comfortable ride of about twenty minutes, reached the end of our trip. Some friends, who had visited Richmond, told Ned to be sure and stay at the Star and Garter Hotel, so we struck for that place and reached it after quite a climb up hill.

It is the best and handsomest hotel I ever saw—nothing in New York even can surpass it. It has a very imposing front, and is most elegantly furnished throughout. The large Coffee Room is immense, and has a very handsome chandelier of ninety-six globes! It has a gallery running around it, divided into about thirty little rooms, fitted up with tables, sideboards, and bundsome furniture, for small parties of from two to six, or eight persons—very cozy little places for a quiet meal. In the middle of the gallery is an orchestra stand, with room for twelve or fourteen pieces, and the centre floor below is polished oak for dancing, with a carpet, which, when taken up, gives an available space of dancing room of fifty by sixty feet.

The windows on one side look out onto a terraced garden with very fine statues and fountnins, marble staircases and balustrades; the garden finally ending in a broad gravel walk, about twenty feet wide and two hundred feet long, below one side of which you look right down some twenty feet into the nurse's promenade, where the children are aired.

The view, from this side, extends for about twenty miles, and tho morning being clear, we could see Windsor Castle (a little over that distance) quite plainly with my field glasses, of which I have a very powerful pair, fitted with triple lenses, one for marine, one for field and a third for theatre views. A most convenient thing, I can assure you, since, by simply turning a little wheel, I can use it for the opera; one turn more brings on a stronger power for field sights; and a third twist throws on the most powerful lens for sea views, which latter develops a power equal to a young telescope. Under these gardens are the stables, very nicely furnished with all kinds of vehicles and horses, and very cheap, too.

Below the garden is n part of the old Richmend Forest—trees hundreds of years old—oaks that look as if the deluge might have left them standing unharmed, and many of them perfectly covered with ivy running up the trunk and branches. Then the twenty-mile view is too lovely to be fairly described! for two or three miles almost a plain, with the Thames winding round like a huge serpent through the most Arcadian scenery. Beyond the three-mile radius, the country is undulating, rising up at times into high hills and diversified by forests, parks, old English homesteads, estates of noblemen, and the most beautiful and snug little cottages, with their red-tiled roofs, making altogether a scene more lovely than I had thought it possible to find on this poor little earth. Add to all this a bright, sunny morning, and a pure, bracing air, and you have, as nearly as I can describe it, our stopping place. Last evening, we started out, after supper, for a stroll in Richmond Park, but it did muchly rain, so we gave it up and came in, and, after looking round the place, we retired for the night.

This morn, while breakfast was being prepared, we walked all over the gardens, etc. Then, after enjoying the aforesaid meal, which was very nice, we started for a livery stable, intending to drive down to Mortlake (where the race ends), as we could get a nice, one-horse trap for two shillings (fifty cents) an hour, without a driver, which we didn't want, of course. However, every turnout was taken weeks before for to-day, so as it was about a mile and a half, we concluded we would walk it, and we did. We got n very good position indeed, just above Barnes' Bridge; and, after waiting about half an hour, the crews came in sight, followed about twenty feet behind by the judges' steamer and two others crowded with people and reporters.

The Cambridge crew, of course, beat, but I think not by a very great distance. It was a perfect sight to see the people, and the carriages of all grades, from the donkey cart to the four-in-hand, of which latter there were quite a number. They come early and bring hampers packed with lunch, etc., and get a good position and then take out the four horses and send them back, with the grooms, to some shady place. There are, generally, about twenty or more in each coach, and they make a very handsome show, the ladies with their pet colors on (Cambridge, light blue, Oxford, dark blue), and the gentlemen with the everlasting one-eye glass, speculating on the winning side. After the race, we walked slowly back to the Mortlake Railway station and took the London train, arriving at the Waterloo station (Surry side) about 1 o'clock. There we took a hansom for home, thus bringing to an close the best time I've had since I "struck" this Island. K.

DECREASE OF SCHOOL ATTENDANCE LAST YEAR.

DIFFICULTY IN GETTING TEACHERS FOR COLORED SCHOOLS.

This difficulty is not easily overcome, because it is founded chiefly in the repugnance existing between the white and colored races. A sufficiency of colored teachers cannot be had without drawing them from other states, and white teachers are generally averse to teaching colored schools.

This state of things is not only calculated to bring our good faith into question, but is in itself an impediment to the *vital work* of educating these people. It should therefore be a study with our school officers how to remove the difficulty.

1. Let them make sure that their own administration is impartial. There is much in the location, style and furniture of a schoolhouse to attract or repel a teacher as well as in the pay and general treatment given.

2. Let school officers frown upon all attempts to discredit the work of teaching in colored schools, and disseminate just views as to its honorable character. This may require courage in some places, but a public officer who has not the nerve to do his duty without fear or favor, had better give way to somebody else.

3. Such institutions as the Hampton Normal and Agricultural Institute, the Richmond Colored Normal School, and the Richmond Institute, should be encouraged. They are doing a work of inestimable value to the colored race and to the state. Their influence tends to cultivate the pride of race, which prefers independent self-development to slavish imitations or petty social ambitions.

4. Unemployed teachers who are willing to teach colored schools should let it be known. —*Educational Journal of Virginia.*

ROSEWOOD AND BLACK WALNUT COFFINS.

THE MUTUAL LIFE

INSURANCE COMPANY,

OF NEW YORK.

Is the best possible kind of

SAVINGS INSTITUTION

FOR THOSE IN HEALTH.

If the insured dies soon after paying a few dollars in premiums, thousands of dollars are at once secured. If he lives many years, it is a good investment. In THIS COMPANY, such are its large dividends, as will be seen by the following illustration, taken from the oldest policy of the Company, that was paid in

Policy No. 39, on the life of GEORGE D. PHELPS, of New York, for $5,000, dated February 9, 1843.

Thirty annual premiums of $155.50 were paid, making in all	$4,665 00
The dividend additions to this policy amount to	6,009 09
Which is $1,337.09 more than all the premiums paid.	
The original amount insured	$5,000 00
Has been increased by dividends	6,009 09
Amount paid by Company,	$11,009 09
Which is $6,337.09 more than all the premiums paid.	

BE TRUE.

Thou must be true thyself
If thou the truth wouldst teach;
Thy soul must overflow, if thou
Another's soul wouldst reach!
It needs the overflow of heart
To give the lips full speech.

Think truly, and thy thoughts
Shall the world's famine feed;
Speak truly, and each word of thine
Shall be a fruitful seed;
Live truly, and thy life shall be
A great and noble creed.
—*Hymns of Faith and Hope.*

Scientific and Mechanical.

MORE THAN TWENTY-TWO BIBLES IN ONE SQUARE INCH.—We have had lately the satisfaction of examining and measuring, under the microscope, a so-called test for microscopes of high power, consisting in the Lord's Prayer written on glass, by William Webb, of London, and occupying a space of one 294ths of an inch high and one 441st of an inch wide, making one 129,664ths of a square inch. We print it here about in the shape as it appears under the microscope, but magnified nearly 450 times in lineal dimensions, and thus about 200,000 times in superficial area:

Our Father which art in
Heaven hallowed be Thy
name Thy Kingdom come
Thy will be done on earth
as it is in heaven give us
this day our daily bread and
Forgive us our trespasses as we
forgive them that trespass
against us and lead us not
into temptation but deliver
us from evil Amen

As now this space of 120,654th part of an inch is occupied with 227 letters, the square inch can contain 227x129,654, or 20,431,458 letters. The whole English Bible consists of only 3,566,480 letters, and this number is contained more than eight times in the preceding one, therefore the whole Bible can be written, by Mr. Webb's method, eight times in one square inch, and still some space be left. But this is by no means the greatest feat of small writing which we find recorded. Mr. N. Peters, a banker of London, devised (according to Mr. R. J. Farrand's account before the Microscopic Society in London) a machine with which, after several improvements, he has written the Lord's Prayer in a space of one 356,000ths parts of a square inch, so that it could be distinctly read by a powerful microscope. The number of letters written by him, and ending with the word "evil," is 223, and as this number goes nearly 16,000 times into 3,566,480, the number of letters contained in the Bible, the latter contains 16,000 times as many letters as the Lord's Prayer. As now 356,000 Lord's Prayers would go in one square inch, and the Bible is 16,000 times longer than the Lord's Prayer, it can go 356,000 divided by 16,000, or 22¼ times in one square inch; and as the quarter of the Bible contains nearly 900,000 letters, which is more than 4,000x223, there is, after the writing of the 22 Bibles in the space one square inch, even room left for 4,000 Lord's Prayers.

NEW ARTIFICIAL STONE.

The whole question of success in making artificial stone is one of cost. It is easy enough by the light shed by modern chemistry on those matters, to make a stone of the most superior qualities; but as the main point is to make it pay, very few of the possible compounds can be made available.

That there is a natural advantage in the process is evident, as stone of this kind can at once be made in the required shape, doing away with the labor of quarrying and cutting, and also of transportation, if the materials used, or at least a portion of them, are on hand; hence several attempts have been made from time to time to invent new processes for producing artificial stone, or to make improvements in existing methods. . . . .

We take occasion to call attention to the method patented by Mr. Eagan, producing all kinds of building and monumental stone of any form or design, representing in color any of the natural stones of this country, and claimed to be superior to them all in cheapness, durability, strength and beauty. At the office of Messrs. Eagan & Van Doren, 71 Broadway, samples may be seen, and information obtained in regard to the sale of the right to make and use it, from which it appears that its universal introduction offers great inducements to all who are willing to undertake it. The process is adapted to manufacture building fronts, sills, lintels, copings, steps, door and window heads, mantels, hearths, tiling, curbing, sidewalks, floors for cellars, kitchens, carriage-houses, and all kinds of factories.

For this stone (which has been obtained as the result of study of the successes and failures of other artificial stone, and labor in making the most perfect and cheap chemical combinations) it is claimed that it is:

1st. *Cheap.*—It is made of cheap and generally distributed materials; it requires no extensive or costly machinery, is easily molded into the required shape, and can be manufactured on the spot where used.

2d. *Hard.*—It has been proved to stand more crushing pressure than any ordinary natural building stone, for instance, 7,000 pounds to the square inch.

3d. *Durable.*—It is composed of elements of a durable character, unaffected by any of the causes which disintegrate most natural building stones.

4th. *Fire-Proof.*—In its composition nothing enters which is not absolutely fireproof, while it can stand being made red-hot and then cooled off in water or on ice.

5th. It may be immersed in water, and will not undergo any sensible increase in weight.

6th. *Frost-Proof.*—If submitted to successive frost and thaw, it does not undergo any sensible deterioration.

SOLVENT POWERS OF WATER.—Water is a physical rather than a chemical agent in bleaching and dyeing; it is the vehicle which carries the chemical substance to the cloth to be operated upon, or which removes the matters necessary to be removed from it. When a substance is mixed with water, it may either be dissolved by it, and disappear, as salt does, or it may remain in suspension as chalk does. Nothing is considered to be actually dissolved in water if it can settle out again, or if it will not pass with the water through a filter made of paper or calico; thus to talk of dissolving ground chalk in water is incorrect, for if allowed to stand it would settle out; or if the mixture were filtered, the water would pass clear, while the chalk would remain upon the calico; but blue vitriol (sulphate of copper), for example, does really dissolve in water, and the liquor all filters through together; to deprive the water of the blue vitriol would require chemical means different in kind from filtration. Water, therefore, dissolves some substances and not others. Water does not dissolve the same quantity of all soluble substances; of some it can dissolve its own weight, and more; of others a small portion; and of some extremely little. As a rule, hot water dissolves more than cold, and more quickly than cold; but, upon cooling, the excess mostly falls out as crystals. This point deserves notice, for a liquor, which is of right strength when a little warm, may be too weak when it becomes cold; left in a carboy, for example, in a cold place, because the salt crystallizes out; this is the case only with those salts that are but sparingly soluble; as chlorate of potash, cream of tarter, sulphate of potash, etc. The crystallizing is sometimes troublesome in steam colors which right enough when freshly made, become filled with small crystals, and rough on the machine; it is felt in the case of an ageing liquor, which contains chlorate of potash as an active agent, which, crystallizing out, leaves the liquor weak and not able to do its work. As a usual thing, the drug room upon a printing or dyeing works should be cool, but there are some liquors better in moderately warm place; brown vitriol, for example, in winter time is apt to go solid in the carboys, if kept in an exposed place.—*Scientific American.*

CAOUTCHOUC is easily joined and made as strong as an original fabric, by softening it before a fire and laying the edges carefully together, without dust, dirt, or moisture between. The edges so joined must be freshly cut. Tubing can be made by joining the edges of a sheet of India-rubber round a glass cylinder, which has previously been covered with paper. After the glass is withdrawn the paper is easily removed. Sift flour or ashes through the tube to prevent the sides from adhering from accidental contact.

SLATES, instead of being nailed to the roof, may be fastened by movable hooks, about two inches long, which are soldered to conically formed zinc plates, 4 to 6 inches long. The slates are thus kept securely between the hook and zinc plate, and can be removed simply, with the greatest facility, by turning the hook. Thus one or more of the slates can be taken out for repair, or new ones inserted, without interfering with the rest.

Publisher's Department.

NOTICE TO TEACHERS.—Do you want a globe for school use? Send us, then, the names of six new subscribers to the SOUTHERN WORKMAN, and we will send you one free of any charges, securely packed in a strong paste-board box.

SUBSCRIBERS TAKE NOTICE!

Every subscriber, who will send us a new name and one dollar, will be entitled to one of our premium oil chromos, provided they make such a request, and designate the chromo they wish. For two new subscribers we will send "Returning Home" ready mounted. For five new names we will send the above picture nicely framed in black walnut and gilt. *We do not send premiums to those who do not request them.* When frames are sent, the receiver will pay the express charges.

OUR PREMIUMS.

Wide awake teachers take notice. Our prize globe is given to every teacher who sends us six subscribers and six dollars.

A box of mathematical instruments to every one sending four new subscribers and four dollars.

A compound microscope for ten subscribers and ten dollars.

A toy steam engine for six subscribers and six dollars.

A photograph of the "Hampton Students," the singers from Hampton Institute, for two subscribers and two dollars.

Teachers will never have a better chance to secure apparatus, books, etc.

CARSON, HURON COUNTY, OHIO.
Mr. Editor,—Your paper surprises me; I do not see how it can be improved. It must be a "ministering spirit" to the people, who have everything to learn. I am glad to see them treated as *people*, with the sugar-plum and fairy all left out. The paper is of superior stock; I have none to compare with it. Any of my papers show wear with one reading, and some go quite to pieces, while yours I can circulate with a reasonable expectation of seeing it again.

Hampton, Va.

JAMES LEFFEL'S
Improved Double
TURBINE WATER WHEEL.

POOLE & HUNT,
BALTIMORE,
MANUFACTURERS FOR THE SOUTH & SOUTHWEST.
Nearly 7000 now in use, working under heads varying from 2 to 240 feet! Twenty-four sizes from 5 3-4 to 95 inches.
The most powerful Wheel in the Market, and most economical in use of Water.
Large ILLUSTRATED Pamphlet sent post free.
MANUFACTURERS, ALSO, OF
Portable and Stationary Steam Engines and Boilers, Babcock & Wilcox Patent Tubulous Boiler, Ebaugh's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.
SEND FOR CIRCULARS.

"Hampton and its Students,"
BY
Mrs. M. F. Armstrong and Helen W. Ludlow;
WITH
SLAVE SONGS,
Arranged by T. P. FENNER.
FOR SALE AT THE OFFICE OF THE
Treasurer of the Normal School.

NOTICE.
A NUMBER OF THE STUDENTS OF THE Hampton Normal and Agricultural Institute desire to go north to work this coming vacation, if they can obtain situations. Those desiring good, faithful young men for the months of July, August, and September will do well to correspond with this office, stating wages, &c.

British, Marine, and Land and Freshwater Shells.
COLLECTED IN GREAT BRITAIN, IRELAND (east and west coast), ORKNEY, SHETLAND, HEBRIDES and CHANNEL ISLANDS, also from DOGGER BANK (many of them by deep sea dredging), on sale or exchange for American Shells, Flowering Plants, Ferns, or specimens of Natural History, suitable for a museum.
Catalogues of the Species will be sent on application to GEORGE DIXON, AGRICULTURAL INSTITUTE, HAMPTON, VA.

EXPEDITION FOR LIBERIA.
TO INDUSTRIOUS AND WORTHY PEOPLE of color desirous of removing to Liberia, THE AMERICAN COLONIZATION SOCIETY will give a passage and subsistence on the voyage—made in about forty days—and support for the first six months after landing. Single adult persons get ten acres, and families twenty-five acres of land. These are all gifts—never to be repaid. Those wishing to remove to Liberia should make application, addressed to William Coppinger, Corresponding Secretary and Treasurer of the American Colonization Society, 450 Pennsylvania Avenue, Washington, D. C.

FREEDMAN'S
SAVINGS & TRUST
Company,
Chartered by Congress, March, 5, 1865.

Southern Workman.

HAMPTON, JULY, 1874.

Our readers will require no apology from us for occupying so much space with the reports of the anniversary exercises of the Normal School. No one interested in the objects of this paper and in the cause of general education at the South, and the promotion of good feeling between those sections of our country, which were so recently at variance, can fail to be greatly interested in these proceedings, or to realize their deep significance. Such a gathering of eminent representative men from the North and the South, greeting each other with true fraternal cordiality on the "mountain top," to which they have climbed by opposite paths (to borrow the happy simile of Dr. Armstrong), is an auspicious omen, for which we may well thank God and take courage. It matters comparatively little that opinions differ as to the best methods of bringing about the common object, the true elevation and education of the colored race. The fact that *it is* a common object—that good men of all sections agree as to the end to be reached, and are earnest in their endeavors to reach it, is the hopeful fact, that like a beacon light, illuminates the pathway of the future and cheers the hearts of all engaged in this educational work. Dr. Ruffner, whose sincerity and earnestness in this work has been fully shown by his labors as the head of the Educational Bureau of the State, expressed the fear that the views set forth by him in his address, in Virginia Hall, would be unpalatable to the majority of his audience. But the interest with which they listened to his remarks, showed that with them the question is, not what is palatable, but what is *true*. If Dr. Ruffner's theory is the true one, the sooner it is adopted the better. If it is not the true theory, we believe no one will be more ready than he, when convinced of his error, to renounce it. Dr. Ruffner found an unexpected ally for some of his theories in Prof. Edward W. Blyden, of Liberia, a pure negro, and proud of the name, who is said to be the most scholarly man of his race, and whose chaste language and pure diction surprised and delighted the audience. As it would be a violation of our rules to enter into the domain of politics, into which a discussion of these views would lead us, we will only express our hearty concurrence with Dr. Ruffner's remark that the colored people (and we would add white people, as well), should not occupy positions in advance of their personal fitness therefor. It is the great curse and danger of our country to-day, that so many positions of trust and responsibility are occupied and disgraced by persons who have no personal fitness therefor. We can only hope for permanent reform when good men of all parties and all classes, shall unite in making personal fitness, rather than partisan activity, the test for all candidates for public or private positions.

Our readers will find a very interesting letter, from California, on the 55th page, descriptive of the Chinese in that state, and their queer customs. The letter is from one of our former teachers, who is now teaching in the beautiful town of San Jose (pronounced *San Hosay*), and from whose gifted pen we hope to receive frequent communications. With one ex-teacher in California and one in London, both of whom retain a warm interest in the school, and are willing to give us their impressions and experiences in the interesting countries where they are located, the school is highly favored. "Long may they wave" their graceful pens for our instruction and pleasure.

H. N. & A. INSTITUTE.

THE ROLL OF HONOR.

Many of the Normal School students are unable to pay the whole of their bills for board, clothing, books, etc., during the course, and on graduating, find themselves considerably in debt to the institute. No deserving student is sent away from the school on account of poverty alone; but as no charge is made for *tuition*, and board, clothing, books, etc. are supplied at cost, it is expected that every student who leaves the school, in debt to it, will feel it to be a matter of *honor* to pay that debt as soon as possible from their earnings or otherwise. While many of the students are oppressed with the weight of this debt, and strive by all means in their power to pay it, others either feel easy and indifferent about it, or think they will send nothing to the treasurer because they cannot send the whole. Let all students who can spare a dollar, send it, and continue to send in small sums till the debt is paid. By waiting till they can accumulate a large amount, they are often tempted to spend what they have laid by, and the opportunity is lost.

The treasurer's Roll of Honor contains the names of ex-students and graduates who have paid, either in whole or in part, their debts to the school. We hope yet to see the name of every one who has left the school in debt, placed upon that roll. There are some most honorable instances of self-denial on the part of students, practiced that they might pay the debt they had been allowed to incur, that all would do well to imitate.

ANNIVERSARY EXERCISES OF THE HAMPTON NORMAL SCHOOL.

DEDICATION OF VIRGINIA HALL.—ADDRESSES BY DISTINGUISHED VISITORS.

Another red-letter day in the calendar of Hampton Normal and Agricultural Institute! On Thursday, June 11th, the closing exercises of this school took place, and the occasion was made memorable, as on the previous year, by a notable gathering of eminent friends of education from different sections of our country. The steady growth of the *intente cordiale* between good men of the North and South, so clearly manifested at these successive gatherings, is gratifying to every lover of humanity; and to those, who amid many discouragements and social privations, are patiently laboring for the education and true elevation of the freedman, is cheering and encouraging in the highest degree.

As last year an added interest was given to the annual exercises by the ceremony of laying the corner-stone of Virginia Hall, so on this occasion, the informal dedication of that noble, though yet unfinished edifice, was a new and pleasant feature of the day.

Among the distinguished guests who honored the occasion with their presence, were Hon. W. H. Ruffner, Supt. Public Instruction of the State; Rev. Dr. Armstrong of Norfolk; State Senators Allen and Evans; Messrs. Hamilton and Jones of the Assembly; Prof. Edward W. Blyden of Liberia, a pure negro, and a profound scholar, author of *Liberia's Offering*, *The Negro in Ancient History*, etc.; Rev. Drs. Ormiston and Dyer of New York; Rev. E. G. Beckwith and Hon. Charles Benedict of Waterbury, Connecticut; Hon. H. N. Daggett of Attleboro, Mass.; Mrs. Walter Baker of Dorchester, Mass.; Mrs. C. A. Johnson and Mrs. S. T. Hooper of Boston; Roland Mather and Judge Storrs of Hartford, Connecticut; W. W. Justice and William Still of Philadelphia (the latter a colored gentleman of education, who, though engaged in mercantile pursuits, is the author of several works, prominent among which is *The Underground Railroad*); Rev. J. W. Harding of Longmeadow, Mass.; Professor C. M. Johnson, Principal of the New Jersey Normal School; Hon. Charles Kimball of Lowell, Mass; Miss M. A. Longstreth of Philadelphia; Gen. W. F. Barry and other officers of the Artillery School at Fort Monroe; Governor Woodfin, Dr. Wright of the National Soldiers' Home; and citizens of Norfolk and Hampton.

There were also present, of the board of trustees, the president, Rev. George Whipple of New York; Revs. E. M. Cravath and Strieby, secretaries of the American Missionary Association; Gen. O. O. Howard, Washington; Hon. E. P. Smith, Commissioner of Indian Affairs, Washington; Hon. Alexander Hyde, of the State Board of Agriculture of Massachusetts; A. M. Kimber, Philadelphia; H. C. Percy, Norfolk; and of the curators of the State Land fund, beside Hon. W. H. Ruffner, State Superintendent of Education, there were Rev. J. Holmes, Richmond; Mr. C. Perkins, Buckingham Court House. A portion of the Northern guests came in the Old Dominion Steamship Company's steamer *Wyanoke*, Captain Couch, who, as last year, very kindly stopped at Old Point, Wednesday, P. M., to land the party, thus saving the trip to Norfolk and return. The rest came via Baltimore; and all were quartered at the Hygeia Hotel, which is now under the management of Mr. H. Phochus, and is a most attractive watering place. The steamer *Mystic*, chartered for the occasion, brought over the Norfolk guests, and made hourly trips between Old Point and the school wharf, during the day. The excellent music of the band of the Artillery School, and of the Soldiers' Home, both of whom were very kindly offered for the occasion by General Barry and Governor Woodfin, added much to the enjoyment of the occasion.

The exercises opened at 8.45 A. M., with the usual school routine. The students gathered in the assembly-room, where the roll was called; and after a brief and simple religious service, consisting of reading the Scriptures by Mr. Larry, the head of the academic department, singing by the school, and prayer by Dr. Ormiston, the classes separated for their different class-rooms, where the usual recitations were held, the visitors examining the scholars and testing their proficiency in the various branches. At 11.30 the school again assembled in the main hall, where, after a few of the old slave songs had been sung by school, to the manifest delight of the visitors, the following rhetorical exercises were given;

1. Salutatory (original), George J. Davis.
2. Recitation, "Maud Muller," Millie Calloway.
3. Oration (original), Ackrel E. White.
4. Essay (original), Mary E. Melvin.
5. Reading (selected), Benj. E. Tonsler.
6. Oration (original), M. M. Mendenhall.
7. Recitation, "Bernardo del Carpio," Jennie L. Ivy.
8. Essay (original), Grace McLean.
9. Reading, "The Vagabonds," W. T. Greenhow.
10. Valedictory, "Africa as a Field for Christian Labor," George E. Stephens.

Of these and the subsequent exercises, in Virginia Hall, the daily papers both North and South, which had representatives present, give such full reports and have spoken in such cordial and commendatory terms, that we feel sure our readers would enjoy quotations from them more than any description of our own.

Of the exercises in the class-rooms, the Richmond *Enquirer* says: "The students in the various classes acquitted themselves well and gave evidence of careful training. There seems to have been no effort at display, but the result shows that the teachers are striving, and successfully, to give to their pupils a good, solid education in those branches which will be useful to them.

"These exercises were succeeded by singing, by the pupils, of some of those sweet old quarter meeting melodies, peculiar to the olden time. No Virginian could listen to these melodies, without having his feelings stirred and his sympathies aroused for those who, in the days of the past, were our playfellows on the old plantation. It is due to Gen. Armstrong, to the pupils and to ourselves, as Southern people, to testify that in the whole of the exercises of the day there was absolutely nothing offensive to the most exacting critic. The conduct of the pupils was easy, graceful, dignified and entirely free from all species of vanity and assumption. Rev. George Whipple, president of the board of trustees, in a brief address replete with feeling, awarded diplomas to the following members of the graduating class:

"Jane Bailey, Hampton; Millie E. Calloway, Danville; Amy Coles, Danville; Rachel Elliott, Portsmouth; Rachel and Violet Howard, Hampton; Jennie Ivy, Jonesboro', Tenn.; Grace McLean, Greensboro', N. C.; Mary E. Melvin, Hampton; Margaret Ricard, Wilmington, N. C.; Augusta Thissel and Florence Tolman, Hampton; Mary Wilson, Portsmouth; George Davis, Danville; William Greenhow, Hampton; Augustus Hodges, Kempsville; John F. Pool, Elizabeth City, N. C.; George E. Stephens, Beanfort, N. C.; James C. Thompson, Burke's Garden, Va.; Benj. E. Tonsler, Charlottesville; and Henry Whitted, Hillsboro', N. C.

"The venerable president gave these young people some sensible advice, telling them that they were sent on a mission of peace to the people of this country.

"The company then marched in procession to Virginia Hall, a large and handsome building, erected in part through the efforts of the 'Hampton Singers.' Here a liberal collation was provided, and, after a short time spent in partaking of these refreshments, the company assembled in the beautiful chapel of Virginia Hall, to listen to addresses from distinguished visitors.

"Timothy Smith, one of the students, delivered a dedicatory address, conservative in tone, in which he thanked the people of the country for the generous donations which had enabled them to erect this commodious building. He believed that the gift would not be made in vain, but that the graduates of the institution would manifest their gratitude by conserving the interests of the country in carrying the blessings of education to the colored people of the South."

The address of Timothy Smith was followed by eloquent, cheering and forcible speeches from Dr. Ormiston, Dr. Dyer, Senator Allen, Gen. Howard, Dr. Ruffner and Prof. Blyden, of Liberia. After the addresses, which were listened to with much interest, the assembly dispersed. The steamer *Mystic* carried the guests back to Old Point and Norfolk. The admirable band of the Artillery School entertained the company at the collation and in the chapel, with choice selections, which added much to the pleasure of the occasion. Of the day's proceedings the *Enquirer* says:

"This commencement is an important era in the history of Hampton Institute. The friendly interest manifested by the Southerners present and the free exchange of views between them and Northern visitors, will bear fruit which will redound to the good of the institute. All who wish well to the colored people cannot but trust that this school, so well conducted and so peculiarly adapted to their wants, will continue to prosper still more abundantly."

The Richmond *Dispatch*, after giving a description of the school and its methods, the buildings, farms, industrial system, etc., says: "The institution seems to have been very admirably managed by Gen. Armstrong and his co-workers. * * The different classes were examined in reading, book-keeping, philosophy, grammar, arithmetic, history, geography and algebra. It is, of course, difficult to judge of the thoroughness of pupils in a public examination of this sort; but they really seemed to be very prompt and accurate in their answers, and to show that they had been exceedingly well taught. The old negro songs and hymns by the pupils were very fine indeed, and it is not surprising that their concerts excite such interest all through the North. The addresses and recitations were very creditable both to teachers and pupils. The recitations and readings were especially well done."

From an interesting report in the New York *Times*, from the pen of Edward King (the talented writer of the article in *Scribner's Monthly*, on "The Great South," which has attracted so much attention), we make the following extracts, only regretting that our space will not allow us to give the speeches of the distinguished visitors in full:

"The history of 'Hampton' is now a part of the history of the country. The brave efforts of the American Missionary Society in behalf of the freedman in all that section around Fortress Monroe, to which the negroes flocked after they were declared contraband of war, and the energetic labors of Gen. Armstrong as an agent of the Freedmen's Bureau, and as the organizer and upbuilder of the institution, are known to the general reader. The 'Hampton Singers' have sung their plaintive and inspiring songs up and down throughout the land, and the wonderful progress that the two hundred and twenty pupils in the institution have recently made in their studies has been the subject of rejoicing in a score of

Northern cities. But no one can really appreciete the naturo of that progress without attending one of the 'commencements.' This yeer, as usuel, large delegations of the friends and patrons of the school came from New York and New England, especially induced hy the announcement of the dedication services at 'Virginie Hall,' the elegant new colloge building, which, when quite finished, will contain a fine chapel, rooms for one hundred and twenty girl pupils, and dining and industrial rooms. The steamer *Wyanoke*, which left New York on Tuesday efternoon brought a goodly party. The good Common wealth of Virginia, which yearly shows such increasing favor toward Hampton, sent an ehle delegation, prominent in which was Dr. Ruffner the State Superintendent of Instruction, the ahlest Southerner who in interested in educationel matters, Rev. Dr. Armstrong, of Norfolk, and State Senator Allen.

"After a delightful afternoon and evening by the cool, surf-beaten shore of Old Point Comfort, where the 'Hygeia Hotel,' is gradually grouping around it all the essentials of a charming watering place, the visitors took steamer on Thursday morning to Hampton Beach. Turning from the broad bay, where half a hundred fleets might safely ride at anchor, and leaving behind them the gay panorama of white-winged ships and swift steamers, the company were carried into Hampton Creek, past the Chesapeake Military Asylum, the Southern Branch of the Home for Disabled Volunteers, past tho National Cemetery, with its five thousand graves and memorial monument there, and landed on the low, fertile shore, where the farm and school are located. Around the large, three-story brick edifice now nsed as the recitation hall, some of the pupils and colored townsfolks were gathered, and gravely saluted the visitors as they passed into the clean, well-ordered halls. The divines and schoolmasters of the party speedily betook themselves to the recitation rooms, and entered heartily into exsnination of the pupils, who were all self-possessed and mannerly in the fullest degree, and showed that their training had been of the most thorough character. In one room, a very black girl went gravely and accurately through problems, with blackboard demonstrations, while some of the wiliest and witticst of clergymen deftly tried to entrap and embarrass her; in another, classes read difficult pieces in prose and verse with admirable sense of dramatic expression and inflection; and in still another, grammar or philosophy was discussed by earnest and cultured men and women with youthful pupils of almost every grade of color, who seemed not a whit abashed, and who answered with astonishing promptness and accuracy. In a front apartment a neat printing press and composing room denoted tho office of the SOUTHERN WORKMAN, which the scholars at Hampton print and issue themselves; from its windows one could look down on the prosperous fruit farm cultivated by the scholars' hands, and on the row of tenta now occupied by the male students in default of dormitories. The walls of the new 'Virginia Hall' stood out in not ungraceful relief again tho crystal vault of the sky, and beyond them one could see the wharves and the curiously-grouped roofs of the town of Hampton, which a lusty band of Englishmen settled more than two hundred years ago.

"The rhetorical exercises held in the assembly room of the recitation hall on Thursday forenoon, brought the graduating class of twenty-threo young men and women to the favorable notice of the visitors, and spectators from all sections testified their delight hy hearty applause. The troops of neatly-clad and cleanly youths and maidens, their swart or tawny faces aglow with the enthusiasm of song or the excitement of listening to their fellow-pupils, formed an inspiring spectacle. It was not without tears that many present listened to the vague, yet rhythmical burdens of those songs of devotion and love wnich seem to spring spontaneously from the hearts of the colored race in Amorica. Nor was it without a certain profound and inexplicable emotion that one heard the black valedictorian of the class, manly and eloquent, give to his fellows the parting words of counsel. That these people so lately slaves, so recently ground into the very dust, should have made such startling advances, was the occasioning of perpetual wonderment to those attending a Hampton commencement for the first time. Of the twenty-threo graduates, twelve were yonng women, and those who participated in the rhetorical closing exercises showed grace, modeaty and appreclation, wbich amply demonstrated their fitness for their future work of teaching. Simply clad, and trained for three years to plain fare and laborious lives, they were prepared for work among the lowly, and fully testified their desire for and zeal in the work. By the close of another year, Hampton will have educated and sent into the field more than a hundred pious and laborious colored teachers, who will devote their whole attention to the amelioration of their race. The thoughts of some of the speakers in the graduating class seemed turned toward Africa and missionary labor there; many a good word for the heathen beyond seas, as well as those at home, was said. The rhetoricel exercises comprised recitations of poems, original orations and essays, and were interspersed with tho inspiring cadences of 'Babylon's Fallen' and 'King Emenuel.' The diplomas were grasped with an esgerness, which showed that tho treasures atteined were fully appreciated, and to the music of the hand from the Soldier's Home the guests and pupils proceeded to the new Virginia Hall, where scholers and teachers served lunch to the visitors, after which the dedicatory exercises were held in the chapel above.

"There were no formal exercises, savo an address of welcome to the new building by one of the male pupils, a black youth, who acquitted himself well, after which Principal Armstrong gave the school, assembled in the rear of the chapel hall, freo rein to sing. Song after song went out upon the still summer eir, every refrain freighted with a mysterious pethos, a strange and spiritual yearning, whose expression doubtless prompted Superintendent Ruffner to say, as he did later in the afternoon, that the world had not yet begun to suspect the half of the power of eloquence, of poetry and music which lay dormant in the negro race. Certainly it was worth all that it had cost, and all that it demanded of the future, to give to those who could bring out of their souls so tonching and sublime a song as 'Dust and Ashes,' all the instruction necessary to make them thorough men and women.

"After the singing, and music hy the able band of the Artillery School at Fortress Monroe, full vent was given the speakers, who unhesitatingly declared their admiration of the manner in which the pupils at Hampton were trained. Rev. Dr. Ormiston, of New York, in a stirring and spirited address upon the need of health and thorough development of all faculties in work, took occasion to refer in terms of highest praise to the training of the pupils. He said that, after many years of experience in examining schools, he had fancied that he could entangle these newly-developed minds, and that he should find them lacking in a thorough understanding of all that they had learned; but he confessed that the examination had agreeably disappointed him.

"The next speaker was Rev. Dr. Armstrong, of Norfolk, a clergyman of great culture, and profoundly respected in Virginia. He alluded tonchingly to the meeting on that occasion of so many who had long been separated by the events of the war, and those following it; and compared the meeting to one which he once had with a friend in the mountains of the Blue Ridge. He had, he said, been wandering in the forests on a mountain side, and was lost, when he suddenly encountered the friend whom he had left in a valley on the opposite side of the ascent the day before.' They had been 'climbing the mountain on different sides,' and that, Dr. Armstrong thought, was whet the citizens of the North and South had been doing for the past few years with regard to the education of the colored race. And he then and there invoked God's richest blessing upon Hmmpton School. Rev. Dr. Armstrong's timely and noble reinforcement of the friends of the long debased race, at this critical epoch in the history of negro schools, will be powerful for good, and is a new evidence that Virginia means to do her duty by black and white alike.

"The eddress of Rev. Dr. Dyer, of the Episcopal Missionary Society, was also a grand testimonial to the thoroughness of the culture at Hampton. Dr. Dyer said he went to the school with a preconiment that he should be disappointed; that the progress made would not be so much as he had been told it was. But he had been shown that his presentiment was groundless; had seen that the normal work and the whole conduct of the institution was in the highest sense praiseworthy, and he promised to plead the cause of Hampton wherever he should go. Hon. Mr. Allen, of the Virginia Senate, followed with a lively speech, showing that opinion in favor of a state appropriation for the institute was steadily gaining ground in the Legislaturo. General Howard next made some interesting remarks, in which he briefly alluded to the opprohlum which had at times been heaped upon those engaged in fostering negro education in the South, and how it had been faced, and in a measure overcome hy the spirit of law; and closed with an appeal for pecuniary help in the work at Hampton and elsewhere.

"Dr. Ruffner, the State Superintendent of Education, was next called out, and after some introductory remarks, said that even very recently General Howard was certainly one of the men he never had expected to love; but turning at the same moment toward the General with a kind of gesture of welcome, the latter hastened forward, holding out his only hand, which Dr. Ruffner eagerly grasped in token of good-will, while the new Virginia Hall rang with vociferous cheering. Dr. Ruffner then read an excellent address, setting forth, among other things, his reasons, and those of the conservative party, for opposing mixed schools, alleging the entire willingness and earnest intention of the people of Virginia to give the negro an education; and asserting that Hampton might be considered an assured success. He also showed how the negroes in Virginia might better themselves in worldly circumstances by industry and temperance, and gave the outgoing teachers—the colored youths and maidens of the graduating class—some excellent advice. Rev. Mr. Blyden, a colored gentleman in the employ of the Presbyterian Missionary Society, alluded at some length to the character of the negro population in this country, to the chances for them to emigrate to and do good in Liberia, and closed with a quaint account of the fruitless struggle which white men are now making to obtain civil rights in the Liberian Republic. Rev. Mr. Fessenden then made an appeal for the support of Hampton' hy 'contributions from Northern friends of the institution. He strongly recommended subscriptions of $1,000, the yearly interest upon which would support scholarships, the tuition fees being bnt seventy dollars per year. In addition to the $95,000 in land scrip given the school by the state of Virginia, $101,000 has been contributed in endowments, legacies, etc., and as much more is needed. Thirty thousand dollers are wanted for the completion of 'Virginia Hall,' and the trustees have decided not to carry forward the work until that amount is forthcoming. Who can doubt that it will be supplied? The school is not sectarian; all evangelical churches are interested in its noble work, and several scholarships were promised to-day. After what has been said at the dedication services of the new hall to-day, it looks as if New England and Virginia were henceforth to work side by side in the cause of negro edncation."

ADDRESS OF DR. RUFFNER.

The Richmond *Dispatch*, of June 15th, contains the address of Hon. W. H. Ruffner, State Superintendent of Public Instruction, at the dedication of Virginia Hall on the 11th ult. We regret that we have not space for the whole of this interesting address in our columns, for though Dr. R.'s views of "The Educational Policy of the Colored People," are not wholly in accord with those generally held by their Northern friends, or hy the colored people themselves, yet he gives them some sound and valuable advice, and his high position, and the great services he has rendered to the cause of the freedman's education, entitle his opinions to our respect and attention. After drawing a parallel between the history of the colored race in this country and that of the Israelites, he says:

"I will indicate some points which I consider essential to success in the education of the colored people of these Southern States. As to the spirit in which I speak, I leave that to be judged by my past record—only adding that I have never felt more zeal for the education of the colored people than I feel to-day; never more determined that they, in the administration of the public school system, shall have that impartial treatment which our Virginia law requires. But horrible blunders have been made in dealing with and for these people, and absolutely fatal measures now overhang us.

"If we are to save the negro from greater disasters than have ever befallen him in this land, if we are to preserve the peace and the civilization of these Southern States, we must consider this subject in a different spirit from that which has usually charactcrized its treatment hitherto. I cannot hope that my views will hc accepted by all who are here present, but I beg at least a hearing.

"1. Looking simply at the sound development of the colored race, we should not hurry on its people to take possession of privileges and to occupy positions, in advance of their personal fitness therefor. There is no surer guarantee of failure and disastrous reaction than such a policy. Put any man to doing a thing that he does not understand, force him into social relations in defiance of social law, urge him into occupations where there is no demand for his services, stimulate him to spend his little earnings in personal ornaments, in traveling, in frequenting thestres and costly hotels, and you simply drive him on to ruin. You unfit him for his natural work, you make society despise and laugh at him, and turn against him and *put him down* with a force which the severest laws are powerless to resist. Every man of observation knows this to be true, and every educator who has studied the laws of human development knows that it must be so.

"Even if hy the hand of power a mass of unfit men are set to doing the highest work of a city, the result is as bad for themselves as for the commonwealth—for all perish together.

"The law of human development is uniform and absolutely without exception. There must be a regular growth—not saltatory hursts. Races, like individuals, have their childhood and youth before they reach manhood. Put hoys to doing man's work and you hreak their constitutions. Growth, to be vigorous, must come from gradneted exertion. There must not he streining on the one hand, nor too much nursing or petting on the other. Lap-dogs are insignificant because they are lap-dogs. It is the St. Bernard of the snow drift thet grows large and strong. Passive educatiou is a contradiction in terms. You must set the faculties to work, and as they earn their knowledge they grow strong, as the lion grows strong while wrestling with his prey.

"Every teacher here knows thet I am uttering sound doctrine. You know, my fellow-workers, that education is simply the systematic strengthening of the powers by exercise; and you know another thing, that a pupil ought not to be promoted from the lowest to the highest grade without passing through the intermediate.

"Then, what think we of the policy that would spend millions for civil rights, and not a cent for education?

"2. I remark, that the education of the colored people should be special and peculiar in its character, at least in the fifteen ex-slave states. By special and peculiar, I do not mean that it should be substantially different from that given to the whites, but that there should be an adaptation in the selection and arrangement of the studies, and in the methods of instruction, to the peculiar character and wants of the people to be educated. They have interesting race peculiarities, which ought to be specially cultivated, and so they have peculiar deficiences and weaknesses, which ought specially to be looked after. The history of the white and colored races up to a recent period have been so very, very different, and even now their general opportunities and their daily lives are so different, that a moment's reflection ought to convince any one that special treatment is a necessity for bringing the colored people up to the general average. There is not one of you that speaks to a colored person, or addresses a colored audience thet does not particularly recognize these principles. And there is not a church or missionary organization thet does not recognize them in its plans. Tbis is reason enough, if there were no other, why the races should be taught in separate schools. If they were allowed to go to white schools they would not have as suitable instruction as in good schools of their own.

"Besides this, I might dwell upon the valne of separate schools in cultivating that pride of race which, as I have already said, promotes self-respect, purity of morals, and intellectual advancement. I shall not treat the subject fully at present, but will express the opinion decidedly that the social repugnance existing in the South between the white and colored races tends to benefit and not injure the negro. I pledge myself to demonstrate this proposition upon eny fitting occasion. But I shall now dismiss this point hy the still more confident assertion that the only practical alternative in Virginia is *separate schools or no schools at all;* and there is no earthly power to make it otherwise.

. . . . . .

"This institution is addressing itself to the supply of the two great wants of Virginia—teachers and workers. It gives knowledge to quicken the intellect and practice to train the fingers. It has done great things already—it is doing great things—for its graduates are doing valuable service in many parts of the state; but greater things than these shall ye see, my friends, if you will only equip this school with all that it should have. I must be allowed to plead for this especially in behalf of the principal, who has so nobly toiled, on this spot and elsewhere, in establishing an institution of real merit, whose young name is already known over the civilized world. I honor and thank the friends of humanity, who have contributed of their means in furtherance of this great enterprise. I honor those young women and men, whose beautiful voices have done such service to their *Alma Mater*. I honor those pupils all, who have so assiduously studied and labored here for their own improvement. I welcome the graduating class to the field of active duty. I wish you all to do well for yonrselves, well for your state, well for your race—and may God be with you!"

ACKNOWLEDGEMENT.

The Normal School is indebted to Governor Woodfin, of the National Soldiers' Home, for the hospitalities shown hy him to guests of the school, at its late Anniversary, and for the use of the Home Band; and to General W. F. Barry, commanding the Artillery School at Fort Monroe for the services of the Fort Band, both adding largely to the attractions of the occasion hy their excellent music; also to Mr. Phoebus, proprietor of the Hygeia Hotel, for courtesies extended hy him to the school and its guests; and to Mr. W. T. Bartlett for the use of rooms in his house on that occasion.

S. C. ARMSTRONG.

Hampton, June 20, 1874.

THE DESTRUCTION OF SENNACHERIB.

BYRON.

The Assyrian came down like the wolf on the fold,
And his cohorts were gleaming in purple and gold;
And the sheen of their spears was like stars on the sea,
When the blue wave rolls nightly on deep Galilee

Like the leaves of the forest when summer is green,
The host, with their banners, at sunset were seen;
Like the leaves of the forest when autumn hath blown,
That host, on the morrow, lay withered and strown.

For the Angel of Death spread his wings on the blast,
And breathed in the face of the foe as he passed;
And the eyes of the sleepers waxed deadly and chill,
And their hearts but once heaved, and forever grew still!

And there lay the steed with his nostril all wide,
But through it there rolled not the breath of his pride;
And the foam of his gasping lay white on the turf,
And cold as the spray of the rock-beating surf.

And there lay the rider distorted and pale,
With the dew on his brow and the rust on his mail;
And the tents were all silent, the banners alone,
The lances unlifted, the trumpets unblown.

And the widows of Ashur are loud in their wail,
And the idols are broke in the temple of Baal;
And the might of the Gentile, unsmote by the sword,
Hath melted like snow in the glance of the Lord!

LORD BYRON.

One of the most remarkable and also one of the most unfortunate of modern English poets, was Lord George Gordon Byron, whose noble birth, ample fortune and great genius were all made worse than useless by the force of strong and misguided passions. Born in London in the year 1788, he was left wholly to the care of his mother, who, having separated from her husband, was obliged to live in the plainest and most humble manner; and his childhood was passed in England and Scotland with few advantages of education, and the inestimable disadvantage of being under the control of a woman who was herself passionate, selfish, and altogether unfit to train a sensitive, talented boy. In 1798, this boy, by the death of his uncle, succeeded to the family title and estates, and became Lord Byron; but his mother's folly was only increased by this change of fortune, and it seems as if she must have used every means in her power, to make her son's ruin a certainty. He was sent first to one of the large public schools and then to the University of Cambridge, in both places giving signs of a frank and generous disposition; but being always and everywhere the victim of the bad habits, which, even thus early in his life, had become so fastened upon him as to have thoroughly vitiated his character. He began to write when he was not more than nineteen years old; and his principal works, *Childe Harold, The Corsair, Giaour, Lara, Don Juan*, etc., were all written between 1809 and 1822, the rapidity and brilliancy with which he wrote during this period being most remarkable. He was married in 1814, but lived with his wife a little more than a year, having one child, a daughter, to whom he was strongly attached. He traveled very extensively in Europe and in the East, became much attached to a foreign life, and the unpleasantness of his family relations together with the poverty which was the result of his extravagance, finally drove him from England. In 1815 he left his native land, and spent the next seven years on the Continent, living sometimes with the poet Shelley, sometimes with other friends, and sometimes alone; but wherever or with whomsoever he was, his manner of life altered little; he was always reckless in dissipation of all kinds, and regardless of the ordinary decencies of society. He became much interested in the Grecian struggle for independence, and in 1823 he sailed from Leghorn for Greece, with gunpowder and other commodities for the combatants, and reached Missolonghi in January, 1824. He developed here unsuspected ability, and worked indefatigably and wisely in the public service; but early in February was seized with an alarming illness. To this, however, he refused to succumb, and was about to take charge of an expedition against the Turks, when, in April, he was again attacked, but once more rejected the proper remedies, and after an illness of ten days, he died at Missolonghi, on the 19th of April, 1824, being only thirty-six years old. His life was brilliant and miserable, a success and a ruin; for at the height of his fame he was never happy; and, when on one day, there were sold fourteen thousand copies of one of his poems, he was at the same time so deeply in debt, that his house was fairly besieged by his creditors.

While his genius was unquestionably great, it was so misused as to have been to a great extent wasted; and there is no sadder picture among our modern great men, than that which shows us Lord Byron—young, talented, rich and noble,—a prey to the worst vices of which human nature is capable—miserable himself, and the cause of infinite suffering to others.

THE MOUTH OF THE MISSISSIPPI.

Wherever the mud of the Mississippi River meets the salt water of the Gulf of Mexico, a "bar" is formed and navigation prevented, so that each one of the numerous mouths which form the Mississippi delta is more or less obstructed, while some of them are only kept open for the passage of vessels by constant dredging. Our illustration this month is of the United States' dredging steamer *Essayons* at work in the Southwest Pass. To the left of her a ship is seen coming in, towed by the flag-ship of the tow-boat fleet, the *Achilles*; while the *Wabash*, another of the same fleet, is seen taking a ship out to sea; and on the extreme left floats the buoy which marks the wreck of the Confederate iron-clad *Louisiana*. She was set on fire and sent adrift down the river, but blew up just before reaching the Union fleet, and now enjoys the distinction of being, perhaps, the only work of human hands which thus far has had any effect in altering the current of the bar, for the channel has slightly changed since she has been lodged there in the mud. The *Essayons* herself, meets a description as being the only dredging machine that has been of any real assistance in making New Orleans a port for heavy-draught shipping. She has a large propeller wheel at each end, and a kind of drag at her stern, which forces the mud stirred up by the after-screw, upward into the current. The current, therefore, which forms the bar is made to do most of the work by carrying away its own deposit; but as the bar forms constantly, so the work must be continuous, and it is necessary in order to keep eighteen or twenty feet of water on the bar of this pass, to have the boats similar to the *Essayons*, so that in case of accident to one of them, no interruption need occur in the daily dredging.

The article from which we have taken this description of the *Essayons* and her work, gives also an account of one of the curious features of this delta of the Mississippi, consisting in the formation of mud-lumps or mud-banks. "These," says our informant, "are islands of mud which rise out of the bog, sometimes in the course of a night or day, being of all shapes and sizes. They disappear sometimes as mysteriously as they come; but, for the most part, they harden in the sun, and are soon covered with vegetation. They then become the homes of countless rabbits, which actually swim from one mud lump to another, while wildcats and coons are plentiful enough throughout the whole of this desolate region."

The lighthouses of this strange wilderness of mud and water have very different difficulties to overcome, from the one of which we gave a picture last month, the foundation being so treacherous that heretofore it has been almost impossible to erect a secure structure. The old Southwest Pass lighthouse is said to have been built on a foundation of cotton bales; and for some time has leaned at such an angle as to make it certain that one day or another it will fall into the Gulf. The new lighthouse which takes its place is of iron; and it is said that one hundred thousand dollars were spent in getting ready to lay the foundation proper, though at last a bottom of hard sand has been reached and built upon with cement which becomes as solid as stone.

As may be imagined, all this country about the mouth of the great river is desolate, unattractive and unhealthy, and, indeed, is only inhabited by those who, as a matter of duty or of gain, are forced to live in its unwholsome atmosphere. Still there is much both in its geography and history which is interesting; and we take this opportunity to give our readers, in another article, a brief account of the beautiful city of New Orleans, one of the oldest cities in America, and, by no means, the least famous.

NEW ORLEANS.

This beautiful city which, from its comparative antiquity and the varied origin of its founders and possessors, is one of the most interesting in America, stands on the left bank of the Mississippi River about one hundred miles from its mouth. It was settled in 1718 by the French, who then owned the whole province of Louisiana, and soon became the seat of government, although, at the time, it had a population of only two hundred. In 1727, the construction of levees upon the river front was begun, and the city thus protected from the annual overflow of the river. Various societies of monks and nuns came out from the mother country, received grants of land and other property, and erected many handsome and spacious buildings; and the growth of the city under its successive French governors was steady though gradual, until in 1763 it, with the rest of Louisiana, was ceded to Spain. This change had at first a disastrous effect; but the city slowly recovered, and under Spanish rule was improved in many essential respects, being finally transferred in 1803 to the United States, at which time Louisiana became part of the American Union.

Situated in the midst of vast marshes as New Orleans is, its growth has necessarily been limited in certain directions, and, as a result of this, the city has spread itself along the highlands of the river bank, until it has a river front of six or seven miles, from which front it slopes gradually back to the swamps lying at a distance of from half a mile to a mile and a half from the levee.

Bayou St. John, a deep, navigable inlet from Lake Pontchartrain, indents the swamp and extends to the suburbs; while the Canal Carondelet runs from the bayou into the heart of the city and terminates in a basin for its accommodation, though most of the trade is carried on through another canal which communicates directly with the lake, and is always filled with sloops, schooners, etc., most of which are employed in the lumber trade. Along the river front the levee, or artificial embankment, is extended by a long series of wooden wharves or piers; and this is the principal business quarter of the town. There are about sixty churches in the city, the finest of which is the Cathedral of St. Louis, a majority of the population of New Orleans being Roman Catholic, by reason of their French and Spanish origin. The private residences are usually surrounded by gardens, and are very spacious and elegant; while the luxuriant vegetation, in a climate which knows no winter, makes New Orleans an unusually beautiful city.

In 1860 the population of New Orleans was one hundred and sixty-eight thousand, eight hundred and twenty-three; and it was the second city in America in the amount and value of its exports, being the greatest cotton market in the world, and far beyond all other cities in the number of steamboats employed in its trade. The war of the Rebellion naturally affected its prosperity very seriously, and it has hardly yet recovered; but its position so near the mouth of that great highway of commerce, the Mississippi River, makes its growth and importance as one of the principal cities of America, a matter of certainty.

NEWSPAPERS.

Before the establishment of printed newspapers, public occurrences, and stirring events were made known and transmitted from one place to another by means of periodical publications in manuscript, which, of course, were only furnished to the very wealthy—then, as the demand for information increased, these were followed by the "news ballad" sung or recited in the street or some public place; then the news pamphlet in prose; then the regular daily or weekly sheet of news; and finally, the first actual printed newspaper. So far as is known, the first regular series of weekly, English newspapers began in 1622, and was called the "Weekly Newes from Italy, Germany, etc.," its contents being principally confined to news from abroad, and discussion of foreign affairs. The first attempt at reporting was made in 1641; the first advertisement was issued in 1648; the first commercial newspaper was published in 1675; and these were followed by medical, agricultural, and literary journals.

It was not until the eighteenth century that morning papers were issued, the first, daily morning newspaper being the "Daily Courant," which was published in London in 1702, and consisted of one page of two columns. The circulation of these papers increased with enormous rapidity, and in 1767 more than ten million newspapers were sold in England alone. Several of the continental nations can boast of having begun the publication of journals some years before a similar attempt was made in Great Britain, the first French paper having been published in 1605; while in the University of Leipsic there is preserved a news publication which, though not answering exactly to our modern ideas of a newspaper, is still essentially the same thing and dates back to 1495.

Knowing as we do how immense is the present power of the press in all civilized countries, it is curious to look back to a time when newspapers were a luxury within the reach only of the very rich, and limited in their influence to a comparatively small class of people, who were sufficiently well-educated to read and appreciate their contents. One of the most important facts in our nineteenth century life is, undoubtedly, that almost without exception, every family in America can have and read its own newspaper—a fact which puts the news of the whole world within the reach of every American who can read and write.

WATCHES.

From the old church clock which we described in our last number, sprang the whole race of modern clocks and watches, which latter grew gradually smaller until they became portable, with springs instead of weights, and were carried about the person under the name of pocket-clocks.

These earliest watches were large, of many different shapes, and with no crystals, either having the face open or covered with metal perforated over the numbers on the dial. They opened back and front, had only the hour-hand, and were wound twice a day. The first important improvement in watchmaking, and, in fact, the greatest that has ever been made, was the application of the coiled hair-spring to the balance. This was to the watch what the pendulum was to the clock, and was introduced about two hundred years ago, being followed some thirty years after by the second great improvement, viz: the use of jewels for the bearings of pivots. Jewels for this purpose are valuable in proportion to their hardness, which decreases in the following order: diamond, sapphire, ruby, chrysolite, agua-marine, garnet; and these stones properly drilled, will last for generations without perceptible wear.

About the year 1717, began a most interesting epoch in the history of the watch; for as this wonderful instrument was brought nearer to accuracy, it was found that fluctuations of heat and cold affected the machinery so much as to seriously disturb its uniformity of movement. Cold, it was found, contracted the balance, which, of course, produced quicker vibrations and caused the watch to gain time; while heat expanded it, lengthened the beats, and produced loss of time. The English House of Commons offered a prize of one hundred thousand dollars to any one who could so improve the chronometer as to enable a ship captain to find his position

at sea, within thirty miles of the true place. France and Spain had already offered large rewards to the same end; and in 1767, John Harrison gained the prize by the invention of the compensation balance, which rests upon the principal that heat expands different metals unequally. He made a compensation balance, the outer rim or tire of which was of brass, and the inner rim and cross-bar of steel; these being so soldered together, that they counteract each other. Cold, contracting the inner steel rim, would reduce the circumference; but, as it contracts the outer brass ring still more, the opposite effect is produced, and the circumference enlarged. The effect of expansion is checked in the same way, so that in a well-made watch the balance remains constant in all seasons. The final great improvement in the watch was made by the "escapement," the most perfect form of which is the "patent lever escapement," or "detached escapement," an invention which is the result of the life work of more than one man of genius. This transforms rotary into vibratory motion, and can only be properly explained by a diagram or the study of a watch; for, simple as it seems, it is in reality a triumph of ingenuity.

We, of the present day, carry about with us familiarly, a little instrument which represents the developed thought, the condensed industry of centuries; and its history accurately written, would fill a hulky volume. What would become of the commerce of the world, of scientific study, of social life, without the watches, which on sea and shore, in counting house, and laboratory and kitchen, mark the recurrence of the hours and divide our time into that order and regularity upon which so much of our usefulness and happiness depend?

It is one of the productions of the human intellect which has steadily kept pace with the wants of the human race; and its inestimable value to us makes it almost a matter of duty for us to understand its mechanism, and know something of its history.

THEY DIDN'T THINK.

BY PHŒBE CARY.

Once a trap was baited
With a piece of cheese;
It tickled so a little Mouse,
It almost made him sneeze;
An old Rat said, "There's danger,
Be careful where you go!"
"Nonsense!" said the other,
"I don't think you know."
So he walked in boldly—
Nobody in sight—
First he took a nibble,
Then he took a bite;
Close the trap together
Snapped as quick as wink,
Catching Mousey fast there,
'Cause he didn't think.

Once a little Turkey,
Fond of her own way,
Wouldn't ask the old ones
Where to go or stay.
She said, "I'm not a baby,
Here I am half grown;
Surely I'm big enough
To run about alone!"
Off she went, but somebody
Hiding, saw her pass;
Soon, like snow, her feathers
Covered all the grass.
So she made a supper
For a sly young mink,
'Cause she was so headstrong
That she wouldn't think.

Once there was a Robin
Lived outside the door,
Who wanted to go inside
And hop upon the floor.
"Oh, no!" said the mother,
"You must stay with me;
Little birds are safest
Sitting in a tree."
"I don't care," said Robin,
And gave his tail a fling,
"I don't think the old folks
Know quite everything."
Down he flew—puss seized him,
Before he had time to blink,
"Oh!" he cried, "I'm sorry,
But I didn't think."

Now, my little children,
You, who read this song,
Don't you see what trouble
Comes to thinking wrong?
And can't you take a warning
From their dreadful fate,
Who began their thinking
When it was too late?
Don't think there's always safety
Where no danger shows.

Don't suppose you know more
Than anybody knows;
But when you're warned of ruin
Pause upon the brink,
And don't go under headlong,
'Cause you didn't think.

For the SOUTHERN WORKMAN.

RAREY, THE HORSE TAMER.

"I Want a Lump of Sugar."

It must be somebody's pet who is putting his pretty head through the dining-room window, with a wistful look in his eyes that says as plainly as words could, "I want a lump of sugar." He'll get it, no doubt, and a pat into the bargain.

About twenty-five years ago, the people of the United States and Great Britain, began to be greatly excited over the wonderful achievements of a young American in training the most vicious horses and the wildest colts. Large audiences assembled to witness his performances. Gentlemen paid large sums, or sent their grooms, to learn his art; his fame spread

"I WANT A LUMP OF SUGAR."

so far that, when he went to England, the Queen sent for him to give one of his exhibitions in honor of her daughter's marriage, and the Emperor of Russia invited him to St. Petersburgh, and procured a wild horse, which had never been broken, for him to try his powers upon. By this time almost everybody perhaps, had heard of Rarey the horse tamer, and he is regarded as one of the benefactors of the world, not merely for having subdued a great many vicious horses, but for having taught that the great law of managing them is gentle and intelligent treatment. He discovered that what all horses, like all human beings, want, in order to become good and reasonable, is *sugar instead of sticks, kindness instead of kicks.* That is his great secret. A writer in *Harper's Magazine*, where I find some interesting stories of Mr. Rarey, says that the key to his entire method is given in his simple directions as to the best manner of introducing yourself to the horse, so that there will spring up mutual confidence. He says: "When you have entered the stable, stand still and let your horse carefully examine you, and as soon as he seems reconciled to your presence, approach him slowly with both arms stationary, your right hanging by your side, the point of your whip, if you have one, toward the ground, the left arm bent at the elbow with the hand projecting. As you approach him, go not too much to the head or cronp, else he will probably move either forward or backward. If, with this precaution, he is restive or suspicious, move yourself to the right or left cautiously, and this will keep the horse in one place. Once very close, stand near his shoulder and stop a few seconds; if you are within his reach he will turn and smell your hand—not that he has any preference for your hand, but that is already projecting and the nearest portion of your body toward him. As soon as he touches your hand and finds it harmless, and probably agreeable to his sensitive touch, you can then delicately caress him, being always careful to move your hand the way the hair lies. As you continue, rub his neck, the side of his head, and, if possible, his forehead, and be careful to favor every inclination of the horse to touch you with his nose. Meantime, follow every touch and communication of your hand in this with kindly looks, and accompany all your tender caresses with affectionately expressed words, such as 'Ho! my little boy—pretty boy!' 'Ah! my beauty—nice lady!' with similar expressions, constantly repeated with the same even and steady tone of voice. From all this the horse soon learns to read your expression—and they are all good physiognomists—becomes acquainted with your voice, and will know at once when fear, love or anger inspire your actions—two emotions of which, *fear and anger*, a true horseman *should never feel.*"

Of course Mr. Rarey often had occasion to subdue animals which had become vicious and unmanageable through previous bad treatment. He was no less successful with these, and by the same method of *kind treatment* joined with firmness and perseverance. The most remarkable of these cases was his conquest of Cruiser, a famous blood horse, belonging to Lord Dorchester, an English nobleman. Lord Dorchester said he had been vicious from a foal; he was often known to lean against the side of his stall and kick and scream as if insane, for ten minutes together. He was sold once but returned to his master; the stable roof had once to be taken off before he could be got out of his stall; and he had become, at last, so violent from the punishments he had received, that he resented every attempt at approach, with yells and kicks, and in one of his fits of fury tore an iron bar, an inch thick, in two pieces with his teeth.

When Mr. Rarey visited him, he found him loaded down with a heavy muzzle of iron and thongs, his food was put within his reach by stealth, and he had to lick it up with his tongue between the iron bars that protected his keepers from his teeth. Mr. Rarey undertook the task of taming this formidable animal, with no fear of the consequences; and incredible as it seems, in three hours Lord Dorchester himself was able to mount him, and Mr. Rarey rode him as a hack. "After Cruiser was reformed," says Mr. Thorp in *Harper's*, "and under the control of his better nature, he was an object of never-failing interest to the English people, her Majesty Victoria herself caressing his head, at the same time expressing joy at his regeneration and regret at the hard usage through which he had passed. The horse himself, under the ameliorating influences of his new position, rapidly improved in his appearance. Gradually the rough haggard grew plump and attractive; his eye 'gleamed with tranquil Christian brightness,' instead of the malignant flash that was wont to extinguish grooms and stable-boys; his coat assumed a silky smoothness, showing that his old prejudice against the solicitations of the curry-comb had passed away. In short, Cruiser became, and is now, a tractable, useful, peaceful member of society, warranted to carry a lady without taxing her courage or her hand.

"The Royal Society for the Prevention of Cruelty to Animals testified their regard by a splendid gold medal, of wonderfully fine workmanship, on the reverse of which, after the title of the Society, is engraved:

TO

JOHN S. RAREY,

FOR INTRODUCING TO THE PUBLIC HIS HUMANE METHOD OF TRAINING AND MANAGING ANIMALS.

1858."

We shall be considerably nearer the millenium when all have learned to regard the noble animal God has given to bear so many of our burdens, as an intelligent creature with rights to be considered, and as amenable to kind treatment as his master, and sometimes more so, as would seem from the following story which an old soldier will tell you about:

OLD BOB, THE ARMY HORSE.

"Yes, I believe I did promise to tell you about Old Bob. Well, when I first knew him, he belonged to the Second United States' Dragoons, Col. William S. Harvey, a part of General Worth's advance guard on the march from Vera Cruz to the City of Mexico. He had formerly been the favorite horse of Col. Jack Hayes, of the Texan Rangers. I have often heard the soldiers describe Colonel Hayes' feats of horsemanship, performed with Old Bob, in the streets of San Antonio; but one day Old Bob got a thorn in his left eye, and it was feared he would lose it, so he was turned over to the quartermaster. But the eye recovered and was as good as ever, although the thorn remained in the eyeball. I have often seen it there myself.

"Old Bob was one of the most knowing horses in the whole army, and as brave as the bravest soldier. I remember once, when the dragoons were exposed to a heavy fire at short range, and some of the horses became restive, how Old Bob would bite and kick at them because they crowded him out of his place in the line. Poor fellow, he was shot on the field of Molino del Rey—peace to his ashes.

"But I meant to tell you something of his fidelity. While General Worth's division was lying at the city of Perote, which, by the way, is situated among the mountains more than eight thousand feet above the sea, the advance guard, under Col. Garland, was stationed about twelve miles farther on at a little village just on the edge of an extended plain, with huge mountains looming up in the hazy distance. From this point the dragoons performed picket duty.

"Boh's master, whom we nicknamed Greenock or Little Scotchman, because he claimed to come from Greenock, Scotland, —soldiers do not always enlist under their own names, for reasons best known to themselves—used once in a while to drink too much *agua diente*, Mexican rum. It so happened that on one of the days when he had been indulging too freely, it came his turn to go on picket guard. He started off very tipsy, and very angry too, because, when he had gone to tighten Boh's saddle girth, the knowing old fellow had tried a trick, which the dragoon horses often attempted, swelling his sides to prevent the girth from being drawn tightly. This was one of Bob's failings. He had two: the other was to unhitch himself in some unaccountable manner from the picket line in the night, and go roaming around the camp much to his master's annoyance, as it sometimes made him liable to be sent to the guard house for not being promptly in line, when 'Boots and Saddles,' was sounded. I think these two peculiarities were the sum total of Bob's sins of commission.

"What's 'Boots and Saddles?' Why, it's an order for the soldiers to saddle their horses and equip themselves for business at once. You see it would be quite impossible to give the order by word of mouth so that all the soldiers of a regiment, or even of a company, which is but the tenth part of a regiment, could receive it at the same moment, when they are scattered all about the camp; but the sound of the bugle can be heard at a long distance, and each dragoon when he hears that particular bugle call, knows that it means 'Saddle up.'

"Well, as I was saying, Greenock was angry with Boh for presuming to know better than himself how tight the saddle girth should be drawn, and thought he'd teach him a thing or two. Greenock's companion on guard was a Dutchman, who spoke but very little English, and that little hardly intelligible. When they arrived at their post of duty, the Dutchman halted while Greenock had to advance a certain distance. He rode on, still keeping up his quarrel with Old Boh by violently jerking his bridle, and driving the spurs into his sides, until the poor animal was nearly frantic, and commenced to do what he could to unhorse his tormentor. The night was dark as darkness itself, and they soon disappeared in it. They did not return at the appointed time, and the Dutchman was unable to give the next relief any clear idea of what had happened. It was concluded that Greenock had either deserted to the enemy or been 'gohhled up' by the guerrillas.

"When the morning relief went out, they heard the neighing of a horse, but it was not yet light enough to see an object at any distance. They proceeded, however, in the direction of the sound, and, as it became lighter, discovered, as far off on the plain as they could see, a horse standing with his head raised and looking toward them, appearing to be trying the best he knew to call them to him. They galloped to the spot, and there was Greenock, stretched at full length on the ground, where he had lain since about half-past nine the evening before. His faithful friend, Old Bob, generously ignoring the cruel treatment he had received, had stood by him all night. Had he not been nobler than most horses, he would have gone back to camp as soon as he had dispossessed himself of his troublesome rider, and Greenock would probably have lain in his drunken stupor till the Mexican Indians, who used to come in from the mountains to market every morning, had found him and stolen everything about him that was stealable, and perhaps his life along with the rest. There is little doubt that he would have forfeited his life as it was, if the case had ever come before a court-martial; but the sergeant of the guard, a good-natured old Prussian, concluded that the least said, was the soonest mended, and made no report of the affair."

OUR HONEY-MOON.

"My dearest," said Fred, as we neared a little way station, "what do you say to some lunch? I can step out here and get you anything you fancy. It may seem a dreadful thing for a bridegroom to confess, but I begin to feel quite sharp after our early dinner. If you don't mind my leaving you for five minutes."

I signified that an absence of that duration might be supported, and Fred started for the refreshment room.

We had been married just three days, and the glamour of the honey-moon was upon everything, the atmosphere was rarified beyond that breathed by every-day mortals, the earth glorified with a new beauty, the heavens with a new light. We ate no bread and beefsteak, but some ambrosial dish untasted before, and drank golden nectar, etherealized from hotel coffee-pots.

I watched Fred from the car window, until he disappeared in the refreshment room. What a splendid fellow he was! Such eyes, such a heart, such a general combination of perfections! How charming, how altogether inexpressible it was to belong to him forever, never to be separated more! when, whiz! clang! Horrors! The train was off again, off with Fred still discussing boned turkey in the eating saloon, his faithful wife hopelessly quiescent in the ladies' car, off, sundering at the rate of thirty miles an hour those whom law and gospel shall not part!

"What's the matter, mum," asked the conductor, noticing my excitement.

"There is a gentlemen left behind," I gasped.

"Is there, mum?" was the stoical reply. "Bless your soul, that's nothing new."

"But, but, he's my husband!" I faltered, blushing to my finger tips, as I felt that fact was something new.

Three ladies turned around to stare at me, and there was an unmistakable titter beneath the heavy mustache of a gentleman opposite.

"Sorry, mum, but it can't be helped. If guests will stop at bar-rooms to whet their whistles we can't wait for 'em."

A bar-room! Fred in a bar-room, whetting his whistle! What did the odious man mean! I tried to crush him with a look, but I wasn't equal to it. Fred, my Fred, in a bar-room?

"You needn't be alarmed," said an old gentleman, kindly, "there will be another accommodation at eight."

"At eight." And it was now just half-past four. I sank back upon the cushion in quiet desperation. What was to become of me?

With the entire abnegation peculiar to the early phase of the honey-moon, I had put my little velvet portemonnaie, handkerchief and vinagrette in Fred's vest pocket instead of my own, but there was such a delightful novelty in feeling that now I had a right to his.

Was there ever a confiding bride left in such a plight? Without a husband and without a cent, and—not the least misfortune to one inclined to the feminine weakness of tears—without even a pocket-handkerchief.

The conductor was again making his rounds.

"Ticket, mum."

"I haven't any ticket," I stammered in bewilderment.

"Two thirty, then, if you please, as far as Philadelphia."

"Ticket, sir—"

"Two thirty, as quick as you can, mum, time's short."

"But my husband has my ticket," I faltered. "He was left at B—— station, you know."

"Beg pardon, mum, but our orders are strict. That sort of dodge is played out on this line entirely. Two thirty, mum, if you please. Will refund at the office, when ticket is presented."

The man suspected me, actually suspected me, Fred's wife! Oh, dear, dear! How utterly lonely and unprotected I felt, after the strong trust and sweet reliance that had been mine.

"I haven't any money," I said, in a faint voice. "You'll have to put me out somewhere, I suppose," I added with despairing resignation.

"Allow me, madam"—the mustached gentleman was up, pocket-book in hand—"until we reach Philadelphia. Your husband can settle it with me afterward," he said, giving his card, with a smile.

If I hadn't been married, I should have fallen in love with that delightful man on the spot. As it was, I only murmured some unintelligible thanks and slipped his card into my pocket, as a memento of a modern knight.

We were to have stopped all night in Philadelphia. As the train neared the city, a new perplexity seized upon me. Where could I go? If it were daylight, I might remain in the ladies' waiting room, but Fred would not arrive until nearly ten at night. I had no money to pay a hackman, go to a hotel, or even get my supper.

A sudden thought flashed through my mind. Aunt Tabby lived in Philadelphia. I had directed a letter to her only a few weeks before, announcing my approaching marriage. True, the reply was rather discouraging, being dismally prophetic of all sorts of evil that awaited me, and darkly suggestive of the snares and pitfalls in that broad road that leads to matrimony and destruction.

We arrived at the depot; my mustached friend had left the car sometime before, so I was unprotected again. An army of hackmen beseiged the door of the depot, and I immediately became the subject of a struggle. Oaths and whips resounded about my ears, until I was finally seized upon and carried off by the most energetic of the party, a red-headed man, whose success arose no doubt from his proclivity for anything resembling a fight.

Having secured me in a very dirty vehicle, he regarded me with a triumphant grin.

"Your trunk is it? Where's the bit of tin."

"The—what?" I asked in perplexity.

"The tin, the hit of tin, to be sure. How am I to get it without the tin?"

My check! I had forgotten that Fred had the check also. Alas, for the powerlessness of women! I saw my new Saratoga, filled with the daintiest of trosseaux, bundled off with a load of hotel baggage, and couldn't raise a finger to reclaim it. It was the last straw on the camel's back, and I drove in tears to Aunt Tabby's, using my tissue veil as a pocket-handkerchief, and thereby unconsciously tattooing my face with streaks of blue.

Even Aunt Tabby's monumental rigidity was overcome by my appearance, when she met me at her immaculate doorstep.

"Left you, and only married three days! Pay that hackman, Mary Jane, and send him off before he sees any more of this family disgrace! Have mercy on us! That I should have lived to see Brother Henry's child come to this. Taken all your money and clothes too? Well! well! it's nothing more or less than I expected! Only an accident! Don't talk to me of accidents! If you ever lay eyes on that man again, my name is not Tahitha Anstitch! The mean-spirited scoundrel! To leave you without a rag au your back. You poor, deluded innocent! Put on the kettle, Mary Jane, and hurry up the tea; this poor child is tremhling like a leaf, and well she may!"

I was too disquieted and miserable to attempt to stem the torrent of Aunt Tabitha's indignation. I let her talk on.

"O, and ain't it dreadful, mum?" I heard the sympathetic Mary Jane murmur aside to her mistress. "Such a sweet young creeture that she be! And only look at her face! I expect he's been banging her."

Aunt Tabby pursed up her mouth and shook her head expressively.

"Let this be a warning to you, Mary Jane."

"O! I'm sure it will, mum," was the feeling reply.

"She'll never lay eyes on him, again," repeated Aunt Tabby, solemnly; "never! Bless my soul! Who's that?"

"Is my wife here?" asked a quick, anxious voice; and the next moment Fred's wife was there clasped in the strong arms, crying and laughing together, on the broad, loving breast.

"How did you get here so soon? How did you find me out? O, Fred! Fred! I have been so frightened and miserable!"

Fred's answer was a shower of kisses.

"How did I come? In a coal car. There was a train of them just behind. It was not the pleasanteat ride in the world, but it brought me quick to you, poor little frightened birdie."

And as I met the glances of those loving eyes, I nestled closer to his heart, and felt, in spite of Aunt Tabby's expectation, I was at home again.—*Exchange.*

The Teachers' Table.

GOOD VS. BAD EDUCATION.

"The essential difference between a good and a bad education is this, that the former draws on the child to learn by making it sweet to him; the latter drives the child to learn by making it sour to him if he does not. Yet how utterly has this plain and practical truth been ignored!"

We were glad, lately, to meet, with a pleasant illustration of the above truth, and also of another—namely, that common sense and tact are even greater essentials to a good teacher—in a report, from a stranger, of one of our Hampton graduates' schools. "I heard there was a school for colored children near my hotel," the lady said, "taught by a girl that had been to *college*. I went to visit it and had a talk with the teacher, who said she had come from the Hampton Normal School. I found her teaching her school spelling *outside* of the schoolhouse. All the scholars were ranged along the bank of a little stream, some of them paddling their feet in the water, but they were saying a very good lesson. 'It seems to me this is not exactly orderly,' I said to the teacher. 'I don't know about the order, ma'am,' she answered, 'but the schoolhouse is very hot some days, and I find the children recite better outside.'"

That is what we think an evidence of her good sense and fertility of resource. Without them she might have kept her children in a close room and punished them for the results of their discomfort and her own.

PICTURE READING.

They have a method of teaching in Germany so admirable that it is a wonder that it has not, ere this, been extensively imitated in American schools. We refer to *picture reading*.

The teacher brings before his scholars a picture of some sort, and holds it up for them to study. Of course, if the children are quite youthful, the subject of the picture should be correspondingly simple; but if they are old enough to appreciate more, it may be rich and varied in what it expresses.

They crowd around (there is not much of what we call *order* in a German school), intensely eager to give the picture a thorough inspection. They study it closely in every part, every faculty alive to discover its real purpose, and each stimulated to surpass the rest in the fruits of his observation.

After reasonable opportunity has been given to examine it, it is withdrawn; and the scholars are required to write out their impressions of it in the form of a composition, to be delivered at a subsequent period.

We need not say what a remarkable agency this must be for the training of the perceptions, the reasoning powers and the mind at large, to a free and appropriate use of language. We can conceive of no one agency to compare with it in a fruitful combination of uses.

So important is it considered in Germany that it is not left to the whims of the teacher, but is imperatively required, as an almost daily exercise, by the governments.

Our Hampton graduates, who take the SOUTHERN WORKMAN, might easily use the beautiful pictures in it for this purpose. Show them, for instance, the picture in our present issue called "Left Behind," and let them guess what it is meant for, and, if they are able, write or tell a little story about it. Then after theirs are read, read them the story in the paper, or let them read it, and they will be amused at the difference. Then the picture can be studied in detail. What kind of a dog is that, children? What color ought he to be, if we could paint him? Did you ever see a steamboat? What is the difference between a steamboat and those other boats sailing over the water? How many kinds of sailing vessels do you see there? What are their names? What can they be going for? What kind of a bird is flying there? Have you ever seen a seagull? What kind of feet have they? Why do they have such great wings? Do you know how fast they fly and what they eat? What is that ring in the post for? How nicely that rope is coiled, what is it for? What is it made of? Did you ever see rope-making?

A great many more such questions may be added, and all that the teacher can tell the children about the picture, especially if it is the result of his own observation, will be eagerly listened to and remembered.

TEACHERS OF READING TAKE NOTICE!

We remember the answer of a gentleman to the inquiry, "how his daughter became so beautiful a reader?" He attributed it to the fact that she had never been to school; but, after teaching her the merest elements, she had been supplied with little story-books, in which she would become so much interested that she would insist on reading them to her mother. Reading thus for the sake of the *story*, of course she would read well. She acquired the habit of reading from the *ideas* instead of merely *calling words*. It then became necessary only to attend to the merely mechanical exercises of articulation and pronunciation.

Correspondence.

CALIFORNIA.

SAN JOSE, CALIFORNIA, *May* 20, 1874.

Dear Hampton Scholars,—I have often thought during this year since I left you, that the best way in which I could reply to the letters you have kindly written me, would be to write to you all together, as it would give me a chance to say much more to you than I have time to write to each one. Some of you have asked me questions about California, and there are many things here which I think you would find interesting, if I could tell them at length.

For instance, there are our friends from Asia, the Chinese, who seem very odd to people just from the East, looking as if they had stepped out of the pictures we see of them in books. For although they come in great numbers to California, and some of them find their way eastward from here, they have no intention of becoming Americans, and so wear their national dress, and keep up their national customs as far as they can, differing in this respect from most other foreigners among us.

They like American hats, instead of their own queer broadbrims, and many of them have found American boots convenient too, though most of them trot along in their low, turned-up shoes. But I have never seen one wear an American coat; and you can distinguish a Chinaman as far as you can see him by his loose, shirt-like overgarment, and by his braided queue, hanging down his back, or coiled around his head. At any time you can see them trotting along the streets, almost staggering under the weight of heavy baskets of clothes which they have been washing. No Chinamen ever carries a burden on his head, but hangs it in two parts at the ends of a pole, which he balances on his shoulder. You would laugh to see a Chinese child with his little queue all braided out with red, as a special ornament. But this is nothing compared with the women's hair, done up in a fashion that makes their heads look like winged butterflies. We have a fall chance to see the style of it, for they wear no bonnets, but go bareheaded through the streets. Besides, they go very slowly, rolling along on their little shoes, the soles of which are like rockers. You know Chinese women never walk any more than they can help. Even those who have not had their feet deformed by pressure, like the aristocratic ladies among them, wear such inconvenient shoes that it is a wonder to me that they can take half a dozen steps without falling.

Not long ago, a few of us went through "Chinatown," as their part of the city is called, at the invitation of a Chinaman who had long been in the employ of one of the party. So he explained things to us as we went through the narrow alleys, and looked into the little shops and lodging houses of which before I had only seen the outside. Everything was about as compact and crowded as in a ship. Just then, everything was decorated for their New Year, which is to them the great holiday of the year, somathing as Christmas is at the South. Sheets of red paper, spotted with gold leaf, hung all over the doors and windows, and showed that it was as they said, a "good day." In large cities, they celebrate the New Year by many ceremonies; but here, principally by a holiday from work, and by setting off vast numbers of firecrackers. We had heard packs of them exploding all the morning, and we found the ground strewed thickly with their red fragments. On the counters of the shops lay piles of red papers, with the name of the store printed on them in Chinese characters. These were New Year's cards, for distribution among their friends and patrons. I suppose the first thing you would have noticed would have been the large teapots of tea standing ready-made in every shop, with the tiny china cups from which they drink. They always keep tea standing about in this way. Everywhere we saw their favorite flower, the white narcissus, called here the "Chinese lily," growing and blossoming in china dishes of water, the roots held in place by pretty pebbles. Queer smelling things to eat, and queer shaped things to wear, filled the little shops, with long opium pipes and other articles for smoking and gambling. The Chinese are great gamblers; but they said they "no play" at New Year's, for that was "good day." So we only saw a game of dominoes. The pieces were somewhat different from those used in this country; and they played a game I did not understand—played it very briskly, taking silver money from their ears, sometimes, where they seemed to keep it for safety, and tossing it back and forth till I could not tell who were the winners. Before leaving the stores, I must tell you of the reckoning apparatus they use. The Chinese are very quick and accurate in the use of numbers. They can count, handle, and reckon money amazingly fast. In their stores, they reckon up bills on a little wire frame, strung with beads. The beads on one wire stand for units; on the next tens, and so on; and they will add up a number of figures in this way faster than a Yankee can do the same on paper. A gentlemen at the head of our principal school tried to learn to use one of these reckoning frames; but as he slipped the beads along, the Chinaman, who was teaching him said impatiently, "O, too slow! too slow! *lastle* boy do like that!"

From the stores we went to a lodging and eating house. Little recesses, or shelves, were built into the walls, large enough to recline in, for opium smokers. In one of them, a man was lying with his head propped up, slowly filling the bowl of his long pipe with opium, which he heated at a lamp. There he would lie and smoke till he dropped into an opium sleep, from which he would not wake perhaps for two or three days.

We were guided to another room by the doleful sounds proceeding from it, and found several musicians at work. I say at work instead of at play, for they never smiled as they beat and scraped on their dismal instruments. There was no tune that we could discover,—nothing but a repetition of disagreeable discords. I never heard a Chinaman sing anything except our Sunday-school songs; and these their harsh voices make seem very queer. I hardly think a knot of Chinamen *could* get together and sing of their own accord; and if they did, I should want to get out of hearing distance.

Then they took us to what they called "China churchee." It was not, alas! like our churches; for a grinning idol sat in state at one end of the room. A canopy of curtains hung around it, and before it was a table, on which stood offerings of various kinds. Beside the blossoming "lilies," there were burning tapers, plates of rice ready to eat, and little cups of tea. I asked one of the Chinamen what they were for. "O," said he, "our God, maybe he likee eat something." "Does he ever eat any of those things?" I asked. "No," said he with a half laugh; but we *no know* what he like; we think maybe he likee these." Wasn't it sad? Right in America, where we are apt to think that all men have been taught about the true God. While we were standing there, one Chinaman after another came in; and after bowing, waving his hands, and making other motions before the idol, he would light one of the little incense sticks in front of the image, where it would burn slowly like a candle, giving out a sweet odor.

You are not to think from this that the Chinese are entirely ignorant. On the contrary, even the poorest of them have been to school, most of them for a number of years. They can read and write their own language, which is a wonderful thing, for it is as hard as to learn many languages, like English. They are required in their schools at home to learn a vast amount of Chinese history, and other things, which we never learn at all. As I said, they are very skillful in computing numbers. They are also very quick at learning new occupations. It seems wonderful to me that in a new country, with a language they do not half understand, they can learn as they do to work according to our customs. They are very industrious and economical; and many good judges consider them some of the best workmen we have in America. You will be glad to know that there is a Sabbath and evening-school in San Jose, where they are taught to read and write English, and the Bible is put into their hands. I hoped to have seen more of this school, but I have been too busy to go there many times, especially as it is some distance from my home. The lady who has charge of it thinks her scholars very interesting.

I see that I shall make my letter too long, if I stop to tell you more about the Chinese. You are not to suppose they are the only foreigners among us. On the contrary, I pass people of a dozen different nations, any day, in the streets of San Jose. One hears so many languages as to remind one of the tower of Babel. San Jose is a very pretty city, full of trees and flowers; and the pride of its inhabitants on account of the tasteful homes and fine public buildings it contains. It is about fifty miles south of San Francisco, in a beautiful valley. This whole valley, some fifty miles long and from ten to twenty-five miles broad, is filled with wheat fields, orchards, vineyards and gardens. It is one of the great fruit-growing regions of the state, and I fear you would not believe me if I told you the variety to be found in our markets.

Lately, however, I have been out among the wheat fields of another region—the great San Joaquin Valley. As I use this term, you naturally think of a depression among the hills; but this valley is half as large as the whole state of Virginia. It seems more like a great plain, the mountains on each side are so far away and dim and blue, though I can easily distinguish, on clear days, the white peaks of the lofty Sierra Nevada range. This valley is famous for its wheat, and for its vast flocks of sheep in the more southern portion. It is like a great green sea of wheat fields. As I follow the paths cut through it, I can just see over the top of the grain, and I amuse myself with single stems which ontmeasure me in height. Taller persons than I might do that a little later in the season. Then it is so thick, and the heads so large and full, that I readily believe the statement I hear, that California wheat brings seven dollars a ton more in England than Chicago wheat. Farming is done here on such a large scale that the machines used are quite different from any I ever saw at the East. For instance, an immense reaping machine called a "header," because its scythes are set so high as to cut off only the heads of the grain, is pushed—not dragged—by six horses. The heads, instead of falling on the ground, are tossed by the machine back into the box. It keeps three large wagons busy to carry it away as fast as it is cut. From these wagons it is pitched by a great derrick fork—instead of a hand pitchfork—into immense stacks on the field. So there is no raking or binding at all. The grain is thrashed and put into sacks right on the same spot, and left on the field till it is sold. One of these headers, with the necessary men and horses to attend it, will reap twenty to thirty acres a day, with an average crop of twenty-five bushels to the acre. Where the grain goes up to forty bushels an acre, or more, of course it cannot be cut so quickly. You see such harvesting is possible only in a country like this, where there is no rain in summer. Everything in farming here depends on the fact that there are two seasons—a rainy winter, and a rainless summer. For instance, these plains were formerly overflowed in winter, until they were protected by levees along the streams, which then came rushing down from the mountains, tearing new channels, and pouring over their banks. But at this season, there are only two rivers in the state large enough to deserve the name. The other rivers are shrunk to little muddy streams, and the beds of the smaller ones are actually dry. The ground in the meadows is cracked into cakes, and the dust in the roads takes away most of the pleasure of riding. But how does vegetation live, you say? Well, the grain gets most of its growth before the rains are over. It has little to do after that but to ripen. Then good-bye to anything green in the fields, except the trees, which send their roots so deep into the earth as to be always supplied with moisture. These fine oaks make the country beautiful even during the drought of summer. As to gardens and lawns, they have to be irrigated, that is, supplied with water artificially. Wells are bored, sometimes what are called Artesian wells, from a hundred to a thousand feet deep. The water from these wells sometimes rises above the ground in a fountain, and sometimes has to be pumped. Most of the wells, however, go down only to surface water, and hence are only from thirty to seventy feet deep. They are usually pumped by means of windmills, and carried by troughs into furrows in the gardens. Stockton, the largest town in the San Joaquin Valley, is called the "City of Windmills," while all through the country you will see them about the farmhouses. They make a very pretty addition to the landscape. I sometimes feel as if I must be in Holland, I have been so taught to consider that the land of windmills; but there is this great difference; there, they are used to pump water out of a wet country; here, to pump it into a dry one.

I find I have written a long letter, though I have only told you a very few of the things that may be noticed here. Books and books have been written on the subject, and they have not described California yet. But though California is a very remarkable state, you must not suppose it is so rich that people can pick up money here without hard work. There are a great many disappointed people among us, who have come hoping to make their fortunes easily; and who have found that hard work, prudence, perseverance, and sense, are necessary here as well as elsewhere. Some of these people, when they find this to be the case, loaf about the country, or crowd into the cities, and grumble about hard times. Many of them become gamblers; and how they live, and what becomes of them, I can't tell. Then there are others who are willing to work, but don't know how to manage; and let them live in California as long as they may, they are always poor. But, on the whole, California is a very good country in which to earn one's living.

I have written this letter to my old scholars all together, because I find it impossible to write to so many individually, as often or as long as I would like. I have been very glad to receive letters from so many of you. Far away as I am, I think more than you can guess of the great work in which you are engaged; in which you are to be helpers; and since I cannot be among you again to do my share, as I should so much like, the next best thing is to hear from the school and from you individually—to see from your letters that you are improving your advantages, and to know that you are earnestly trying to help your people. I like to know about the schools you teach, how many scholars you have, how much interested they are in their own improvement, how much help you get from the parents, what are your greatest encouragements and discouragements, what you are studying and learning yourselves. But it is impossible for me to answer so many letters, except after a long delay. So I want to ask you to consider this latter as squaring up all my debts. Please consider this general letter, each one of you, as meant for *you;* and either now, or when you reach the place to which you are going this summer, sit down and write me in return. Unless you do this, as the school year is coming to an end, and you scatter in so many directions, I fear I shall lose sight of you. I can hardly realize that the class which entered Hampton School when I did, now goes out, its school training finished, to do its part in helping on general education. I do not need to add my good wishes or my hopes for your success: for I feel as if I were still your teacher, and you know I am always

Your friend,

L. M. W.

LONDON.

LONDON, *April* 25, 1874.

London, or at least this part of it, St. John's Wood, is most lovely just now. Through the latter part of March and most of this month thus far, we have had most delightful spring weather: cloudless, sunny days, some splendid moonlight nights, the air soft and balmy, and Regent's Park one mass of foliage and bloom. Walking through it a few days ago, by a path varying a little from my usual route, I passed a nursery of young bulbs of various kinds and most lovely colors: purple, red, white, and yellow, in every variety of shades, all reminding me of Kings' Chapel graveyard, Boston, in hyacinth and tulip time. In fact, London can show sometimes most perfect weather and beautiful skies; and since she blossomed out of her Lenten sackcloth and ashes, the streets have presented a brilliant and attractive sight, particularly Regent and Oxford Streets, where the big stores or *shops* as they are invariably called here, are situated. The elegant carriages, splendid horses, and handsome liveries of footmen and coachmen present a most fascinating spectacle. The music stores are, of course, my particular attraction. Boosey has just erected one of the finest I have ever seen. It is of marble, five stories in height, and between the windows are medallion heads of Beeh, Beethoven, and other distinguished composers; and then the general finish, carving and sculpture are very handsome. Novello's store is also very large, and very elegantly finished and decorated.

I do not know to what extent the solemnities of Lent usually affect the gayeties of London society, or the patronage of the various places of amusement. This year was perhaps an exception to ordinary times, on account of the royal marriage and the festivities attendant upon the reception of the newly married pair, who arrived in England early in March. On the 12th, they made their grand entry into London from Windsor Castle, accompanied by the Queen. I went with a friend to see the royal show, and obtain my first glimpse of royalty in proprie personæ. We secured a very good stand on the corner of Regent and Little Argyle Streets, quite near Oxford circus; and after nearly an hour's patient waiting, had the satisfaction of seeing the party pass very near to us. They were in an elegant state carriage, drawn by six splendid bay horses, with a postillion on each left horse—no driver—and a pair of "illigant Mickies" behind. The postillions' uniform was very showy: red, with a quantity of gold lace, huff kneebreeches, tucked into high boots, with fancy, flesh-colored tops turned over, black velvet jockey caps, and white wigs—altogether very grand and imposing. The queen is very stout and somewhat coarse looking; she had on a cloak of royal ermine. The young bride, of course, attracted the most attention. She is very lovely and sweet-looking, and bowed very pleasantly in response to the welcoming shouts and demonstrations of the surrounding throng. We got into one or two crushes, and were near being pressed flat in our zeal to behold the royal personages and equipments; but on the whole, the crowd was good natured and well behaved, and we reached home again in safety, quite satisfied with our experience of the day. In the evening we went out to see the illuminations; walked down Regent, Cockspen and Parliament Streets, across Westminster Bridge and by the houses of Parliament, but were greatly disappointed in them, and could not help pronouncing them poor affairs after all.

Very fine musical and theatrical entertainments have been given at the different places of amusement in honor of the bridal pair. One performance, Sullivan's "Light of the World," was especially ordered by his Royal Highness, the Duke of Edinburgh (the bridegroom), and I heard that the author was knighted on the occasion. As musical students, we have frequent opportunities and facilities for hearing operas, concerts, etc., at comparatively little expense. Being very desirous of hearing the opera of "Semiramide," in which Signor Agnesi, a very celebrated singer, was to appear, we procured tickets for Drury Lane theatre when it was advertised; but owing to the illness, tediously prolonged, of this "star" performer, we went twice and heard two other substituted operas before he was able to appear. On Tuesday eve, March 24th, we heard

"Trovatore," in which there is some very fine scenery and also some splendid chorus singing, sixty-four voices under the direction of Sir Michael Cotta. A week later, March 31st, the beautiful opera of "Norma" was given. The singing was very fine indeed, and the whole thing was put upon the stage in the best manner possible. In the first scene, the "Forest Scene," where the Druids march in, the band of the Coldstream Royal Guards appeared dressed in the costumes of the old Druid priests and sacred players, and played the "Druids' March" most grandly. In the duet between Norma and Adelgisa, Nilles Bauermeister and Titjiens substituted a long and difficult cadenza for the written one, and it was a perfectly wonderful performance given as it was, in such perfect accord and harmony. After the opera was over, we went to look at the splendid marble statue of Charles Kean, in the large central rotunda. In the other halls and waiting rooms of this immense building are equally fine statues of Garrick and other great actors. Finally, after two weeks more, we at last saw and heard (for both senses are addressed and gratified), the glorious opera of "Semiramide." The singing, especially that of Sig. Aguesi and the ladies of the troupe, was truly admirable and wonderful. The scenery was, as usual, perfectly magnificent, especially in the scene at Ninus' Tomb. The stage is immense, and the whole depth of it was used; and as the time was at evening, and tha river Nile at the back, with a full moon shining on the water, the effect was most beautiful. In the "Palace Scene" the decorations were magnificent, and in the great procession which ushers in Semiramide, there were a hundred and fifty on the stage at once. The banners and standards were splendid, the Golden Beetle and all the emblems were most carefully looked after, and not a single detail omitted to make the representation perfect. Everything was pure Egyptian, the singular sculptures and the peculiar architecture were all closely copied from the best models; for instance: the carvings on the great hall of tha palace were copied from some of the rare, antique sculptures in the British Museum. When London undertakes to get up anything of this kind, she puts every possible facility into the hands of the director. There is, too, a very pleasant custom here, when any particularly fine piece of scenery is represented, of calling for the artist, who appears before the stage and bows his thanks for the compliment. During Passion Week very fine sacred concerts were given every evening. We went to the Royal Albert Hall to hear Handel's "Messiah," which was grandly given. About the middle of the evening, the Prince and Princess of Wales, Duke and Duchess of Edinburgh, Prince Arthur and several of the royal household came in. Tha Princess and Duchess wore some of the most magnificent diamonds one could imagine; tho Duchess' bodice was one perfect blaze of them. Tha Princess is thought here to be very lovely, though I confess I could not see it; but what is better, she has the reputation of being beautiful in character and of a most amiable disposition. In the midst of the music I often think of "Hampton and its Students," not tho book only, though I have received that and enjoy it greatly. I wish the singers would come over this way; I doubt not they would meet with a grand success. I sympathise with Mr. Fenner in his "flat seventh" difficulty, referred to in the "Preface to Music;" it is impossible to get that interval, which they sing, into print. I suppose you are all busily studying and preparing for tha June examination and closing exercises. I shall look with much interest for an account of them. K.

THE HAMPTON SINGERS.

(Extract of a Letter from one of the Singers.)

LONDON, ONTARIO, *June* 8, 1874.

It is so warm here one can hardly write or do anything else. I expected to find it cold, but we feel the heat as much as we do in Virginia. Two men died here last week from sun-stroke.

We have a very pleasant time, after all, all, rambling about in the afternoon, in the woods. We ride a hundred or a hundred and fifty miles nearly every day, and the scenery is beautiful along the rivers and lakes. This part of Canada is very much like the South. We see a plenty of log huts along the railroads. I did not think there was so much difference between the Canadians and our people until we reached Montreal, the city, and everything looked so different. The common people are not as intelligent as they are in the United States. The chief attraction in the large cities is the architecture. In Montreal are several very fine churches and public buildings. The French Catholic cathedral seats over ten thousand, and has the largest bell on the continent. We attended service at the English cathedral; it is a large and fine church. We came across Victoria Bridge just as we were entering Montreal. It is nearly two miles long and cost over six million dollars.

The Parliament buildings in Ottawa are as fine as any buildings I every saw. At St. Catharine's, (about seven miles from Niagara), they refused to take us in any of the common hotels, and a doctor, the proprietor of the Springbank, a fine hotel where invalids go to use the mineral water, took us. In Toronto they refused us at two of their first-class hotels, and we had to go into a filthy little hotel, where nobody staid but low-class people. After the first night, we discovered some animals on tha beds worse than bed-bugs, and we left and were quartered among the colored people during the remainder of our stay in the city. I don't think we will realize very much cash from our trip through Canada. A party of singers from Louisiana came through here last fall and proved to be nothing, and a great many people thought we were not any better. We will give two concerts in this place and one in Strafford, and then leave Canada for Detroit.

I suppose everyone at Hampton is thinking about going home now. I should like very much to be there at the closing exercises on the 11th.

HAMPTON.

To the Editors of the Southern Workman:

I notice in your last month's issue an article signed "Observer," on "draining at Norfolk, Va." As there is reference in it to my paper on this subject which appeared in your columns, you will oblige me by inserting a few words in reply, as I have been a close *observer* on *both sides* of the Atlantic. In England, agriculture is as much a profession as that of "law, physic, or divinity," and has to be studied in the same way. Forty years ago I was serving my apprenticeship with one of the best farmers in the county of Durham, England. Most of our arable land was rolling, with a sandy subsoil, and undrained. With the best management, we could not get more off it, on an average, than ten bushels an acre. That land is now thoroughly drained, and yields on an average over thirty bushels an acre. I give this as my own experience; but the same remarks apply to other parts of England and Ireland, and *especially to the Scotch Lothians.* The lands of Virginia are much in the same condition as those of Great Britain half a century ago. The very best farmers in these parts tell me that their wheat crop does not average more than ten bushels per acre. Their soil and subsoil are the same alluvial deposit as that of Norfolk. The whole district for many miles inland was once a large lagoon, gradually filled up by beach and river deposits. I therefore take this yield as the prevalent one through this portion of the state. If there is no improvement to be made, then I say Virginia is doomed as a wheat growing state. With such an impression no English or German farmer could be induced to settle among us. Indeed I see no hope for the state but in *thorough* draining on *scientific* principles. I use the words *thorough* and *scientific* advisedly, because shallow and partial draining, with inaccurate levels, improper outlets, etc., do more harm than good. It would pay the state of Virginia to bring over a posse of English drainers with their foremen, and hire them out to farmers wishing to improve their plantations. These would instruct others, and ye should soon have well-trained drainers among our own people. The fact, that the state was bringing over English drainers, would show its interest in agriculture, and determination to encourage the farming population; and money expended in this way would promote emigration more than pamphlets, which are seldom read, and agents, who are always suspected of interested motives. Were Virginia rich, I should recommend her to loan her people money for draining as England has done, which has increased the yield of cereals three-fold in that country.

I observed here on the estate of the Hampton Normal and Agricultural Institute, a few acres of wheat sowed in the fall, on land well channred and thoroughly prepared, with a sandy subsoil and an open ditch on the lower side; exactly the kind "Observer" describes as existing at Norfolk. This wheat came up beautifully, and promised a good crop. Just at the time when the ear was forming, the *lower* blades began to turn yellow, then the *upper* ones, and soon the whole plant became a mass of rust. From other parts of the state we hear the same complaint. The "Greensboro Patriot" is before me (an excellent agricultural paper); it says "half of the wheat in North Carolina is ruined by rust." This disease was frequent in England when tha land was undrained, but is now almost unknown. If I were to ask "Observer" the cause of this disease, he would say, *"It is a fungus;* and so it is; but fungi cannot germinate on healthy plants: they only take root and flourish where decomposition has begun; but when once established they spread, like yellow fever or jaundice, from the dead to the *living* tissues. Let us investigate this subject a little further. The stomata of the leaf, as I stated in my last paper, have the power of expanding when the soil is moist, so as to allow the excess of water to evaporate; and of contracting in a drought when there is a deficiency of moisture in the ground; but when the spongioles of the root are surrounded with water, they become gorged and force it through the capillary tubes into the leaf cells, faster than it can be discharged by the stomata, and a disease similar to dropsy is induced, and decomposition of the leaf cells commences. The spores of fungi, which are continually floating in the air, settle on the diseased parts, germinate, and spread from leaf to stem, from stem to grain or chaff, and finally attack the seed, causing it to ripen prematurely. We have traced the disease to its cause. What is the remedy? There is only one. Make a way for the water to pass from the spongioles of the roots down to the drain pipes, and rust will entirely disappear.

Excuse Mr. Editors these hasty remarks. I should not have replied to "Observer's" letter had I not feared that it might induce some farmers to believe that draining is an unnecessary expense, and thus check the only means that I see of raising the standard of agriculture in the state to the high position which its soil and climate will admit, and on which the prosperity of the commonwealth depends. GEORGE DIXON.

DECORATION DAY

Was observed this year at Hampton with more than usually interesting and appropriate ceremonies. At an early hour, tha battalion of tha Artillery School, at Fort Monroe, under command of General Barry, marched from the Fort, with the band, with two immense evergreen wreaths, each six feet in diameter. One of these bore tha inscription "The Garrison of Fort Monroe, Va., to their dead comrades;" tho other, "Tha Garrison of Fort Monroe, Va., to the Confederate dead," both of which were placed in their appropriate localities. After this ceremony tha battalion marched to the Normal School premises, where tha troops rested a few minutes on the lawn on the banks of the creek, and then returned, the band playthe familliar tunes of the old slava songs sung by tha students: "Dust, Dust, an' Ashes," "Babylon's Fallen," "I've Been Listening All tha Night Long," "Winter'll Soon Be Ovar," atc., to the great satisfaction of students and teachers.

An hour after the visit of the garrison, the students of tha Normal School formed and marched into the cemetery with their floral offarings, visiting on their return, the school cemetery, and decorating the graves of their late good physician Dr. Seymour, and of Noble and Royal, tho only students who have died at the school since its organization. Meantime, the steamer *N. P. Banks* had landed at Old Point some five or six hundred wall dressed colored people, including sociaties in regalia, and a band of music, who came at once to tha cemetery, on foot or in carringes, most of them bringing their dinner with them, while the various booths furnished catables and cool lemonade, to those who had not supplied themselves.

Tha steamer *Hampton*, chartered for the occasion, brought to the wharf of the Soldiors' Home, Farragut Post No. 5, with tha Naval band from Portsmouth, and a large number of ladies and gentlemen. Commodore Stevens of the Navy Yard also came over in the steam barge, and was received by Governor Woodin, of tha Soldiers' Home. Our old favorite the *Mystic* was also put into requisition for tha occasion, and brought ovar a large number of visitors. The presence of so many gaily dressed steamers gava a gala appearance to our harbor. After dinner at the Soldiars' Home, tha whole party, joined hy the veterans of the Home and thair band, proceeded to the cemetery where the regular order of axereises was carried on. The noticeable and hopeful feature of this as of other celebrations of Memorial Day, is the increasing good will shown both hy words and actions toward each other, hy the parties in the late strifa. Here the graceful tribute of the Fort garrison to tha Confederate dead, was in the spirit of the following quotation from tha address of Colonal Brady at the cemetery. With the growth of such magnanimous sentiments all animosity and hitterness between tha North and South will soon giva place to that true brotherhood which becomes tha citizens of every section of tha republic.

"Let no words fall from our lips, or thoughts enter our hearts, the utterance of which might tend to arouse the animosity engendared hy the late terrible war between the sections. Let us forget the hitterness of the past. The Blue aad tha Grey quietly, sweetly repose side hy side around us, and those who surviva tham should, can, and let us earnestly hope and desire *will* be friends. The brave sympathize with tha brava. Wa cannot approve of the cause for which the Southarn soldiar fought so long, so valiantly and so desperately; but their heroic deeds are recorded upon the pages of history, and we cannot if we would, and would not if we could, blot them out. After all, it was a struggla of brothers against brothers, fathars against sons, and the credit of all that was noble and good in the contest belongs to our common country. Let us extend the right hand of fellowship and good will ona to the other, and unite together for the advancemant and benefit of the republic."

THE FLORA OF HAMPTON.

MAY—CONTINUED.

Agrostemma githago—*corn cockle.* Specularia perfoliata—*clasping bell-flower.* Veronica Americana—*brooklime.* Polygonum aviculare—*bird's knot grass.* Lolium temulentum—*poison darnel.* Juncus tenuis—*slender rush.* Juncus tenuis, variety dichotomus—*two-stemmed slender rush.* Juncus accuminatus—*pointed rush.* Juncus effusus—*soft bulrush.* Carex stamines—*straw sedge.* Carex hystericina.

JUNE.

JAMES LEFFEL'S
Improved Double
TURBINE WATER WHEEL.

POOLE & HUNT,
BALTIMORE,
MANUFACTURERS FOR THE SOUTH & SOUTHWEST.
Nearly 7000 now in use, working under heads varying from 2 to 240 feet. Twenty-four sizes from 3 3-4 to 36 inches.
The most powerful Wheel in the Market, and most economical in use of Water.
Large ILLUSTRATED Pamphlet sent post free.
MANUFACTURERS, ALSO, OF
Portable and Stationary Steam Engines and Boilers, Babcock & Wilcox Patent Tubulous Boiler, Ebaugh's Crusher for Minerals, Saw and Grist Mills, Flouring Mills Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.
SEND FOR CIRCULARS.

FREEDMAN'S
SAVINGS & TRUST
Company,
Chartered by Congress, March, 5, 1865.
PRINCIPAL OFFICE,
WASHINGTON, D. C.
Branches in all cities and large towns of the South and Southwest.
FIVE CENTS, or larger amounts, received on deposit, and Bank Books issued.
ALL PROFITS paid to depositors as interest, not exceeding seven per cent. per annum.
INTEREST on sums of ONE DOLLAR and upwards begins first of each month, and is payable on the 1st of January and 1st of July.
☞ *Every Account strictly confidential.*
THE NORFOLK BRANCH,
AT
NO. 116 MAIN STREET,
Is open daily from 9 A. M. to 3 P. M. and on Saturday Nights from 6 to 8 o'clock.
☞ DON'T WASTE MONEY! SAVE THE SMALL SUMS!

HAMPTON, AUGUST, 1874.

SUCCESS IN BUSINESS.

From that momentous period in boys' lives, when frocks are exchanged for trousers, they speculate on what they will be when they are men. At first, fancy only is consulted. They will sail ships, or drive stages with four horses. After a while, they find that nothing they undertake is altogether jolly; that every bodily occupation has its peculiar ache; and every mental pursuit is exhausting, and crowded with competitors. As years advance, young men, finding obstacles in all paths, begin, in earnest, to inquire where lie their most available forces.

It is precisely at this turning point of life that a most important thing is apt to be lost sight of, and, perhaps, only realized after years of painful experience; namely, that the strongest of all business forces is whole-hearted perseverance. No trade could have become established among men, unless it was capable of yielding support: and at almost any business, an average person can make an honest living, if he will, and if his will is strong. Should a man fail at one undertaking, he will probably fail at others; the fault being usually in himself. Napoleon found it good, practical policy, never to have anything to do with unsuccessful men.

Hence, it is of the highest importance for a beginner, to stick to his first choice. He has in one short life, scarcely time to see how much he can make of any one profession. But he may notice that the front ranks in none of them are crowded. He who changes from one business to another, throws away time as well as the practical experience which he has gathered. But, whoever bends himself steadily to one chosen occupation, finds his field grow with his growth, until the prentice boy may become a millionaire.

In America, where people rise from poverty more frequently than anywhere else in the world, examples enough are to be seen of men who prove that they have the secret of success, by succeeding. When a beginner selects an occupation, he will do wisely to hunt for those who have prospered in the same field, and find precisely how they have managed. He may safely disregard the profuse advices of neighbors who do not themselves prosper. Successful men seldom make a noise about their methods; yet their actions are better worth study, than are cart loads of volunteered advice from those who are accustomed to having what they call bad luck. A beginner needs to model himself not upon good preachers, but upon good practicers.

In most occupations, money is chiefly made by *directing* the labors of others. But it is fortunate for most young men that they have not capital at first, to hire others. As in war, no one is fit to command until he has learned to obey; so in business, he who begins by working for a master, learns to manage employés of his own. While in a subordinate station, if a young man succeeds in making himself necessary to his master, he has taken a long stride toward success in life. Sorry hands are the first to be discharged; but there is always a demand for those who study their employer's interests; and whoever is remarkable for honesty, industry and good-will, has acquired a character worth to him, at least, a thousand dollars. As business is founded on confidence, a man will rise in proportion as others rely on his word, and on his judgment and energy.

Business success is only half gained by filling the purse. He is fortunate, who, early in life, discovers that money is as slippery as an eel. A thousand bargains offer themselves of things very desirable, but which can, somehow, be done without. If a man does not watch his expenses, he will go backward, no matter how much he earns. Many deserving persons are always at the bottom of the hill, because they do not cut off every outlay not essential to success; and because in undertaking new enterprises, they do not count the costs just as carefully as they estimate the profits.

THE FREEDMAN'S BANK.

The failure of this institution has been the first intimation which has really reached its ignorant depositors, that their hard earnings were not secured by the national government.

The funds were at first invested in United States securities only, as its charter at that time demanded. Afterward, this policy was changed, with the sad results of to-day. The bank, owing about three and a third millions to its depositors, has only one-ninth of the amount in cash and United States bonds. The remaining eight-ninths are in securities which have become unsaleable. The Southern Workman feels that he has been wounded in the house of his friends.

It may be some consolation to the pure-minded founders of the institution, to reflect upon the good which it has actually accomplished. During its short nine years of activity, it has shown poor people the accumulative value of little sums. It was far better for most of its depositors to have saved and lost, than never to have saved. Habits of self-denial have been formed; much money which would have gone for finery and folly has been rescued; and although mismanagement has cut off a percentage, yet there will be more left to many of its depositors, than they would have had, if the bank had not helped them to save.

Perhaps a salutary lesson will be drawn from the downfall of this strong institution, which, if fully understood, will be worth all its cost. It may impress the truth, that land is the sort of riches least likely to fly away from its owner. The values of stocks, bonds, and bank accounts, depend upon the honesty of other men, or upon their good judgment. But when land is prudently purchased, it is the owner's fault only, if it does not increase in value. It is the last kind of property to be disturbed by the price of stocks; and it alone, cannot be lost, stolen, or borrowed. Its possession means to a poor man an escape from rent, and is the first step toward independence. The Freedman's Bank will have fulfilled its noble purposes, if it has taught the people to be their *own bankers*, and set them on the road toward earning their *own homes*.

MEETING OF THE EDUCATIONAL ASSOCIATION OF VIRGINIA.

The ninth annual meeting of the Educational Association of Virginia, and the first ever held in this part of the state, assembled at the lecture-room of Christ Church, in Norfolk, Tuesday night, July 14th. After an appropriate prayer by Rev. Dr. Armstrong, of 1st Presbyterian Church, Prof. N. B. Webster, chairman of the local committee, announced the completion of the usual arrangements for entertainment, places of meeting, etc., and introduced the Hon. John B. Whitehead, Mayor of Norfolk, who had been requested to welcome the association to the hospitalities of the citizens. The cordial welcome to the "City by the Sea," was responded to by the President, Prof. B. L. Gildersleeve, of the University of Va., who proceeded to deliver his annual address, which was heard with marked attention.

Prof. L. M. Blackford was elected president for the ensuing year; and the meeting adjourned till 10 o'clock, the next day.

Among the prominent gentlemen attending the sessions of the convention, we noticed the state superintendents, Rev. Dr. Ruffner, of Virginia, and Prof. Newell, of Maryland; and of city and county superintendents, J. H. Binford, Esq., of Richmond; S. H. Owen, Esq., of Petersburg; Maj. J. F. Crocker, of Portsmouth; R. L. Crane, Esq. of Alexandria; J. J. Ladd, Esq., of Stannton; E. B. Macon, Esq., of Princess Anne Co.; J. C. Weaver, Esq., of Accomack Co.; and John F. West, of Norfolk Co.

The colleges and academic institutions were well represented by such professors as Atkinson, Blackford, Buchanan, Curry, Doggett, English, Garnett, Gildersleeve, Harris, Hogg of Alabama, Hoxton, Massie, McGuire, Minor, Price, Smith, Toy, Venable, Vawter, and Webster.

Of distinguished Virginians in attendance we recollect Lieutenant Gov-or Withers; Hon. John Goode; Judge Blow; and Rev. Drs. Armstrong, Blackwell, Barton, Peterson, and Thomas.

The regular work of the association consisted of the reading and discussion of papers on educational topics.

The paper on Geographical Instruction, read by R. L. Carne, Esq., elicited considerable discussion, in which Messrs. Binford, Owens, Ladd, Jones, Webster, and Withers participated.

Among the most important papers read and discussed, were the following: namely,—On Latin Translation, by Prof. W. W. Smith, of Bethel Academy; on Instruction in Chemistry, Physiology, and Natural History, prepared by Professor Davis, of Virginia Agricultural and Mechanical College, and read by Professor W. O. English; on The Study of Languages, by Professor Turner, of Hollins Institute; on Prizes and Honors in School, by Rev. R. H. Phillips, of Staunton Female Institute; and on The Best Practical Method of Teaching the Elements of English Grammar, by Prof. N. B. Webster, of Webster Institute, Norfolk. On all these papers there were pleasant and highly interesting debates.

Besides the papers above named, and the President's address, an able essay was read by Rev. Dr. Ruffner, on Mental and Moral Science in their Relations to Education; an address was delivered by Prof. Thomas R. Price, of Randolf Macon College, on The Place of the Mother Tongue in Education; and another address, by Rev. Prof. J. L. M. Curry, of Richmond College, on Our Public Free School System in its Relation to Colleges. It is to be hoped that all these papers and addresses will be published in the "Educational Journal," or in pamphlet form.

An invitation from the Principal of the Hampton Normal Institute to visit the school and partake of a collation was accepted, and on Friday afternoon the steamer *Mystic* was chartered for the excursion. About two hundred and fifty citizens and their guests, including a delegation of about twenty from the Maryland Association, enjoyed a delightful trip down the river and Hampton Roads, and were met at the wharf of the Normal School and escorted to Virginia Hall. After looking over the building, all assembled in the dining hall to partake of a lunch and listen to some fine music by the band of the National Soldiers' Home.

In tendering thanks for the invitation, Professor Blackford, president of the association, in a graceful speech, expressed his deep interest in the success of the Hampton Normal and Agricultural Institute. The Principal explained the origin, objects and prospects of the Institute as fully as possible in the brief time allowed by the arrangement to reach Fort Monroe in time to witness the dress parade. The party consisted of persons from remote parts of Virginia, from Maryland, Alabama and South Carolina—most of them representative men in the cause of education; and by the interest they took in all they saw, testified unmistakably, to the kind feelings entertained by the Southern people toward the efforts to instruct and elevate what President Blackford called "a long neglected class of our people."

Altogether, the Norfolk meeting of the Educational Association of Virginia, has been most pleasant and profitable to the entire community as well as to the members themselves; and all classes of our population will feel, directly or indirectly, the benefits of the stimulus it has given to the great cause of Education.

BUYING LAND.

While theorizers are expounding the designs of Providence as to the future of the colored race, a most important movement is going on by the race itself. Instead of rushing en masse to Africa, or aiming at occupations in which competition is active and powerful, the negro is quietly, wherever opportunity serves, securing to himself the title deeds of certain pieces of land. The soil may be poor, and the cabin rude and small, but its owner feels it to be like a firm footing in a boundless swamp. Without rents to pay, it is possible to lay up money, even for a man who works most of his time for others. A land-owner being a taxpayer, is directly interested in electing honest officers only, to spend the public money. By buying land, the negro is taking the most effectual means open to him, toward recognition as a useful citizen and a power for good in society and politics.

In all civilized countries, the class of land-holders furnishes the most influential men in other pursuits. Farmers, or the sons of farmers, have always taken the lead in America; and it may safely be assumed, that until an influential body of colored farmers exists, the negro never will be able to live down the calumnies of his enemies.

The peasants of Europe come to the United States in search of a chance to show what is in them. They find cheap lands; make a comfortable living; and their children become wealthy. The happiness, if not the existence of the negro in America, is staked upon his answer to this question: Can the colored farmers do as well on the cheap lands at the South, as the European emigrants have done at the West?

The author of the interesting article on the Opium Trade in California, published in this number, writes in a private letter as follows:

"I feel a little like the Chinese merchant here, who wondered why white people wished to know the bad side, and seldom took any interest in the improvement of his race, in their factory labors, in their service as domesties, in their eagerness to learn, etc. The Sunday-schools are very flourishing; and last Saturday, a foreign and Chinese Sunday-school joined numbers and went on a picnic. It was a curious mixture of dress, customs and games, and indicated a very friendly spirit, and a desire to improve. Selfish men are constantly trying to crowd back these celestials, and use the papers against them; but, still they come; and, on the whole, for good. They bring their vices, but they learn a great deal of good, and are of immense service as industrious workers. Housekeepers value them exceedingly. The Chinese question here, is what the negro question is, in the East."

AN EXCURSION.

There is nothing more refreshing to the tired denizens of the city than a visit to the country. Sweltering mid the heat and dust; pursued by cares and anxieties; annoyed by the constantly recurring jars of business, misunderstandings, and personal altercations; driven along irresistibly with the current of trade; spurred on by inexorable necessity or stimulated by the excitement of gain; no time for friendly intercourse; no time for domestic enjoyment; no time for thought; no time even for prayer; no time for any thing but work, work, work,—what a deliverance they experience when they can escape from the chains of their servitude to the freshness, joyousness and liberty of the country.

How the energies are quickened; how the recuperative forces are stimulated; how the heart pulsates; how the feelings glow.

The mind released from its long tension, recovers its elasticity; the finer sentiments, so long kept in abeyance, so long restrained by prudence and mastered by policy, now exult in the freedom of unfettered exercise; all the faculties assert their prerogatives; the whole man comes back to himself. He has been, all the while, an artificial man, living in an artificial world, a kind of twelve-hour clock, wound up in the morning, running down at night, resting a while in sleep, to begin the next day the same monotonous tick-tack, tick-tack of business life; keeps time very well, too, as all good clocks ought to do. Why, as long as he is so near me, I shall never be compelled to buy a time-piece. See! there he goes down to business half-past six exactly; yonder he comes from the Post-office, quarter past seven; yonder goes his boy around the corner for his julep, just eleven o'clock; there, he passes by to dinner, one o'clock precisely; and so on through the day.

But he has come out from all these things now, and left his mask behind him. Nature, in her artless grace, unbosoms herself to him; and he, through force of association and reciprocity of confidence, unbosoms himself to her.

What a ridiculous figure this grave, dignified man of fifty, cuts, as he goes whistling over the fields, jumping over the ditches and climbing over the fences, tasting the berries on the roadside and the sour-grass on the balk-row, just to see if they have the same flavor as when he was a boy. But hold! what makes him pause, looking thoughtfully and sad, while a tear, the first since the wrinkles came, steals hurriedly down his cheek as if afraid to linger in that unfrequented track? Ah! he sees just ahead of him the tangled growth that marks a country graveyard; and his thoughts have in a moment, carried him back over the lapse of thirty years, to the hour when in just such a place as this, he looked for the last time upon a mother's face, laid her form beneath the sod, and turned away alone, stricken, despairing, to fight the battles of life. Don't restrain your sighs nor check your tears. It is not weakness that wrings them from you, but the strength of an inner, purer nature, asserting its long neglected claims. Weep on, poor world-weary, world-hating, and yet world-loving brother of humanity, while your Mother Nature beholds you in the purest phase of your self-abused character.

But all this is not what I intended to write about. When I commenced, I purposed taking an imaginary trip to the country, in the neighborhood of "Fox Hill," stopping at the principal farms and prying somewhat, still with friendly eye, into the amount, manner, and kind of business done on each. Well, it is not too late for that now: so let us "jump into the wagon," and make a dry land excursion. Don't be in a hurry, now; for we wish to observe things carefully; and, besides, "Rosinante" is somewhat incompetent, and still more averse to rapid locomotion. To use the language of a venerable "ward of the nation" when speaking of himself: he is "not swift, but constant."

Hold up here, now; we will go in at this gate with the mulberry on each side. Fine farm, showing care, enterprise, management, and their legitimate consequence—thrift. Who lives here? Why, Colonel J. C. Phillips, one of the best farmers in Easteru Virginia. Here he comes to meet us, wide brimmed hat, linen coat, and breeches in his boots. A farmer will be a farmer, you know, summer or winter.

Well, we pass over our short conversation with Colonel, in which we learn that he raises corn, wheat, oats, potatoes, garden truck and fruits. We can see from the corn rows, wheat stocks, and potato vines, that his land yields well. We can also see, that the soil is light, well cultivated, easily drained, and as the farmers say, "lays well." The fact of the business is, the colonel has a good farm and is making money on it. Well, he deserves it; for he is a genuine type of the old Virginia gentleman—I had like to have said old gentleman; for his hair is getting suggestively gray; but I can easily remember when he was a youngster; and I am nothing more than a boy, yet. Passing along by the handsome little farm owned by R. B. Wood, Esq., we next come to a fine residence on the roadside, the outward appearance of which, is a standing advertisement of thrift and comfort. This is owned by C. W. Hickman, Esq., and is just such a farm as that of Colonel P. But good gracious! if all those children are his, this would make a splendid location for a female institute.

What magnificent oaks these are! and that is the finest field of clover I have seen since the "late onpleasantness." Every thing in good order, and a general welcome to all who are worthy of it.

Get up, "Rosinante," we 'll pass on to the next. Heigho! a country schoolhouse. We 'll just drive as near to the ditch on the other side as possible; for the experiments of my boyhood are too fresh in my memory for me to feel any degree of comfort in close proximity to a schoolhouse. Turn in here, and we 'll spend the night with the "Big Corporal," and continue our journey to-morrow—I meant to say, next month. CRAB.

OPIUM TRADE IN CALIFORNIA.

Probably there is not an evil among the many that have stalked abroad to demoralize, degrade and destroy the human race, more to be deplored than that of opium. Its extensive use in most of the Oriental countries—once almost confined to that division of the world—is, now, in this age of commercial communications; in these times when men go to and fro in the earth, carrying with them the peculiar habits of their nationalities,—spreading and deepening its grasp. Like the kindred evil of alcoholic liquors, to which, in its general social effects, it bears a strong resemblance, it finds its way to new lands, and with it carries its palsying influence upon the energies of new countries. California, with its thousands of Chinese, opens a profitable market for the opium trade; and with every year the trade increases. Two lines of steamers bring their loads of coolie emigrants and their large cargoes of this East India drug. It is estimated that no less than ten thousand dollars worth enters the Custom-house of San Francisco by every vessel, and that the annual trade amounts to about a quarter of a million. It is also the opinion of those who are acquainted with the matter, that a large quantity outside of this estimate finds its way into port through the devices of smugglers. The article being easily hidden, the duties enormous, and the penalty amounting to nothing more than confiscation of the article, the temptations are strong; and not only the China men and women, but sailors, passengers, and officers of ships, find strong temptations to overreach authority and law. Custom-house officers are employed to inspect every individual Chinese or foreigner, who lands on American shores from China; and a certain percentage is allowed on all smuggled opium. A lady is employed to inspect Chinese women. Sometimes it is found braided in the hair, sometimes packed in the hollow sole of a Chinese shoe, and sometimes bound on the limbs. It has been moulded in the shape of eggs and whitened over to escape notice; made to imitate the roots of plants; and covered with some earthy substance to counterfeit the medicinal herbs used by the Chinese doctors; or concealed among the dried lizards and other reptiles used also as medcine. Usually it is in the form of a thick paste like tar, but sometimes dry and hard as flint. The duties are a hundred per cent. A merchant sometimes pays twenty-five hundred dollars duty on a single importation.

The streets of the Chinese section of San Francisco abound in opium dens: the corner groceries of the celestials. Low and dark and vile with heavy odors, the opium smokers recline on mats supported on straw pillows. Each individual pays for his whiffs, takes a long bamboo pipe on the end of which is dropped a small quantity of the opium paste. A few inhalations produce the desired affect, and hours of heavy sleep follow. Once addicted to the habit, an opium smoker rarely ever reforms; mind and body become enfeebled, and the power of self-control is soon gone. When the consequent sufferings become unendurable, an over dose quiets the bodily pain forever. The proportion of opium smokers is hard even to guess at. Probably about half of the Chinese men and a very few of the women are consumers. The same discouraging influences which drive the California miner to intemperance, operate to increase the proportion of smokers amongst the Chinese. Restraining influences are fewer than in his own land. Home, wife, children far away, and frequently disappointed in his money making schemes, a Chinaman takes to his pipe as a white man to his cups. The better class of Chinese citizens look upon the evil as a serious one. They are quite willing to use their power, feeble as it is, against the trade, and are extremely reluctant to give foreigners information about its consumption. A good Chinese emperor once exclaimed: "I know that wicked and designing men, for purposes of lust and profit, will clandestinely introduce the poisonous drug; but nothing under heaven shall ever induce me to legalize the certain ruin of my people." Alas! that such wisdom cannot prevail.

Another dark side of Chinese life in San Francisco is the constant slave trade carried on in Chinese girls. These girls are bought in China, —kidnapped sometimes—brought to San Francisco and sold for vile purposes. They are generally very young, often not over twelve years of age. Their treatment is brutal and degrading in the extreme, often so much so, that they appeal to the city authorities or missionaries for protection. It is for the relief of this class of women, that a Chinese Home has been opened, designed also as a "Normal School for the training of Bible Readers."

Correspondence.

LONDON, *May* 31, 1874.

Every stranger who comes to London, must of course visit the Tower, that ancient and world-renowned edifice, so prominent in English history almost ever since England began to have a history, and around which clusters so many interesting associations, some, indeed most of them, of so dark and terrible a nature, that the very name "Tower of London," caused an involuntary shudder and a thrill of indignation at the remembrance of the bloody and cruel deeds which have been done within its walls.

The antiquity of this building has been a subject of much discussion; but, it is generally believed to have been erected by William the Conqueror, in the early part of his reign, and strongly garrisoned at that time by his Norman followers, in order more fully to awe his new subjects into a more secure allegiance.

It stands upon the north bank of the Thames, the principal entrance being on the west side; while on the south side is an arch called the "Traitors' Gate," through which state prisoners were formerly brought by way of the river. Near this Traitors' Gate is the Bloody Tower, supposed to be the scene of the murder of the two young princes, Edward V. and his brother, who were smothered by order of Richard III. It is not known, however, on what special account this part of the building received its gloomy appellation, which was given to it sometime during the reign of Queen Elizabeth. For nearly five hundred years before this, it had been a royal palace; and we were shown the apartments occupied by Queen Elizabeth previous to her accession to the throne, and also the stone under which the bodies of the unfortunate princes were found. The principal buildings or parts of the immense pile —all of which is included in the Tower— are the Church, the White Tower, the Old Mint, the Record-office, the Jewel-office or Keep, the Horse Armoury, the Grand Storehouse, the Lions' Tower, and the Beauchamp Tower. The church, or St. Peter's Chapel, as it is called, is principally remarkable as the depository of the headless bodies of numerous illustrious personages, who suffered either within the walls or just outside of them, on Tower Hill; among whom, may be mentioned the good and accomplished Lady Jane Grey, and Anne Boleyn Catharine Howard (two of the unfortunate wives of Henry VIII.), and many men of high rank both in the church and state. The White Tower is supposed to be the oldest part of the whole edifice, dating as far back as 1070. This consists of three lofty stories, with vaults underneath, in one of which, Sir Walter Raleigh was a prisoner, and where he wrote his History of the World. I stepped into the horrid place, but had no desire to linger within its walls.

In another, we saw the beheading axe—a most villainous looking thing—the block, and the executioner's mask of black leather; also a horrid instrument of torture called "The Scavenger's Daughter," which, by means of a cruelly ingenious arrangement of screws, could, by slow degrees, crush a man into a lifeless, shapeless mass. But enough of such horrors. Thank God! their day is gone by. Within this White Tower is the ancient chapel of St. John, originally used by the English monarchs, and said to be the finest specimen of Saxon architecture in England. It is a very massive chamber of oblong form, with vaulted roof and heavy columns, with large squared capitals curiously sculptured, and having a cross on each, and presenting a very imposing appearance.

In the Jewel-keep we saw the crowns of the last four or five generations, Queen Victoria's surmounting the rest. This is a magnificent work of art, weighing one and three-quarter pounds, and valued at one million pounds sterling, about five millions of dollars. It is one mass of diamonds and other rare and precious gems—rubies, emeralds, etc. This *light and airy head-dress* is not intended for every day wear. On state occasions it is borne on a cushion, by some noble official of the Royal Household, in the grand procession, while the crown actually worn by the Queen, is a small, though very splendid tiara of gold and gems. Here too was the famous Koh-i-noor bracelet; this name, signifying "Mountain of Light," was given to it centuries ago by the Eastern Monarch; in whose possession its existence first became known to the world. Its history is curious and eventful; but after passing through many illustrious hands, it has now been for a long period one of the trophies of British conquest, and here it is likely to remain.

Among other interesting and beautiful things here, we saw the Royal baptismal service—the sceptres made of gold and incrusted with diamonds and other paraphernalia used at coronations, such as the sceptre with the dove, St. Edward's staff, the three swords which are carried before the sovereign; namely, the "Curtana" or sword of mercy, pointless;

(See page 63).

A MAN'S A MAN FOR A' THAT.

ROBERT BURNS.

Is there, for honest poverty,
That hangs his head, and a' that?
The coward slave, we pass him by,
We dare be poor for a' that!
For a' that, and a' that,
Our toils obscure, and a' that;
The rank is but the guinea's stamp,
The man's the gold for a' that.

What tho' on homely fare we dine,
Wear hodden gray and a' that;
Give fools their silks, and knaves their wine,
A man's a man for a' that!
For a' that and a' that,
Their tinsel show and a' that;
The honest man, though e'er so poor,
Is king o' men for a' that.

Ye see yon birkie called a lord,
Who struts and stares, and a' that;
Though hundreds worship at his word,
He's but a coof for a' that:
For a' that and a' that,
His riband, star and a' that;
The man of independent mind,
He looks and laughs at a' that!

A king can make a belted knight,
A marquis, duke and a' that;
But an honest man's above his might
Good faith he mauna fa that;
For a' that and a' that,
Their dignities, and a' that,
The pith o' sense and pride o' worth
Are higher ranks than a' that.

Then let us pray that come it may—
As come it will for a' that—
That sense and worth, o'er a' the earth,
May bear the gree and a' that;
For a' that, and a' that,
It's comin' yet for a' that,
That man to man, the world o'er,
Shall brothers be for a' that.

ROBERT BURNS.

In a miserable little cottage in the southern part of Scotland, there was born in the winter of 1759, a boy who was destined to bear through a short life the burdens and glories of genius, who was to write some of the most beautiful songs in the English tongue, and yet to lead a life of coarse dissipation, and, with the means of riches in his hand, to be always a poor and needy man.

Robert Burns' father was a small farmer, who, being unsuccessful in his attempts to improve his condition, died, leaving his family penniless. Throughout his lifetime, however, he devoted himself to his children, training them carefully himself, and obtaining for them better education than was usual among men of his class, so that Burns was a fair English scholar, and developed, early in life, a strong taste for the songs and ballads of his native country. He worked as a farm laborer for years, writing constantly, and producing some of his finest compositions in the midst of the homely life from which, as yet, he had no thought of escaping. His "Mountain Daisy" and "The Mouse" were composed while holding the plow, "Death and Doctor Hornbook" while resting himself at the roadside; while "Hallowe'en," "The Cotter's Saturday Night," and many charming ballads, were written during his residence at Morsgiel, a farm which he and his brother leased together. Although the poems which were produced at this time were read by a small circle of friends, Burns had no idea of publishing them; and his foolish dissipation resulted finally in such entanglements that he made up his mind to leave Scotland and go out to the Island of Jamaica, but was actually unable to procure the money necessary to pay his passage. At this crisis, the thought for the first time presented itself to him, of making his poems a source of pecuniary profit; and he at once opened negotiations with a printer, and an edition of six hundred copies was rapidly sold, from which he realized enough to enable him to commence his journey. Just as he was about to sail, however, he received letters containing such favorable criticism upon his work, that he determined to take courage, and once more try his fortune at home. He went back to Edinburgh, where he soon became known, and achieved sudden fame, being introduced into the society of persons of highest rank, by whom he was admired and flattered as a sort of curiosity. None of his new acquaintances, however, gave him any substantial help or wise advice; and he says bitterly of himself, "The great misfortune of my life was to want an aim." He took a farm again in 1788, and married a woman to whom he had been attached for years; but he was an unskilful farmer, and soon gave it up, and settled down upon the salary of three hundred and fifty dollars per annum, which he received as an excise officer, and which was his only support during the remainder of his life. He was extremely proud, and often refused to take money which he had fairly earned; while he yielded so often to the temptation of drink, and was naturally so careless, that it is little wonder that he died at the age of thirty-seven, in poverty even greater than that in which he was born. His widow and children were cared for by public sympathy; and his memory is cherished now as the memory of a man rarely gifted; but during his lifetime he was undoubtedly neglected and misrepresented, and many of the vices and misfortunes which preyed upon him might have been averted by a little tender care on the part of those among whom his lot was cast. As a poet, however, his fame is secure, for he wrote many songs which are sung wherever the English tongue is spoken, and treasured everywhere as gems of true poetry.

THE RED CROSS.

During our own great war and the late war between France and Germany, much has been done to relieve the sufferings of the sick and wounded by societies of surgeons and nurses, carefully organized, and generously supplied by government, and private charity, with the means to carry on their noble work.

This system originated with a brave and tender-hearted English woman, who, years ago, in the Crimean war (between Russia and England), went out from England single-handed, and begun what seemed the almost hopeless task of caring for the sufferers stricken by shot and shell, or, worse still, by the fatal infirmities of climate, scarcity of food, and exposure. Many women followed her, and gave such strength and power of purpose to the work, that Florence Nightingale and her corps of nurses found their names written high up upon the roll of Fame, and their example a power for good throughout the whole civilized world. When our own war broke out, hardly a week elapsed before the "Sanitary Commission" hoisted its flags, and opened its rooms to receive and send help to our soldiers; and hundreds of women rallied to the work which they alone could do, and, as time showed, could do so well. Other societies were formed, and there was scarcely a village through the length and breadth of the land that did not contribute its share toward the support of nurses and hospitals, sending food, clothing, and luxuries of all kinds to the men whose duty led them daily into the jaws of death.

Still more recently, in the Franco-German war, this same work was continued; and not only did the two conflicting nations care in this manner for their own sick and wounded, but the other European nations, and even our own country, sent nurses and supplies to assist in the great charity which knew not the difference between friend and foe, when friend and foe alike lay in need of help.

Our first-page picture shows a member of the English society of nurses, the badge of her sisterhood, a Red Cross, being bound upon her left arm. We see that she is standing in the dismantled room of some fine, old house, a room from which the rich furniture, the costly hangings, the beautiful pictures, have all vanished, to make place for hospital cots, surgical appliances, and the thousand articles needed in such work as this nurse has to do. She has just unpacked one of the great packages sent from England by some stranger hands, and with her arms filled with bandages, is going back to her ward, where, doubtless, the surgeon is waiting for her help. Looking at all these things, and realizing how much suffering and terror they represent, who can help praying that there may be no more war; but, that, instead, men may everywhere be led to see how fair a thing is Peace.

THE SHIP OF THE DESERT.

In the great deserts of the East an animal abounds, whose existence seems a direct proof of the wisdom and beneficence of Providence: for it is so exactly adapted to the peculiarities of its native country and the needs of the people whom it serves, that it is scarcely possible to doubt the purpose of its creation. The "ship of the desert," *i. e.*, the camel, is of such importance in the life of Eastern nations, that were it to become extinct, the result would be the depopulation of the whole of the desert country; and we offer the following description to our readers, hoping that they will stop for a moment to consider, how vast are the interests, how great the creative wisdom, which this single animal represents.

"Designed to live in regions where but scanty nourishment of vegetation and water can be found, the camel meets the demand of the most perfect possible organization. All fulness of form is sacrificed, the head is small and careless, the neck bare of flesh, while the thighs and legs are stripped of every muscle not essential to movement, and the dry, meagre body has only the vessels and tendons required to knit the frame together. The jaw is powerful enough to crush that hardest of elements, the tough and scanty vegetation of the desert; and the foot is a mass of soft muscle, which slides helplessly in the mud, and is unfit for climbing, but is perfect for traveling over the even surface of the sandy plain. The camel is condemned to become the easy slave of men, because it has no defense against its enemies, being destitute of horns or tusks, and not sufficiently swift of foot to enable it to escape by running. Its flesh is sweet, nutritious food; its milk the best of beverages; of its hide, tents are made; of its hair, the most splendid shawls the world can show; and its bones serve for weapons of war, and agriculture, and for domestic utensils. The hump is a fatty growth upon the camel's back, and in suffering or starvation it is the last part of the animal exhausted, as it wastes away very slowly."

In long journeys, the camel can exist and toil for days, entirely without food; but usually he snatches the coarse shrubs growing beside his sandy path, and depends upon them and upon the absorption of his hump, for his nourishment. His internal water sacks supply fluid, which prevents him from suffering from thirst; while the wonderful scent, which enables him to detect the existence of water at a long distance, often saves the lives of his less acute human companions. Then when the terrible desert sirocco darkens the air with clouds of sand, and burns the flesh, and closes the painful nostrils, the camel finds his advantage. He has no ears to be filled with the driving sand; his ugly nostrils close up impenetrably; and, his deep-set eyes, overhung by his huge brow, will be the only eyes in the whole caravan, which can safely look upon the awful scene. His shambling gait seems awkward and slow; but, such are his powers of endurance, that he can accomplish a long journey in a shorter time than a horse, beside carrying a burden of from four hundred to one thousand pounds; or, for short distances, as much as fifteen hundred pounds. His patience is great, and he bears uncomplainingly the ill usage and hard work to which he is often subjected, although he is believed, by the natives, to be capable of life-long hatred of those who ill-treat him. In desert traveling, one often meets with a camel laden with a man, his wife, their numerous children, and household goods, all packed in two carefully balanced panniers, hanging upon either side of the great, slow-pacing animal, who thus wins his title, "the Ship of the Desert."

FLOWERS.

The glory of the summer is just now at its height, and the long, hot days, when the whole world seems brilliant with light and color, make it almost incredible, that, in the not distant future, the chilly barrenness of winter is waiting for us. We hardly realize, that, by and by, the earth will put away its green grasses and leaves, its gay and delicate blossoms, its rich fruits, and take on, instead, a brown mantle of decay, or the white garment of the snow. But it will come, this wonderful, never-failing change, and under grey, cold skies, with deserted fields and bare gardens about us, we shall think regretfully of the lovely blossoms, the luxuriant growths of the summer time.

Now, why do not more of us try to carry some of this beauty with us through the dismal winter days? Why do we not remember that a little forethought, a little labor, will enable us to keep our rooms fair with bright and fragrant flowers, from the first frost till the incoming of another spring? To gather a few seeds, to cut and start a few slips, is no difficult matter; and the pleasure their growth will bring from week to week is known only to those who have tried the experiment. Hanging baskets of coarse wicker work, of wire, or earthern basins, or gourds, or cocoanut shells, may be placed in our windows, and filled with such seeds and cuttings, as shall make them sources of delight all winter long. Put in rich earth, and then plant, for example, morning-glory seeds and cuttings of ivy, with a fern or two; and you have a little garden which asks nothing of your hands except regular watering, and once a week a thorough washing of its leaves with warm soapsuds, and which returns to you, for every moment that you spend upon it, hours of pleasure. Then, in common flowerpots, or, indeed, in anything which will hold earth, you can plant certain bright, hardy, little plants, which are not dainty in their requirements as to soil and temperature, but, which, with small encouragement, will blossom energetically for weeks and weeks. Petunias, the common varieties of geraniums, salvias, pansies, etc., all do well in this way, and are pleasant friends to have beside us in our living rooms, when rain and wind keep us within doors, and the biting frost has laid low the last summer flowers. A little ingenuity in training the climbing plants, ivies, etc., upon framework, or about the windows, will often transform a room into a bower of greenery; and this may be done without shutting out any of the precious sunlight, which is even more necessary to the human occupants of a house, than to the plants which they cherish.

The cost of all this pleasure and beauty is—what? A little care, a little trouble, a little perseverance, a little time—no money, no special knowledge, no unusual advantages. The receptacles for the seeds and slips, may, as we have said, be made from almost anything that will hold earth; the earth itself is cheap enough, and within everybody's reach; and the seeds and cuttings are to be had by almost everybody for the gathering and choosing. Only, it must be remembered, that in order to have our little house gardens in order for the winter, it is necessary to begin work before the winter comes; and now is the time to collect seeds to be planted a month or two later, and to start cuttings for the luxuriant growth which will by and by gladden our eyes.

Use a few leisure moments in summer, then, wherein to lay up stores of beauty and enjoyment for the winter, whose cold breath will make our bright-faced flowers doubly precious to us.

WATER AND ITS USES.

This all-important subject is never more important than when the summer heat makes us realize more keenly our dependence for health and comfort upon a pure and abundant water supply; and a word or two here as to the necessity of the free and constant use of water for our house and our bodies, may not come amiss, and we trust may increase the attention of our readers to this pressing matter. As there is nothing which can, to any extent, take the place of water, and as we actually cannot subsist without it, we ought, in the first place, to see that our houses are conveniently and fully supplied with it, from wells or springs; and, in the second place, to make sure that such supply approaches, as nearly as possible, to absolute purity. Then our housekeepers should remember that no house can be wholesome to live in, which is not clean, and that no house can

be clean without the use of plenty of water; while every one of us should understand that a daily bath from head to foot, is a necessity both of neatness and of health; and should make this daily bath a matter of duty. It is not, of course, indispensable that the water used for cleaning and washing should be as pure as that used for drinking; and for the former purposes, rain water caught in cisterns, or even in open tubs, is best, and usually most convenient to obtain. The wells which furnish our drinking water should never be near enough to any outhouse, sewer, cesspool, or other source of contamination, to receive impurities from them; but this is often more easily said than done, and in crowded neighborhoods, or where there is any uncertainty about the position of the well, it is altogether safer, especially in hot weather, to *boil* the water used for drinking. This may, at first, seem rather troublesome; but habit will soon make it easy to keep three or four quarts of this boiled water always on hand, and this in itself is a safeguard, in many places, against some of the more ordinary illnesses of summer. It is, in short, the simplest way of purifying drinking water; and although it does not, by any means, remove all impurities, it nevertheless goes far in that direction.

But, to recur to the external use of water, we feel that it is scarcely possible to say too much as to the desirability, the necessity of the daily bath. It is one of the tests of civilization: for no person of civilization can tolerate physical uncleanness; while there may be a deeper meaning than we think for, in that connection of "clean hands and a pure heart." Those who have grown up in ignorance or have allowed themselves, in spite of knowledge, to become careless in this matter, will doubtless find that it requires some resolution to make a beginning; but we heartily wish that every one who reads these words, would, at once, decide to try the experiment of taking a thorough bath, every morning for a month. It is easier to commence in hot weather than in cold: for the refreshing effect is more immediately felt; but this is one of those cases in which virtue will be found to be its own reward; and whoever will persevere now from this first of August until the first of the comiag September, will be almost sure to find that they have laid the foundation of a habit, which will bring them health and happiness so long as they live. A thorough bath of cold water in summer or winter, strengthens the muscles, cleanses the skin, stimulates the blood and the nerves, and is the first step in a life of cleanliness, toward which life we should all of us constantly aspire.

THE INDIAN BIBLE.

On the 2d of November, 1631, the Rev. John Eliot landed, from the ship *Lion*, at Boston, and in the following year, settled as teacher and preacher at Roxbury, Massachusetts. He devoted himself, at once, to the conversion of the Indians, and, learning their language, translated in 1863, the Bible into the Indian tongue. This was the first Bible in any language, priated in America; and it naturally made the Harvard College press (from which it was issued) famous, two editions, of three thousand copies in all, appearing in the years 1663 and 1666. "Up Biblum God," which means the Book of God, is a portion of its title; but there is but one man now living, who can read the language in which this unique book is written, the tribe for whom it was prepared, being entirely extinct. So far as is known, there are but fifteen copies of Eliot's Indian Bible in America, and a still smaller number in Great Britain; a copy, which was sold in New York in 1868, having been purchased for $1,130, the highest price ever paid for a printed book in one volume, in this country. The devoted and faithful Eliot labored for many years, and won for himself the title of "Apostle to the Indians," a name which truly he well deserved.

The wicked are not always so happy nor the good so unhappy, as is imagined; and vice is, nine times out of ten, its own punishment.

For the SOUTHERN WORKMAN.
BY J. ENDECOTT LINDEN.

THE WAY.

(*Isaiah* 35:8).

A highway hath the Lord cast up,
The "Way of Holiness;"
Wherein his own redeemed may walk,
Whom he doth love and bless.

"No lion shall be found thereon,"
Nor any conscious sin;
And though a fool, the wayfaring man
Shall never err therein.

To find this way, my anxious soul
Had sought, with many a tear,
Till Christ himself revealed it me,
With his own words of cheer.

"I am the Way, the Truth, the Life;"
Frustrating not his grace
By any effort of my own,
I bow before his face.

So, now, a refuge strong from sin,
From both its guilt and power;
I find at last, sweet, perfect rest
In Christ my Rock, my Bower.

Oh that beneath his cleansing blood
I may through life abide;
Till he shall send his loving hand
To waft me o'er the tide.

Then, safe within "my Father's house,"
Where the many mansions be,
I'll sing his power, which, from all sin,
Through faith, hath set me free

LEFT BEHIND.

Poor Ponto! It made him sad to be left behind, and I do not wonder at it. One bright autumn day his little master, Henry, had said to him, "Ponto, would you like to go to the beach? Uncle Charles and I are going to the beach."

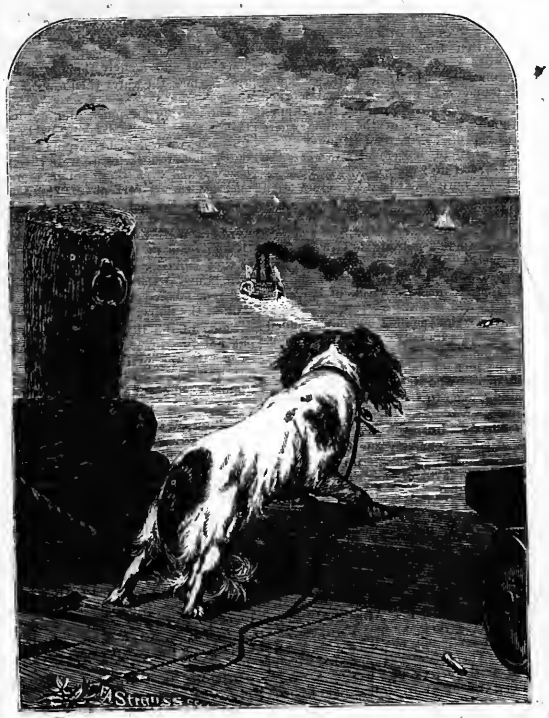
Now, if there was anything that Ponto liked more than another, it was going to the beach, and chasing the little birds along the wet sand, and seeing the foamy waves come up and chase him, as if they were saying, "Leave those little birds alone."

And so, when Henry spoke of going to the beach, Ponto jumped up and barked with delight, and tried to lick his little master's face with his tongue. Then he ran round as if he wanted to say, "Oh, I'm so glad, so glad! for I do love to go to the beach."

But there is many a slip between the cup and the lip. Now, it happened that Mr. Cross was to make one of the party to the beach, and Mr. Cross did not like dogs. He said he would not have a dog with him: so Uncle Charles had to tell Henry that Ponto must stay at home.

Henry was greatly disappointed at hearing this. "Poor Ponto!" he said, "after all, I cannot take you with me to the beach. You will have to stay at home."

Ponto did not quite understand these words; but when Henry tied a string to his colar, and fastened it to a ring in the wood-shed, then Ponto understood that his little master had changed his mind, and would not take his dear dog with him to the beach.



LEFT BEHIND.

Ponto whined and cried when he found he was not to go, and felt sad enough, when, through the open window of the wood-shed, he saw Henry, Uncle Charles, Mr. Cross, and all Henry's brothers and sisters, going off to the steamboat that was to take them to the beach.

"This is too bad!" thought Ponto. He tugged at his rope, but could not break it; then he lay down on the floor; then he jumped up and barked; and then he gnawed at the rope. "I do so like to frolic on the beach with my dear master!" thought Ponto.

For more than twenty miuutes he tried to get away; and when, at last, he had almost given up trying, the rope broke, and Ponto was free. With the rope dangling at his colar, he ran at once down to the wharf; but the steamboat had started. Ponto saw it, and barked long and loud; but Heary could not see or hear him.

Henry and his party arrived at the beach without Mr. Cross; for, just as they were starting, a summons from his wife compelled Mr. Cross to leave. It was now too late to get Ponto, and Henry missed him so much that he was sad.

But that foreaoon while he was in the water with his uncle, learning to swim, he saw all at once a dog runniug along the sand. "Can that be Ponto?" cried Henry. Yes, it was indeed Poato. As soon as the boat returned to the wharf, Ponto got in, and on its next trip sailed down to the beach without paying his fare: for the captsin supposed he belonged to some one of the passengers.

How glad Ponto was to see his young master! And how glad was Heary to see Ponto. They had a fine time together in the water. Was not Ponto a clever dog to find his way all alone to the beach? and to kaow, that, by staying on board the boat, it would take him where he could find Henry? I think I never knew so bright and good a dog as Ponto.—*The Nursery.*

For the SOUTHERN WORKMAN.

AN AMERICAN NOBLEMAN.

In America, you know, we do not believe in giving patents of nohility to descend from father to son, so that an idle young fellow can content himself with the glory of his great grandfather's hard-earned title. "The field is the world: let every man win his own laurels; for the only true nohility is the nobleness *in* him"—that is what we say.

The standard of true nobility has varied with the world's growth. Brute force, physical courage, chivalrous deeds, intellectual power have all had their turn in earning renown; and the older the title, the more likely it is to have been won in the distant dark ages, by a sledge-hammer of a hand that could not write its own name. David tells of a time when "a man was famous according as he had lifted up axes upon the thick trees." One would be more famous now if he could devise some way to save the labor of cutting them dowa by hand: for this nineteenth century is pre-emineatly the age of invention.

And America is pre-eminently the coaatry of inventors. American inventions are famous the world over; and foreign nations, whose notions of ranks and titles have been so different from our own, are recognizing the nobleness of American inventors, by conferring upon them their own orders of nobility.

During the great World's Fair, held at Vienna, Austria, a year ago, for the purpose of collecting and comparing the works of all nations in art and sciеace, a letter came to this country from the commissioners in charge of the United States department, announcing that the Emperor of Austria had created Thaddeus Fairbanks, of Vermont, inveator of the Fairbanks scales, a Knight of the Imperial order of Francis Joseph. "It seems," they said, "that the emperor, who is fully imbued with the spirit of the age, has grown convinced that no country can become truly great, save through its manufacturing and commercial activities; and being impressed with the inventive genius of Mr. Thaddeus Fairbanks, desires to confer some mark of personal respect and honor upon him."

Of course, every one knows what the Fairbanks scales are. Whatever we want weighed, from a letter to a loaded freight car, we like to bring to Fairbanks' scales. They have taken the first premium at more than one World's fair, and are used in every quarter of the globe, and their very name suggests fairness in the balance. It is pleasant to know that their inventor is still living to enjoy the honors and wealth that his genius has brought him, aad to hless not only the world with his inventions, but his own town by the true nohleness of his character.

The Hampton Students, on their way to Canada, had the pleasure of a visit to the great manufactory in St. Johnsbury, Vermont, the largest of its kind in the world, from which over fifty thousand of the Fairhanks scales are sent out annually, to all quarters of the globe.

The process of casting the glowiag molten iron into the sand moulds is always a brilliaat, beautiful sight; and a walk among powerful, giant machines working away, almost hy themselves, as if the brains were iu them, instead of in one small, human head, is iuteresting, even to one who does not understand their operatioa. For some interestiag statistics as to the maufacture, we are indebted to Mr. E. A. Walker, who showed us through the works.

"The establishment employs constantly a thousand workmea, principally Americans, most of whom have been in the manufactory from tweaty to forty years.

"The sales of the house reach $2,000,000 annually, with a rapidly increasing demand. The establishment, which has been an assured success for over fifty years, has works that cover over ten acres of ground.

"The Fairbanks scales are produced in three hundred varieties—of all sorts and sizes—from the most delicate standard of the druggist or banker to the ponderous railroad-car or canal-boat scales. They are adapted to the standard of all nations, and marked with the signs of each. Large invoices are constantly sent as far as Japan. They are carried on the backs of camels across the deserts of the East, and supplied to the entire world.

"One of the most remarkable manufactures of this company is the 'Railroad Track Scale.' This is one of the later inventions of that great mechanical genius, Thaddeus Fairbanks. The platforms are built ranging in length from thirty to one one hundred and fifty feet. The larger of these are used for weighing freight trains as they pass, and correspond in structure to the most substantial railroad work.

"The 'Live Stock Scale' is another specialty of this establishment, of the Fairbanks make. They have weighed in the Union Stock Yards of Chicago, in the past seven years, 17,400,000 animals, taking them on by the drove at once. Thus both the drover and the butcher know what they are doing when they buy and sell.

"To our agricultural population, these scales are invaluable. By their aid can be ascertained the actual difference between what they buy and sell, and the various successes of their fattening processes on cattle. Anything that has weight, and can be handled and moved, Fairbanks can weigh. The largest scale is registered five hundred tons; but those of double its range are frequently built to order. To weigh a loaded steamboat, a railway train in motion, a drove of cattle, at once, six thousand bushels of grain an hour, would seem hardly possible; but these are every-day tasks for the Fairbanks scales.

"All the scales are subjected to the nicest tests before being 'sealed.' The minutest films of metal are used for the more delicate trials. Masses of iron, weighing hundreds of pounds, are placed alternately on the different corners of the scale platform, and if the difference in position changes the 'record,' the scale is condemned. The thoroughness of the work, and this severity of the test, is the explanation of the world-wide reputation of the Fairbanks scales for accuracy."

Mr. Thaddeus Fairbanks is the oldest, and the only one living, of three brothers once associated in the business, created by his inventive genius. One of them was governor of his state; and his son, the Hon. Horace Fairbanks, is the inventor of some valuable additions to the machinery. The beautiful houses of several members of the family are grouped on the hills above the manufactories; and their public spirit and benevolence extend beyond their own *fair banks* through all the town, whose fine, free library, and art gallery, containing able works of our own and foreign artists, were gifts of Hon. Horace Fairbanks; and its academy was built at an expense of $80,000, by Mr. Thaddeus Fairbanks, our true, American nobleman.

WRECKED AT HOME.

Left alone on Grampus Rock, with all sign of rescue fading away into the night, things looked pretty dismal for ten ship-wrecked boys. Some of us had never slept away from home before in our lives,—unless, perhaps, when we lay in hay-mows and barns, on the "night before Fourth o' July." For on that night, at twelve o'clock precisely, it was the custom of the entire boy population of Fairport to ring the church bell—the "town bell" we called it—and build a bonfire on the Common. These amusements were forbidden, being destructive to the sleep of the older people, to say nothing of burning fences and dry-goods boxes. So we escaped from home and hid away in hay-lofts, until the hour when the clangor of the town bell and the flames of bonfires should banish sleep from the entire town for the rest of the night.

"I say, fellers," said Jack Adams, "this is like sleeping out, night before Fourth o' July."

Bill Keeler whimpered: "But we aint got no fire." Bill's grammar always was a little shaky.

Fire! There was an idea! If we only had a fire, it would not be so lonesome. But there was nothing to burn, it seemed; and Dandy Blake said that fish-bones and sea-weed would not catch afire, even if we had matches.

Matches! Who had any matches? It would be strange if, out of ten boys, at least one-half did not have some stray matches among the odd lumber stored in their pockets. There was a general rummaging, and pockets turned inside out gave forth nails, twine, chalk, fish-hooks, sinkers, knives and other such valuables; and in Ben Dennett's vest pocket—for Ben wore a real waistcoat—were found three matches! In Rufe Parker's jacket was found one more. It had worked through a hole in his pocket, and slipped down into a corner of the lining, where it was captured with great triumph.

But what to burn? Here were the matches, but no wood.

"Let's burn the boat!" cried Jem Conner.

Little Sam burst into tears. "You shan't burn my father's boat," he said.

"Pho! there's nothing left of her but small pieces. We are in for it now, and it'll be no worse to make a fire of the old thing than to make a wreck of her, anyhow."

"And we shall catch it, anyhow," added Bill Keeler, gloomily: "so we may as well be hung for an old sheep as a lamb." Still the idea of burning even the fragments of old Snowman's boat was a little appalling, even to us shipwrecked young mariners.

"I move we burn the *Red Rover*," said Jack Adams, removing his battered cap by way of making himself presiding officer. "All in favor of that will say 'aye,' contrary-minded, 'no.' It's a vote," he added, as a shrill chorus of ayes rose on the chill air

A melancholy procession of boys took up the line of march over the rock to the other side, where the main part of the wreck still lay. The old hatchet was found under the after-part of the boat, where it had been left. Armed with this, Ben Dennett struck the first blow, shivering off a huge chunk of pitchy pine in an instant. This set an example, and we all rushed at the wreck like hungry wolves, each one tearing away a slice, Sam Snowman vieing with the rest in the work.

With great glee—laughing and joking at our misfortune—we lugged the wood over the ragged spur of rock to the leeward, where we were out of the wind. Some slivers of dry pine and fragments of newspaper from somebody's pocket served as kindling. One of Ben Dennett's matches was carefully scratched on a dry stone, under his cap, the entire company crowding around to keep off the air. It fizzed a little, spluttered, choked Ben so that he gasped for breath, then—it went out. Three were left. Another and another were scratched, each boy holding his breath; and each went out irresolutely. Ben had wet his matches when he went overboard.

Rufe's one match was all we had left. Little Tommy began to tremble with fear and cold as that was produced and anxiously drawn across the surface of a smooth, dry stone. It fizzled, crackled into a clear flame, and in a moment a bright, yellow blaze was leaping up from the little knot of pine and dry sea-grass. Each boy gave a great hurrah of joy; and we had a jolly fire.

We brought over, bit by bit, the entire wreck of the once proud *Red Rover of the Bloody Seas*, and prepared for the long night before us. Some of the fragments of the old craft had floated away and were lost. Some were rescued from the detached rocks, where they had lodged. Jerry Murch waded out into the swirling tide and secured a piece of the broken gunwale, which he particularly coveted. Leaving the rock, to return, he cut his bare foot on a sharp shell, and, giving a little howl of pain, tumbled over into the current, which bore him swiftly away.

Speechless with terror, and with mouths wide open, the boys stood helplessly looking at their comrade as he was swept out from Grampus. But Ben Dennett, dropping his armful of wood, dashed into the water, struck out bravely, grasped Jerry by his long, red hair, and dragged him into shallow water. As they regained the shore, Jerry, dropping his bit of timber, which he had held all the time, rubbed his head ruefully, and said, "You needn't have pulled a fellow's hair so."

"That's the way always to save a drowning man," said Ben. "Aint it so in story books? You know the hero seizes the other hero by his flowing locks, and all that sort of thing."

But the rest of the boys executed a sort of war-dance around the heroic Ben, doing him honor for saving two lives that day. We had not forgotten that he took Tommy Collins on his back when we were wrecked; and, nobody thought it less heroic because the water then was only knee-deep.

The roaring fire put a different look on things right away. Basking in the cheerful blaze, we watched the limpets broiling on the hot stones; for we were ravenously hungry, and even these tough morsels of shell-fish tasted very nice. There was no water, and the hot, salty limpets made us somewhat thirsty. But the Fairport boys were not used to whimpering much; and though some of them licked their chops, as they looked across at the little stone farm-house at the entrance of the harbor, and remembered the nice, brown pans of milk in the dairy, nobody complained.

Some of the little fellows were dozy, but not one of us thought of going to sleep. It was pretty clear that we could not be found until daylight; and Jem Conner's suggestion that we put our fire on top of the rock, so that it might be seen from town, was scouted as a wild and extravagant project.

"Who could see the fire so far off? And who would bother themselves about us, anyhow?"

That was boy-reasoning. Yet, at that very moment, and all through that anxious night, the island-dotted bay, the rotting wharves, the marsh, and the spruce-covered pastures were searched painfully by anxious men and mothers, who could not give up their children for lost.

Unconscious of the pother which our absence was making in the distant, unsleeping town, we little midgets perched ourselves on the rocks about the fire, and told stories.

"Give us the 'Drummer Boy,'" said Bill Keeler.

This was one of Rufo Parker's stories, inherited from his grandfather's time, but common property in Fairport. Every Fairport boy knew the story of the drummer boy's melancholy ghost; but Rufe always told it well.

"No, don't let's have that; it's a ghost story," said little Sam Snowman, glancing around the gloomy picture with a scared look.

"Oh! bother the ghost!" said Ben. "I've heard it lots of times. Heave ahead, Rufe. Who's afeard?"

As Ben was the hero of two rescues from drowning, he was allowed to have his way, and Rufe then told his tale.

"It was a wild and gloomy night in the month of March—"

"No, no," broke in Jem Conner. "'It was a tempest-tossed and weeping night in the month of March.' That's the way it goes. I've heard it lots of times."

"'T aint neither," replied Rufe, angrily. "And I just want to know who's telling the story—you or I?"

"O shut up, Jem!" said several of the boys; and Rufe, somewhat heated in this interruption, went on:

"It was a wild and gloomy night in the month of March" (with a withering glance at Jem), "when the British abandoned Fort George, situated on the heights of Fairport. They went away in such haste that they forgot a little drummer boy, aged fifteen, who was in prison in the dungeon—the which you may now see in ruins in the lower left-hand corner of the fort, as you go in from the side toward town; but the roof's fallen in, so that you can't see all of the dungeon, but you can see where it was; and us fellers have been in there many a time, and know it's so."

Taking a long breath, Rufe proceeded: "Well, this poor little drummer boy, aged fifteen, when he heard the soldiers marching away in a hurry, jumped up and beat 'The Retreat' on his drum, which he happened to have with him; but in vain. Though he beat his drum with uncommon energy, and made a deuce of a row, he couldn't attract the attention of his departing comrades, who marched off in double-quick time—for the Americans were after 'em,—and so left their unfortunate drummer boy shut up in the dungeon—aged fifteen."

"But he was aged fifteen once before," interposed Tommy Collins, whose eyes were as big as saucers.

"O cork up, youngster!" said Ben Dennett. "Heave ahead, Rufe."

"A great many months, mayhap years, passed away before the dungeon in old Fort George was visited by anybody. The war— Oh! I forgot to say in the right place, that this was in the Revolutionary War. The war was over, and some people thought they would explore the dungeon, to see if, mayhap, they might find some curiosities, and, mayhap, some stores of gold and silver. But, there in a dark and dismal corner, their tin lantern—for they had one of those tin lanterns from Rowell's store—their tin lantern showed them a heap of skeleton bones bent over a rusty, dusty drum. *It was the little drummer boy, aged fifteen!*"

Proceeding in a ghostly whisper, and glancing around on his terrified audience, so as to mark the effect, Rufe went on:

"When Fort George was evacuated, it was the fifteenth of March, Seventeen Hundred and something or other; and now, on the fifteenth of March, every year, his ghost comes to the old dungeon and beats his ghostly drum. People don't remember it, sometimes; but when it is another wild and gloomy night in the month of March, they hear from the old fort the hollow rolling of the drum. Then they say, 'It's the fifteenth of March;' and so it is. And, last March, me and Bill Williams hid behind Oliver Bridges' house, and we heard the drum, just as sure as a gun. It was an uncommon wild and gloomy night, just like this" (the stars were shining thickly in the sky while Rufe was talking); "and, if we'd waited, we would have seen the ghost of the little British drummer boy, aged fifteen."

Some of the chubby faces about the fire grew pale as this blood-curdling story was concluded. The place seemed more lonely than ever, while the boys listened to the soft lapping of the waves on the rocks, and the far-off note of the sea on the wild shores of the bay. It was late—how late nobody knew; we had nothing but the stars to tell the time. Most of us were dreadfully sleepy; but everybody was too much afraid to sleep. What might not happen in the darkness and silence of the night?

As we boys crouched together about the flickering fire, suddenly cries of distress and horror were heard from the other side of the rock. There were sounds of groans and shrieks for an instant; then all was still. Again, the yells and cries grew more and more sharp, as of a person in mortal anguish; then they sank away in a sobbing groan. Every boy stood at once on his feet, his eyes starting from his head, his form motionless; and not a word was said. Bill Keeler's seal-skin cap actually rose three inches on the top of his head, held there by his white hair, which stood on end with terror. You could have hung your hat on Rufe Parker's eyes, they stuck out so.

Nobody stirred. Jack Adams was the first to speak:

"Let 's go and see what it is!"

And away he dashed, like a brave old mutineer of the ship *Bounty*, as he was, before his comrades could still their chattering teeth long enough to say "No." Every boy followed Jack, each one afraid of being left behind.

Half-way over the rock, there came another loud, wild cry. This time we heard the startling words:

"Help! help! help!"

And jumping down on the other side, the whole mob of boys tumbled over Jem Colmer, who was lying under a crag, howling in his hands, speaking-trumpet fashion, and making all these unearthly noises just for a lark.

"O you scarecrows!" said he. "Before I 'd be fooled so!"

He had stolen away while Rufe was telling the ghost story; and he knew just about when to come in with the chorus of groans and yells. He had the tale of the drummer boy all by heart.

"Pshaw! who was 'afraid? We knew it was you," said Jerry Mureh.

"Of course, we did," said little Snowman, his teeth still rattling like a pair of castanets.

Jack Adams said it was a mean joke—so it was—to try to scare a lot of little fellows like that. Jack was almost always right.

Finding their way hack to the fire, the excited boys sang a few mournful little songs about Old Dog Tray, who was gentle and was kind, and whose tail hung down behind, just like any other Old Dog Tray; hut it was a very dull business. One hy one they sauk off to slumber, and all was still save the low wash of the waves, the solitary cry of a night-hawk overhead, and an occasional snivel from a heap of legs and arms where some of the poor, little, old soldiers were dreaming of home.

Once, toward morning, there was a general alarm. One of the boys, awaking from a troubled sleep, caught sight of a sail creeping down by Nautilus Island. He sang out, hastily, "Sail ahoy!" But the little craft was too far off to hear his hail. The half-awakened boys stood disconsolately about, rubbing their aching limbs and eagerly watching, as the sail, ghostly in the grey dawn, faded away in the mist and disappeared behind Holbrook's. We left the water's edge, and, seeking our uneasy bed once more, slept brokenly until sunrise.

It seemed a moment after—hut it must have been several hours, for the sun was rising over Kebeh's Mountain—when I was awakened by the rattle of oars pulled noisily into a boat, and the sound of voices. Starting up in the chilly air, I beheld Gitchell's boat, her keel just grating on the rocky beach of our island. In the bow stood old Gitchell, with the painter in his hand. He saw the boys rising, one by one, from the rocks. The remark he made was, "Wal, I swan to man!"

Uncle Oliver, Captain Bakeman and Si Redman were in the boat. They had been searching for us all night. The harbor had been explored in every direction; and now, toward morning, the whole distance as far up as Nigger Island having been covered, they had extended their search to Grampus, but with faint hopes of finding the young brood so far out to sea.

We were rescued. And nothing in life ever tasted so good as the half-warm water which we found in a small keg on board. There was nothing to eat, though old Gitchell, with a dark grin, offered us a chunk of pig-tail tobacco, on which he allayed his own hunger.

What a triumphal voyage was that which we made homeward! A soft, westerly breeze sprang up with the sun; the clumsy old boat, dear to fishing excursions and chowder parties, seemed a large of beauty. Somewhat lame and sore with our uneasy rest on the rocks, and faint with long fasting, we boys were joyful enough to forget all trial, and entertained our rescuers with marvelous tales of our night's adventures.

As the old craft drew near the town, the news of our coming, spread: for the boys swarmed over the gunwale, and crowed prodigiously their greetings. The wharf was dotted with tearful parents, sisters and brothers, some of the latter looking half envious at the heroes of the rescue. We were received with open arms. Nobody thought of scolding. A great terror had been removed. Each father and mother, I suppose, thought, "For this my son was lost and is found, was dead and is alive."

Even old man Snowman, as he took little Sam into his big arms, brushed a drop of dew off his weather-beaten cheek with the back of his tarry hand, and only said, "You blamed little rat."

There was rejoicing in Fairport that summer morning; and in many happy homes a great cloud of sorrow was lifted, as the young prodigals were welcomed with smoking breakfasts, and with that little show of feeling which a New Englaud cool self-restraint permitted.

It was a peaceful end to what at one time seemed a most perilous adventure. Looking hack at it now over the still lapse of years, it does seem like a narrow escape. Perhaps we truant youngsters were much to hlame for the night of tearful apprehension which we brought into the quiet old towu. Perhaps—and who shall say that each one did not deserve to "catch it," as little Sam expected he should, when he reached home after the wreck?—*St. Nicholas.*

A NEW WRITING-MACHINE.

The *Mechanics' Magazine* figures and describes a new form of writing-machine, the invention of the Rev. Malling Hansen, superintendent of the Royal Deaf and Dumb Institution of Copenhagen. The machine is designed for rapid writing, and is also capable of being used by the blind. The work is done by means of a series of keys, moved by the fingers something in in the same way as the keys of a concertina, each key leaving the impress of its proper letter or character on the paper below, when it is struck by the finger. The keys are so disposed, that the imprint of each type, when struck, is directed to, and received upon, a central spot, over which the blank paper is made to travel by means of suitable machinery.

Besides offering great facilities for copying purposes, the machine is said to rival stenography as a means for reporting speeches or taking down dictated composition. Rapid writing rarely exceeds four letters per second; while in ordinary speaking, from nine to ten, and in rapid speech, from fifteen to twenty letters are uttered per second. This machine, with a little practice., enables the operator to take down an average of twelve letters per second, and an expert manipulator can considerably exceed this. The instrument is in use in London, and its performances are said to be very satisfactory.

BRONZING OBJECTS OF WOOD, ETC.

Objects of wood, stone-ware, and porcelain, picture-frames, etc, may, it is stated, be made to receive a beautiful bronze, by applying, by means of a brush, a thin layer of a water-glass solution, and then dusting this over with fine bronze powder. The excess of the powder is to be removed by gentle tapping; and the article, if of porcelain or some stone-ware, slightly heated. The bronzing may be polished by means of an agate stone, and thereby made to assume a beautiful effect.

(From page 59).

and the swords of justice, temporal and ecclesiastical. But the most interesting room to me was the Beauchamp Tower, a chamber into which prisoners were brought to spend the night previous to their execution. The walls are covered with carvings and inscriptions cut by many a noble hand, one in particular, by Lord Dudley, the husband of Lady Jane Grey: it is a coat of arms with the letters IANE, cut above it. There are ninety-one of these inscriptions, all of them most sadly and painfully interesting. The entrance to this tower is through a little door, which opens upon a secret staircase built in the thickness of the wall. As we came out and walked across the Tower yard, we were shown the stone and railing marking the spot where the scaffold formerly stood. We were conducted all over the place by one of the warders, dressed in the ancient style. But one must make many visits, and explore the place very thoroughly, to take into his memory one half the curious and wonderful things to be found here.

Not far from the Tower, stands the splendid Monument erected by Parliament in commemoration of the great fire which occured in 1666. I have climbed to the top of this, two hundred and fifteen feet, by its marble staircase, consisting of three hundred and forty-five steps. I was rewarded by a glorious view from the balcony over the capital. The column is of the Doric order, fluted, upon a pedestal twenty-eight feet square, the north and south sides of which, each have an inscription in Latin, one describing the desolation of the city laid in ashes, and the other its glorious restoration; on the east side is a statement of the time at which the pillar was begun, continued and finished, covering a period of six years; and the west side is covered by a finely carved emblem of the scene, which contains many allegorical and some historical figures. I have been told by one of my uncles, an old habitue of London, and well versed in its history, that this great fire commenced at Pudding Lane and ended at Pie Corner; but I do not find any such appetising names in this locality at present.

Agricultural.

DRAINAGE AT NORFOLK.

II.

If two kernels of wheat he sown, one in Egypt and the other in England, the one in the latter country is in danger from too much moisture at the roots; while the one in Egypt has entirely different peril to encounter. The compact coating of Nile mud causes Egyptian grain to flourish, not merely hy fertility, hut by keeping out the hot, drying air, which would roh the earth of all its moisture. Travelers inform us, that, while Egypt is one of the richest countries in the world, no wheat is there produced on porous soils.

The climate of Norfolk, for a month before wheat harvest, is more similar to that of Egypt than to that of England. Our prevailing wiuds, at that season, instead of being laden with moisture and imparting it to porous soils, as in England, come over a hot country and suck up moisture wherever they find it. Plants need to drink as much as animals; and whether the climate and soil of Norfolk furnish the wheat plant with too much or too little water, is to be determined, not by foreign, or northern, hut by Norfolk experience. Without cautious trials, it would surely be a wild thing for Norfolk farmers to rush into tile drainage, merely because it is an English panacea.

Northern farmers drain, that they may be able to work their soils early in the spring. At Norfolk, there is seldom a month in the year, in which, soils provided with occasional ditches, are too wet to work.

English farmers drain so as to escape the rust. Norfolk farmers, would, hy tile draiuiug, run the risk of foreing their wheat into growth in January, and its loss or serious injury by our long, cold springs. It would be far more profitable to lose the crop by rust, than by a costly, winter foreing-apparatus of tiles.

If Norfolk were a green isle with a large home market, and its farmers had uothing to fear from competitors southward, an expense of thirty or forty dollars per acre in drains, might pay wealthy men a good interest, by enabling them to gain a few days over their neighbors. As the case stands, there is yet no proof that the outlay would not consume the profit.

Wheat is a valuable crop, but not the only one. We have others not known in England (such as corn), which are less risky, as valuable, and better suited to our soil and climate. It is yet to be proved, that drainage would not injure these summer crops, by letting in the hot, dry air about the roots.

In the Northern states, the more the ground is stirred, the moister it is. At Norfolk, any old uncle will tell you that you will kill cucumbers, by hoeing them in a dry time.

In the North, wheat is the first thing sown when the new land is broken.

At Norfolk, the practice is to sow no grain or clover until several years have elapsed, and the soil becomes compact. Porosity is feared by the farmers; and the fact is worth many theories. Surface flooding, by sudden torrents, is the chief danger from water, dreaded by the Norfolk farmer, after he has tapped his beds of sand. Before he speuds ou drains several times the value of his land, it were well for him to try it on a small scale, considering carefully the force of the old adage, that "Circumstances alter cases."

As for wheat growing, it is to be hoped that English and German farmers who come to Virginia, may notice how much has been accomplished at the North, in avoiding rust by selecting early ripening varieties of seed. Effort in that directiou, and in proper enriehment of the ground, seems much more promising of valnable results, than does tile draining to a Norfolk OBSERVER.

For the SOUTHERN WORKMAN.

SOME THOUGHTS ON FARMING.

BY A WOMAN.

Tilling the soil appears to have been the most ancient and time honored employment.

When the sun first rose on the earth, warming and vivifying the myriad germs of vegetable life concealed in her bosom, there sprang up, in great luxuriance, the thorn, the thistle and the briar, as well as the kindly fruit, for the food of man.

Now, here in this field of labor, was placed our Ancient Ancestor, with the command to select and cultivate such plants as were necessary to his wants,

His first implements must have been rather rude: for as yet, the brain to conceive, and the hand, to fashion the spade, the hoe and the plow, had not come into being.

From that time, to the present, our blessed Mother Earth has given us, lavishly, from her stores, tenfold, for all our care and attention.

To receive the greatest reward for our labor, we must understand what constitutes the particular kind of soil we intend to cultivate, and the nature of the vegetable life we wish to nourish upon it, and see if the earth contains the food required for a vigorous growth. Though, from the earliest times until now, men have tilled the ground, they have but slowly come to the great truth of the immutable laws, which govern everywhere in nature, in the earth as well as on it, that the relation of *cause* and *effect* is clearly seen in the productions of the soil.

For long ages, men worked on, as moles, in the dark; but, in modern times, in a few of the most enlightened nations, men of the ablest minds have devoted lives of industry and toil to investigation and experiment; and farming has become a science.

We have agricultural colleges, where our young men learn the art and science of farming, and magazines exclusively devoted to conveying a knowledge of the best methods of agriculture. There is a right as well as a wrong way of doing things in this department, as in others; and to be a successful farmer, one must learn the art. Instead of the rude plow of the Egyptian, which was only a sharp stick, we have the steam plow, all manner of planters and reapers, machines so multiplied and numerous, that, little more is required, than to direct the machinery.

Yet, with all these helps, many are content to farm in the old way. They take up a large tract of land; never examine the earths which

compose it, indeed, are quite ignorant of whether it is suited to the crops, whether it requires manures or what kinds. They break up fifty acres or more for corn, plow a shallow furrow, plant, paying little attention to the kind of seed, work it once or twice, and then let the weeds tend it the rest of the season. Just so with other crops: about half put in; weeds allowed to grow all along the fence-rows, every year bearing a greater abundance, —notwithstanding all this careless, ignorant way of farming, nature is friendly, and a considerable yield is produced.

Now, if one-third of the ground was broken and done intelligently and thoroughly, the best seed selected, fertilizers used if needed, not a weed allowed to hold up its head—and working hand in hand with *nature*—the result would be, with less hard labor, a harvest such as would astonish the possessor. A little, well done, is better than much badly performed.

If the farmer is ignorant, so much the worse for his business. There is little excuse for him. He has his daily and yearly observation and experience of the operation of the laws of Nature. He is in the midst of her fields and groves, and she waits to pour her treasures into the lap of her faithful and obedient children. If he is too indolent to learn wisdom with these golden opportunities, he pays a heavy penalty.

If the farmer is poor, let him look to his ways: it is the result of ignorance, carelessness, or extravagance. The want of industry and economy, is the common parent of almost all the poverty in the world. To practice economy is a lesson which many are long in learning, and some never master. Where you find ten industrious laborers, there will be but one who knows how to save. It is an old and true saying, "Take care of the cents, and the dollars will take care of themselves." This appeals most emphatically to the consideration of the farmer.

There is great waste here in this favored land, for want of barns and sheds to shelter the stock in winter. Horses and cattle will keep fat on one-third less food, if protected from cold and storms—"The merciful man is merciful to his beast." Then there is a great saving in manures, which can always be used to advantage somewhere on the farm, but lose much of their value when exposed to the winter rains.

Another great item of waste is farming tools: they should always be kept dry, under cover, when not in use; they will work better, and last twice as long, as when left out; besides, there is much valuable time consumed, and often loss of temper, in hunting a plow here, and a hoe there, where it has been left, in the field, when last year's crop was put in; then, some one must run after the spade, sticking in the ground, in the garden, or lying rusting in the fence corner; the scythe is hanging in a tree, or, at best, in an open shed; and after considerable trouble, the things are found, rusty and weather-beaten, and in poor condition for use.

Another item, is the harness for the teams: it is often either hung on the fence, or thrown down in a heap, in what is only an apology for a stable, trampled on and broken. When put on, a buckle gives way—the place is supplied with a string,—a strap or a trace breaks, —a piece of rope is tied on; after a time, the whole sett is in such a bad condition, that a spirited horse breaks loose, runs off, and there is a general smash-up, making a heavy bill for repairs. Now, a little care in keeping the harness blacked and greased, and hung up in the dry, with one or two hours' work in mending occasionally—which every farmer ought to do—would be a great saving; indeed, he should be able to repair the most of his implements; and he will generally find wet days enough for that purpose, if he will so apply them.

Particular care should be taken, in gathering the crops. It is poor economy, to raise more corn than can be gathered in the autumn. It should be cut, husked, put in dry cribs, secure from rats, the fodder stacked near the barn—which should never be very distant from the house, so convenient that the farmer can visit and feed his cattle, at least, twice every day.

Allowing the fodder to remain standing after the corn is removed, and turning the stock in, to shift for themselves, through the winter, is slovenly and wasteful. The corn blades, after a few heavy frosts and drenching rains, are of little value for food, and the cattle live at starvation point. This, the humane farmer will not permit.

The crops should, as soon as practicable, be put in readiness to take advantage of the best market.

To you, lords of the soil, the most honorable and independent of any class of laborers, I would say, Let your ambition be, to have the neatest and best managed farms in the state; the finest stock—the most carefully tended and the most profitable; and your prosperity will be a beacon light to the surrounding neighborhood, and a blessing to yourselves. Rest not satisfied at any point short of the highest intelligence, the soundest wisdom and morals, and the greatest refinement in taste and manners. Not in vain, should the sweet influences of Natura breathe around you, in your daily walks. The strength and the virtue of a nation lie in her yeomanry.

Be faithful to your high calling.

THE UNORGANIZED SUBSTANCES FOUND IN PLANTS.

Let us now examine those complex substances in the juices and cells of plants, produced out of the sap, which are not possessed of organized structure, although they are most of them destined by nature to be ultimately converted into organized structure. They are the organic elements combined into complex molecules, waiting for the final touch, which is to make them the abode of life. They may therefore be called *organizable bodies.* Most of our food, and many of the luxuries of our tables, are obtained from these substances, by arresting them in their progress of development.

Sugar is one of these; produced out of the vegetable sap by the agency of *cell-life.* Sap is not at all sweet when it enters the spongioles of the roots, but it becomes so, as it ascends toward the leaves, by a new arrangement of the organic elements. We find by analysis, that each complex molecule of sugar is composed of twelve atoms of carbon, twelve atoms of oxygen, and twelve atoms of hydrogen. This can only be accounted for by the redistribution of the elements of carbonic acid and water; of the former, twelve atoms of its carbon and twelve atoms of its oxygen have united with twelve atoms of the hydrogen of the latter, leaving the remaining twelve atoms of the oxygen of the carbonic acid, and the whole of the oxygen of the water to ascend to the leaves, and pass off through the stomata. Sugar is therefore made by a similar process to that which is employed in the formation of wood-substances. The only difference is, that the operation of condensation has not been carried so far. Less oxygen has been dismissed, and more hydrogen connected with the other ingredients. There is therefore, relatively, less carbon in each molecule. Hence, sugar is a substance not so highly carbonized as wood. It is found in the cell-liquid of nearly all kinds of plants. It differs slightly from the common *cane sugar* in having more oxygen and hydrogen in its molecules; and is therefore a trifle less carbonized. It is called on this account *grape sugar,* to distinguish it from the *cane sugar* of commerce. Sugar is very soluble in water, and therefore is particularly well-fitted to be easily carried about wherever nourishment is needed. It is, indeed, the food of all vegetable textures that do not contain nitrogen in their composition. Sugar is found in solution only in the juices of plants; but by depriving it of the watery particles with which it is always accompanied in the living plant, it assumes the crystaline form; but we find the crystals of sugar, indeed those of all organic compounds, put on curved outlines of rounded grains; while those of saline inorganic compounds take the form of crystals, bounded by straight lines and angles.

Starch is also a complex *organizable body,* produced out of vegetable sap by the agency of cell-life. It is merely sugar a little more highly carbonized. Each of its molecules is found on analysis, to contain twelve atoms of carbon, ten atoms of oxygen, and ten atoms of hydrogen. It is therefore formed by twelve atoms of carbonic acid losing fourteen atoms of oxygen, and acquiring ten atoms of hydrogen from water, the oxygen escaping to the leaves, as in the formation of sugar. Starch is always found in the interior of vegetable cells, in the condition of little rounded grains, attached together. They remain loose and free in the cell-liquid so long as the cell-walls continue unbroken. These starch-grains are readily seen when sought for by a microscope; but are, nevertheless, small enough for over three thousand of them to lie side by side within the breadth of an inch. The green color of living vegetables is due to a thin coating of coloring matter, round the starch grains, within the cells. The fact is, that the grain is itself a delicate cell, packed full of starch-molecules, surrounded by a thin film, which, from being wrinkled, gives it a corrugated appearance. When starch-grains are placed in boiling water, the cell-films burst, and the starch-grains escape, and are changed into a soluble gum. Taking advantage of this property, the laundress gives stiffness to linen and cotton fabrics by immersing them in a solution of starch, and drying them again by applying hot irons.

The cells of some plants get packed so full of starch-grains, that almost all other contents are excluded. This is the case with the potato; in the tuber of which, they lie loosely amidst each other, and in no way attached to the film of the containing-cell. The starch in the potato is an extraneous substance, formed in the cell for employment elsewhere, and not an essential portion of its structure. It is designed for the nourishment of the young shoots of the plant, when they are produced in the next growing season. When they are pushed forth in the spring, the tuber is robbed of its starch, and loses its "*mealy*" properties. Starch is deposited in nearly every kind of seed, and, there, it is destined, as we before stated, for the support of the germ during the early stages of its existence. The starch remains fixed and unchanged during the winter; but when the time arrives in the spring, for the development of the germ, it is converted into "*diastase,*" a soluble sugar, which can be taken up by water and conveyed to the radical and plumule, till they are so far developed as to be able to draw their support from the earth and air.

The starch deposited in the grains of barley, for the nourishment of the germ, is prematurely converted into sugar by the process of malting. If the grain had been allowed to fall in the ground, and to remain there until the spring, the rain and sun would have done just what the malster effects by soaking the grain into water, and drying it again on the stove.

When potatoes are boiled that they may be employed as articles of food for man, a somewhat similar change is effected. The starch-grains are burst and converted into a kind of soluble gum, which is more fitted for immediate digestion. Starch can be procured from all parts of plants, but most constantly and abundantly from their seeds.

(To be continued).

THE FLORA OF HAMPTON.

JUNE—CONTINUED.

Briza media—*quaking grass.* Baptisia tinctorin—*wild indigo.* Prunella vulgaris—*self-heal, heal-all.* Liriodendron tulipifera—*white wood, tulip tree.* Magnolia glauca—*white bay, beaver tree.* Liquidanbar styraciflua—*sweet gum.* Linum Virginianum—*yellow flax.* Andromeda arborea—*sorrel tree.* Medicago sativa —*lucerne, medick.* Melilotus alba—*white melilote clover.*

JULY.

Cirsium lanceolatum—*common thistle.* Polygonum persicaria—*smart weed.* Delphinum consolida—*larkspur.* Fosteronia detormis—*Fosteronia.* Silene armeria—*catch fly.* Sericocarpus conyzoides—*white-tipped aster.* Spiranthes gracilis—*slender ladies' tresses.* Lobelia Boykinii—*slender lobelia.* Lysimachia quadrifolia —*four-leaved loosestrife.* Sedum pulchellum—*white stonecrop.* Vitis vulpina—*fox grape.* Vitis æstivalis—*summer grape.* Tecoma radicans —*trumpet flower.* Castanea vesca—*chestnut.* Plantago major—*larger plantain.* Pogonia ophioglossoides—*snakemouth arethusa.* Rubus occidentalis—*black raspberry, thimbleberry.* Scutellaria pilosa—*hairy skull-cap.* Asclepias phytolaccoides—*poke-leaved silkweed.* Stylosanthes elatior—*pencil flower.* Xanthoxylum Americanum—*prickly ash.* Polypogon Monspeliensis—*polypog grass.* Salsola kali—*saltwort.* Hydrocotyle interrupta—*pennywort, navelwort.* Geum album—*white avens.* Typha latifolia—*broad-leaved cat-tail.* Phryma leptostachya—*lop seed.* Centaurea calcitrapa—*star thistle.* Rhexia Virginica—*deer grass.* Diospyros Virginiana—*persimmon, seed plum.* Castanea pumila—*chinquapin.* Quercus phellos—*willow oak.* Hypericum mutilum—*St. John's wort.* Eysanthes refractra—*Eysanthes.* Diodin Virginiana—*Virgian diodia.* Cephalanthus occidentalis—*button bush.* Sanicula Marilandica—*Maryland sanicle.* Sericocarpus tortifolius —*twisted-leaved aster.* Callicarpa Americana —*French mulberry.* Allium mutabile—*garlic, wild onion.* Borrichia frutescens—*sea oxeye.* Discopleura capillacea—*bishop weed.* Martynia proboscidia—*unicorn plant.* Elymus striatus —*lyme grass.* Centrosema Virginianum—*sea pea.* Teucrium Canadense—*germander.* Cuscoclos stimulosa—*spurge nettle, tread softly.* Clethra alnifolin—*sweet pepper bush.* Scabiosa utropurpurea—*purple scabish.* Lactuca alongata—*trumpet milkweed.* Rhus quercifolium—*oak-leaved sumach.* Chimaphila maculata—*prince's pine, bitter wintergreen.* Sanicula Canadensis—*sanicle.* Atropa belladona—*deadly nightshade.* Mentha piperita—*peppermint.* Ludwigia alternifolia—*seed box.* Passiflora cœrulea—*blue passion flower.*

REMOVAL OF INK BLOTCHES FROM WRITING.

When ink blotches have been formed over writing which it is desired to decipher, we are advised to brush off the spot carefully with a weak solution of oxalic acid by means of a camel's-hair pencil. In this way layer after layer of the superincumbent ink will be removed, and finally the writing itself will, in most cases, come to view. This is especially possible where some considerable interval has elapsed between the two applications of ink. As soon as the letters are visible, the brushing should be continued for a time with clean water, so as to arrest the tendency of the acid solution to make a further change in the ink.

Publisher's Department.

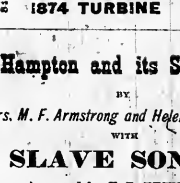
SUBSCRIBERS, TAKE NOTICE!

Every subscriber, who will send us a new name and one dollar, will be entitled to one of our premium oil chromos, provided they make such a request, and designate the chromo they wish. For two new subscribers we will send "Returning Home" ready mounted. For five new names we will send the above picture nicely framed in black walnut and gilt. *We do not send premiums to those who do not request them.* When frames are sent, the receiver will pay the express charges.

JAMES LEFFEL'S
Improved Double
TURBINE WATER WHEEL.

POOLE & HUNT,
BALTIMORE,
MANUFACTURERS FOR THE SOUTH & SOUTHWEST.
Nearly 7000 now in use, working under heads varying from 2 to 240 feet. Twenty-four sizes from 5 3-4 to 96 inches.
The most powerful Wheel in the Market, and most economical in use of Water.
Large ILLUSTRATED Pamphlet sent post free.
MANUFACTURERS, ALSO, OF
Portable and Stationary Steam Engines and Boilers, Babcock & Wilcox Patent Tubulous Boiler, Blaugh's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting, Pulleys and Hangers.
SEND FOR CIRCULARS.

HAMPTON
Normal & Agricultural
INSTITUTE.
Fall term opens Thursday, October 1st, 1874. All who desire to enter should appear at that time.
The course of study continues three years and embraces the elements of an English and Scientific Education.
Graduates are able to secure situations as teachers in the public schools of the South, at salaries ranging from twenty-five to forty-five dollars per month.
Circular or catalogue sent, on application to S. C. ARMSTRONG, Principal, Hampton, Va.



N. F. BURNHAM'S
WATER WHEEL
1874 TURBINE
81 per cent. guaranteed with 20 feet head in the Massachusetts test of 1874. Price based on first-class Wheel. Pamphlet and price-list sent free. N. F. Burnham, York, Pa.

Mrs. M. F. Armstrong and Helen W. Ludlow;
WITH
SLAVE SONGS,
Arranged by T. P. FENNER.
FOR SALE AT THE OFFICE OF THE
Treasurer of the Normal School.
Sent by mail on receipt of $1.50.

EXPEDITION FOR LIBERIA.
TO INDUSTRIOUS AND WORTHY PEOPLE of color desirous of removing to Liberia, The American Colonization Society will give a passage and subsistence on the voyage—made in about forty days—and support for the first six months after landing. Single adult persons get ten acres, and families twenty-five acres of land. These are all gifts—never to be repaid. Those wishing to remove to Liberia should make application, addressed to William Coppinger, Corresponding Secretary and Treasurer of the American Colonization Society, 450 Pennsylvania Avenue, Washington, D. C.

British, Marine, and Land and Freshwater Shells.
COLLECTED IN GREAT BRITAIN, IRELAND (east and west coast), ORKNEY, SHETLAND, HEBRIDES and CHANNEL ISLANDS, also from DOGGER BANK (many of them by deep sea dredging), on sale or exchange for American Shells, Flowering Plants, Ferns, or specimens of Natural History, suitable for a museum.
Catalogues of the Species will be sent on application to GEORGE DIXON, Agricultural Institute, Hampton, Va.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. III. HAMPTON, VA., SEPTEMBER, 1874. NO. 9.

ONLY A RABBIT.

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, F. RICHARDSON, RICHARD TOLMAN, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

The Southern Workman should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager.

Southern Workman.

HAMPTON, SEPTEMBER, 1874.

OBLIGATIONS TO PARTY.

Good citizens, who respect themselves too much to sell their votes, may be divided into two classes. The first, refusing to be led by mere politicians, favor the best men of either party for office; the other class wheel into line with the precision of drilled infantry, at the bidding of some ward or township meeting. Men of the latter sort believe the politicians—whose trade it is to magnify the importance of party discipline, and to prove that the safety of the public strong box depends more upon the political opinion of its keepers than upon their honesty. Men of the first class think an unjust judge is more to be feared than an imperfect law; that a senator, who will take a bribe, may be right in his party views, but is a suitable candidate for the penitentiary, and is capable of harming the country infinitely more than an honest man, whatever his opinions on questions of policy.

Those who obey their party, right or wrong, often regret that they cannot secure better nominees. They find that the best men are seldom selected at the primary meetings, because the leaders at those meetings wish to push forward men of their own stamp, who will reward them by contracts or minor offices, without regard to the interests of the public. These leaders are bold in selecting bad men in proportion as they feel sure that their nominees will be supported. Hence, they struggle to perfect party discipline and denounce independent action. All parties being managed alike in this matter so soon as they become old and powerful; it has come to pass that one of the strongest allies to corruption, in America, is the spirit of blind obedience to party.

Inasmuch as defeat is the only thing feared by the leaders of primary meetings, the way to compel them to put forward pure men only, is to defeat all others. The loss of a political measure, or its delay for a few years, is not of half the importance to the country or to its good citizens, as is the honest administration of government. Party organizations are, sooner or later, abused by mercenary schemers. They are always of vast importance to the politicians; sometimes, also, to the country. But, so long as candidates are elected in the present way, by noisy demagogues, and the wicked principle is acted upon, that to political victors belong the spoils; the destinies of the country will be safer with the independent voters, who obey no party mandates whatever, and honor no mercenary nominees with their suffrages.

AGRICULTURE IN THE SOUTH.

We trust that our readers are giving careful attention to the interesting series of papers in course of publication in the Agricultural Department of this paper, and are making practical use of the hints and facts therein contained. It cannot be too closely pressed upon the Southern people, that the future of their country depends immediately upon the development of her agricultural resources, and that no slipshod farming can be tolerated, in the hope that great natural advantages will counterbalance the carelessness and ignorance of the masters of the soil. If Southern farmers mean to enter into successful competition with farmers of the North and West, they will soon find that they cannot afford to do without any of the means which are employed in other and less fertile regions; for a poor soil, properly cultivated, soon becomes more valuable than the richest land which is exhausted year by year by the demands made upon it by an improvident owner; and all the fertility of the "Great South" will not make her a rival of her less-favored neighbors, so long as intelligence and industry do not drive her plows and dig her drains. A good farmer must thoroughly understand the nature of his land, the crops which it will best produce, and the proper management of these crops; and he must let neither indolence nor prejudice stand in the way of his work. The difference between a farm drained and tilled, planted and harvested in intelligent obedience to the laws of scientific research, and a farm managed at hap-hazard, according to the fashion of fifty years ago, is so great as to be scarcely credible. For example, to quote from one of Mr. Dixon's recent letters in the SOUTHERN WORKMAN, land in England which forty years ago did not yield more on an average than ten bushels of wheat to an acre, now yields an average of over thirty bushels to an acre. In this particular instance, the cause of the remarkable increase is "thorough draining on scientific principles; that is, draining which is deep and complete, with accurate levels, proper outlets, etc." Mr. Dixon goes on to notice that the lands in Virginia are, to-day, in much the same condition as were those of Great Britain a half century ago, with a similar yield of less than ten bushels to the acre. Now, there is every reason to believe that scientific drainage in Virginia will give the same result as scientific draining in England; and, surely he who runs may read: There is no farmer from Maryland to Georgia, who cannot appreciate the possibility of a three-fold increase in his wheat crop.

And this is but one instance out of many which go to prove the folly of superficial farming, and the fact that the agricultural future of the South depends entirely upon the intelligent action of her farmers. Of course we all know that "Rome was not built in a day," and that our system of farming is not likely to be remodeled all at once; but the point is to make a beginning, and that beginning must be in the education of our farmers. For the present, it is true, there are many obstacles in the way of this step; but each man can do a little, nay, a great deal for himself; and it is this sort of self-help that we earnestly desire to recommend to our *readers*. Farmers, as individuals, or in clubs, can take standard agricultural periodicals; can buy a good book now and then; can form societies for comparing experiences and making suggestions; can get lecturers occasionally; in short, can get the information they need in a variety of ways, if they will only give the matter a little thought, and remember that to understand one's business is the first principle of success. It is to this work that the better class of farmers must devote themselves; and it is a work which very surely and specially will bring its own reward.

THE HARD TIMES.

Excepting the sheriffs, the most independent men in times like the present, are landowners who are out of debt. Idle mechanics may have to walk the streets, but a farm always furnishes work for its owner. Mills and factories may close, and artisans starve, but the farmer is sure of food and lodging. When he cannot sell produce for money, he can barter it, or he can change his grain into meat, and so gain two or three years till times improve. When Banks break, Stock companies fail, notes and ledger accounts lose their value by stay laws; and general ruin overtakes the city—the country witnesses the falling houses at a safe distance, and stands ready to deal with the surviving traders when the storm is over. Land suffers no permanent injury from financial panics. The tremendous crisis of 1857, and our present troubles, show how unapt are farmers to fail in business as compared with any other class of owners in the United States.

The hard times commencing with 1837 lasted five years. There are some indications that our present term of suffering will be much shorter. If luxury was its prime cause, almost every one has had to mend at least one person's ways, in that respect. The wish for superfluous things has led the nation to grasp at wealth too eagerly and by unsafe methods. The consequent disaster has compelled us to live more prudently, to buy less of foreign goods, and to stop borrowing money to build western railroads. Under this change of course, we are slowly recovering, and have reason to hope, that, valuable as the lesson is, and much as the nation needed it, a kind Providence may presently cease from farther instruction by the birch, until we again forget ourselves in mad haste to be rich.

FARM MAPS.

The pupil who has learned to draw a tolerable map of his native state will find his notions of distances and form distinct and valuable all through his after life. He has obtained clearer ideas than written descriptions could have given him, of the relative size of his county, and of its connections by water and highways with the important cities. Yet, though the art of drawing is thus shown to be of practical power, it is too apt to be thrown aside when the battle of life commences. Business men seem to regard skill in making maps as of the same value as Greek or Latin, and dismiss them all from their regard as they do foot-ball and cricket.

Farmers especially are losers by this neglect of drawing. A plot, showing the exact size of each field, would aid in introducing system and order into the farm management. By long practice in guessing, a farmer can judge about how much seed or manure or labor he applies to an acre. But a map would give him positive knowledge and enable him to compare results with those of others. On such a map the different fields might be designated by letters or numbers, and a record kept from year to year of the amount expended on each field and the returns realized. The farmer who followed this plan would accumulate a fund of valuable information in the most definite shape; as different from the loose and inaccurate ideas of most cultivators, as daylight is from dusk. The merchant who should keep his accounts in his head as farmers do, even if he did a cash business, would be considered lacking in common sense.

The principles of land surveying are so simple that no one need hesitate about constructing a map of the tillable part of his own farm. Every field can be divided into triangles of which the owner, with a twenty-foot pole, can measure the three sides, and draw them on paper with a foot rule. Counting one hundred feet to the inch, a plan of a one hundred acre farm would be about two feet square. No compass is needed where the opposite corners are visible from each other, or from a point in the field. To find the area of each triangle it is only necessary to multiply the length of the longest side by half its shortest distance from the opposite angle. If feet are multiplied by feet, the area in acres is readily found by dividing the product by the number of square feet in an acre, which is 43,560.

A good map will often save its cost many times over by furnishing hints to a farmer in laying out his place so as to shorten the roads and fences. The fences, on a hundred acres divided into nine equal fields, are over three miles long; spoil a strip ten feet wide amounting to four acres; and often cost as much as the dwelling. Since a square lot requires less fencing than any other sort, a map will at once show which fields need alteration in shape.

PROGRESS.

It is gratifying to note that the colored people in this section are laying up money. We have seen in the last four years many instances of prudent economy among them which would have done credit to the Irish race or to Dr. Franklin himself. The government bounties coming in a lump, were naturally wasted; but the widows' pensions, and the surplus earnings of the oystermen, lumbermen, truckmen, etc., have very generally found their way into the Freedman's Bank. Little fortunes of from one hundred dollars to twenty-seven hundred dollars have been laid by since the war, in the Norfolk Branch, by colored men; and the aggregate of deposits in June last was $108,000.

The disposition to secure land is a marked feature. Like their zeal for education, it does credit to the shrewdness of the race. They realize that independence attends the ownership of land. They see that hotels are built and railway cars are run for the accommodation of the men who have money; and that some Americans respect wealth when they respect nothing else.

Education and wealth are the shorter and best roads to civil rights; and it is fortunate for themselves and for the country that the bulk of the colored race are quietly acting upon those lines.

EDUCATIONAL REFORM.

The following article is clipped from "The Educational Journal of Virginia," and is from the pen of a thoroughly trained collegiate, who has devoted himself to business pursuits. The writer speaks the minds of thousands

who believe that the true school should take boys and girls, and train them into true men and women.

A Letter to a College Professor.

My Dear Sir,—I have yours of the 1st inst., and thank you very much for the spirit in which you take my officiousness. But pray, don't regard me as a busybody in other men's matters. I know the eleventh commandment well; and that it is my first duty to attend to my own business and provide for my family. There is just where my special interest in the general cause of education begins. I have been bewildered and misled and befooled, and wasted time and feeling and strength, in the vanities and vexations of old educational courses to the point of absolute disgust; and I went, if possible, to save my five boys from a little of what I have suffered. I would like them, if there is an open road from the land of darkness and ignorance and dryness, into that of light, and intellectual vigor and freedom, to take it, and not spend forty years as I have done, "wandering up and down to find their weariness;" nor consume the spring-time of life, in the dreary wastes of scholastic training—so-called. I am determined, as their guide, to take the poet's advice, and "*dare to be wise*"—to have the nerve to "separate the precious from the vile," and to "refuse the evil and choose the good." And I tell you, for a start, that nerve, that backbone—moral and intellectual bone and muscle—honest dependence of thought, in the fear of God, ere just the very first things that every man needs in every place, position and pursuit. In other words, all education should contemplate as its nearest object, *vir*-tue, *man*-liness—and farther and higher, the greater development and growth —*humanity*. I understand this last word to mean *kind*-liness—the feeling that results from the grand consciousness of Universal Fatherhood, and Universal Brotherhood; or, rather, the self-respect, and large and loving-mindedness that such a consciousness implies. True, education means the *leading out* and developing of the powers and faculties of the body, mind and heart, and the opening up and enlargement of their capabilities and susceptibilities, the kindling of their fires and regulating them; the intensifying their forces and directing them; and all this waiting upon nature, according to right reason, and in the direction of general good-will and the largest usefulness. It most positively does not mean by artificial stimulants and appliances to set a young person so much ahead of his fellows as to make him *shine* in society, and, in the end, unhappy in his individuality and an insufferable bore to others, in the unceasing assertion of his superiority; or, in any way, to exalt the individual, regardless of his duties to society.

Well, then, my first complaint of our educational courses is, that they do not sufficiently regard the great ends and real objects of education; but that they lose sight of them while they are engaged in magnifying the means and plans that they are using.

My friend, who has gotten at last to think and believe that to be a good Latin scholar was the great end of life, is but one illustration. There are many such idol worshippers as he, who go through life with such delusions: and you have seen and can see enough of them anywhere. Possibly we ought not to blame professors for extolling the *arts* they deal in and live by; but, certainly, damage is done by their indiscretion, and humanity suffers. . . . . .

Now, my experience of our school and college courses beyond reading, writing and arithmetic is, that as a general system, in their regular course they educate young men away from practical usefulness, rather unfit than fit him for life; rather enfeeble than harden him for the duties of life. Grammar, Rhetoric, Belle Lettres, as they are taught, Metaphysics as it is taught, Latin and Greek and the higher mathematics,—these are the higher branches of education; and the more diligent and fruitful a young student is in their pursuit (except where each is learned for a practical purpose), the more sure and the deeper is he likely to get mired and imbedded in them; and the greater his success, the more certain is it that he will be hopelessly and forever entangled in them—forever stick in them. . . . . .

How often have I sat and admired athletes at the circus, showing such symmetrical, full and beautiful development of their physical systems—every bodily power educated to its largest reach; and, as I have admired them, how often have I wondered, why should not the moral and intellectual man receive a like education? But, alas! I have had to confess the apt type of our education in the old sailor in the last scene of the circus. You will recollect the big-bellied, bloated old lumberer that comes out on horseback hardly able to bear his load of habiliments. But away he rides. And as he rides he throws off one after another of the superfluous garments that encumber him, until, as the last wrapping sails from him on the air, nature asserts herself, and he seems to say with Macbeth, "Now that thou art gone, I am a man again."

And who that has been through a "regular college course," and afterward entered into the business of life, does not recognize his own experience in this? Indeed, an education is too much as the song describes life,—

"From youth to age we gather shells,
And then we leave them like a child."

It is too much the case that our scholastic training consists in heaping up rubbish, in leading us away from right, natural habits, and then we have to spend years in disembarrassing ourselves and getting back to the clear, honest teachings of nature.

. . . . . .

Another complaint that I have to make is very near akin to the first; and that is, that our educational courses do not feed or nourish the mind, but only pretend to exercise its powers. The mind must be fed as well as the body. Words are but straw and chaff, the necessary vehicles and coverings—the personation of human thought. They are not thought. They are not truth. The abstractions of grammar or aesthetics, the pretty things of rhetoric and polite literature are not the food of the mind. A man may starve on them. And on such things men may become intellectually obese and yet die for lack of nourishment. The Creator made the soul of man to feed upon Truth, upon the knowledge of Himself, and of his ways, upon great principles and eternal truths, which in one sense are the bread of life. And what care is given to these, as things are now?

But my third objection is, that our education does not sufficiently contemplate real, active life, either in its provisions, its pasturage, or in its exercises. The proof of this is seen in the facts already alluded to, that those who submit most willingly and take the most thorough training, as it is called, are the least fitted for and the most averse to active life; and are indeed almost certain to become either professors or teachers merely, or else make a clean sweep of their scholastic acquisitions on entering active life.

And now the great question is, how are our courses to be reformed so as to turn out clear thinking, prompt and independent men of action; sound-minded, large-hearted, competent workers and good citizens, instead of shrinking, conceited, half-developed visionaries, powerless to make a living except by teaching others the fancy things that they have learned—with nothing in them really to give help or comfort to the general world, and crazy with the thought that their own vapours and baby clothes make them princes of intellect—too exalted for the contact of the common crowd. What do we need so much as that *Humanity* should be restored to its proper place in our educational course! We want *less learning:* books that are redolent of and flavored high with human life: studies that move us to the service of society, and set us thinking how to be and do good. We must go back and learn from the heathen a lesson that, with all studies of Latin and Greek quantities and pronunciations, and classic superficialities, we seem to have overlooked that the highest business of the instructor is to teach, "*Ars bene ac beate vivendi.*"

Agricultural.

(CONTINUED.)

THE UNORGANIZED SUBSTANCES FOUND IN PLANTS.

BY GEORGE DIXON.

Oil is a complex, *organizable* body, produced out of vegetable sap, by the agency of cell-life. It is a more highly carbonized product than starch. Each of its molecules contains twelve atoms of carbon, one atom of oxygen, and ten atoms of hydrogen. Oil seems to be starch deprived of the greater part of its oxygen. A starch-grain is changed into a globule of oil, when it loses nine-tenths of its oxygen. Some of the specks that are seen floating in cell-liquid, when it is examined by a high magnifying power, are composed of very minute globules of oil. Cocoanut oil, palm oil, flaxseed oil, coleseed oil, and castor-oil, are all expressed from the seeds of the plants yielding them. These oils are formed in the seeds, no doubt, to afford nourishment to the germ during the earlier period of its growth. Oil is a very combustible substance; because, like coal, it is almost entirely composed of carbon and hydrogen. When it is burned, these elements are united with oxygen derived from the air, and carried off as carbonic acid and water.

Gluten is a complex, *organizable* body, produced out of vegetable sap, by the agency of cell-life. If any kind of fresh vegetable juice be allowed to stand for a few minutes, after it has been pressed from a plant, a greenish-colored jelly-like substance will be seen to settle to the bottom of the vessel containing it. When the green coloring matter is washed away from the deposit, the remainder will be found to be a greyish-colored body, of a sticky or glutinous nature. It has received the name of *gluten*, from this property. Gluten is a much more complex substance than sugar, starch, or oil. These are exclusively composed of carbon, oxygen, and hydrogen, but gluten contains all the four organic elements. Each molecule of gluten has in itself forty-eight atoms of carbon, thirty-six atoms of hydrogen, six atoms of nitrogen, and fourteen atoms of oxygen; besides a trace of sulphur and phosphorus. It is formed, no doubt, in the vegetable cell, out of carbonic acid, water, and ammonia, by getting rid of the superfluous oxygen and hydrogen, and combining their remaining elements. Gluten is of a *highly plastic nature*, and peculiarly fitted for the work of organization. It is very prone to decomposition, and is easily caused to decay; but this only makes it more suitable for the purposes of life, which is a state of constant change and not of fixedness. Its highest results are produced by rapid change of material; hence, such a substance is best suited for employment, where the higher vital operations are concerned. Gluten owes this useful property to the exact element, nitrogen, in its composition. Grains of wheat consist almost entirely of starch and gluten, mingled together in the proportion of nine parts of the former to every two of the latter. If wheat flour is washed with successive streams of water, while it is being kneaded up briskly by the head, the starch will pass away in the water, and there will remain pure gluten, sticking as a sort of paste about the hand. When the young germ of the seed is being developed, it is probable that the gluten is consumed in building up the cell-films, to which its own composition is so nearly allied; while starch is used in forming wood and the various deposits that are laid upon the films.

Albumen is a complex, *organizable* body, produced out of vegetable sap by the agency of cell-life. If the clear liquid that remains, after the gluten has been removed from vegetable juice, be boiled for a few minutes, it ceases to be clear, and a white, cloudy deposit appears in it, which slowly subsides, and collects together at the bottom of the vessel. This deposit is formed of a substance very closely resembling the coagulated white of an egg, and on this account it has received the name of *albumen*. It is soluble in cold water. Gluten and albumen are so nearly identical in composition, that the chemist has not been able to find any difference between them on analysis. Therefore, the molecular composition of gluten, may be taken to represent also the composition of albumen.

There is another substance, of which the same remark may be made, which is found in abundance in the meal of beans, peas and vetches, and which only differs from gluten and albumen in being soluble in both cold and hot water; it is, however, separated from its solution, in a solid, clotted state, when an acid is added. This clotted mass is found to be so like to the coagulum, which separates from milk, when an acid is added, in the process of cheese-making, that it is called *caseine*, the Latin word for cheese. This ought to suggest to the keepers of dairies, the importance of feeding their cows on these substances. *Gluten, albumen,* and *caseine,* are classed together as *glutinous* bodies. The white portions of nuts and almonds is almost entirely fixed albumen. The fact seems to be simply this: a complex, plastic principle is made out of vegetable sap, and is stored away round the young germ in the seed, for its future use. But this plastic principle is in the state of *gluten* in some seeds (*insoluble* in cold water); of *albumen* in others (*soluble* in cold water but not in it when boiling hot); and of *caseine* in yet others (*soluble* in both cold and boiling water, but not if an acid is present).

Plants make innumerable other complex substances besides those enumerated, upon which the peculiar odors, flavors, and other characters of their texture depend. These, however, are *special* products rather than *general* ones. Each different kind of plant yields its own particular substance, and not that which characterizes other species. One forms an essential and aromatic oil; another, a bitter extract; and another, an astringent principle; but all alike yield sugar, starch, fixed oil, and gluten. These, and all the special products, are complex substances, constructed out of simple elements. We have seen above that the constructive operations of vegetable life, are mainly formed by fixing carbon, hydrogen, and nitrogen, and by dismissing oxygen. This is an invariable rule in the vegetable economy. Vegetable life is the grand antagonist of chemical power. It is always doing in some simple way those operations which the chemist, with all his skill, is unable to effect. But we must not forget that it is through the stimulating influence of solar light and heat, that living vegetables are enabled to effect all their offices fixing; carbon, hydrogen, and nitrogen, and expelling oxygen.

Having pointed out the best methods of preparing the soil; the elements necessary for its fertility; plant life; and the substances both organic and inorganic, by which plants are built up; we are now prepared to enter upon the consideration of the best means of developing those products which are remunerative to the farmer. To do this, does not require any skill in chemistry; if we make the field our laboratory. With the fertilizers as our re-agents, we can interrogate the soil, and receive a *certain answer*, far more to be depended upon than the most rigid qualitative analysis.

THE FLORA OF HAMPTON.

PEAR BLIGHT.

It attacks in every conceivable way, running from the top twigs downward; in the middle running around limbs in the form of a band or ring, and sometimes killing the body of a tree, and the top remaining uninjured or looking sound; and sometimes beginning on one side of a limb and running downward and upward, discoloring the bark and wood until its discoloring ceases both above and below. Sometimes it only runs around a single eye—a disease then that is not governed by any known laws in other maladies. I think the real cause is as yet unknown. It has done me much damage. The varieties worst injured are in order as follows: Vicar of Wakefield, Swan's Orange, Clapp's Favorite, Flemish Beauty, Doyenne d'Ete, Golden Beurre of Bilboa. All varieties here were injured more or less; the thriftiest growers were the worst injured. Those on the levelest ground were worse injured than those on sidehill. My trees were in grass, on limestone soil, generally clay limestone on pebbly subsoil; some on tolerably strong soil, some on thin. Dwarfs were generally worse affected than standards.

A short time ago I visited the grounds of Mr. Limpert at Grove Park in this county, a German of intelligence and refinement. He is an amateur pear grower, and has taken pains in the selection of his varieties. Soil of pretty strong but well drained character has given them perfectly clean culture. His losses were four times greater than mine according to the number of trees. Mr. Limpert had steadily pursued the practice of removing every limb or twig or branch as soon as it became affected; but he is convinced it did not do the least good. His pear grounds did look disheartening.

I am now fully convinced, after three years close observation, that the frozen sap blight theory, the sunstroke theory, insect theory, and all others, are only theories without foundation, and that we are just as much as ever in the dark.

I observed to Mr. Limpert that I thought about that as I did about cholera or any other epidemic of the human family, that he that thought he knew the most about it knew the least. He said "I think you are right in that; we know nothing at all." In conclusion, let us hope that this dreaded pest of the pear grower may, like all other kinds of pestilence, pass away for this time at least.—*Gardener's Monthly.*

HELVELLYN.

SIR WALTER SCOTT.

[In the spring of 1805, a young gentleman of talents and of a most aimiable disposition, perished by losing his way on the Mountain Helvellyn. His remains were not discovered till three months afterward, when they were found guarded by a faithful dog, his coustant attendaut during frequent solitary rambles.]

I climbed the dark hrow of the mighty Helvellyn,
Lakes and mountains beneath me gleamed misty and wide;
All was still, save hy fits, when the eagle was yelling,
And starting aroond me the echoes replied.
On the right, Striden-edge ronnd the Red-tarn was bending,
And Catchedicam its left verge was defending,
One hnge nameless rock in the front was ascending,
When I marked the sad spot where the wanderer had died.

Dark green was that spot 'mid the hrown mountain heather,
Where the pilgrim of netnre lay stretched in decay,
Like the corpse of an outcast ebandoned to weather
Till the mountain winds wasted the tenantless clay.
Nor yet qnite deserted, though lonely extended:
For, faithful in death, his mnte favorite attended,
The much-loved remains of his master defended,
And chased the hill-fox and the raven eway.

How long didst thou thlnk thet his silence was slumber?
When the wind waved his garment, how oft didst thou start?
How many long days and long nights didst thou number,
Ere he faded away, the friend of thy heart?
And, oh, was it meet, that—no requiem road o'er him;
No mother to weep, and no friend to deplore him;
And thou, little guardian, alone stretched before him—
Unhonored, the pilgrim from life should depart?

When a prince to the fate of the peasant has yielded,
The tapestry waves dark o'er the dim lighted hell;
With scutcheons of silver the coffin is shielded,
And pages stend muto hy tho canopied pell;
Through the courts, at deep midnight, the torches are gleeming;
In the proudly-arched chepel the banners are beaning;
Far adown the long elsie sacred music is streaming,
Lamenting a chief of the people should fail.

But sweeter for thee, gentle lover of nature,
To lay down thy heed like the meek mountain lamb,
When wildered he drops from some cliff huge in statnre,
And draws his last soh hy the side of his dam;
And more stately thy couch by this desert lake lying,
Thy obsequies sang by the grey plover flying,
With one faithful friend but to witness thy dying,
In the arms of Helvellyn and Catchedicam.

SIR WALTER SCOTT.

One of the most famous of modern English writers of prose, fiction and poetry was the Scotch Sir Walter Scott, who was born in Edinburgh, in August, 1771, and who made for himself by means of his prolific genius and continued labor, a world-wide fame. His grandfather was a farmer, and his father a lawyer, and the education of the boy Walter was very strict, though in some respects very favorable to the development of his peculiar talents. He was lame from his infancy, and for many years during his childhood and youth was an invalid, and this undoubtedly had great effect upon his future career; for during those years he read an immense number of old romances, ballads, plays, etc, and listened to the inexhaustible stock of legends and stories, stored up in the memory of an old aunt with whom he passed much time. He became familiar with the homely life of the Scotch people, and knew in the flesh many of the characters whom he afterward idealized in his works. He was educated for a lawyer, but early in life began his literary career, although he had so diligently prepared himself for the legal profession, that he did not entirely give it up for some time after the publication of his poems. He commenced with translations of German poetry and minor poetical compositions; and in 1805, took his place as the most popular poet of his day, by the publication of "The Lay of the Last Minstrel." This was followed by "Marmion," "The Lady of the Lake," "The Lord of the Isles," etc., which were all tales in verse, and from their originality both of subject and treatment and the easy, musical flow of their rhyme, became immediately the delight of the reading public. In the year 1814, Scott first attempted a prose story, and without any announcement published "Waverley," anonymously. Its success was so great, that in the course of four years it was followed by "Guy Mannering," "Heart of Mid-lothian" "Rob Roy" and several others, all printed without the author's name, and all taking equally high places in public favor. Suspicion pointed toward Scott, but he was so actively engaged in contributing to reviews and magazines, that nothing but his own confession could make his friends believe him to be the successful author of what are now known as the "Waverley Novels," a series of romances which belong to the highest order of romance, and are a valuable contribution to modern English literature. But the fame and money which his works brought to him were finally the temptations which led him to his ruin; for he became possessed with a desire to surround himself with the magnificence which belonged to the heroes of his favorite productions; and he fancied that there was no end to his own ability to create. He bought the beautiful estate of Abbotsford, and lived there for several years in a sort of gorgeous dream, reviving, as far as possible, the luxurions and extravagant life of the olden days when men and women of the upper class could scarcely touch the limit of their power. His reckless expenditure and careless business habits soon saddled him with heavy debts, and he was forced to sell everything he possessed, cut down all expenses, and devote the remaining years of his life to the hard labor by which alone he could hope to pay his creditors. His spirit and determination never left him, and he struggled on to the last, writing until his brain became absolutely exhausted, and his death a certainty. His last days bore sad witness to the vanity of earthly hopes; for his wealth had melted in his hands; the friends of his youth were dead; or, worse, had become his enemies; he had no hope but in constant, unremitting toil; and he had nothing but the warm love and devotion of his children to comfort and sustain him in his final trial. He died in 1832, after a brilliant life, the only spot on which, was the fatal mistake of an extravagant use of money which he had not legitimately earned; and in spite of which, his character and his work claim our honest and deep admiration.

"ONLY A RABBIT."

A pretty glimpse of old English life is given us in this charming illustration which carries us back to days when sporting was the chief recreation of an English gentleman; and when manners were more simple—not to say rougher—than are ours of the present time. The background of the pictnre is a qnaint stone house, with latticed windows, and rich, climbing vines, and a paved walk leading across the red tiled floor of the porch down, doubtless, to some pleasant garden sweet with roses and honeysuckles.

On the bench beside the door is seated, in an attitude of comfortable repose, the master of the house, clad in the queer, awkward dress of the day, and intent upon reaching the bottom of the jng of ale which the picturesque serving woman has brought to him from some cool recess of her domain. The big, honest, well-trained dogs at his feet, and the gun that he holds carelessly in his thickly gloved hand, tell us what his day's occupation has been; but, another glance shows us that he has by no means been successful in his sportmanship. His wife, or, perhaps his daughter, has emptied his game bag, and dropped upon the stones at her feet the only trophy it contains. "Only a rabbit?" she asks, with smiling face; and looks up in mischievous inquiry at the bearer of the gun, who, doubtless, left her in the morning full of boasts as to the bag of game with which he should return. How he accounts for and excuses his ill luck we shall never know, though we may be sure he will not lay it to his own unskillfulness, and can easily fancy that behind his big mug of ale he is hiding his shame at having been found, at the end of a long day's shooting, to come back at night-fall with "Only a Rabbit."

POLITICS.

Under a republican government such as our own, it is incumbent upon every citizen to devote a portion of his time and energy to obtaining a reasonable comprehension of the political condition of his own country, of its past history, and the principles upon which its legislation is founded.

In order to vote or to act intelligently upon any question of public interest, some honest study must be given to the laws by which the nation is governed; and no man has any moral right to go to the polls in obedience merely to the advice and suggestion of other men, where he himself is ignorant of the probable results of his action. A conscientious man will no more cheat his government than he would cheat his parents; and he who truly loves his country will regard the common weal as far more important than his own private ends, and will show his appreciation of his responsibility as a citizen by allowing no selfish considerations to come between him and his public duties. But it must be understood that the mere desire to be a faithful citizen is not of itself sufficient, though it is the necessary foundation for all worthy effort. There must be, also, as we have said before, intelligent study of political principles, and of laws and their action, and a real interest in the science of politics. The information needed for the prosecution of such study can be gained from books, or from the speeches and conversation of sound and vigorous thinkers; and this information should be patiently and carefully sought; for it is not always easy to distinguish, at first sight, the superficial, undigested talk of unprincipled or ignorant men, from the valuable opinions and suggestions of intelligent and honest minds. If there is any thing worth understanding, surely it is the science of government; and the brief and only safe rule for those who mean to be worthy of the name of citizen is, "First find out what your duty is; then do it."

TREES.

In the European countries, and especially in the East, the lesson of this century in respect to trees is that it is a dangerous thing to cut them down either in town or country, without supplying their places by careful replanting. The effect of trees upon the rain supply, upon the fertility of the soil, and the health of human beings and animals, has been found to be much greater than was formerly supposed; and the question of what kind of trees to plant and how to plant them, has already become of practical importance. In country neighborhoods, where the young trees may have every advantage, much may be left to individual taste and judgment; but in cities and towns the matter becomes somewhat more difficult, as there are various points to be considered in the choice of trees for planting in crowded, dusty, paved and gas-lit streets. The requirements for a tree for this purpose are, that it should be easy to move, of rapid growth, and not liable to injury from the effects of gas or action of worms. Now all trees suffer to some extent from a gas leak near their roots; but some are less injured by this cause than others. Again, many trees die on sidewalks from lack of nourishment, and care must always be taken in planting, that the roots of the tree have access to a full supply of earth.

The tulip poplar is a fast grower, and proof against worms, but is difficult to move; while lindens and maples though fine, fast growers, are among the first to be attacked by insects. The horse chestnuts and Norway maple are beautiful and hardy, but are of slow growth; and the poplar and paper mulberry do not root deeply and are apt to blow over and throw up the pavement. The offensive odor of the ailantus makes it objectionable; and, on the whole, for a city tree, preference is given to the black or Carolina poplar, which combines all the requisites, and affords a beautiful shade.

CHILDREN.

There are very few parents, even among those who are most conscientious and consistent, who do not require to be occasionally reminded of their duties to their children—those dutics which are so imperative and so important, that the names "Father" and "Mother" imply the very greatest human responsibility. Our children are not given us as toys, neither are they sent to us as burdens, but are precious souls intrusted to our hands to be guided and trained with all the patient wisdom which we can command. Most of us have much to learn ourselves before we are fit to teach our children; and both parents and teachers should remember that nothing affects children so much as the consciousness that those who have the care of them are thoroughly fitted for the work. Children are never contented when they feel that those who are teaching them are not certain of their own knowledge, and require nothing so much as confidence in the hand that is to gnide them. There is no way in which you can so surely help a child to control its own temper as by always controlling your own; there is no way in which you can teach truthfulness so surely as by being truthful yourself; and this holds good in the intellectual as well as the moral life. If you never undertake to teach children anything that you do not thoroughly understand yourself, they will soon learn that all the information you give them is to be implicitly trusted, and will profit by it accordingly. We all know how quickly children detect falsehood, dishonesty or ignorance on the part of those about them, and are perhaps painfully conscious that in matters coming within their comprehension, there are no severer judges than little children. Therefore, if we would really endeavor to fulfil our duty to our children, we have first to begin with ourselves; for we can never expect from them a higher standard of life than we show them day by day in their homes and at their schools. Example is stronger than precept: it is useless to check a child for profanity or idle talk, when our own tongues are unbridled; it is unjust and inconsistent to demand in our families the purity and goodness to which we are ourselves strangers; and the only sure influence over our little ones must come from our victories over own own sin and weakness.

It seems as if God had given us no more powerful motive toward righteousness than the fact that he trusts our little children—his little children—in our faltering hands, and puts upon us the awful responsibility of their future. What our children do and are depends very greatly upon our treatment of them; and so those men and women who are parents, need always to remember that they have to answer not only for themselves, but for their children too.

LIFE.

The following lines were written by Mrs. Barbauld, an English writer of great merit, extensively known as the author of excellent hymns, and early lessons for children. She was born in 1743, and lived to be nearly eighty-two years old.

Life! I know not what thou art,
Bnt know that thou and I must part;
And when, or how, or where we met,
I own to me 's a secret yet.
Life! we have been long together,
Through pleasant, and through cloudy weather.
'Tis hard to part, when friends are dear;
Perhaps 't will cost a sigh, a tear.
Then steal away; give little warning;
Choose thine own time;
Say not Good-night; bnt, in some brighter clime,
Bid me Good-morning!

One might as well attempt to calculate mathematically the contingent forms of the kaleidoscope, as to look through the tube of the futnre and foretell its pattern.—*Beecher.*

The sun is not more obviously the source of light, than the Bible is the source of divine knowledge.—*Hodge.*

THE ORGAN GRINDER'S MONKEY.

My master grinds an organ:
And I pick up his money;
And, when you see me doing it,
You call it very funny.

But, though I dance and caper, still
I feel at heart forlorn:
I wish I were in monkey-land,—
The place where I was born!

There grow the great green cocoanuts
Around the palm-tree's crown:
I used to climb and pick them off,
And hear them—crack!—come down.

There, all day long, the purple figs
Are dropping from the bough;
There hang the ripe bananas: oh,
I wish I had some now!

I'd feast, and feast, and feast, and feast;
And you should have a share.
How pleasant 'tis in monkey-land!
Oh, would that I were there!

On some tall tree-top's highest bough
So high the clouds would sail
Just over me, I wish that I
Were swinging by my tail!

I'd swing, and swing, and swing, and swing:
How merry that would be!
But, oh! a traveling monkey's life
Is very hard for me.

—*The Nursery.*

For the SOUTHERN WORKMAN.

THE STAR SPANGLED BANNER.

A Story of Early Life in Michigan.

BY JACK MURRAY.

"Many years ago," said my grandmother, "a person standing on this busy street corner—which was then an undistinguishable spot in the unbroken wilderness—might have seen slowly approaching in the distance, one of those ponderous and clumsy vehicles, furnished with a covering of white cloth, which were employed by emgrants from the Eastern states in transporting their earthly possessions to their new homes in the great West.

"Within the comfortable shade of the moving tent, four people were sheltered: an elderly but stalwart man, his sturdy wife—fit to be his companion in pioneer life,—none of your modern Flora McFlimseys, I can tell you—and two young people: a fine brave boy of fifteen and a girl somewhat younger. These were the only ones left in the family nest; all the seven others had flown off to make homes for themselves; and, thus late in life, the father moved by the restless spirit of emigration that had possessed his youth, had started once more on the track of the "Star of Empire."

"The boy's name was Alexander—his bold, adventurous spirit was worthy of a pioneer's son, and like his famous namesake, he would have wept had there been no more wild western worlds to conquer. I need not give you the names of the rest of the party, when I tell you, that the veteran pioneer was my father, and I, the little girl who sat beside our mother in our canvas ark.

"We were among the first white families to settle in the then almost unknown region lying between Saginaw Bay on the east, and Lake Michigan on the west. One of them was on its way, not far in advance of us, and in the hope of overtaking it, and joining our camps, we had pushed ahead more vigorously than usual, that day, and till a later hour.

"At last, however, your great grandfather decided that we must give up the effort for that day, and halted the weary beasts by a clear spring beside a grove, which is now the centre of our city market square. We reached the shelter of the grove, so pleasant to weary travelers, just as darkness descended upon us. Alexander soon led out the tired horses upon the rich green grass, while father kindled a fire, and mother and I busied ourselves in preparing the evening meal.

"As the flames leaped higher and higher, and the darkness was driven farther and farther back, they cast their fitful glimmer up into the mysterious shadows of a great gnarled oak, whose giant branches stretched protectingly over the spot your great grandfather had selected for our night's resting place. But the uncertain rays could not reveal all that those shadows hid. Upon the largest of the branches, and pressing himself close against the trunk of the tree on the side farthest removed from the firelight, stood a gigantic Indian warrior, painted, after his terrible fashion, in frightful streaks of black and vermillion, and bedecked with feathers and porcupine quills. In his hand he held the fatal tomahawk; on his back rested his long bow, and quiver of arrows, and in his wampum belt was thrust a long, bright, sharp knife.

"Busily and unsuspiciously, the family beneath continued their preparations for the night, while not a motion on the part of the Indian betrayed his close proximity. Relying on their neighborhood to the family traveling in advance of them, whom they had expected even before this to have overtaken, and wearied out by their unusual day's exertion, the emigrants relaxed somewhat their accustomed vigilance, and throwing themselves down beside their camp fire, soon sank to unsuspecting slumbers.

"When the deep, regular breathing of the sleepers below had for some minutes given evidence of their complete unconsciousness, the Indian cautiously descended from the perch, where he had watched like their evil genius above them, and with hasty but perfectly noiseless footsteps glided to the other side of the little grove. With a low whistle, he summond a nervous, knowing animal, onto which he sprang, and in a moment, horse and rider were swallowed up in the night.

THE ORGAN GRINDER'S MONKEY.

"Hardly had the Indian disappeared, when another "solitary horseman" rode leisurely up to the spot from which the warrior had just disappeared. The new comer was a young man, not much over twenty years old, but with the stalwart frame and quick intense eye of a frontiersman trained to the adventurous life of the forest. In person he was tall and erect like one of our pine trees; he had a broad, deep chest and a frank handsome face, bronzed as it was, and partly concealed by a full, brown beard.

"As the rider drew near the spot just left by the Indian, his horse stopped suddenly, with ears erect and pointed forward, and limbs rigid and motionless. The hunter—for such he was—looked quickly on all sides. His eye caught the gleam of the fire through the trees; he hastily dismounted, and making his well-trained mare lie down, unslung his ponderous rifle, and cautiously moved forward, taking advantage of every inequality in the ground, and every tree, the more effectually to screen his approach. Presently, glancing around the huge trunk of the oak, he saw a few feet away, the emigrant family, still quietly slumbering in its shadow. I have heard him say, in after years, that the upturned face of one of the helpless sleepers, thrilled him with its unconscious appeal for protection as no call to battle had ever thrilled him before or since.

"Hastily springing to his feet, he glided back through the grove, and feeling about in the leaves, with the acuteness of a savage almost, soon discovered the footmarks of the Indian's horse. These he followed cautiously, until satisfied that they led directly toward a large encampment of Sioux, then fishing on the shore of Lake Michigan. Returning more rapidly than he had gone, he hastily aroused the sleepers, and apprised them of what he had seen; and, farther, that he was sure that some Indian had discovered their little camp and had hastened to inform his comrades, who might, even now, be returning to take their scalps.

"At once, the family realized their danger, and hastily began to pack their wagons. This the trapper insisted that they should not do, as time was so precious; but their earthly all was stored in their wagon, and, overcoming his objections, they quickly hitched their horses, replaced the few articles that had been unpacked, and drove rapidly after the hunter, who rode just ahead. As they put a fast increasing space between them and the dangerous scene of their camp, and the giant oak and even the dull glow of their fire was lost in the distance, the first shock of terror passed from their minds, and they almost regretted the unhesitating attention they had given the warning voice of the hunter, who, by his own speed, was still urging them to haste. Your grandfather began to question the wisdom of relying so implicitly upon the advice of so youthful and unknown a woodsman. Alexander, with a boy's impetuosity, inferred too much from his grandfather's expressions of doubt, and to show his own contempt for the fancied danger, began singing the "Star Spangled Banner" in a rich voice that rang full and clear, over the plain. Dearly we all paid for that boyish rashness.

"The hunter raised a warning hand and seized his rifle; but, hardly had the first ringing line ended, when a horrid yell broke upon the still night air, while clattering hoofs seemed to surround us on every side.

"The hunter unsheathed his knife, and in a moment the horses were freed from the wagon; then catching me in his arms and seating me before him, he dashed off, closely followed by Alexander and our mother on one horse, while father brought up the rear on the other. A shower of arrows fell all about us, and Alexander crying, 'They 've hit me; good-bye all!' fell from his horse. The terrified animal flew onward with its lightened and almost unconscious burden. She could not stop it, though she tried; and the men knew too well, that to halt would have been only to insure a torturing death for all. I shrieked with anguish as my favorite brother's death cry was borne to my ears; but the hunter clasped me closer, and on we flew into the night, while, as we went, the brave young voice was heard distinctly, though ever fainter, singing still the "Star Spangled Banner" to taunt his enemies, and to draw their pursuit from us. So the brave young life went out gloriying in his birthright of freedom, and the safety of his loved ones.

"The brave hunter who risked his own life to save us on that terrible night, is now your grandfather; for the little girl he bore away in his arms from the savage pursuers became afterward his wife. We have had many days of happiness since then, but even to this day, that brave young voice on the plain, at midnight, still often rings in our ears."

HOW THE "GULL" WENT DOWN.

Ben had pulled his boat upon shore and swabbed it out, so that his wife's new blue calico might not smell of fish when they reached Shark River. Then Dan came and took a turn at swabbing, while his father went up to put on his Sunday clothes. Conny sat on the sand, watching him.

"Take the crabs out the fo'cas'le, Dan," she ordered.

Dan went to the bow, and peeped into the little black hole.

"Reckon I won't. Them crabs 's nigh soft," he said.

Conny waded out at once, and threw them into the water.

"Do you think *my* mother 's agoing on a journey with a lot of shedders and bnsters?" she scolded on, while Dan sat down contentedly, splash into the water, and punched his toes lazily into the mud. Conny always had her own way.

Presently, Ben and Mrs. Van Dort came down, ready to set off. The children did not heed their father's going, for he started to the Barnegat fishing banks every morning before three o'clock, and seldom was back until dark; but it was a great event for their mother to leave home. Twice a year Ben took her down to Shark River, to buy calico and sugar and shoes and snch "trade." These voyages were each a crisis in the family history. The children hung about her, stroking her white cotton gloves and looking admiringly at the pink roses in her bonnet.

"Come, hurry in, Jane," called Ben. "We 'll have considerable of a blow before we reach Sherk's River."

But Jane ran back once more to kiss Conny and hug Dan. She tried to say "God bless you, children!" but the words would not come. Only the minister ought to say such solemn things, she thought.

"Mind and say your prayers, Conny," she whispered; "and take good care of Dan and baby."

"One would think yon were agoing to be gone a year," grumbled Ben. "Good-bye, you young vaggybonds," nodding as he pushed the boat out beyond the first breaker.

It was a warm, clear day. The "Gull" danced over the low sparkling waves, light as a feather. Conny could see the blue line of paint below her taffrail, and even the rose in her mother's bonnet, until they were out quite into deep sea water.

"I tell you, Dan!" she said. "Let 's not go to bed, to-night. Let 's have supper ready for them."

Dan nodded. "Reckon I 'll histe a lantern to light 'em in."

"To light father in? No! He 's bin a-coming in here every night since he was a boy."

"Mother has n't then. It was her I was agoing to light in. Anybody 'd hev knowed that!"

Dan went on composedly picking up great blobs of broken jelly-fish from the sand.

"Throw them horrid things away, Dan'l Van Dort!" for Conny wanted to air her authority. "You stuff 'em in yer pockets till I can't abear your trowsers in the house at night," covering her nose with her apron.

Dan sniffed at them with an air of relish.

"They won't shine until ye keep 'em awhile. I 've got my light-house 'most built, an' I want these for lanterns. Better come and help, Con. Here 's a big un you may put in," holding it out to her.

Conny paused wishfully a minute; then tossed her head.

"Light-house, indeed! I 've got to keep house and mind baby. I 've no time for play."

Baby was easily taken care of through the day; she lay playing with Dan in the sand, as he built his light-house, and only kicked her fat legs when anybody spoke to her. Conny had plenty of time to make ready the supper; she had plenty of things with which to make it ready, too. Not half so much money came into Ben's cottage as into many of the wretched rooms where beggars live in towns; but there was always an abundance of meat, potatoes, and fish in the cellar, and a Sunday suit apiece for the whole family up stairs; and the house itself,—with its rag-carpets, and big wood fires, and painted wooden chairs, and colored prints (a hundred years old) on the whitewashed wall, of King George and Queen Caroline, and the Animals going into the Ark,—was as bright and clean and shiuing as the white sand or blue sea without. When a person has so much fishing and sea and weather and beach to think of out-of-doors, he really has not time to care for sofas or clothes or those unnecessary things.

Conny set the table, and made hot cakes and put the soft-crabs down ready to broil; and then she rocked baby to sleep, and tucked her into bed. She was sure to sleep until morning; so that Conny could shut the door and run down to the beach to see the "Gull" come in.

The evening was damp and cold; but the sky and sea were one blaze of fierce, yellow light. She stopped to look at it.

"I never saw any thing like that before, Dan."

"It 's mighty curious."

Dan grunted, as if he could say n great deal more if he chose, and if she were not a girl.

The white caps were all gone. The sea was coming in, in deep, dark swells, with a dull, threatening roar. Conny saw all the fishing-boats fluttering into the little cove, although it was an hour before their usual time. Men were running down from the village to help the fishermen haul them on shore. They worked quickly,—but, like sea-coast people, without a word,—lowered the sails, unshipped the masts.

"Now we 're all in," said Cap'n Job, the wrecking-master, as the last was pulled up. "Van Dort were n't at the Banks to-day."

"But he 's at Sherk's River, with Janc," some one said.

Nobody spoke; the men looked at each other, then out to sea, and, glancing at Conny, drew apart, and whispered.

"Is the 'Gull' in danger, slr;" She pulled Cap'n Job's sleeve. He did not look at her.

"Danger, nonscnse! You ought to be in bed, child. Go to the house, and take Dan. Go at once, I tell you!"

Conny did not go. She saw a sail, close reefed, out in the grey distance, like the flicker of a bird's wing.

"There's father, now," she cried.

At that moment there was a sharp crackling in the air. The yellow light was gone. The sea rushed in as if driven by terror.

"It 's come, men! It 's come!" cried Cap'n Job.

Conny had heard of a wind-sqnall, which, fifty years ago, had strewn the shore with wrecks. She clung to an old spar, in the sudden darkness and the storm of spray and sand that drove over her, cutting her hands and face.

"It 's a wind-squall; bnt It can't hurt mother—It can't hurt mother!" she cried.

When the darkness passed with the heavy cloud, she climbed up to the little headland, and sheltering her eyes with one hand, looked steadily out to sea.

The fishermen were near the cove, watching her, and whispering together. One of them went to the village and brought down two or three women. Nanty Hephurn, who was a friend of Jane Van Dort's, went up to Conny.

"Come home with me, dear," she said. "Don't look out out yonder," putting her hand over the girl's eyes. "It 's growin' clearer, and the sea 's ugly to look at after a storm; weeds and wrecks and dead things is washed ashore, and ——"

Conny quietly put down her hand.

"I must see the 'Gull' come in. Mother 's aboard."

Nanty looked at the men, perplexed. She wiped her eyes once or twice, and then put her hands on Conny's shoulders.

"There was a wind-squall like this once afore, Conny."

"I know."

"And—and of all the ships within two miles of the bar, not one lived through it. Not the big ships, dear! Are you listenin'?"

Conny, after a minute, drew away.

"I wish you would go to Dan, Nanty. He 's crying yonder. I—I can't speak to him now."

She put her hand over her eyes again, looking through the slowly lifted weight of mist. Her lips moved.

Dan pulled her by the skirt, after awhile.

"Come away, Conny," he sobbed. "They say the 'Gnll' has gone down, and they 're afeard for you to stay here."

"It could n't go down. God would n't let it. I 've bin prayin'." But her face was like death as she said it.

The mist had lifted now. Under the pale twilight lay the vast angry sea—the waves rising out of fathomless darkness. Conny caught Dan fiercely by the arm, and pointed outward. Her lips were too parched to speak.

"The 'Gull!' The 'Gull!'" shouted the men. Only sea-bred eyes could see the far-off boat which was dashed to and fro like a huhhle. "Ther 's no chance ther fur a *good* boat," said Cap'n Job; "hut for that old water-log—— Take them children away, Nanty. Don't let 'em see their own mammy go down."

The wind beat the masts of the "Gnll" level with the water, once again.

Conny clinched Dan's hand in hers.

"Pray, Dan! Pray! and God can't let them drown!"

A great wave lifted the "Gull" tanntingly into sight, and then—it was gone! Only a black hull was washed above the yellow foam for an instant, and sank never to rise again.

Nanty ran to the child as she fell on the sand and carried her to her own house; but at the door, Conny opened her eyes and struggled to her feet.

"I must go home. Mother told me to take care of Dan and haby till she came back."

Nanty sobbed out loud then. She had been very fond of Jane.

"Child, did n't you *see* the 'Gull' go down?" she said.

"Yes," said Conny; "hut I was a-prayin'. Mother 'll come back."

She ran alone through the darkness to the cottage. Dan was crouched, crying, by the fire. She knelt down beside him.

"God would n't take them when we was prayin'," was all she could say.

And there came then a great shouting and cries without, and the door burst open, and her mother was on the floor and had them both in her arms, sobbing and laughing all at once; and Ben was talking to the neighbors, with a queer qnaver in his voice:

"'Gnll' went down? Yes, of course she must hev. She sprung a leak an hour afore the sqnall struck her, and I knew it was no use to try to bring her in, and Jane and I got board the steamer pntting into the lnlet, and come over afoot. I 'm glad I did n't see the old boat agoin' down."

"It was good luck as drove you nlgh the steamer, Ben," said Cap'n Job.

"Luck or—God," said Ben, taking off his old hat. "Hillo! give us a kiss, you young uns," stooping to hide his wet eyes. —*St. Nicholas.*

WHO PRINTED THE FIRST BIBLE?

BY DONALD G. MITCHELL.

In the year 1420, there was living in the city of Haarlem an old gentleman, who kept the keys of the cathedral, and who used after dinner to walk in the famous wood, that, up to this time, is growing just without the city walls. One day, while walking there, he found a very smooth bit of beech bark, on which, as he was a handy man with his knife, he cut several letters so plainly and neatly, that, after his return home he stamped them upon paper, and gave the paper to his boy as a "copy." After this, seeing that the thing had been neatly done, the old gentleman—whose name was Lawrence Coster—fell to thinking of what might be done with such letters cut in wood. By blackening them with ink, he made black stamps upon paper; and by dint of much thinking and much working, he came, in time, to the stamping of whole broadsides of letters, which was really printing.

But, before he succeeded in doing this well, he had found it necessary to try many experiments and to take into his employ several apprentices. He did his work very secretly, and enjoined upon his apprentices to say nothing of the trinls he was making. But a dishonest one among them, after a time, ran off from Holland into Germany, carrying with him a great many of the old gentleman's wooden blocks, and entire pages of a book which he was about to print.

The Dutch writers credit this story, and hint that the runaway nprentice was John Faust or John Gutenberg; but the Germans justly say that there is no proof of this. It is certain, however, tnat there was a Lawrence (Custos, of the cathedral) who husied himself with stamping letters and engraving. His statue is on the market-place in Haarlem, and his rough-looking books are some of them now in the State-house of Haarlem. They are dingy and printed with bad ink, and seem to have been struck from large engraved blocks, and not from movable types. They are without any date, but antiquarians assign them to a period somewhat earlier than any book of Faust or of Gutenberg, who are commonly called the discoverers of printing.

John Gutenberg, at the very time when this old Dutchman was experimenting with his blocks in Holland, was also working in his way, very secretly, in a house that was standing, not many years ago, in the ancient city of Strasburg. He had two working partners, who were bound hy oath not to reveal the secrets of the art he was engaged upon. But one of these partners died; and, upon this, his heirs claimed a right to know the secrets of Gutenberg. Gntenberg refused; and there was a trial of the case, some account of which was discovered more than three hundred years afterward, in an old tower of Strasburg.

This trial took place in the year 1439. Gutenberg was not forced to betray his secret; but it did appear, from the testimony of the witness, that he was occupied with some way of making hooks (or manuscripts) cheaper than they had ever been made before.

But Gutenberg was getting on so poorly at Strasburg, and lost so much money in his experiments, that he went away to Mayence, which is a German city further down the Rhine. He there formed a partnership with a rich silversmith, named John Faust, who took an oath of secrecy, and supplied him with money, on conditlon that after a certain time it should be repaid to him.

Then Gutenberg set to work in earnest. Some accounts say, he had a hrother who assisted him, and the Dutch writers think this brother may have been the robber of poor Lawrence Coster. Bnt there is no proof of it; and it is too late to find any proof now. There was certainly a Peter Schöffer, or a scribe designer, who worked for Gutenberg, and who finished np his first books by drawing lines around the pages and making ornamental lnitial letters and filling up gaps in the printing. This Schöffer was a shrewd fellow, and watched Gutenberg very closely. He used to talk over what he saw, and what he thonght, with Faust. He told Faust he could contrive better types than Gntenberg was using; and, acting on his hints, Fanst, who was a skillful worker in metals, run types in a mold. This promised so well, that Faust determined to get rid of Gutenberg, and to carry on the business with Schöffer, to whom he gave his only daughter, Christen, for a wife.

Faust called on Gutenberg for his loan, which Gutenberg could n't pay; and, in consequence, he had to give up to Fanst all his tools, his presses, and his unfinished work, among which was a Bible nearly two-thirds completed. This Faust and Schöffer hurried through and sold as a manuscript.

There are two copies in the National Library at Paris, one copy at the Royal Library at Munich, and one at Vienna. It is not what is commonly known as the Mayence Bible; but is of earlier date than that.

It is without name of printer or publisher, and without date. It is in two great volumes folio, of about six hundred pages a volume.

It was certainly the first Bible printed from movable types; but poor Gutenberg got no money from it, though he had done most of the work upon it. But he did not grow disheartened. He toiled on, though he was without the help of Schöffer and of Faust, and in a few years afterward succeeded in making books which were as good as those of his rivals. Before he died, his name was attached to books printed as clearly and sharply as books are printed to-day.—*St. Nicholas.*

THE HOME OF DANIEL WEBSTER.

Dr. Vernon O. Taylor writes in the October number of "Oliver Optic's Magazine":

Did any one of your numerous young gentleman or young lady readers ever visit the home of Daniel Webster?

Inferring that many "noes" would be shouted in response to this inquiry, it is thought not to be out of place to give a brief description of the aforesaid locality.

The home of Daniel Webster, while he lived, was in the town of Marshfield, Mass., and the house remains there still. The place is reached by an easy stage road from South Marshfield, from which the "place" is distant about two miles, and very near the Duxbury town line.

We are near the famous residence of the great statesman, and are yet not aware of the fact until we see a guide-board bearing the words "Green Arbor," the index finger on the board pointing in a northeasterly direction toward a road bordered thickly on each side by brush and maple and elm trees. Turning in the direction indicated, after a drive occupying but a few moments, we find ourselves before the Webster-mansion. It appears to be a large and spacious house, standing in the midst of a pleasantly cultivated plot of land. In the distance we see a young and thrifty orehard; in front of the house, and near the entrance, is a large and beautiful elm tree, so large that more than a hundred years must have elapsed since it first shot up from the soil, and so beautiful, because its branches spread their wings bravely forth in all directions, and the luxuriance of the foliage pleasantly meets the eye, and the limbs, stretching far out on each side, gracefully touch and sweep the earth, at points some sixty feet distant from each other.

We ring the bell at the door, and are immediately greeted by an intelligent-appearing Irishman, to whom we make known our desire of looking over the house. He acts as our guide, and we are shown through the various apartments. We visit in their respective orders the sitting-room, dining-room, library, several chambers and the conservatory. The sitting-room floor was covered with the same carpet which was trodden by Mr. Webster himself; it was of antique pattern, as also was the furniture. Upon the walls hung portraits of different members of the family, and the room appeared as if but lately occupied. The dining-room was a small but neat apartment, in which was the usual dining-room furniture. Upon the walls hung appetizing sketches; in one corner was a huge punch-bowl, made of thick plate glass, curiously carved, the whole standing nearly two feet high. Here also was the old family silver, which had been in the family for years.

Passing next into the library, we are amazed at its pleasant and home-like appearance. Here were all the books and curiosities belonging to Mr. Webster's collections: Law books on this side, books of travel on that; pamphlets here, unbound manuscript there. Here were beautiful oil paintings, mostly sketches of landscape. Upon the frame of one of the paintings was Mr. Webster's hat and cane; probably placed there by himself, and never afterward moved. It made us think that Mr. Webster had but just gone out, and would return soon. Hanging near the door was a pen-and-ink profile portrait of the mother of Daniel Webster, beneath which were written, in his own handwriting, these words:

MY EXCELLENT MOTHER.

D. W.

Near by, in a beautiful case, was a large collection of insects, embracing all the common and not a few of the uncommon kinds; each insect was pierced with a pin, and was thus secured to the board. We next saw a curious speciman of Chinese work, wrought in ivory, and elaborately carved in Oriental designs in a very tasty manner. A step farther on we found Mr. Webster's chair, which was an arm-

chair, an easy-chair, a reclining-chair, and a writing-chair, all combined. It was provided with a soft and easy cushion, and upon the arm of the chair, arranged upon a pivot, so that it could be moved in any direction, was a writing-desk, provided with all the necessary utensils and stationery for writing letters or legal documents. We next observed a large table, upon which was a "Register of Visitors to Green Arbor," in which we inscribe our names and residences.

Passing up stairs, we visit the chambers, which are large, well arranged and well lighted. The same antique carpets cover the floors; the beds are all made up, and appear to be ready for occupancy. Curtains of lace screen them. Mr. Webster's and the guest chamber bear about the same appearance, but the chamber of a son who was killed in the Mexican war looks entirely different. The bed is hung with the stars and stripes; pictures portraying battle scenes adorn the walls; there are no ornaments or knicknacks here; in their place we see a collection of powder, shot, balls, guns, pistols, and, in fact, all of the munitions used in war.

Leaving the house by a back entrance, we proceed along a graveled walk through the garden; we pass the pond and walk along a path which leads to the tomb of the Webster family. It is but a short distance from the house, and here repose the ashes of the immortal dead: Daniel, his wife, his son Fletcher—who was killed at the second battle of Bull Run, and who, when in command, occupied a responsible and leading position in one of our Massachusetts regiments—and others. But one son is now living of all that family, and he is Ashburton, now a young man of twenty-seven years of age.

We gladly paid a fee of twenty-five cents each for our entertainment. This sum is appropriated to the grounds; by means of it everything is kept in good repair, and in harmony with the pleasant mansion which stands upon the grounds. The old house has now, we believe, passed into other hands, and strangers tread that spot which was once the home, the place where he loved to dwell, of one of America's greatest statesmen.

A feeling of awe pervades one's mind when breathing the air of such a place; when beholding the same scenes that so eminent a man daily looked upon; when reading the books that he once studied; when gazing with delight upon the curious objects which it delighted him to secure, and when pacing the rooms, so rich in antiquity, as it were, so classic withal, and yet so beautiful.

WATCH THE BABIES.

How Mothers May Guard Their Infants' Livss. Instructions for the Care of Childreu in Summer Mouths.

CIRCULAR FROM A LEADING SOCIETY OF MEDICAL MEN.

The subjoined circular concerning the management of infants during the summer months was prepared by a committee of leading medical men, and officially recommended to the thoughtful attention of mothers by the Obstetrical society of Philadelphia:

RULES FOR THE MANAGEMENT OF INFANTS RUNING THE HOT SEASON.

Rule 1. Bathe the child once a day in tepid water. If it is feeble sponge it all over twice a day with tepid water, or with tepid water and vinegar. The health of a child depends much upon its cleanliness.

Rule 2. Avoid all tight bandaging. Make the clothing light and cool, and so loose that the child may have free play for its limbs. At night undress it, sponge it and put on a slip. In the morning remove the slip, bathe the child and dress it in clean clothes. If this cannot be afforded, thoroughly air the day-clothing by hanging it up during the night. Use clean diapers and change them often. Never dry a soiled one in the nursery or the sitting-room, and never use one for a second time without first washing it.

Rule 3. The child should sleep by itself in a cot or a cradle. It should be put to bed at regular hours, and be early taught to go to sleep without being nursed in the arms. Without the advice of a physician never give it any spirits, cordials, carminatives, soothing syrups or sleeping drops. Thousands of children die every year from the use of these poisons. If the child frets and does not sleep, it is either hungry or else ill. If ill, it needs a physician. Never quiet it by brandy or by cake; they are common causes of diarrhœa and of other troubles.

Rule 4. Give the child plenty of fresh air. In the cool of the morning and evening send it out to the shady sides of broad streets, to the public squares, or to the park. Make frequent excursions on the rivers. Whenever it seems to suffer from the heat, let it drink freely of ice water. Keep it out of the room in which washing or cooking is going on. It is excessive heat that destroys the lives of young infants.

Rule 5. Keep your house sweet and clean, cool and well aired. In very hot weather let the windows be open day and night. Do your cooking in the yard, in a shed, in the garret, or in an upper room. Whitewash the walls every spring, and see that the cellar is clean of all rubbish. Let no slops collect to poison the air. Correct all foul smells by pouring carbolic acid or quicklime into the sinks and privies. The former article can be got from the nearest druggist, who will give the needful directions for its use. Make every effort yourself and urge your neighbors to keep the gutters of your street or of your court clean.

Rule 6. Breast-milk is the only proper food for infants. If the supply is ample and the child thrives on it, no other kind of food should be given while the hot weather lasts. If the mother has not enough she must not wean the child, but give it, besides the breast, goat's or cow's milk, as prepared under rule 8. Nurse the child once in two or three hours during the day, and as seldom as possible during the night. Always remove the child from the breast as soon as it has fallen asleep. Avoid giving the breast when you are overfatigued or over-heated.

Rule 7. If, unfortunately, the child must be brought up by hand, it should be fed on milk-diet alone—that is, warm milk out of a nursing-bottle, as directed under rule 8. Goat's milk is the best, and next to it cow's milk. If the child thrives on this diet, no other kind of food whatever should be given, while the hot weather lasts. At all seasons of the year, but especially in summer, there is no safe substitute for milk, if the infant has not cut its front teeth. *Sago, arrow-root*, potatoes, corn flour, crackers, bread, and every pulverized food, and *every article of diet containing starch* cannot and must not be depended on, as food for very young infants. Creeping or walking children must not be allowed to pick up unwholesome food.

Rule 8. Each bottleful of milk should be sweetened by a small lump of loaf-sugar, or by half a tea-spoonful of crushed sugar. If the milk is known to be pure, it may have one-fourth part of hot water added to it; but if it is not known to be pure, no water need be added. When the heat of the weather is great, the milk may be given quite cold. Be sure that the milk is unskimmed; have it as fresh as possible, and brought very early in the morning. Before using the pans into which it is to be poured, always scald them with boiling suds. In very hot weather boil the milk as soon as it comes, and not once put away the vessels holding it in the coolest place in the house—upon ice if it can be afforded or down a well. Milk carelessly allowed to stand in a warm room soon spoils, and becomes unfit for food.

Rule 9. If the milk should disagree, a tablespoonful of lime-water, may be added to each bottleful. Whenever pure milk cannot be got try the condensed milk, which often answers admirably. It is sold by all the leading druggists, and the grocers, and may be prepared by adding to six table-spoonfuls of boiling water without sugar, one table-spoonful of the milk, according to the age of the child. Should this disagree, a tea-spoonful of arrow-root, of sago, or of corn-starch to the pint of milk may be cautiously tried. If milk in any shape cannot be digested, try for a few days, pure cream diluted with three-fourths or four-fifths of water, returning to the milk as soon as possible.

Rule 10. The nursing-bottle must be kept perfectly clean, otherwise, the milk will turn sour and the child will be ill. After each meal it should be emptied, rinsed out, taken apart, and the tube, cork, nipple, and bottle placed in clean water, or in water to which a little soda has been added. It is a good plan to have two nursing-bottles, and to use them by turns.

Rule 11. Do not wean the child just before or during the hot weather, nor, as a rule until after its second summer. If sucking disagrees with the mother, she must not wean the child, but feed it in part out of a nursing-bottle, on such food as has been directed. However small the supply of breast-milk, provided that it agrees with the child, the mother should carefully keep it up against sickness; it alone, will often save the life of a child when everything else fails. When the child is over six months old, the mother may save her strength by giving it one or two meals a day of stale bread and milk, which should be pressed through a sieve and put into a nursing-bottle. When from eight months to a year old, it may have also one meal a day of the yolk of a fresh and pure-boiled egg; or one of beef or mutton broth into which stale bread has been crumbed. When older then this, it can have a little meat finely minced; but even then milk should be its principal food, and not such food as grown-up people eat.

BRIEF RULES FOR CASES OF EMERGENCY.

Rule 1. If the child is suddenly attacked with vomiting, purging and prostration, send for a doctor at once. In the meantime, put the child for a few minutes in a hot bath; then carefully wipe it dry with a warm towel, and wrap it in warm blankets. If its hands and feet are cold, bottles filled with hot water and wrapped in flannels, should be laid against them.

Rule 2. A mush poultice, or one made of flaxseed meal, to which one-quarter part of mustard flour has been added, or flannels wrung out of hot vinegar and water, should be placed over the belly.

Rule 3. Five drops of brandy in a tea-spoonful of water may be given every ten or fifteen minutes; but, if the vomiting persists, give this brandy in equal parts of milk and lime-water.

Rule 4. If the diarrhœa has just begun, or if it is caused by improper food, a tea-spoonful of castor-oil or of the spiced syrup of rhubarb should be given.

Rule 5. If the child has been fed partly on the breast and partly on other food, the mother's milk alone must now be used. If the child has been weaned, it should have pure milk with lime-water, or weak beef tea, or chicken water.

Rule 6. The child should be allowed to drink cold water freely.

Rule 7. The soiled diapers or the discharges should be at once removed from the room, but saved for the physician to examine at his visit.

For the convenience of mothers the following recipes for special forms of diet are given:

Boiled flour or flour ball: Take one quart of good flour; tie it up in a pudding-bag so as to make a firm, solid mass; put it into a pot of boiling water early in the morning, and let it boil until bed-time. Then take it out and let it dry. In the morning peel off from the surface and throw away the thin rind of dough, and, with a nutmeg-grater, grate down the hard, dry mass into a powder. Of this from one to three tea-spoonfuls may be used, by first rubbing it into a paste with a little milk, and finally by bringing the whole to just the boiling point. It must be given through a nursing-bottle.

An excellent food for children who are costive may be made by using bran-meal or unbolted flour instead of the white flour, preparing it as above directed.

Rice water: Wash four table-spoonfuls of rice, put it into two quarts of water, which boil down to one quart, and then add sugar and a little nutmeg. This makes a pleasant drink.

A pint or half a pint of milk added to the rice water before it is taken from the fire, gives a nourishing food suitable for cases of diarrhœa.

Sago, tapioca, barley or cracked corn can be prepared in the same manner.

Beef tea: Take one pound of juicy, lean beef—say a piece from the shoulder or the round—and mince it. Put it with its juice into an earthen vessel containing a pint of tepid water, and let the whole stand for one hour. Then slowly heat it to the boiling point and let it boil for three minutes. Strain the liquid through a cullender and stir in a little salt. If preferred, a little pepper or allspice may be added.

Mutton tea may be prepared in the same way. It makes an agreeable change when the patient has become tired of beef tea.

Raw beef for children: Take half a pound of juicy beef, free from any fat; mince it very finely, then rub it into a smooth pulp either in a mortar or with an ordinary potato-masher and press it through a fine sieve. Spread a little out upon a plate and sprinkle over it some salt, or some sugar if the child prefers it. Give it alone or spread upon a buttered slice of stale bread. It makes an excellent food for children with dysentery.

Correspondence.

A MEETING WITH THE POET LONGFELLOW, AND A VISIT TO SUMNER'S GRAVE.

LETTER FROM A HAMPTON STUDENT SINGER.

To the Editors of the Southern Workman:

One of the greatest pleasures that we have on our singing campaign is in being invited to social entertainments by friends of the school, and the opportunities this often gives us of meeting distinguished and interesting people.

I must tell you about our visit to Cambridge, and to the grave of Sumner.

On the 10th of May, Mrs. H. J. Moore, who has been a teacher among the freedmen in the South, being much interested in our Institution, invited us to her residence in Cambridge. It was a stormy Saturday, and though we reached her house in the forenoon, we were prevented by the weather from carrying out all the programme that had been arranged for our visit. Nevertheless, we engaged in pleasant and social amusements,—spelling matches, charades, etc.—which was a great relief and pleasure to us after singing nearly every evening for several weeks.

Mr. Moore, being one of the Custom-house officers, could not be present in the afternoon, but came in the evening, when all the guests had arrived. Among them were Professor Brockie, of Yale College, and Professor Henry W. Longfellow, whose delightful poems so many have read, who have not seen his aged, but young-looking, face.

Mr. Frederic Moore and his brothers entertained us with a very amusing shadow-pantomime of the "Hungry Chinee."

After a delightful evening, all went home except the five young ladies of the Hampton Students, whom Mrs. Moore invited to stay all night, as most of the guests desired to go to Mount Auburn Cemetery, with Mrs. Moore and the Students, the next day, to see the grave of Hon. Charles Sumner, that great and noble friend of our people, in their time of bondage and trouble.

The next day was a beautiful Sunday; the air was fresh, and the gentle breezes seemed to speak of the goodness of the great Creator. Even the grass looked greener and fresher, and the dust was laid, after the rain storm. At half-past ten, we took the cars to Mount Auburn from Boston, and having to go through Main Street, Cambridge, we were all right to meet our party. Mrs. Moore and the young ladies came on the car, and we proceeded to Mount Auburn. After we reached the cemetery, we entered at first the beautiful little marble chapel, in which funeral services are sometimes performed, and sang, while we waited for Mr. Moore, Professor Longfellow, and the rest. They soon arrived, and we walked in procession toward Sumner's grave.

As we marched along the beautiful pathways decorated with stone-work, and sweet flowers that filled the air with odor, we saw all kinds of sepulchers and tomb stones, having figures of angels and names carved on them. When we reached the grave, we stood in a circle and sang two of our historical songs; namely, "O Dust and Ashes, Fly Over on my Grave"; "My Lord, What a Morning." These songs sent a thrill through each one's heart, to think how much this honorable man had done for our people, and how he stood by us even to the last moment. Everything he did and bore for us seemed to come fresh in our memories: The heavy blow dealt by a coward's hand; the earnest words in Congress, for our people; and, greatest of all, the urging of President Lincoln (who was also our real friend), to declare the Emancipation Proclamation at the critical moment, when slavery having reached its height, was shaking to its foundation under the strokes of eloquence and the scourge of war. This is the time when God made Sumner an instrument to do his work more thoroughly than ever before: so he gave the great wheel of justice a turn, and let it crush slavery out of existence.

Our hearts thrilled with enthusiasm while we stood silently around the grave of this noble defender of justice—this Union Star of America. I feel unable to express the thoughts of gratitude that we gave God in secret, and the reverence for our true friend, whose last words were so earnestly and emphatically spoken before he left us and joined the angels of light: "*Don't let the Civil Rights Bill fail.*"

His grave did not look melancholy and desolate: it was decorated with flowers, by friendly hands, and is situated in one of the choicest spots in beautiful Mount Auburn, which looks more like a fine park, than a grave-yard.

After leaving the grave, we ascended a high tower and viewed the whole cemetery, which is very large. We could see all around for several miles. We descended the tower singing "John Brown's Body," etc.

Then Professor Longfellow desired us to call at his residence in Cambridge, and we did so. We were more than pleased to see such a library as he has. We sang two songs; then went to Mrs. Moore's house and took dinner; after which, Hon. John Owens, who was once our minister to Italy, spoke a few words about Mr. Sumner, and encouraged us in our good work for our people.

We went home to in the afternoon, feeling happy and full of delight over that day's information and pleasure; at the same time thanking Mr. and Mrs. Moore for making everything so pleasant for us.

J. B. T.

TEMPERANCE.

The drunkards of to-day were innocent school children a few years ago, and the drunkards of a few years hence will be of those who are boys to-day. "Wine is a mocker." It deceives the boy with false ideas of manliness; it disappoints the man by giving him the weakness without the innocence of boyhood; to the cold it offers warmth; to the overheated it promises coolness; the weak it tantalizes with anticipated strength; the sick it cheers with false hopes of health; it deludes the coward with expectations of courage, and makes the really brave reckless and foolhardy; it ridicules the wise by giving them the tongues of fools; it offers pleasure, but derides the seeker by only giving mortification and pain; it makes the very ground mock the step staggering with unsteady motion; and at the bitter end of protracted dissipation it sums up an accumulation of horrors in dreadful "delirium tremens," when the sufferer is taunted by fiends who seem to laugh and jeer and revel with satanic satisfaction about the wreck of their unfortunate victim.

GUILD'S SIGNAL.

BY BRET HARTE.

Two low whistles, faint and clear,
That was the signal the engineer—
That was the signal that Guild, 'tis said—
Gave to his wife at Providence,
As through the sleeping town, and thence
Out in the night,
On to the light,
Down past the farms, lying white, he sped!

As a husband's greeting, scant, no doubt,
Yet to the woman looking out,
Watching and waiting, no serenade,
Love song or midnight roundelay,
Said what that whistle seemed to say:
"To my trust true,
So love to you,
Working or waiting; Good-night!" it said.

Brisk young hagmen, tourists fine,
Old commuters along the line,
Brakemen and porters glanced ahead,
Smiled at the signal, sharp, intense,
Pierced through the shadows of Providence—
"Nothing amiss,
Nothing!—it is
Only Guild calling his wife," they said.

Summer and winter, the old refrain
Rang o'er the billows of ripening grain,
Pierced through the budding boughs o'erhead,
Flew down the track when the red leaves burned
Like living coals from the engine spurned;
Sang as it flew:
"To our trust true,
First of all Duty—Good-night!" it said.

And then, one night, it was heard no more,
From Stonington over Rhode Island shore,
And the folk in Providence smiled and said,
As they turned in their beds: "The engineer
Has once forgotten his midnight cheer."
One only knew,
To his trust true,
Guild lay under his engine, dead.

New York Tribune.

HAPPY ACCIDENTS.

The cracking of a picture placed in the sunshine set Van Eyck experimenting to produce a varnish that would dry in the shade. He found what he sought, and found besides, that by mixing it with his colors, they acquired greater force and brilliancy, and required no subsequent varnishing; and so about the discovery or rediscovery, of the art of painting in oil. Mezzotinto owed its invention by Prince Rupert to the simple accident of a sentry's gun-barrel being rusted by the dew. Henry Schanword, a Nuremburg glasscutter, happened to let some aqua-fortis fall upon his spectacles, and noticed the glass was corroded and softened where the aqua-fortis had touched it. Taking the hint, he made the liquid accordingly, drew some figures upon a piece of glass, covered them with varnish, and applied his corroding fluid, cut away the glass around his drawing, so that when he removed the varnish, the figures appeared raised upon a dark ground; and etching upon glass was added to the ornamental arts. Alois Senefelder, playwright and actor, thinking possible to etch upon stone in place of copper, polished a slab for the purpose. He was disturbed by his mother coming into his small laboratory with a request that he would jot down her list of things for the wash, as the woman was waiting to take the basket away. There being neither paper nor ink handy, Senefelder scribbled the items on his stone with his etching preparation, that he might copy them at his leisure. Some time afterward, when about to clean the stone, he thought he might see what would be the effect of biting the stone with aqua-fortis, and in a few moments saw the writing standing out in relief. Taking up a pelt-ball charged with printing ink, he inked the stone, took off a few impressions on paper, and he had invented lithography. The pelt-ball used by Senefelder was long indispensable in a printing office. A Salopian printer, in a hurry to get on with a job, could not find his ball, and inked his form with a piece of soft glue that had fallen out of the glue pot, with such excellent results, that he henceforth discarded the pelt-ball altogether, and, by adding treacle to the glue, to keep it from hardening, hit upon the composition of which printers' rollers have ever since been made. Three very different discoveries are recorded to have resulted from the unintentional application of intense heat. Pliny attributes the discovery of glass to some merchants traveling with nitre, who, stopping on the banks of a river to take a meal, were at a loss for stones to rest their kettles upon. Putting them upon pieces of nitre, they kindled their fires; nitre, dissolved by the heat, mixed with the sand, and the merchants were astonished to see a transparent matter flowing over the ground, which was nothing else but glass. Charles Goodyear had for many years experimented in vain, hoping to deprive India-rubber of its susceptibility to the action of heat and cold. Conversing with a friend on the subject, he emphasized an assertion by flinging a piece of sulphured rubber across the room. It lighted upon the stove; and when he picked it up, a few days afterward, he found the intense heat to which it had been subjected had conferred upon the India-rubber just the quality he had so long striven to impart to it. According to some, he stumbled upon the discovery in a different manner; but, at any rate, vulcanized India-rubber was the creation of an accident. A Limerick tobacconist, looking dolefully at his poor neighbors groping among the smoldering ruins of his burned out shop, noticed that some of them, after trying the contents of certain canisters, carefully loaded their waistcoat pockets from them. He followed suit, and found the snuff had come out of the fiery ordeal very much improved in pungency and aroma. Like a wise man, he said nothing, but took another place, set up a lot of ovens, and before long, Black Yard snuff—otherwise "Irish Blackguard"—was all the rage with lovers of nasal titillation; and in a few years Lundyfoot was a rich man, owing to the accident he thought had ruined him. A would-be alchemist, seeking to discover what mixture of earths would make the strongest crucibles, one day found that he had made porcelain. Instead of transmuting metals, as he had fondly hoped to do, Bottger transmuted himself; as if he had been touched with a conjurer's wand, he was on a sudden transformed from an alchemist into a potter.

HOW TO MAKE COARSE WOOD LOOK LIKE POLISHED MAHOGANY.

The following process is recommended in *Wiederhold's Trade Circular:* The coarse wood is first coated with a colored size, which is prepared by thoroughly mixing up, in a warm solution of one part of commercial glue in six parts of water, a sufficient quantity of the commercial mahogany brown, which is in reality an iron oxide, and in color stands between so-called English red and oxide of iron. This is best effected by adding, in excess, a sufficient quantity of the dry color with the warm solution of glue, and thoroughly mixing the mass, by means of a brush, until a uniform paste is obtained, in which no more dry red particles are seen.

A trial coat is then laid upon a piece of wood. If it is desired to give a light mahogany color to the object, it is only necessary to add less, and for a darker color more, of the brown body color. When the coat is dry, it may be tested, by rubbing with the fingers, whether the color easily separates or not. In the former case, more glue must be added until the dry trial coat no longer perceptibly rubs off with the hands. Having ascertained in this way the right condition of the size color with respect to tint and strength, it is then warmed slightly, and worked through a hair sieve by means of a brush. After this, it is rubbed upon the wood surface with the brush, which has been carefully washed. It is not necessary to keep the color warm during the painting. Should it become thick by gelatinizing, it may be laid on the wood with the brush, and dries more rapidly than when the color is too thin. If the wood is porous and absorbs much color, a second coat may be laid on the first, when dry, which will be sufficient in all cases. On drying, the size appears dull and unsightly; but the following coat changes immediately the appearance of the surface. This coat is spirit varnish. For its production, three parts of spirits of wine of 90° are added, in excess, to one part of red acaroid resin in one vessel, and in another ten parts of shellac, with forty parts of spirits of wine of 80°. By repeated agitation for three or four days, the spirit dissolves the resin completely. The shellac solution is then poured carefully from the sediment, or, better still, filtered through a fine cloth, when it may be observed that a slight, milky turbidity is no detriment to its use. The resin solution is best filtered into the shellac solution by pouring through a funnel loosely packed with wadding.

When filtered, the solutions of both resins are mixed by agitating the vessel, and letting the varnish stand a few days. The acaroid resin colors the shellac, and imparts to it at the same time the degree of suppleness usually obtained by the addition of Venetian turpentine or linseed oil. If the varnish is to be employed as a coat, the upper layers are poured off at once from the vessel. One or two coats suffice, as a rule, to give the object an exceedingly pleasing effect. The coats dry very quickly; and care must be taken not to apply the second coat till the first is completely dry.—*The American Builder.*

MIXTURE OF ALKALINE SALTS WITH PLASTER OF PARIS.

Persons occupied in making plaster casts have been for a long time aware that unburned gypsum can be made to harden by the use of an alkaline solution, and that if this be employed in connection with the burned gypsum, or the regular calcined plaster, a much firmer mass is produced. Some detailed experiments have lately been made by Mr. Schott, in Brunswick, which may furnish some important hints in regard to the use of sulphate of lime with potash. Thus, if equal parts of powdered crystallized sulphate of lime and of a neutral sulphate of potassa be mixed together, and then reduced to a paste with water, the mass hardens perfectly, and more quickly than gypsum in the ordinary treatment. If equal parts of common calcined plaster of Paris and of sulphate of potassa be mixed together, they will harden in a moment with less than an equivalent weight of water; so much so, indeed, that the mixture cannot be poured out of the vessel. If, however, one part of each of the salts and two of water be used, they form a mass which can be poured out, and the surface of which will be found coated with a crust of sulphate of potash. The rapidity of hardening, therefore, can be made to vary with the percentage of water, the mass solidifying even if six parts water be used.

EFFECT OF ALCOHOL ON THE CONSTITUTION.

It is well known among physicians, that, the prognosis for a sick man, who does not use alcoholic drinks, is always more favorable, than for one who does; while the expectations are more unfavorable in proportion to the amount and strength of the liquor he consumes, no matter what the disease may be. Ordinary, slight diseases, of little account for a temperate individual, take in a drinker always a serious form. During epidemics, drunkards are without fail the first to suffer from them: for instance, in cholera epidemics, they are invariably the first victims, while the maximum deaths occur on days after the weekly libations, that is Tuesday and Wednesday. Hard drinkers are always very severely attacked when typhoid fever, dysentery or small-pox prevail. Their disposition to febrile delirium greatly augments the danger of all acute diseases. But in the case of wounds, the difference between a drunkard and a temperate man, is most striking: while among the latter, wounds usually heal by first intention accompanied by a healthy inflammation, easily subdued when too active, we find, that among drunkards, the dangers of phlegmon, erysipelas and gangrene, are constantly threatening, cicatrization is continually delayed, and the wound and its surroundings present, as a rule, a bad aspect; while the most trifling wounds, and even mere scratches, scarcely noticed by a temperate individual, become, often, for a drunkard, matters of the most serious consequences.—*The Manufacturer and Builder.*

FASTEN a nail or key to a string, and suspend it to your thumb and finger, and the nail will oscillate like a pendulum. Let some one place his open hand under the nail, and it will change to a circular motion. Then let a third person place his hand upon your shoulder, and the nail becomes in a moment stationary.

A NEW work-box of Vienna manufacture is a pot containing a small rose-bush. The pot is of Russian leather, and the roses on the bush, of leather, nicely perfumed. By pressing a spring, the bush flies back, and underneath is seen a fine array of sewing implements.

Publisher's Department.

SUBSCRIBERS TAKE NOTICE!

Every subscriber, who will send us a new name and one dollar, will be entitled to one of our premium oil chromos, provided they make such a request, and designate the chromo they wish. For two new subscribers we will send "Returning Home" ready mounted. For five new names we will send the above picture nicely framed in black walnut and gilt. *We do not send premiums to those who do not request them.* When frames are sent, the receiver will pay the express charges.

JAMES LEFFEL'S
Improved Double
TURBINE WATER WHEEL.

POOLE & HUNT,
BALTIMORE,
MANUFACTURERS FOR THE SOUTH & SOUTHWEST.

Nearly 7000 now in use, working under heads varying from 2 to 240 feet! Twenty-four sizes from 5 3-4 to 96 inches.

The most powerful Wheel in the Market, and most economical in use of Water.
Large ILLUSTRATED Pamphlet sent post free.

MANUFACTURERS, ALSO, OF
Portable and Stationary Steam Engines and Boilers, Babcock & Wilcox Patent Tubulous Boiler, Blaugh's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.

SEND FOR CIRCULARS.

HAMPTON
Normal & Agricultural
INSTITUTE.

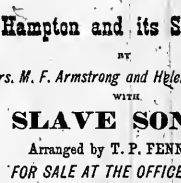
Fall term opens Thursday, October 1st, 1874. All who desire to enter should appear at that time.

The course of study continues three years and embraces the elements of an English and Scientific Education.

Graduates are able to secure situations as teachers in the public schools of the South, at salaries ranging from twenty-five to forty-five dollars per month.

Circular or catalogue sent on application to
S. C. ARMSTRONG, Principal,
Hampton, Va.

N. F. BURNHAM'S



WATER WHEEL.
The Best in the Market, and second to none in use. First-class Wheel. Send for a Pamphlet and be convinced. N. F. BURNHAM, York, Pa.

24 per cent. guaranteed with
1874 TURBINE

"Hampton and its Students,"
BY
Mrs. M. F. Armstrong and Helen W. Ludlow;
WITH
SLAVE SONGS,
Arranged by T. P. FENNER.
FOR SALE AT THE OFFICE OF THE
Treasurer of the Normal School.
Sent by mail on receipt of $1.50.

EXPEDITION FOR LIBERIA.

TWO INDUSTRIOUS AND WORTHY PEOPLE of color desirous of removing to Liberia, The American Colonization Society will give a passage and subsistence on the voyage—made in about forty days—and support for the first six months after landing. Single adult persons get ten acres, and families twenty-five acres of land. These are all gifts—never to be repaid. Those wishing to remove to Liberia should make application, addressed to William Coppinger, Corresponding Secretary and Treasurer of the American Colonization Society, 450 Pennsylvania Avenue, Washington, D. C.

British, Marine, and Land and Freshwater Shells,

COLLECTED IN GREAT BRITAIN, IRELAND (east and west coast), ORKNEY, SHETLAND, HEBRIDES and CHANNEL ISLANDS, also from DOGGER BANK (many of them by deep sea dredging), on sale or exchange for American Shells, Flowering Plants, Ferns, or specimens of Natural History, suitable for a museum.

Catalogues of the Species will be sent on application to GEORGE DIXON, AGRICULTURAL INSTITUTE, HAMPTON, VA.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. III. HAMPTON, VA., OCTOBER, 1874. NO. 10.

RIP VAN WINKLE.

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, F. RICHARDSON, RICHARD TOLMAN, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

The Southern Workman should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager.

Southern Workman.

HAMPTON, OCTOBER, 1874.

We have before us a letter from Manchester, New Hampshire, written by an authority on cotton manufacture, which institutes a comparison between steam and water-power, and contains facts full of encouragement for this region, and for the city of Norfolk in particular. Manchester, as our readers may be aware, has become a large place since 1839, by taking advantage of a descent of fifty-four feet to the mile to the Merrimack River. The annual rental paid by the mills is, says our correspondent, "$5.00 for each horse-power of water used, to which should be added say $1.00 per annum for attendance on wheels and gates and oil and tallow, and to make a complete comparison, say $10.00 more for fuel and fireman for heating the mill and supplying steam for the dressing works; making a total cost per horse-power of $16.00 per annum."

"The average cost of steam-power in this region (of New Hampshire) is very close to $52.00 per annum. I have the record of one at Fall River, which is $42.00." "The Fall River people claim to save the difference in power, in freight, and other expenses, by being near the markets and also by getting their coal somewhat cheaper."

An engine of fifty horse-power would be sufficient for a factory of four thousand spindles. Taking the difference between $52.00 and $16.00 would give $36.00 as the loss by employing steam at Manchester. Or $18.00 per year loss in the running expenses of steam factories at Manchester. The steam factories at Fall River claim to make up this difference by saving in freight and coal.

Let us see how it would be at Norfolk. Raw cotton is worth $2.00 per bale less at Norfolk than at Manchester. A factory of the size supposed would consume in a year about fourteen hundred bales. The saving in favor of Norfolk in freight on the raw material would be $2800.00, or $1000.00 in excess of the loss by using steam-power.

The city of Norfolk averages during the six coldest months of the year forty-eight degrees in temperature. Manchester averages during the same period not less than three degrees below freezing. The heating expenses saved by having a mill at Norfolk in place of Manchester would be sufficient to offset the annual loss by depreciation of steam machinery. The first cost of steam-power is about the same as the expense of building Davis' canals wheels and pits for a water mill.

James River coal could be delivered at the doors of factories at Norfolk for $5.20 per ton; but a better quality of Virginia coal comes via Baltimore at about the same price. At four pounds per hour, and counting thirteen hours per day, each horse-power would cost at Norfolk in a year of working days $37.44 for coal. The expense per horse-power for coal at Manchester is $40.00 per annum.

Norfolk has been rapidly assuming the position of a first-class cotton depot, as is shown by the erection during the past year of three of the heaviest cotton presses in America, and by the crowded bales upon her wharves. Hundreds of sites offer themselves around the city, where lighters would deliver the raw material direct from the cars or canal boats, at a merely nominal expense. By the same method lumber is delivered at $14.00 per thousand feet of merchantable Yellow Pine.

Laborers at Norfolk can afford to work cheaper than at Manchester, because living expenses of all kinds are less. Poor people live often in houses neither ceiled nor plastered, and their fuel bills are less than half of a New Hampshire laborer's in a tight house. Five cents will buy fish enough for a whole family's dinner; and oysters are hawked about the streets at twenty to twenty-five cents per quart. The market for all kinds of vegetables is often glutted; and berries after the first of the season, can be had for almost nothing from the farmers.

In and around Norfolk are thirty thousand people, for the female part of whom there is actually no industry that would compete with a cotton factory. From so many there would be enough who would be handy and easy to teach. The blessing of such a source of employment to the community would be appreciated so far as to secure partial if not total exemption from taxation.

A large part of the goods made at Norfolk would have to be sent to New York for sale. In this respect the Southern factory would be subject to nearly the same expense as the one at Manchester.

Cotton spinning is not altogether a new thing in this region. There are now eight mills in operation at Petersburg, only eighty-four miles from Norfolk. These mills though small, have been reasonably prosperous; and the last one built, running only sixty-two looms, depends entirely upon steam-power. We have been assured by the manager of one of the Petersburg mills, that one important difficulty they have to contend with, is the scarcity of good hands. Some would be naturally adapted to the work and learn easily; others would not. But there are not enough good hands to enable the manager to select and employ only those who are capable of rapid work.

This point of labor seems to us a very important one in favor of Norfolk over any other place of equal facilities in cheap transportation. The white population in and near the city number nearly twenty thousand. The males are employed in trading and mechanical pursuits, and on the water. Their families are compelled to remain at Norfolk; and the poor would be eager in many cases to work for the lowest wages ever paid in New England.

Of two eminent thieves Tweed of New York is in jail, while Moses of South Carolina still defies the law. Public opinion punishes the one, but cannot even arrest the other. The most difficult and necessary task of despots, is to muzzle the press. This was impossible in New York; but in South Carolina, Slavery had already performed the work, and prepared the ground for a crop of evils.

The triumph of Moses has been founded on the fact that written language was unknown to the common people. Had every voter been able to read, the antagonists of the capitalists could never have been combined solidly against the best interests of the state. The venality of the public servants would have been known and felt as an injury and stigma to all classes; and fitness rather than politics would have been sought in legislators. To the present wholesale suppression of right, a reaction must come. Even Moses will be unable to roll back the deluge. But so long as ignorance prevails at the polls, union will give strength for evil; and the blind followers of political tricksters, both black and white, will at times combine to work incalculable injury to the state.

The first fine enthusiasm of the ex-slave was for education. It gained him the admiring sympathy of good men. His last passion for politics has not the same effect. The former was food convenient for him; for the latter he has proved in South Carolina, that he was unprepared. His shameless legislature has ruined the credit of a great state. Without him, Moses and his crew would pass away. His attitude is opposed to order and decency,—an outrage upon the moral sense of every community which has a public opinion. So far as in him lies, he is committing political suicide. The wax of his wings is already melting in the sun. Even Grant is forsaking him; and whether or not his abuse of power results in war followed by Federal interference, the principle of universal suffrage is likely to be curtailed.

In view of South Carolina how imperative seems the necessity for more reading, writing and thinking among the colored people in order that they may be saved from themselves. Their fate is in their own hands; their friends can only hand them the ladder; it remains for them to mount. No laws will secure them lasting honors unless they make themselves worthy; nor permanently prevent them from filling positions for which they really fit themselves. Unreasoning prejudice itself will melt away, if they rightly use their great opportunities.

Though great changes require time, it will be the fault of the colored people themselves, if many of the rising generation do not attain wealth. Industry, sobriety, and the common school, are their true stepping stones to usefulness in the community. If the colored people make the most of these, the world will be compelled to respect them, and their best friends will be justified in the high opinion they have formed of the capabilities of the race.

Before the war, which brought out all that there was of strength, manhood, endurance and patriotism in the two sections, it was a commonly received opinion that the South was lacking in those great elements of individual success, energy and perseverance. But we may well challenge the annals of history to show an instance of more steady and rapid recovery from the devastation of war than can be furnished in Hampton.

Thirteen years ago it was literally laid in ashes, only some half dozen houses remaining unhurt, and all but three of them subsequently destroyed. Four years afterward the citizens, all but the smallest remnant of whom had become voluntary refugees, returned to their homes, or what had once been their homes, and set about the work of repairing their fallen fortunes. And now, when not ten years have elapsed since the work of reconstruction begun, we see the town exceeding its former thrift, over-reaching its original bounds, and renewing its youth for the fresh career that opens before it. True, a new generation fills our streets, but they are for the most part of the same stock and lineage of the old; only the hardships they have undergone,—the privation of the camp, the fatigue of the march, the perils of battle, the strife of conflict—have given quickness to their apprehensions, keenness to their vision, temper to their minds, resolution to their wills and courage to their hearts, so that undismayed by disaster and undaunted by difficulty they have stripped themselves for the race after wealth, and many of them are reaping the reward which their energy and industry so richly deserve.

It gives us pleasure to record instances of individual success, and to speak particularly of the improvements going on around us. Among the buildings of the town the most noticeable both as to style and location is that of Mr. J. S. Darling, just opposite Barnes' Hotel. This is a square house with mansard roof, three bay windows, two of them running up two stories, and has all the modern improvements, except gas. Mr. L. H. Sclater has built a very handsome cottage residence on the site of the old Chesapeake Hall. It is of the Jersey style of cottage,—cross-shaped, two stories high and containing eight rooms. Mr. M. Colbert, our enterprising news dealer, has now in course of erection and nearly completed, a building on Queen near the Cross streets, with six rooms above and constructed for two stores below. It is 30x40 feet with square open front, and will be one of the handsomest business houses in the place.

Mr. J. W. Richardson has just completed a new store and dwelling on the corner of Queen and Back streets, just opposite St. John's church.

All these men, with one exception, started in 1865 without a copper.

Last, but not least, the school trustees have now in course of erection a brick school-house on the old academy lot, 43x48 feet, rectangular, with break in front, two stories high, six rooms, and capacity for two hundred scholars. The house is to be heated throughout by a furnace below, and will probably be ready for occupation by January 1, 1875.

Messrs. Smithers & Daugherty are the contractors for all these houses, but Mr. C. D. Cake is the architect of the last mentioned. We rejoice in the prosperity of the town, and hope that this is but a beginning of that which is to come. We have always made it a point to keep the prosperity of the place prominently before the people, and shall still continue to do so.

"THE CHICAGO HEBREW SCHOLARSHIP."

Hampton Normal School acknowledges with peculiar pleasure, a gift under the above title, from Mr. Henry Greenebaum of Chicago (of the firm of Henry Greenebaum & Co., bankers), and others of his co-religionists in that city, who have thus provided the means to send a student through the three years course in the school, and into the field as teacher of the freedmen.

It is pleasant to have the unsectarian and unsectional character of the school thus acknowledged by sympathetic help from all hands, and particularly pleasant to see this cause recognized by the nation whose history furnishes such remarkable parallels to that of the American freedmen, that they have universally adopted it as the type of their own.

The Jewish people are everywhere noted for their ample provision for their own poor. Such an act as this is pleasing evidence that they still regard the ancient command of their great Lawgiver: "Love the stranger also, for that ye were strangers in the land of Egypt;" and still claim the blessing of Him who said: "The liberal deviseth liberal things, and by liberal things shall he stand."

AN EXCURSION.

II.

Now to resume our excursion. You remember, good reader,—or if you do not you ought to—that when we closed our last we were just turning into the "Big Corporal's" gate. Some of you may desire to know who the Big Corporal is. Well, as his nickname implies, he is a big man, and was a corporal during the late war. No! I am not going to tell you which side he fought on, for all sectional prejudices have not yet disappeared; too many of the roots of bitterness yet remain; and I am not going to write anything that will quicken or perpetuate them. These were all good enough in their place and time; but they have served their turn; and, now that they are dying, let them die. And let us not weep over their graves, or sigh for their return with their reign of terror, their deluge of blood, their burning hates, their devastating fires, their carnage, pillage, murders, and all their countless train of horrors. Suffice to say the Big Corporal was a soldier true—true to his friends and generous to his foes. "But give us his name, his name!" Ah, yes! pardon me my friends. I am too much like the Widow Bedott. But we only get together once a month, and you must make some allowance for over fullness. Well, his name is Samuel W. Phillips; and the more you see of him the better you will like him. What a rousing welcome we receive! The dogs bark it; the chickens crow it; the little pickaninny swings opens the gate and grins it; the master opens his hand and showers it; the mistress opens her heart and repeats it; the big, fat cook opens the pantry and spreads it in all the effusion of far-famed Old Virginia hospitality.

Let us just suppose that we have spent the night and after breakfast next morning are taken around by our host to look at his farm. We find the land lower, stiffer, and of a darker color than that previously examined; naturally more fertile, but requiring deeper tillage, more thorough draining, and not admitting of such variety in products cultivated; better for the smaller grains and grazing purposes, but not so well adapted to vegetables and fruits. If we might judge of the fertility of the soil from the condition of the stock we should put this down as an exceedingly fertile farm. From the pig in the sty to the horse in the plow, everything is fat and well-kept; not a hint of poverty anywhere.

But we must be moving on. We will now ride through this small skirt of woods, pay our compliments to Capt. W. P. Phillips, and then on for an hour's chat with old Uncle Ben Phillips. Why, this a neighborhood of Phillips', is n't it? Pretty much: they are all Phillips' or Heckman's, or related to them. But Uncle Ben has for years occupied a prominent place in the family. In early life filled with a love of adventure he went out west as far as the Rocky Mountains, and followed the business of trapping for a number of years. So long did he remain unheard from that his relatives gave him up for dead. But, finally growing tired of the wild life of the forests, he returned to his old home and settled down as all thought for life; but the California gold fever rekindled his thirst for adventure, and though considerably past the prime of life he once more started for the mountains and the woods. When the late war broke out his indomitable spirit again asserted itself, and with rifle in hand he won his title to the "Scout of the Peninsula." Age has silvered his hair and furrowed his cheek, but it has not yet bowed the noble spirit animating the heart that beats in his bosom. Blunt and laconic in speech; honest and straightforward in dealing; fearless of person and resolute of will,—there is yet about him a gentleness of manner that reveals the innate kindness of his heart. Pleasant as it is to sit and hear him relate his adventures by "flood and field," we must bid him good-bye and resume our ramble.

Retracing our steps a little, we soon enter Fox Hill proper. This is a peculiar country; and I think it no sin and mean no harm when I say that the people are as peculiar as the country. If you will observe, you will see that the country is formed of four, long, parallel ridges with intervening salt meadows down which run narrow, shallow streams emptying into Back River. These ridges are successively known as Wallace's, Lewis', Holton's, and Hawkins'; and the locality of a person's residence is designated by the ridge on which he lives. The meadows—or, to use the vernacular of the locality, the "marshes"—are about the same width as the ridges, but extend much beyond them, forming on the northern side, what might, perhaps, properly be called a tide-water prairie. The country is quite thickly populated, the land being divided into farms of from five and ten to fifty and sixty acres. But until late years, and even now to some extent, the cultivation of the soil was of secondary importance, the inhabitants living mainly from the water, fishing in summer and oystering in winter. Some of them are also employed as mechanics and laborers in the Government works at Fort Monroe. Here is furnished a beautiful illustration of the readiness with which man adapts himself to the conditions of climate, soil and geographical position. With a soil thin and unproductive, much of it subject to tidal overflow; and, until recently, poor facilities for transportation to market,—it was evident that nothing commensurate with man's ordinary necessities could be accomplished by agriculture; but there were two adjuncts to it which presented themselves and which they were keen to perceive and quick to avail themselves of. The waters around them abounded in fish and oysters; and the salt meadows could afford pasturage for hundreds of cattle: so, turning their attention mainly to these, they contented themselves with only sufficient cultivation of the soil to supply the necessary grain and vegetables for home consumption. The cattle are small, hardy and inferior, but very tenacious of life. They are allowed to run at large, and rarely if ever fed. Where the choice breeds such as the Alderney and Devon would perish from hunger, they can give a good crab choice of position and then thrive.

But I must bring this ramble to a close reserving further mention of the people in my next.

CRAB.

For the SOUTHERN WORKMAN.

PRACTICE AND THEORY.

In conversation with a friend, a farmer relates his experience in raising grapes and trees, entering into the minutest details; sometimes becoming quite eloquent when describing his victories over the enemies which infest them.

"His knowledge," he said, "was gained by dint of application, by actual experience and hard labor. It was none of your book knowledge, written by men who knew nothing about farming."

The above is quoted because it illustrates a very common idea among successful practical men, who are themselves very worthy of being written upon, for the instruction of beginners. They are cautious about book knowledge; probably because they have been misled, and lost time and money. But it is evident from the large advantage which many succeed in deriving from books, that the trouble is often as much in the reader as in the writer. Narratives truthfully drawn up, cannot mislead, except where the circumstances differ, and the readers are not skillful enough to make the necessary allowances. For instance, on the subject of drainage: where there is too much water, as in England, a story of scientific farming treats of good drainage first. But where there is too little water, as in Colorado, scientific farming means irrigation. In both cases, as also in Virginia, scientific farming is the proper recipe, but it would hardly do for a pioneer at Greeley to use an English farm dictionary. And so in regard to the whole range of out-door management,—a wise adaptation of means to ends, requires an entire reversal of methods at times, and important modifications generally of written instructions.

Lest the writer should be suspected of prejudice upon the subject of drainage, he would state that he has used tiles, and is a full believer in them in the North.

In 1869 he saw laid about four hundred yards of tile drains on an acre of the Hampton School farm as an experiment. He is confident that the money was sunk, in the American sense of the term.

With much deference to Northern and English prejudice he would state his profound conviction that neither a Yankee nor an Englishman is competent to grow a first-class crop of corn at Norfolk, unless he uses the local experience. If the superficial crust is broken during a dry time, and the air admitted, the crop will be spoiled. Scientific farming at Norfolk during dry weather means a deep, mellow bed, not too porous, *under the crust;* and an Englishman would drain away the needed moisture, while a Yankee would aerate the crop to dryness with his cultivator. However unpalatable these facts to strangers, they are the fruit of actual observation on the ground, by one who came but a few years since to Virginia, strongly prejudiced in favor both of tile drainage and constant cultivation. The refusal to recognize *facts*, which conflict with theories elsewhere, can only result in disaster to the new comer, and discouragement to the cause of emigration.

Riding some years since on the head waters of the Roanoke, the driver told of several Northern men who had come into that country soon after the war, with the intention of showing the natives how to farm. They launched out largely, built great barns, and had fine cattle. But the driver remarked that they did not raise as big crops as the farmers around there, and had all gone home. It was a saddening story to the writer, who is always sorry to hear of Yankee or Englishman, going home *from* Virginia. It is to be feared the people to whom the wanderer returns, will fail to comprehend, that he had himself only to blame for not finding or making a delightful home in the old State, whose natural advantages are so far superior to any of her Northern sisters, and who offers immensely better chances than the West, to persons who come prepared to use their previous knowledge of farming, rather as furnishing hints, than infallible rules defiant of climate.

OBSERVER.

Correspondence.

From our London Correspondent.

LONDON, *June* 25, 1874.

I have often wished since I came over here that I had the gift of sketching from nature. I could fill a Webster's Dictionary (unabridged) with views of little interesting things that one sees here at every turn,—ivy-covered walls, groups of trees, glimpses of water, and almost every conceivable variety of charming miniature landscapes. At the Crystal Palace, especially, one might sketch for days or weeks over, and not exhaust the subject. The gardens here are lovely—beautifully laid out, and covering I should think thirty acres; with beautiful fountains, inviting little arbors and summer houses, clumps of trees here and there, and delightful walks and winding paths in all directions. From the top of the Tower, which is two hundred feet higher than the dome of St Paul's, it all looks like a huge Chinese puzzle. Part of the grounds nearest the Palace are terraced, with massive granite steps and great Egyptian Sphinxes on each side, making the front approach very imposing in appearance. The whole building is in itself a great curiosity, and looks anything but substantial; nothing can be seen but iron and glass except the wooden floors in some parts. The Tower looks like a structure of open-work ivory, but when one is within it proves to be very solid and finely built.

A stroll about the streets or suburbs of London is always sure to be interesting. In whatever direction one may turn his steps, the various styles of architecture, the magnificence of some of the public buildings, the quaint oddity of others, the ivy or moss-covered edifices, the ancient churches—the ornamentation elegant, elaborate, sometimes grotesque—and over all, the general flavor of antiquity, long-established, time-honored respectability,—give an almost solemn charm to it in the eyes of an American accustomed to the stamp of comparative newness everywhere surrounding him. I wish that in our goodly land there were more buildings erected that would give promise of standing to grow venerable with age, gathering around them the associations and memories of added years, that they might be treasured with affectionate veneration in the hearts of coming generations. But we are in too great a hurry to see everything that we begin, done and finished up; and I greatly fear that edifices such as Westminster Abbey, for instance (of which I intend to write more particularly in a future letter), which was centuries in building, will not soon form a part of any American landscape.

In company with my friend and room-mate F. I have recently made a short visit to Brighton—the English Saratoga, or rather Newport; being on the sea I often long for a whiff of the salt sea air (not being so oppressed with a sense of the nearness of every part of the Island to the sea as was the old gentleman who said he was afraid to go to bed in England least in his sleep he might tumble out and roll into the Ocean). Oh, for a sail in the *Quakeress* or a row in the *Queen Emma* on the waters of Hampton; or even the tamer sort of boating upon the beautiful Charles River, where I have spent so many pleasant hours!

Brighton is situated directly upon the southern coast of England. A very pleasant ride of an hour and a half brought us there early in a pleasant June afternoon. It was not the fashionable "season" at that time; so of course we saw nothing of the style and elegance which display themselves there some few weeks later; but we saw a good deal; in fact, about all of the place, which seemed to us rather an inferior one, possessing few of the attractions one looks for in a watering place famous as this is. There is really no beach—properly so called. What passes for one is all stones, no sand, and altogether, not inviting as a bathing place. We arrived at half past three and struck at once for the sea, which was visible just at the foot of Queen's Road. This begins opposite the depot and leads directly to King's Road, which follows along the beach (such as it is) not more than a hundred feet from the shore. Of course we visited the world-renowned aquarium; but here again we were greatly disappointed; perhaps our expectations were unreasonable; but we had been told it was the largest and most perfect one in the world; but I think the one at the Crystal Palace, though on a much smaller scale, is in every other respect fully equal to it. We saw a live Octopus (a sort of India-rubber ball with about two hundred legs), which employs itself in gyrating around its tank and taking in small fishes or anything else that comes within its reach. After refreshing ourselves (it being a very hot day) with ice cream served to us below the surface of Mother Earth, we sallied forth and walked all around that part of the town. We spent the night at a very nice boarding house, the proprietor of which was a friend of one of my teachers at the academy, enjoyed greatly our excellent supper here and the refreshing night's sleep which followed it.

The next morning we went out to the "Devil's Dyke," a natural curiosity about six miles from Brighton. Our obliging host very kindly gave us the use of his phaeton, and a pair of beautiful little ponies which took us out there in less than half an hour, though it was an uphill road all the way. Ponies are in very common use here; but I think I never saw a handsomer pair than these. The summit of the Dyke being reached, we were assailed by a daguerreotype artist, and as he shewed us some very good pictures he had taken, we sat, phaeton, ponies and all, for ours; and the result was very satisfactory.

The view from the top of the enbankment is grand; the country stretches out for miles around like a panorama. Looking straight down, the wheat fields and pastures resemble the squares on a checker-board; the men look like children; from this elevation we could see parts of sixteen different counties. We staid about an hour enjoying the bracing air and beautiful view and then started on our return trip. Going out, we rode all around the east part of the town, and returning we took in the west side; so that we think we have a tolerably correct idea of Brighton and its surroundings. The ponies were fresh after their hour's rest and ready to come flying over the down hill road, and it was only by a strong pull upon the reins and the aid of a small brake attached to the carriage, that they could be coaxed into a steady trot; but they brought us back safely to the house. After paying our bill for bed and board, and personally expressing our thanks to our kindly host for the pleasant ride we had enjoyed, through his friendly courtesy, we made our way very leisurely to the depot, and taking the 5 P. M. express, were in our room in London again by eight, feeling abundantly refreshed and invigorated by our seaward jaunt. I must not forget to mention that we were both out upon the water for a short time—F. in a boat and I in a *Kyak*, a sort of canoe which one sees here on the waters of Regent's Park.

Such an excursion as this takes us entirely out of our usual routine, which is music in some shape or other, and we enjoy it none the less for that. Our hours of study and practice do not give us ordinarily much time for anything else, though we try to get a walk somewhere every day, either going to or coming from lessons, when the time is not so limited as to oblige us to make use of more speedy methods of locomotion. On Sunday afternoons we usually stroll out into the country. Hampstead Heath is one of our favorite places of resort; here is always a fresh, breezy atmosphere. One can take a long walk, too, within the limits of Regent's Park, where there is much to see and enjoy; and, in fact, in this immense city and its immediate suburbs, one can hardly fail of finding objects of interest sufficiently novel and attractive to make a long walk enjoyable in any direction.

K.

"THE HEAVENS DECLARE THY GLORY."

ADDISON.

The spacious firmament on high,
With all the blue, ethereal sky,
And spangled heavens, a shining frame,
Their great Original proclaim.
Th' unwearied sun from day to day
Does his Creator's power display,
And publishes to every land,
The work of an Almighty Hand.

Soon as the evening shades prevail,
The moon takes up the wondrous tale,
And nightly to the listening earth,
Repeats the story of her birth;
While all the stars that round her burn,
And all the planets in their turn,
Confirm the tidings as they roll,
And spread the truth from pole to pole.

What though in solemn silence all
Move round the dark, terrestrial ball?
What though no real voice nor sound
Amid their radiant orbs be found?
In reason's ear they all rejoice,
And utter forth a glorious voice,
Forever singing as they shine,
"The hand that made us is divine."

JOSEPH ADDISON.

The beautiful hymn which we publish this month is, or ought to be, an old friend to all lovers of English poetry; and its author, Joseph Addison, was in his day held to be one of the great English poets. His stilted and frigid lines, however, are not much to the taste of modern readers, and his fame now depends upon his elegant and finished prose, which still stands as a model to all writers of English.

He was born in 1672, in the county of Wiltshire, England, his father being at the time rector of a parish there, and was educated at the University of Oxford. He early became known for the ease and beauty of his Latin verse; but his translations and English writings introduced him more directly to the public, and the influential friends whom he made procured for him official positions and a pension from the crown. He traveled considerably on the Continent, holding various offices; and in 1709 commenced, in company with his friend Richard Steele, the publication of the famous paper called the "Tattler," which was followed in 1711 by its still more famous successor, the "Spectator"; and it is upon his share in these periodicals that his fame mainly depends. He continued to write and to mix in public affairs, until, in 1716, he married the Dowager-Countess of Warwick, and in the following year was made secretary of state. His marriage was an unhappy one, and his office little to his taste, so that the failure of his health, produced in great part by indulgence in drink, induced him to resign his position as secretary, and return to private life. The change, however, afforded him no relief; and in 1749 he died, having only reached his forty-eighth year, and being still in the fulness of his powers.

He has left us examples of a school of popular writing unsurpassed for grace and animation of style; and students may safely devote some of their leisure moments to the careful reading of his contribution to the "Tattler," "Spectator," and "Guardian."

RIP VAN WINKLE.

The ragged, grey-bearded figure standing this month upon our first page is the hero of one of the most famous stories or legends in American literature; and as he has been immortalized by the pen of Washington Irving, one of America's greatest writers, we feel that we need no farther excuse for introducing him to our readers. As nearly as possible, then, in Washington Irving's own words we offer you his story, making only such omissions and unimportant changes as are rendered necessary by want of space.

"Whoever has made a voyage up the Hudson must remember the Kaatskill Mountains which are seen away to the west of the river, swelling up to a noble height, and lording it over the surrounding country. At the foot of these fairy mountains the voyager may have descried the light smoke curling up from a village whose shingle roofs gleam among the trees, and which is of great antiquity, having been founded by some of the Dutch colonists in the early times of the province.

Within a few years there were standing in this village some of the houses of the original settlers, built of small, yellow bricks brought from Holland, having latticed windows and gable fronts, surmounted with weather-cocks.

"In one of these very houses, there lived many years since, while the country was yet a province of Great Britain, a simple, good-natured fellow of the name of Rip Van Winkle. He was a kind neighbor, and an obedient, hen-pecked husband—to which latter circumstance was perhaps owing that meekness of spirit which gained him such universal popularity. It was his termagant wife, too, that made him such a favorite among all the good wives of the village, who, as usual with the amiable sex, took his part in all family squabbles; and never failed, whenever they talked those matters over in their evening gossipings, to lay all the blame on Dame Van Winkle. The children of the village, too, would shout with joy whenever he approached. He assisted at their sports, made their playthings, taught them to fly kites and shoot marbles, and told them long stories of ghosts, witches, and Indians.

"The great trouble with Rip was a strong aversion to all kinds of profitable labor. It was not for lack of perseverance; for he would sit on a wet rock, with a rod as long and heavy as a Tartar's lance, and fish all day without a murmur, even though he did not get a single nibble. He would carry a fowling-piece on his shoulder for hours together, trudging through woods and swamps, and up hill and down dale, to shoot a few squirrels or wild pigeons. He would never refuse to assist a neighbor even in the roughest toil; and was a foremost man at all country frolics for husking Indian corn, or building stone fences. The women of the village, too, used to employ him to run their errands, and to do such little odd jobs as their less obliging husbands would not do for them. In a word, Rip was ready to attend to any body's business but his own; but as to doing family duty, and keeping his farm in order, he found it impossible. In fact, he declared it was of no use to work on his farm: it was the most pestilent little piece of ground in the whole country; every thing about it went wrong and would go wrong in spite of him. His fences were continually falling to pieces; his cow would either go astray or get among the cabbages; weeds were sure to grow quicker in his fields than anywhere else; the rain always made a point of setting in just as he had some out-door work to do,—so that though his estate had dwindled away under his management acre by acre, until there was little more left than a mere patch of Indian corn and potatoes, yet it was the worst conditioned farm in the neighborhood. His children, too, were as ragged and wild as if they belonged to nobody, and his son Rip, an urchin begotten in his own likeness, promised to inherit the habits with the old clothes of his father.

"Rip Van Winkle, however, was one of those happy mortals of foolish, well-oiled dispositions, who take the world easy; eat white bread or brown;—whichever can be got with least thought or trouble—and would rather starve on a penny than work for a pound. If left to himself, he would have whistled life away in perfect contentment; but his wife kept continually dinning in his ears about his idleness, his carelessness, and the ruin he was bringing on his family. Morning, noon and night her tongue was incessantly going. And Rip had but one way of replying to all lectures; he shrugged his shoulders, shook his head, cast up his eyes, but said nothing.

"Rip's sole domestic adherent was his dog Wolf, who was as much hen-pecked as his master; for Dame Van Winkle regarded them as companions in idleness; and even looked upon Wolf with an evil eye as the cause of his master's going so often astray.

"Times grew worse and worse with Rip Van Winkle as years of matrimony rolled on; a tart temper never mellows with age, and a sharp tongue is the only edged tool that grows keener with constant use. For a long while he used to console himself when driven from home, by frequenting a kind of perpetual club of the sages, philosophers, and other idle personages of the village, which held its sessions on a bench before a small inn, designated by a rubicund portrait of His Majesty George the Third. Here they used to sit in the shade through a long, lazy summer's day, talking listlessly over village gossip, or telling endless sleepy stories about nothing. The opinions of this junto were completely controlled by Nicholas Vedder, a patriarch of the village and landlord of the inn, at the door of which he took his seat from morning till night, just moving sufficiently to avoid the sun and keep in the shade of a large tree; so that the neighbors could tell the hour by his movements as accurately as by a sun dial.

"From even this stronghold the unlucky Rip was at last routed by his termagant wife, who would suddenly break in upon the tranquility of the assemblage and call the members all to naught, so that poor Rip was at last reduced almost to despair; and his only alternative to escape from the labor of the farm and clamor of his wife, was to take gun in hand and stroll away into the woods. Here he would sometimes seat himself at the foot of a tree and share the contents of his wallet with Wolf, with whom he sympathized as a fellow sufferer in persecution.

"In a long ramble of this kind, on a fine, autumnal day, Rip had unconsciously scrambled to one of the highest parts of the Kaatskill Mountains. He was after his favorite sport of squirrel shooting, and the still solitudes had echoed and re-echoed with the reports of his gun. Panting and fatigued, he threw himself, late in the afternoon, on a green knoll covered with mountain herbage, that covered the brow of a precipice. From an opening between the trees he could overlook all the lower country for many a mile of rich woodland. He saw at a distance the lordly Hudson, far, far below him; and on the other side he looked down into a deep mountain glen, scarcely lighted by the reflected rays of the setting sun. For some time Rip lay musing on this scene; evening was gradually advancing, the mountains began to throw their long, blue shadows over the valleys; he saw that it would be dark long before he could reach the village, and he heaved a heavy sigh when he thought of encountering the terrors of Dame Van Winkle.

"As he was about to descend, he heard a voice from a distance, hallooing, 'Rip Van Winkle! Rip Van Winkle!' He looked around but could see nothing but a crow winging its solitary flight across the mountain. He thought his fancy must have deceived him and turned again to descend, when he heard the same crying through the still evening air: 'Rip Van Winkle! Rip Van Winkle!' At the same time Wolf bristled up his back, and, giving a low growl, skulked to his master's side, looking fearfully down into the glen.

"Rip now felt a vague apprehension stealing over him; he looked anxiously in the same direction, and perceived a strange figure slowly toiling up the rocks and bending under the weight of something he carried on his back. He was surprised to see any human being in this lonely and unfrequented place; but supposing it to be some one of the neighborhood in need of assistance he hastened down to yield it.

"On nearer approach he was still more surprised at the singularity of the stranger's appearance. He was a short, square built old fellow, with thick, bushy hair and a grizzled beard. His dress was of the antique, Dutch fashion—a cloth jerkin strapped round the waist; several pair of breeches, the outer one of ample volume, decorated with rows of buttons down the sides, and bunches at the knees. He bore on his shoulder a stout keg that seemed full of liquor, and made signs for Rip to approach and help him with the load. Though rather shy and distrustful of this new acquaintance, Rip complied with his usual alacrity; and mutually relieving each other, they clambered up a narrow gully, apparently the dry bed of a mountain torrent.

"As they ascended, Rip every now and then heard long, rolling peals, like distant thunder, that seemed to issue out of a deep ravine, or rather cleft, between two lofty rocks, toward which their rugged path conducted. Passing through the ravine, they came to a hollow like a small amphitheatre. But during the whole of their ascent Rip and his companion never broke the silence; for though the former marvelled greatly what could be the object of carrying a keg of liquor up this wild mountain, yet there was something strange and incomprehensible about the unknown that inspired awe and checked familiarity.

"On entering the amphitheatre new objects of wonder presented themselves. On a level spot in the centre was a company of odd-looking personages playing at nine-pins. They were dressed in a quaint, outlandish fashion: some wore short doublets; others jerkins, with long knives in their belts; and most of them had enormous breeches, of similar style with that of the guide's. Their visages, too, were peculiar: one had a large head, broad face, and small, piggish eyes; the face of another seemed to consist entirely of nose, and was surmounted by a white, sugar-loaf hat, set off with a little red cock's tail. They all had beards, of various shapes and colors. There was one who seemed to be the commander. He was a stout old gentleman, with a weather-beaten countenance; he wore a laced doublet, broad belt and hanger, high-crowned hat and feather, red stockings, and high-heeled shoes with roses in them.

"What seemed particularly odd to Rip was that though these folks were evidently amusing themselves, yet they maintained the gravest faces, the most mysterious silence, and were, withal, the most melancholy party of pleasure he had ever witnessed. Nothing interrupted the stillness of the scene but the noise of the balls, which, whenever they were rolled, echoed along the mountains like rumbling peals of thunder. As Rip and his companions approached them, they suddenly desisted from their plays and stared at him with such fixed, statue-like gaze, and such strange, uncouth, lack-lustre countenances, that his heart turned within him and his knees smote together. His companion now emptied the contents of the keg into large flagons, and made signs for him to wait upon the company. He obeyed with fear and trembling; they quaffed the liquor in profound silence and returned to their game.

"By degrees Rip's awe and apprehension subsided. He even ventured, when no eye was fixed upon him, to taste the beverage, which he found had much the flavor of excellent Hollands. He was naturally a thirsty soul, and was soon tempted to repeat the draught. One taste provoked another; and he reiterated his visits to the flagon so often that at length his senses were overpowered, his eyes swam in his head, his head gradually declined and he fell into a deep sleep.

"On waking he found himself on the green knoll whence he had first seen the old man of the glen. He rubbed his eyes—it was a bright, sunny morning. 'Surely,' thought Rip, 'I have not slept here all night.' He recalled the occurrences before he fell asleep,—the strange man with a keg of liquor; the mountain ravine; the wild retreat among the rocks; the woe-be-gone party of nine-pins; the flagon—'Oh, that flagon!' that wicked flagon!' thought Rip,' what excuse shall I make to Dame Van Winkle!'

"He looked around for his gun, but in place of the clean, well-oiled fowling-piece, he found an old firelock lying by him, the barrel incrusted with rust, the lock falling off, and the stock worm-eaten. He now suspected that the grave roysters of the mountain had put a trick upon him, and having dosed him with liquors had robbed him of his gun. Wolf, too, had disappeared, but he might have strayed away after squirrel or partridge. He whistled after him and shouted his name, but all in vain; the echoes repeated his whistle and shout, but no dog was to be seen.

"He determined to revisit the scene of the last evening's gambol, and if he met with any of the party to demand his dog and gun. As he rose to walk he found himself stiff in the joints and wanting in his usual activity. 'These mountain beds

do not agree with me,' thought Rip, 'and if this frolic should lay me up with a fit of the rheumatism, I shall have a blessed time with Dame Van Winkle.' With some difficulty he got down into the glen; he found the ravine up which he and his companion had ascended the previous evening; but, to his astonishment, a mountain stream was now foaming down it, leaping from rock to rock and filling the glen with babbling murmurs. He, however, made shift to scramble up its sides, and at length he reached to where the ravine had opened through the cliffs to the amphitheatre; but no traces of such an opening remained: the rocks presented a high, impenetrable wall, over which the torrent came tumbling in a sheet of feathery foam, and fell into a broad, deep basin, black from the shadows of the surrounding forest. Here, then, poor Rip was brought to a stand. He again called and whistled after his dog; he was only answered by the cawing of a flock of idle crows. What was to be done? The morning was passing away, and Rip felt famished for want of his breakfast. He grieved to give up his dog and gun; he dreaded to meet his wife; but it would not do to starve among the mountains. He shook his head, shouldered his rusty firelock, and with a heart full of trouble and anxiety, turned his steps homeward.

"As he approached the village, he met a number of people, but none whom he knew, which somewhat surprised him, for he had thought himself acquainted with every one in the country round. Their dress, too, was a different fashion from that to which he had been accustomed. They all stared at him with equal marks of surprise, and whenever they cast their eyes upon him, invariably stroked their chins. The constant recurrence of this gesture induced Rip, involuntarily, to do the same, when, to his astonishment, he found his beard had grown a foot long.

"He had now entered the skirts of the village. A troop of strange children ran at his heels, hooting at him and pointing at his grey beard. The dogs, too, not one of which he recognized as an old acquaintance, looked at him as he passed. The very village was altered: it was larger and more populous; there were rows of houses which he had never seen before, and those which had been his familiar haunts had disappeared. Strange names were over the doors; strange faces at the windows; everything was strange. His mind now misgave him; he began to doubt whether both he and the world around him were not bewitched. Surely this was not his native village, which he had left but the day before. There stood the Kaatskill Mountains; there ran the silver Hudson at a distance; there was every hill and dale precisely as it had always been—Rip was sorely perplexed. 'That flagon last night,' thought he, 'has addled my poor head sadly!'

"It was with some difficulty that he found his way to his own house, which he approached with silent awe, expecting every moment to hear the shrill voice of Dame Van Winkle. He found the house going to decay—the roof fallen in, the windows shattered, and the doors off their hinges. A half-starved dog that looked like Wolf was skulking about it. Rip called him by name, but the cur snarled, showed his teeth, and passed on. This was an unkind cut, indeed. 'My very dog,' sighed poor Rip, 'has forgotten me.'

"He entered the house, which, to tell the truth, Dame Van Winkle had always kept in neat order. It was empty, forlorn, and apparently abandoned. This desolateness overcame all his fears,—he called loudly for his wife and children—the lonely chambers rang for a moment with his voice—and then all again was silence.

"He now hurried forth, and hastened to his old resort, the village inn; but it, too, was gone. A large, rickety, wooden building stood in its place, and though there was as usual a crowd of folk about the door, yet Rip recollected none of them, and their talk about rights of citizens, elections, members of Congress, liberty, Bunker's Hill, heroes of Seventy-six, and other words, were a perfect Babylonish jargon to the bewildered Van Winkle.

"The appearance of Rip, with his long, grizzled beard, his rusty fowling-piece, his uncouth dress, and an army of women and children at his heels, soon attracted the attention of the tavern politicians. They crowded round him, eyeing him from head to foot with great curiosity. One bustled up to him, and drawing him partly aside inquired on which side he voted? Rip stared in vacant stupidity. Another short but busy little fellow pulled him by the arm, and rising on tiptoe, inquired in his ear whether he was Federal or Democrat? Rip was equally at a loss to comprehend the question, and somewhat dismayed, cried out, 'Alas, gentlemen! I am a poor, quiet man, a native of the place, and a loyal subject of the king—God bless him!'

"Here a general shout burst from the bystanders—'A tory! a tory! a spy! a refugee! hustle him! away with him!' It was with great difficulty that a self-important man in a cocked hat restored order, and with an austere brow, demanded again of the unknown culprit what he came there for, and whom he was seeking? The poor man humbly assured him that he meant no harm, but merely came there in search of some of his neighbors, who used to keep about the tavern.

"'Well, who are they? Name them.'

"Rip bethought himself for a moment, and inquired 'Where's Nicholas Vedder?'

"There was silence for a little while, when an old man replied in a thin, piping voice, 'Nicholas Vedder! why he is dead and gone these eighteen years! There was a wooden tomb stone in the churchyard that used to tell all about him, but that's rotten and gone, too.'

"'Where's Brom Dutcher?'

"'Oh, he went off to the army in the beginning of the war; some say he was killed at the storming of Stony Point; others say he was drowned in a squall at the foot of Anthony's Nose. I don't know—he never came back again.'

"'Where's Van Bummel, the schoolmaster?'

"'He went off to the wars, too, was a militia general, and is now in Congress.'

"Rip's heart died away at hearing of these sad changes in his home and friends, and finding himself thus alone in the world. Every answer puzzled him, too, by treating of such enormous lapses of time, and of matters which he could not understand,—war, Congress, Stony Point; he had no courage to ask after any more of his friends, but cried out in despair, 'Does any one here know Rip Van Winkle?'

"'Oh, Rip Van Winkle!' exclaimed two or three; 'oh, to be sure! that's Rip Van Winkle, yonder, leaning against the tree.'

"Rip looked, and beheld a precise counterpart of himself as he went up the mountain: apparently as lazy, and certainly as ragged. The poor fellow was now completely confounded. He doubted his own identity, and whether he was himself or another man. In the midst of his bewilderment, the man in the cocked hat demanded who he was, and what was his name?

"'God knows!' exclaimed he, at his wit's end; 'I'm not myself—I 'm somebody else—that's me yonder—no, that's somebody else got into my shoes—I was myself last night, but I fell asleep on the mountain, and they 've changed my gun, and everything 's changed, and I 'm changed, and I can't tell what 's my name, or who I am.'

"The by-standers began now to look at each other, nod, wink significantly, and tap their fingers against their foreheads. At this critical moment a fresh, comely woman pressed through the throng to get a peep at the grey-bearded man. She had a chubby child in her arms, which, frightened at his looks, began to cry. 'Hush, Rip,' cried she, 'hush, the old man won't hurt you.' The name of the child, the air of the mother, the tone of her voice, all awakened a train of recollections in his mind.

"'What is your name, my good woman?' asked he.

THE EARL-KING.

"'Judith Gardenier.'

"'And your father's name?'

"'Ah, poor man! Rip Van Winkle was his name; but it 's twenty years since he went away with his gun, and never has been heard of since—his dog came home without him, but whether he shot himself, or was carried away by the Indians, nobody can tell. I was then but a little girl.'

"Rip had but one more question to ask; but he put it with a faltering voice:

"'Where's your mother?'

"'Oh, she, too, died but a short time since; she broke a blood-vessel in a fit of passion at a New England peddler.'

"There was a drop of comfort, at least, in this intelligence. The honest man could contain himself no longer. He caught his daughter and her child in his arms. 'I am your father!' cried he—'young Rip Van Winkle once—old Rip Van Winkle, now. Does any body know poor Rip Van Winkle?'

"All stood amazed, until an old woman, tottering out from among the crowd, put her hand to her brow, and peering under it in his face for a moment, exclaimed, 'Sure enough! it is Rip Van Winkle—it is himself! Welcome home again, old neighbor—Why, where have you been these twenty long years?'

"Rip's story was soon told, for the whole twenty years had been to him but as one night. The neighbors stared when they heard it; some were seen to wink at each other, and there was a general shaking of the head throughout the assemblage. It was determined, however, to take the opinion of old Peter Vanderdonk, who was seen slowly advancing up the road. Peter was the most ancient inhabitant of the village, and well versed in all the wonderful traditions of the neighborhood. He recollected Rip at once, and corroborated his story by assuring the company that it was a fact, handed down from his ancestors, that the Kaatskill Mountains had always been haunted by strange beings; that it was affirmed that the great Hendrick Hudson, the first discoverer of the river and country, kept a kind of vigil there every twenty years, with his crew of the Half-Moon; being permitted in this way to revisit the scenes of his enterprise. That his father had once seen them in their old Dutch dresses playing at nine-pins in a hollow of the mountains; and that he, himself, had heard, one summer afternoon, the sound of their balls, like distant peals of thunder.

"To make a long story short, the company broke up, and returned to the more important concerns of the election. 'Rip's daughter took him home with her;—she had a snug, cheery house, and a stout, good-natured farmer for a husband, whom Rip recollected for one of the urchins who used to climb upon his back. As to Rip's son and heir, who was the ditto of himself seen leaning against the tree, he was employed to work on the farm, but evinced a hereditary disposition to attend to anything else but his business. Rip now returned to his old walks and habits; he soon found many of his former cronies, though all rather the worse for the wear and tear of time; and preferred making friends among the rising generation, with whom he soon grew into great favor.

"Having nothing to do at home, and being arrived at that happy age when a man can be idle with impunity, he took his place once more on the bench at the inn door, and was reverenced as one of the patriarchs of the village.

"He used to tell his story to every stranger that arrived at Mr. Doolittle's hotel. He was observed at first to vary on some points every time he told it, which was, doubtless, owing to his having so recently awaked. It at last settled down to precisely the tale I have related, and not a man, woman or child in the neighborhood, but knew it by heart. Some always pretended to doubt the reality of it, and insisted that Rip had been out of his head, and this was the one point on which he always remained flighty. The old Dutch inhabitants, however, almost universally give it full credit.

"Even to this day, they never hear a thunder-storm of a summer afternoon about the Kaatskill, but they say Hendrick Hudson and his crew are at their game of nine-pins; and it is a common wish of all hen-pecked husbands in the neighborhood, when life hangs heavy on their hands, that they might have a quieting draught out of Rip Van Winkle's flagon."

ECONOMY.

Of all civilized nations it is said that Americans are the most extravagant, and foreigners are continually shocked by what they consider the heedless waste of our housekeeping, especially among the poorer classes. In our cookery above all, there is much spoiled, or actually thrown away, which in other countries would be carefully prepared and eaten. Our prosperity as individuals depends so much upon the economical use of our means, that none of us can afford to despise small things,—to squander the pennies, to throw away the crusts, to burn the rags, or to idle away the minutes.

There is a wide difference between economy and stinginess,—so wide that in fact it is only the economical man who can afford to be generous; and there is certainly no disgrace in the thriftiness which is almost always the foundation upon which fortunes are built and success and comfort established.

Very few men and women who are personally careless and extravagant succeed in making competencies, or even in keeping themselves out of the terrible grip of poverty; and perhaps the first and most necessary advice to be given to young people of either sex, in commencing life, is that they should watch over their small

expenses, guard against all careless expenditure, and learn early the importance of economy.

Translated from the German for the SOUTHERN WORKMAN.

THE ERL-KING.

BY. H. W. L.

[The Erl-king, or Elf-king, is a mischievious being in the fairy stories of Germany. Several translations have been made of this pretty song, hut as I have not one within my reach, I must try to make one of my own for our readers.]

Who rideth so late through the night wind wild?
It is the father with his child;
He holds his darling close in his arm,
He claspeth him safely, he foldeth him warm.

"My son, why hidest thy face with fear?"—
"Seest thou not, father, the Erl-king near?
The Erlen-king, with train and crown?"—
"My son, 'tis the mist-wreath, floating down."

"Thou lovely child, come, go with me!
The prettiest plays I will play with thee;
Many hued flowers there are seen;
My mother has dresses of golden sheen."

"My father, my father, and dost thou not hear
What the Erl-king is whispering soft in mine ear?"—
"Be quiet, my darling, thine ear deceives;
'Tis the wind that is whispering among the dead leaves."

"And will thou not go with me then, pretty boy!
My daughters are waiting to lend thee with joy;
They will lead thy steps in the moonlit ring,
Dance with thee, dandle thee, merrily sing."

"My father, my father, look yonder and see
Where the Erlen-king's daughters are nodding to me."—
"My boy, I see well where thy fancies play:
'Tis the shimmering willow, old and grey."

"I love thee my beauty;—I love thee, I say,
And, willing or not, I shall bear thee away."—
"O father, the Erl-king is following fast!—
He seizes!—he hurts me!—he has me at last!"

The father shudders, and fast and wild
He rides like the wind with his moaning child.
He reaches his threshold with toil and dread—
Alas! in his bosom, his child lies dead!

Do our readers think that our picture is not altogether a good illustration of the poem? It is open to that objection, we confess. We should say that the little fellow is an American boy, and not so afraid of ghosts and fairies as the little German boys used to be. Perhaps some of the school children can write a story about him.

It is a pretty picture at any rate,—is it not?—for which we are much indebted to Mr. Shorey.

THE COLORED RACE IN CANADA.

The story of the refugees from slavery who have found a home on Canadian soil has never been adequately written, yet it would form a most interesting and valuable chapter in the history of the Afric-American race.

I have endeavored, in a flying trip through two of the Canadian Provinces with the Hampton Student Singers, to collect such information on the subject as came within my reach, for the benefit of the readers of the SOUTHERN WORKMAN, many of whom have a personal interest deeper than mere curiosity in this land of the North Star.

By far the largest proportion of the colored population of Canada is in the Province of Ontario.

The British Dominion of Canada is divided into provinces corresponding in general features of distinctive government to the states of our Union. The Province of Ontario is the most southern and western of these, separated only hy Lake Erie from Ohio, and hy the Detroit River from the southeastern corner of Michigan, close to the Ohio boundary. Its geographical position made it therefore the easiest point of escape for the fugitive slave; the nearest door into the land of liberty,—always open and always thronged.

The tide of emigration received of course a great impetus by the passing of the fugitive slave law in 1850, and, at that time, many who had been living in New York and New England crossed the St. Lawrence into the more northern Province of Quebec, settling in Montreal and other cities. Very few scattered into the more distant provinces, and Ontario still received the largest number of emigrants, especially in its southwestern part.

Once safely over the border they had neither the means nor the inclination usually to seek further. Here, therefore, we still find them and their descendents to the third generation; numbering, by the last census, fifty thousand in the Province and eleven thousand seven hnndred in its southwestern county of Kent.

They had, indeed, no reason to look further, finding themselves at once not only among friends, and often relatives from whom they had been long separated, hut in the midst of the finest farming lands in the whole Dominion, much of it belonging to the Crown, and to be had at very low rates. Bnt what avail low rates to men who are penniless and ignorant, one may ask. It is true, no douht, that the early history of the fugitives was one of hardship and struggle, and the weakest of body or soul went under; bnt, that most of those who had the enterprise to escape had also the energy to rise when they had any chance, the facts of their present condition abundantly prove.

The little town Chatham itself, with twelve hundred colored inhabitants, has sent back to the States a number of representative men from the refugees, and their children. Among these are the Honorable Y. S. Rapier, and Isaac D. Shadd, members of congress, from Alabama; Wm. H. Jones, Jr., and Alfred Bowler, senators in the legislature of South Carolina; Dr. A. R. Ahbott, a graduate of the University of Toronto, held a position as surgeon in the United States Army during the war.

The best engraver and gunsmith in the Dominion is Mr. James M. Jones, a colored man of Chatham. These and other interesting particulars I received from Mr. Isaac Holden, himself one of the leaders of his people, though, with the blood of four races in his veins,—Irish, Dutch, African, and Indian—it might be difficult, strictly speaking, to say what his people are. He identifies himself with the colored race, however, and is the first colored man who has held office under the Canadian government: that of Inspector and Superintendent of Public Works at the Insane Asylum in London, Ontario. Mr. Holden was freehorn, a master huilder in Louisiana, but came to Canada in 1854 to find a more open field for his abilities than the United States then afforded. He was for years a member of the police service in Chatham, and has risen to his present position of influence in the community hy his own industry and force of character. I was glad to get the information and opinions of such a man upon the interesting subject we are considering, and hope to have more extended reports from him at a future time. Ths prominent names I have cited are of course exceptional, though suggestive. It is more important to ascertain the condition of the masses of the people. This Mr. Holden reports as generally excellent, and my own observations coincided with his statements. It is his opinion—and our readers know it is the SOUTHERN WORKMAN'S—that the safest investment for the colored settler is in land. He buys his little farm, and tills it himself, and thus gains at once anchorage, a home and a position among men. There is in Canada, to be sure, a special inducement to investment in land, as a certain amount of income from real estate, either owned or rented, is one of the conditions of suffrage. Among the colored citizens a man is considered very well off who owns his house, a little farm, and three or four thousand dollars outside of these. There are very many who are as comfortable as this. Perhaps the richest of those in Chatham is a man who reached there a penniless fugitive; an unedncated man still, bnt shrewd in business. He handles about three hundred thousand dollars a year in his husiness of a produce dealer.

I have said enongh to prove not only the material prosperity, hnt, to a great extent, the moral and spiritual prosperity of the colored people in Canada. Large fortunes may be sometimes the illgotten gains of unpriucipled men; hut wide spread comfort necessarily implies a generally high tone of industry and morality in the community. That this exists is acknowledged hy all, and as freely by their white neighbors as hy their own leaders. They have thus years ago settled the question which some people are still looking to our own history to decide—the question whether colored men can take care of themselves.

It must be remembered, also, that in Canada they have had to meet not only the natnral obstacles of poverty and ignorance, and a severe, nncongenial climate, hut to encounter social opposition as hitter as in any part of the United States, and probahly the more trying hecanse unlooked for. Recognizing neither white nor hlack in her constitution or statute book, England's boast that no slave could set foot npon her soil without becoming free, was not strong enough to break the fetters of that slavery to prejudice which respects no Mason and Dixon's line. With the ballot in his hand, and open doors before him Into every school and university in the state, the colored citizen has had to hreak his way into every circle of society to whose level he rose, if he entered it at all.

This striking fact seems to bear significantly upon the like problem before our own freedmen, and to suggest that civil rights and social recognition are not necessarily coincident. Education worthy of the position sought, a self respect that can afford to be independent of it, and *time* that settles all questions,—these will be the solution.

My inquiries after the prospects and condition of the rising generation did not receive as encouraging answers. Educated heyond the limitations of their fathers, it is more difficnlt to find satisfactory employment for them, the higher grades of occupation being still difficult of access and requiring special energy and perserverance for success. Mr. Holden is anxious to see numerous manufactories established to employ this unoccupied talent. It is his opinion, and that of others, that the Southern states, with their more congenial climate and home associations will be the ultimate sphere for the colored race in America. However that may be, the new facilities for return provided by emancipation do not seem to affect the population in Canada very sensihly as yet.

The colored citizens interest themselves in the politics of their adopted country, taking sides nsually with the liberal party. We happened to be in Chatham on "Emancipation Day," as they had changed its celebration from the fourth of August, to the sixth, to make it coincide with a large political meeting. The speeches were spirited as usual on such occasions; one of special interest was that of "Father Henson," a venerable bnt vigorous man of something over ninety years, who is said to have been the original of a great part of Mrs. Stowe's sketch of Uncle Tom. He does not approve of being interviewed, however, and was only willing to tell how as soon as he set foot on the Canadian shore, he knelt, and kissed the sacred soil of freedom.

I have said that the little settlement of Bnxton, near Chatham, founded a quarter of a century ago for colored men, deserves a description to itself, and I will leave the story of our visit to it for another article, especially as I hope to be able to add to it, then, some interesting points of information from its nohle founder.

BY THE SEA.

Boys who have been born and brought up hy the sea wonder what sort of fun they who live inland can possibly have. To be sure, there are the woods and streams to give them some sorts of sport; it is true, they have squirrel and rabbit-hunting, the delights of gunning, the pleasure of "going in a-swimming," where the mill-pond and the pehbly streamlets sparkle in the sun or glide under the cool shadows of the willows; hut as a boy, I used to think that the poor fellows who never knew salt water, nor saw the furious breakers dash on the rocky coast of New England, were much to be pitied. And when once, while I was a little chap, I was takeu on a visit to Bucksport, it seemed as if I should stifle in the close air of the country town, which had no water near it but a contemptible river flowing past. The sea seemed so far away that I thought I should lose my hreath before I could get back to its salt air again. But perhaps I was homesick.

When the gale was high and the long rollers came thundering on the beach, Aunt Rachel used to take me hy the hand and lead me along the lonely shore. It was almost terrible to look over the immense waves as they came piling over each other, and to see far ont on the stormy sea, the dancing fishing-boats, now riding on top of the sea and now disappearing in the watery trough of the wind-swept ocean. Sometimes a bit of hroken spar would come tnmbling in from the far-off waves to tell its story of wreck and disaster. Once, while the gale was howling and the breakers were crashing along the shore, Aunt Rachel snatched from a foaming wave a piece of a ship's rail, with part of a child's night-dress clinging to it. Where was the little one who had worn this garment? And in what dismal wreck had some distressed mother tied it to this floating wood? Nothing ever came from the sea to tell us.

But all was not sad and tragical hy the sea. Such larks as we nsed to have hy the Back Cove shores! On Saturday afternoons we tore mussels from the rocks at low tide, or dug clams from the watery sand, and roasted them in fires of driftwood. Or we built rafts of the loose wood along the beach, and paddled aboht the broad cove. If the frail craft fell to pieces and let the half-naked youngsters into salt water, there were enough swimmers to save those who could not swim. Then there were the joys of hoat-building and sailing; and how eagerly we watched the rude little craft as their birch hark sails faded away in the blue waters of the bay. In the drift, along the beach, we found all sorts of cnrious things; not only hits of wreck, but fragments of clothing, curious and unknown shells, foreign nuts; and once the whole shore was strewn with big russet apples, lost overboard, perhaps, from some distressed trading schooner.

Dearer than all this, even, were the rude wooden wharves that skirted the ancient town. The smell of tar and oakum, the odor of salted fish and the flavor of the brine were in the atmosphere of these delightful places. Here were rusty old anchors, huge and hrown, over which we climbed, while we marveled what they had seen at the bottom of the great sea. Worn iron chain-cables were piled up with sun-bleached rigging and fragments of ship-houses and cabooses which should voyage no more. Here was a battered figure-head of King Phillip, which had been scorched in the fierce snns of the Indian Ocean and had lost its nose in the icy Artic. Here, once or twice a year, lay the two or three ships of Fairport, discharging salt from Cadiz and peopled with story-telling sailors who had sailed all the seas over and knew the most delightful yarns ever spun; of these Dave Booden was cousummate. He had been a foremast hand "in the time of the embargo," when the British fleets blockaded the entire coast of New England. His tales were blood-curdling; and many is the night when we boys staid so late listening to the latest version of the story of his blowing up the *Arethusa*, that we were sent supperless to bed. The *Arethusa* was a British sloop-of-war blockading Casco Bay. Dave, who, by the way, always spoke of that period as "the time of dimhargo," was a prisoner of war on board, having been captured from a fishing-pinkey and kept as a pilot. By hnrraking for King George and otherwise pretending to be a good tory, he gained the confidence of the crew; and one night, while laying at anchor off Diamond Head, he fixed a lighted fuse under the powder magazine, slipped through an open port-hole to a boat that was towing astern and so made off, paddling with his shoes for want of oars.

"When that ere ship blowed up," said the truthful Dave, "I was nigh unto ten miles and a-half away. But she shook the air so, that I wuz blowed clean out o' that yawl jest straight. My cap went up three feet higher nor I did, and I went up about nine feet inter the air. What air ye snigerin at?" Dave would angrily demand of onc boy who never would believe this part of the story. "When I lit agen, I jest sot right in the yawl on the very same thort that I was a-sittin' on afore; and my cap was on my head, tew. Fact, boys, and ye may jest ask yer old gran'ther efit ain't." Gran'ther Perkins, who commanded the American volunteers in the time of the embargo, had been dead ten years or more. Dave's story-telling had no fortifying witnesses.

Once in a while—too often, alas!—news would come in a round-about way, of a Fairport vessel lost at sea. Perhaps one of the survivors would, after many thrilling adventures, reach us, and become the sad hero of the town. Sometimes a fishing vessel would sail for the Banks, and never be heard of more. We boys would sit under the lee of the rocks, and fancy that one of the flitting sails that glided along the blue line of the sea and sky, was the missing vessel; then, as she melted away, we would fall to inventing stories of the woful wreck, and whisper to each other, how the men, some of whom we knew, had starved on the raft as they floated on the waves, until they ate each other, or struggled against their fate until they perished miserably in the waters. When night fell, and the full moon swam up the sky, we used to see Marm Morey sitting on Fish Hawk Crag, looking wistfully out to sea. Sol Morey, as brave a lad as ever split a cod-fish, became on Georges Banks, had sent word by a passing vessel that the *Two Brothers*, in which he sailed, would be in port by the full of the moon. The moon filled and waned, and waxed and waned again, but the *Two Brothers* never came. Sol's mother watched and waited, and waited and watched, on Fish Hawk's Crag for many moons and many years. When the young moon hung pale in the sunset sky, she said, "Sol will be here soon." When it grew smaller, and disappeared from the heavens at night, she went about her work, and said never a word about Sol or the *Two Brothers*; but we boys knew when the moon was full, for we saw Marm Morey on the crag, hopefully turning her faded face to the sea, watching for the gleam of the sail that came no more.

Considering what risks are run by boys about the sea-shore, it seems strange that no more of them are swallowed by the waves. Perhaps the remorseless sea, as poets call it, has a savage pity for the small children who play about its edges. Certain, a kind Providence watches over the lives of the little folk, who snatch a fearful joy from the rush and tumult of the sea. Many a time we tumbled off the wharves, or upset in sail-boats, or were snatched off the rocks by the hungry breakers; yet not one of all my playmates ever met his death thereby. They were spared to be killed by a flying railroad train, a falling roof-slate, an Alpine avalanche, or a stray bullet in the trenches before Petersburg. Once a little crowd of us, caught on a bare reef of rock by the rising tide, and cut off from shore, were driven from point to point, until huddled on Otter Rock, which was usually covered at high water. We sobbed and screamed in vain for help, while the mocking waves crept higher and higher. We faced death, then, every one of us. A few inches of slippery rock stood between us and the end of the beautiful world that smiled around us. The tide crept on and on, stood still, and sunk away inch by inch until we were free! We crawled along the weedy reef, and hushed and half-tearful, told our tale. The tides, at that season, were not so high as usual. But to us it seemed a miracle. Perhaps it was.—*St. Nicholas*.

To the Editors of the Southern Workman:

I noticed in your August number a *second* article from "Observer" on "Drainage at Norfolk." It is evident that nothing will convince him but ocular demonstration; and this I am glad he is going to have on the estate of the Normal Institute at Hampton. General Armstrong promises to *thoroughly* drain a few acres, and try similar crops on the same soil, in the same situation, the one drained and the other undrained, carefully noting the amount of labor required, the time of maturing, and the yield of each. I trust when the experiment is tried, the result will be published in the columns of your valuable paper. "Observer" has evidently the impression which prevailed in the minds of many farmers in England, till removed by experience, that to drain land is to deprive it of its moisture; but the contrary is the fact. This was proved on a piece of *partially* drained land in North Carolina. A crop on it suffered but little from a severe drought, while those on the undrained were almost entirely burnt up. This arose from two causes: first, the land being drained, admitted of deeper culture; so that the soil, to a considerable depth, remained open and friable, and in a condition to retain moisture; and, second, by its lightness, the atmosphere was able to penetrate below the surface, and the moisture, which it held in the state of vapor, was condensed and taken up by the soil in the cool of the night, which enabled it to sustain the growing crop through the heat of the day; while the undrained land, not admitting of deep culture, and becoming baked and hard on the surface, gave out moisture in the night instead of absorbing it. This, in some states of the atmosphere, becomes visible. In a drought, a vapor may be seen rising from the land that is undrained, while over the drained land there is no such appearance, but it is drawing in, though invisibly, the dews of heaven, to sustain the growing crop.

I do not know what would be the cost of draining by *inexperienced hands* in this country, but the average cost in England by *experienced drainers* is not more than three pounds per acre. With such a subsoil as that of Norfolk, I think it could be sufficiently drained for ten dollars per acre. If, by draining, the crop can only be doubled (but I am satisfied the increase will be greater than this on good lands), what better investment can any one require for their capital? But the increase in the crop is not the only advantage; there is the great saving of labor, and the certainty of the crop; the latter a circumstance so very desirable where there is but *one return* in the year for the labor and capital employed.

It has been said "that the man who can make *two* blades of grass grow where only *one* grew before is a benefactor to his country": to do this he must double his crop, which I believe can only be done by *draining and deep and subsoil plowing*.

GEORGE DIXON.

THE FLORA OF HAMPTON.

AUGUST—CONTINUED.

Sida spinosa—*spined mallow*. Ilerpestis nigrescens—*black herpestis*. Lactuca elongata—*trumpet milkweed*. Platanthora ciliaris—*yellow fringed orchis*. Zizania aquatica—*Indian rice, water oats*. Solidago odora—*sweet-scented golden-rod*. Nesaia verticillata—*swamp willow-herb, grass peley*. Conchrus trihuloides—*hedge-hog grass, bur grass*. Statice Bmonium—*marsh rosemary, sea lavender*. Ilibiscus moscheutos—*marsh hibiscus, marsh mallow*. Chenopodium maritima—*glasswort*. Erecbtites hieracifolius—*fireweed*. Œgothera biennis, variety muricata—*tree primrose*. Trichostemma dichotoma—*blue curls*. Epilobium coloratum—*willow-herb*.

SEPTEMBER.

Ipomœa commutata—*false bindweed*. Eupatorium hyssopifolium—*hyssop-leaved boneset*. Vernonia Noveboracensis—*ironweed*. Solidago Canadensis, variety procera—*Canadian golden-rod*. Xanthium strumarium—*clotweed, clot-bur*. Ambrosia artimisia—*bitterweed, hogweed*. Circium lanceolatum—*common thistle*. Brizopyrum spicatum—*spike grass*. Erianthus brevibarbis—*weedy beard grass*. Cucumis melo—*musk melon*. Dlodia Virginiana—*Virginian diodia*. Polygonum acre—*water pepper, biting knotweed*. Polygonum Pennsylvanicum—*knee knotweed*. Eupatorium serotinum—*boneset*. Kosteletzkya Virginica—*sweat weed*. Quamoclit coccinea—*Jasmine bindweed*. Pluchea camphorata—*ploughman's-wort*. Conoclinum coelestinum—*mist flower*. Polymnia uvedalia—*leaf cup*. Baccharis halimifolia—*sea groundsel tree*. Andropogon scoparius—*broom grass*. Amarantus hybridus—*purple pigweed*. Portulacca oleracea—*purslane*. Eupatorium hyssopifolium, variety lleeirifolium—*narrow-leaved boneset*. Xyris fimbriata—*yellow-eyed grass*. Nabalus albus—*lion's foot, white lettuce*. Eupatorium purpureum—*purple boneset*. Eragrostis hirsuta—*hairy meadow grass*. Agrostis purahll—*slender pasture grass*. Antennaria margaritacea—*everlasting*. Helianthus rigidus—*rough-leaved sunflower*. Ascyrum stans—*St. Peter's-wort*. Aster flexuosus—*salt marsh aster*. Phaseolus diversifolius—*wild kidney bean*. Gerardia purpurea—*purple Gerardia*. Spartina alterniflola—*soft marsh grass*. Diodia teres—*buttonweed*. Euphorbia polygonifolia—*knotgrass spurge*. Cardiospermum halicacabum—*heart seed, balloon vine*. Bideus hipinnata—*Spanish needles*. Lobelia syphilitica—*blue cardinal flower*. Bideus chrysanthemoides—*bur marigold, daisy beggar ticks*. Ludwigia linifolia—*narrow-leaved seed box*. Chrysopsis mariana—*golden aster*. Eupatorium aromaticum—*sweet-scented boneset*. Lespedeza sessilifora—*bush clover*. Desmodium canescens—*tick trefoil*. Rhus copallia—*sumac*. Lobelia puberula—*puberulent lobelia*. Ludwigia alata—*winged seed box*. Atriplex hastata—*orache*. Galium hispidulum—*rough bedstraw*. Aster patens—*spreading aster*. Tripsacum dactyloides—*sesame grass*. Verbesina siegesbeckia—*crown beard*. Uniola paniculata—*sea-side oat*. Helianthus tuberosa—*Jerusalem artichoke*. Solidago tenuifolia—*narrow-leaved golden-rod*. Salicornia mucronata—*dwarf saltwort*. Monardia punctata—*horsemint*. Lespedeza violacea—*violet bush clover*. Commelyna Virginica—*Virginian day flower*. Eclipta erecta—*erect eclipta*. Bideus frondosa—*beggar's tick*.

The Teachers' Table.

O'ER wayward childhood wouldst thou hold firm rule,
And sun thee in the light of happy faces;
Love, Hope and Patience, these must be thy Graces,
And in thine own heart let them first keep school.

—*S. T. Coleridge.*

SCHOOL BEGINS.

This is the month when Hampton welcomes back her scattered children with many new comers, who will claim the title. The new school year is marked by the opening of Virginia Hall, the beautiful edifice which has been sung up and prayed up and built up by hard labor of busy hands and heads and hearts, and now stands ready to receive Hampton's daughters in greater numbers than have ever come before. The subject of the education of women is receiving earnest and extensive consideration at present among those who are interested for the progress of the human race; and in the symmetrical development of mind and body will be found the safe and natural solution of the problem. While a young woman is being trained in the routine of domestic duties,—learning to sweep and wash and cook— it will do her no harm to store her mind with knowledge that will lift her above the mere drudge, and make her a happier woman and able to become a nobler wife and wiser mother; and she will study all the better for a mixture of home interests, and healthful household exercises in her training.

This twofold education of hands and brains is Hampton's theory and practice for both sons and daughters. She welcomes both back, and is glad to know how cheerfully they return.

A northern schoolmaster advertises the reopening of school by this card in the papers, addressed to his scholars:

"Dear boys, trouble begins on the 1st of October."

We are glad to know that not even in jest, do Hampton boys or girls think of the reopening of school as the beginning of trouble. Welcome back, then, dear girls and boys, to a new year of pleasantness and progress.

A WORD TO HAMPTON GRADUATES.

So many of you are teachers or expecting to be that the "Teachers' Table" seems the proper place to leave a note for you. Hampton does not forget the children she sends out into their noble field of labor. Do not forget her; —send in your names for the Record of Graduates, with any items of interest about your work, your successes or your perplexities. The SOUTHERN WORKMAN will be your medium of communication with your old friends, and you will always be sure of encouragement, advice and affection from your Alma Mater.

HINTS TO YOUNG TEACHERS.

One of the most important things for a young teacher—or any other—on commencing a school is to find employment for each pupil, with the least possible delay. This will so preoccupy their activity as to prevent the temptation to irregularity and misdemeanor. Nothing is more important than to furnish full and constant employment to all the pupils from the outset. This will prove, at once, the source of most successful progress to the pupil and of relief to the teacher.

Never make a *demand* of a pupil without knowing that it is right and necessary; and then when once made, never fail to secure its execution. A failure here is fatal. The demand may not always be met at once; a little delay will sometimes make success easier by giving time for reflection and for passion to cool; but in no case can a teacher afford to let an explicit demand go unfulfilled.—*Rhode Island School master*.

A NEW ENTERPRISE.

Miss Bliss, of South Hadley, Massachusetts, and Miss Furguson, of New Haven, Connecticut, sailed on the 20th of November last, to establish at Wellington, South Africa, the foundations of a seminary similar to the one at Mount Holyoke, Massachusetts.

Of the 150,241 teachers in the United States according to the last census, nearly two-thirds are women.

IMPOSSIBLE—to make scholars sing by whipping.

At Home.

WHISTLE AND HOE.

There 's a boy just over the garden fence
Who is whistling all through the livelong day;
And his work is not just a mere pretense,
For you see the weeds he has cut away.

Whistle and hoe,
Sing as you go,
Shorten the row
By the songs you know.

Not a word of bemoaning his task I hear,
He has scarcely time for a growl, I know,
For his whistle sounds so merry and clear,
He must find some pleasure in every row.

Whistle and hoe,
Sing as you go
Shorten the row
By the songs you know.

But then while you whistle, be sure that you hoe,
For if you are idle the briars will spread;
And whistle alone to the end of the row
May do for the weeds, but is bad for the bread.

Whistle and hoe,
Sing as you go,
Shorten the row
By the songs you know.

—*Rural New Yorker.*

THE HOME GUARD OF LAUREL HILL.—In Stockbridge, the beautiful hill town in Massachusetts, where the Hampton Student Singers are again resting a little after a hard campaign, there is a society called the Laurel Hill Association. It was founded by ladies; and its object is to keep up the standard of beauty and order in the village, to see that the streets and parks are cared for, and to spend a certain amount every year in improving and beautifying the place. The society celebrated its twenty-first anniversary, this summer, upon lovely Laurel Hill, where it has met every year since it was established. The orator of the day was Mr. B. G. Northrup, one of the trustees of Hampton Institute, and Superintendent of Public Instruction in Connecticut. The Hampton Students gladly gave their voices to honor the occasion.

This society has done wonders for Stockbridge, and is the parent of many similar societies in other places. The work is a beautiful one, well worthy of imitation. It takes money,—yes;—but every one can, at least, have the ambition to make home bright and beautiful; and if every one would try, perhaps there would not be so much need of such societies.

WHAT TO DO WITH OLD UMBRELLAS.—"I would like to tell the girls something. It is about a good use for the frames of old umbrellas, sunshades or parasols. You just open them, strip off the cover, sharpen the handles to a point and thrust them open into the ground to serve as trellises for vines. Last summer we girls had a lovely sweet-pea vine growing over mother's old parasol frame, and a balloon vine trained over father's castaway umbrella; they were lovely. The frames were old-fashioned whalebone ones. Iron frames will answer the same purpose, but they ought not to stand in very sunny places as they easily become heated and so injure the vines."

From St. Nicholas.

OVER SEVENTY YEARS AGO.—It was such an old newspaper!—all creased and torn and yellow—and yet the minister as he unfolded it, handled it as though it were precious gold. He had finished his Sunday sermon, and was walking home from the meeting-house with his wife, across lots. They stood still to look at the paper, talking about its being such a treasure, and how Sally should have it and take care of it after they were gone, and reading over the name and date just as if it was a verse of poetry,—"*Washington Federalist, May* 24, 1802." They were not young folk, but he put his arm about her neck while he read one of its notices:

"Died—At Mount Vernon, on Saturday evening last, MRS. MARTHA WASHINGTON, widow of the late illustrious GEORGE WASHINGTON.

"To those amiable and Christian virtues which adorn the female character, she added dignity of manners, superiority of understanding, a mind intelligent and elevated.

"The silence of respectful grief is our best eulogy."

BORAX, useful for many things, is a most effective remedy in certain forms of colds. In sudden hoarseness or loss of voice in public singers or speakers, from colds, relief for an hour or so, as by magic, may be obtained by slowly dissolving, and partially swallowing, a lump of borax the size of a garden pea; or by holding in the mouth three or four grains, ten minutes before speaking or singing. This produces a profuse secretion of saliva or "watering" of the mouth and throat, probably restoring the voice or tone to the dried vocal cords, just as wetting brings back the missing notes to a flute when it is too dry.

A SONG OF THREE WORDS.

ORARE, LABORARE ET CANTARE.

Three blissful words I name to thee,
Three words of potent charm;
From eating care thy heart to free,
Thy life to shield from harm.
Whose these blissful words may know,
A bold, blithe fronted face shall show,
And, shod with peace, shall safely go
Through war and wild alarm.

First, ere thy forward foot thou move,
And wield thine arm of might,
Lift up thine heart to Him above
That all thy ways be right.
To the prime source of life and power
Let thy soul rise, even as a flower
That sky-ward climbs in sunny hour,
And seeks the genial light.

Then gird thy loins to manly toil,
And in the toil have joy;
Greet hardship with a winning smile,
And love the stern employ.
Thy glory this the harsh to tame,
And by wise stroke and technic flame,
In God-like Labor's fruitful name
Old Chaos to destroy.

Then, mid thy workshop's dusty din,
Where Titan steam hath sway,
Croon to thyself a song within,
Or pour the lusty lay;
Even as a bird that cheerly sings,
In narrow cage, nor frets its wings,
But with full-breasted joyance brings
Its soul into the day.

For lofty things let others strive
With roll of vaunt-ful drum;
Keep thou thy heart a honeyed hive,
Like bee with busy hum.
Chase not the bliss with wishful eyes
That ever lures and ever flies,
But in the present joy be wise,
And let the future come!

—*Good Words.*

For the SOUTHERN WORKMAN.

TOBACCO.

The use of tobacco is so wide spread an evil, the effects are so terrible, mentally, morally and physically, that all available means should be used to arrest and put a stop to this most pernicious habit.

Let us examine into the nature of tobacco. Where it was first found remains in doubt. Some writers say, as far back as the fabulous ages of Greece, Bacchus discovered and made known its properties; to him it was dedicated; hence, To Bacchus—tobacco.

Thorius, a Grecian poet, ascribes the discovery and first use of this plant to Bacchus Silenus and the Satyrs, who were gods of drunkenness, gluttony and lust.

It was found in use among the Indians, when the white man came here; hence, the name, Indian Weed.

The "Encyclopedia Americana" says: "It is a nauseous and poisonous weed, of an acrid taste and disagreeable odor; in short, whose only properties are deleterious."

M. Possett and Riemann have analyzed the leaf of the tobacco, and give the following constituents: Nicotine; nicotianine; extractive matter, slightly bitter; gum; a green resin; vegetable albumen; gluten; chloride of potassium; nitrate and malate of potash; phosphate of lime; malate of lime; silica; woody matter; traces of starch and water.

Physicians and other scientific men, in different ages, have given it their attention, hoping to find some properties which would be useful in *Materia Medica*, but its medicinal qualities—narcotic, emetic, carthartic and diuretic—are so powerful that it is seldom used, and, only in extreme cases, as a last resort; for the effects are often more terrible than the disease itself.

"Tobacco is, in fact," says a learned writer, "a violent, absolute poison. A very moderate quantity introduced into the system—even applying the moistened leaves over the stomach—has been known very suddenly to extinguish life. A thread dipped in the oil of tobacco, and drawn through a wound made by a needle in an animal, killed it in the space of seven minutes."

Mr. Brodie found that two drops of the oil applied to the tongue of a cat, with an interval of fifteen minutes, occasioned death.

There is a case reported of a woman who made an ointment of snuff and butter and rubbed on the heads of three children afflicted with scald-head. At once they were seized with vertigo, violent vomiting, fainting and convulsions.

I knew a woman who had smoked for some years, and at last became so nervous under the influence of the pipe, that each time before commencing, she would place a cup of water by her side, and, after smoking ten minutes, lay down her pipe and sit trembling, shaking, drinking and spitting for half an hour, unable to rise from her seat. I have heard some say they smoked to keep them from growing fat.

The infusion of tobacco,—as it is made by chewing, the juice mixing with the saliva of the mouth—like all narcotics, affects the nervous system, and acts powerfully on the heart. The celebrated Dr. Cullen in his "Materia Medica," and Dr. Darwin in his "Zoonomia," and all other medical writers of distinction agree in relation to the poisonous quality and the deleterious and fatal influence of the common use of tobacco. It is not in one form alone, but in all of them the evil lies; snuffing, chewing or smoking, it is just the same as regards the fatal effects upon the body.

The use of snuff often causes little excrescences to appear in the nose and the top of the throat; destroys the fine sense of smell; gives a nasal twang to the voice; dries up the muscles of the face, which assumes a rigid look; the skin becomes a pale brown color,—Nature at last hangs out her flag of distress; though patient and long-suffering she will not always keep her peace. This practice of snuffing is followed by both sexes, but women generally fill their mouths with it.

"By chewing tobacco," says Dr. McAllister, "all its deadly powers are speedily manifested in the commencment of the practice. In this mode, too, its nauseous taste and stimulant property excite and keep up a profuse discharge from the muscous follicles and salivary glands. At first, all the secretions from the nose, throat, lungs and mouth are increased; but after the stimulus has been continued some time, the mouth becomes parched; there is often hoarseness or some cough; indigestion more or less shows itself,—with loss of appetite and general derangement of the system.

"But the most fearful ravages are made upon the mind. The memory becomes feeble, the ideas confused, the ability to keep the thought fixed on one subject almost lost; and a miserable discontentedness takes possession of the victim.

It stupefies the mind, deadens conscience, produces insanity often like *delirium tremens:* indeed, we often find the use of alcoholic drinks and tobacco in the same individual."

Tobacco is intoxicating in its nature, and those who habitually use it may be called *tobacco drunkards.* Indeed, alcohol and tobacco are handmaidens of the Evil One, and seem to require each other's help. The poor victim is not aware how closely he is bound hand and foot, until awakened to his danger, he attempts to release himself; then he discovers he is the slave of an appetite that is leading him down to certain ruin, and his attempts to abandon the pernicious practice, cause great nervous prostration and suffering, which, always attend the discontinuance of habitual stimulants. He has a hard task, but let him not despair: from the evidence in many cases, a reform is possible.

Tobacco lowers the moral tone of the individual: he is no longer free; he has lost the power of self control, and become the pitiable slave of appetite. It blunts the finer feelings, destroys manliness, nobleness of soul and self-respect; for no one can continue to do what he acknowledges to be injurious to him—and I have heard many confess it—without being false to his convictions of truth and right.

The expensiveness of tobacco is another important consideration. Many millions of dollars are spent annually for this pernicious article. This sum is worse than wasted: it has ruined both mind and body. Just think of the fortunes spent in this way, which would have been sufficient to clothe and feed all the poor in the United States. Indeed, if all the alcohol and tobacco were swept from the face of the earth, there need be no poor. There is plenty for all.

Dr. Clarke gives the case of one very poor family who spent one-third of all their wages for tobacco and snuff. This is not an isolated case; thousands more could be added.

There is yet another aspect of this question which is no trifling one—*its filthiness.* The smokers, chewers and snuffers render themselves extremely offensive to all who do not belong to their class.

If a man smokes, his house, clothes, books, etc., become permeated through and through by the disagreeable odor. You can detect a smoker ten feet distant.

If he chews, he is more filthy still: the stinking juice runs from the corners of his mouth, a sign of great filthiness within; his breath renders the air foul around him; and the pools of nastiness which he leaves in all places of public meetings, railroad cars, etc., ought to make him a nuisance, to be banished from decent society. It would not be tolerated were it not so universal and long standing.

Simon Paoli, physician to the King of Denmark, states that merchants frequently lay their tobacco in bog houses, that it may become impregnated with the volatile salts of the excrements, and rendered brisker and stronger and more fetid.

Another writer says, "that cigar makers frequently take water in their mouths, and spurt it over the leaves to moisten them."

The manner of preparing the weed for use makes it even more disgusting than it is by nature. In view of all the evil effects upon mind and body, and the filthy condition in which those live who use it,—it is strange the practice should still be continued.

To every one who desires to be pure, clean and healthy in body and soul; who has aspirations toward intellectual distinction; who strives after that noblest and greatest of all conquests,—the mastery of his own spirit, and thus secure the only *true liberty,*—let him at once and forever *abjure tobacco* and flee from it, as his deadliest enemy.

VERITAS.

MORAL COURAGE.

When Mr. Lincoln was nominated for the highest office in the nation, and a committee was sent to Springfield by the national convention to inform him officially, of his nomination, some of the rich neighbors sent him several bottles of champagne and wine with which to treat the coming committee. Now came the tug of battle, the test of principle. What did he do? Why, like a true moral hero he sent the bottles home, and informed his wine-bibbing neighbors that when he wanted liquid fire to treat his guests with, he would let them know. Noble, manly, God-like! This one act was the key which opened the door to the temple of his beautiful character. Abrahem Lincoln was a moral hero. He dared to do right. He did noble service not only for freedom, but for temperance. His son Tad was a chip of the old block. Like his father, he was always heroic for the right. He began e temperance youth. When traveling in Europe, in company with his mother, he was frequently offered wine to drink by the daughters of nobles and king: but never yielded—always saying, "I thenk you;. I signed the pledge of total abstinence when e boy, and do not wish to break it now." This was moral heroism—moral courage. Would that all our boys and young men would imitate his noble example!

We want such men of principle as we have here described; men who will not yield to the fascinatious of the wine cup, however fashionable it may be. Such heroes may not have their names written on the page of history, or carved in marble, but they are indelibly inscribed on the monuments of a noble character which shall stand long after rocks and worlds shall be no more.—*Western Temperance Herald.*

GOOD TEMPER.

Our happiness in this world depends to a greater extent than most of us imagine, upon the conditions of our tempers. We may be well-to-do, prosperous, surrounded by every earthly blessing, and yet may mer all by a fretfulness which prevents us from profiting by the rich materials of happiness that are ready to our hands, and ruffles the surface of our lives into most unlovely roughness. A sweet, patient, cheerful temper is worth more than almost any other gift of nature, but if it could only be obtained as a natural gift we should have nothing to do but to envy those who are so fortunate as to possess it and mourn our own deprivation. As a matter of fact, however, most of us can be good tempered if we will, though undoubtedly the struggle is sometimes hard and long. If we determine to control our passionate and selfish impulses, to seem cheerful when we are in reality down-cast and dismal, to put on bright faces and pleasant voices when perhaps our hearts are bitter and full of anger; by and by we shall find that we have made for ourselves a habit of good temper which is of incalculable value to us. Who is there who has not keenly felt the difference between the good and bad tempers of our friends? Do we not all know how a single ill-tempered person can destroy the peace of a household; how sometimes an ill-natured speech, an angry word, will make our way hard to us for many a day; or, how on the other hand, a smile, a cheerful greeting, a kindly outspoken wish, will keep us hopeful and our hearts warm, long after the giver has forgotten them. Now, with very few exceptions, we are free agents in this matter: we can go about this world with sour faces and sharp tongues, spreading bitterness and grieving wherever our feet fall, or we can let the light and sunshine of good temper guide us and shed its wholesome rays into the hearts of all who come within the circle of our daily influence. We can give way without a struggle to the sway of unkind thoughts, and ignoble motives; or we can resolve that we will so guard ourselves in word and deed that the evil which is in us shall injure and distress our fellow-men as little as is possible. We can give short answers, cross looks, and uncourteous manners to those with whom our lives are spent; or we can warm and strengthen them with kindliness and the cheer which comes in face and voice. Which is the better way?

To DESTROY INSECTS.—No insect that crawls can live under the application of hot alum water. It will destroy red and black ants, cockroaches, spiders, chinch bugs, and all the myriads of crawling pests which infest our houses during the heated term. Take two pounds of alum and dissolve it in three or four quarts of boiling water; let it stand on the stove until the alum is all melted; then apply it with a brush while nearly boiling hot, to every joint and crevice in your closets, bedsteads, pantry shelves, and the like. Brush the crevices in the floor of the skirting or mop boards, if you suspect that they harbor vermin. If, in whitewashing a ceiling, plenty of alum is added to the lime, it will also serve to keep insects at a distance. Cockroaches will flee the paint which has been washed in cool alum water. Sugar barrels and boxes can be freed from ants by drawing a wide chalk mark just around the edge of the top of them. The mark must be unbroken, or they will creep over it, but a continuous chalk mark, half an inch in width, will set their depredations at naught. Powdered alum or borax will keep the chinch bug at a respectable distance; and travelers should always carry a bundle of it in their hand bags, to scatter over and under their pillows in hotels, etc.

JAMES LEFFEL'S
Improved Double
TURBINE WATER WHEEL.

POOLE & HUNT,
BALTIMORE,
MANUFACTURERS FOR THE SOUTH & SOUTHWEST.

Nearly 7000 now in use, working under heads varying from 2 to 240 feet! Twenty-four sizes from 5 3-4 to 96 inches.

The most powerful Wheel in the Market, and most economical in use of Water.
Large ILLUSTRATED Pamphlet sent post free.

MANUFACTURERS, ALSO, OF
Portable and Stationary Steam Engines and Boilers, Babcock & Wilcox Patent Tubulous Boiler, Ehrsam's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.

SEND FOR CIRCULARS.

N. F. BURNHAM'S

WATER WHEEL

84 per cent. guaranteed with 1874 TURBINE

The best in the Market, and guaranteed to beat any other Wheel. Send for a Pamphlet and be convinced. N. F. BURNHAM, York, Pa.

"Hampton and its Students,"
BY
Mrs. M. F. Armstrong and Helen W. Ludlow.
WITH
SLAVE SONGS,
Arranged by T. P. FENNER.
FOR SALE AT THE OFFICE OF THE
Treasurer of the Normal School.
Sent by mail on receipt of $1.50.

EXPEDITION FOR LIBERIA.

TO INDUSTRIOUS AND WORTHY PEOPLE of color desirous of removing to Liberia, THE AMERICAN COLONIZATION SOCIETY will give a passage and subsistence on the voyage—about forty days—and support for the first six months after landing. Single adult persons get ten acres, and families twenty-five acres of land. These are all gifts—never to be repaid. Those wishing to remove to Liberia should make application, addressed to William Coppinger, Corresponding Secretary and Treasurer of the American Colonization Society, 450 Pennsylvania Avenue, Washington, D. C.

British, Marine, and Land and Freshwater Shells.

COLLECTED IN GREAT BRITAIN, IRELAND (east and west coast), ORKNEY, SHETLAND, HEBRIDES and CHANNEL ISLANDS, also from DOGGER BANK (many of them by deep sea dredging), on sale or exchange for American Shells, Flowering Plants, Ferns, or specimens of Natural History, suitable for a museum.

Catalogues of the Species will be sent on application to GEORGE DIXON, AGRICULTURAL INSTITUTE, HAMPTON, VA.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. III. HAMPTON, VA., NOVEMBER, 1874. NO. 11.

WILL THE ICE BEAR!

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG,
F. RICHARDSON,
RICHARD TOLMAN, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

The Southern Workman should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager.

Southern Workman.

HAMPTON, NOVEMBER, 1874.

For years one of the staple arguments in favor of social and political repression of the colored race, has been the bugbear of amalgamation. It is because this idea is working against education, thereby perpetnating discord; that we venture to discuss so delicate a subject. At the outset we are reminded of the strong probability that the success of the South in the late war would have been followed by a steady relative increase of the colored population.

The arithmetical result in a country whose policy excluded white reinforcements and favored mixtnre, must necessarily have been Africanization. The war, however, not only forever stopped fresh importations from Africa, and opened the country to the Norse element; bnt in its consequences it administered the only check which amalgamation could have received in the South. Under the fostering influence of slavery, the process had so far progressed, that in the year of grace 1865, the Virginians had to deal not with the African race but with a body among whom the pure type was an exception. It is only since the war that the whole power of social influence has been exerted against mixture. The war delivered the South from the thing itself, and now the shnddering horror of the shadow contrasts strangely with the former indifference to the reality.

The following considerations in respect to amalgamation seem fairly suggested by the present positions of the races.

First, Until amalgamation becomes again a common practice, intermarriage cannot fail to place the parties under such a social ban that it will be confined to the lowest classes.

Second, The numerical superiority of the white race and the accessions by emigration southward, will constantly reduce the relative number of the colored people.

Third, No one who believes in the superiority of Anglo Saxon blood can consistently donbt its ability to choose and maintain its own distance from any other race which is numerically inferior.

Fourth, In the struggle for wealth and culture no conservative can suppose that the white race will be unable to keep the lead on a fair field.

Fifth, Those who believe that race prejudice is unconquerable, have abundant historical evidence to prove that intermarriage on any considerable scale is to the last degree improbable. The English in India, the French in Algeria, the Germans in America, to say nothing of the peoples, as the Brahmins and the Jews, whom traditions have separated from all around them for thousands of years, are all examples of separation under less favorable circnmstances than those in which the white race is placed in the southern states.

These are a few of the reasons why we believe that the most timid may dare to trust the future of the Anglo Saxon race to the Providence which endowed it with strength of individuality, and to spread education broadcast without fear that any one will be hurt by giving the colored people an opportunity to rise as high as their character and abilities will permit in the face of white competition.

A RAPID workman often appears to move more deliberately than a slow one. We have known a small wiry man who would do his task thoroughly, and yet no big burly fellow, however hard he might puff, could catch up with him. The man's motions were easy and graceful, without a trace of excitement. He had mastered the grand secret of speed; namely, the art of making no false motions.

Probably a fourth part of the labor done in the United States is wasted. It seems to the common laborer such a small thing in chopping or hoeing or spading, whether he strikes half an inch one side or the other! Few have any idea how much they could save of time and effort, if they could always hit just where the blow would do the most execution.

There is no tool unworthy of becoming an artist's means of showing the superiority of dexterity over brute force. A great painter, when asked what he mixed his colors with, answered "With brains, sir." There is plenty of room for such mixture in studying the use of tools.

If it were possible there ought to be a Professor of Handiness in every Agricultural College. Bunglers are so common, because the boys are not brought up to appreciate the importance of economy of motion. They fail to comprehend that a false motion takes just as long as a true one. The few who do bend their close attention upon their work, acquire a quickness of eye and sureness of aim, which becomes second nature. They accomplish much, with great ease to themselves. Their skill has become mechanical. So with careless beginners: their habits of half awake effort, become forced and almost ineradicable, before they know enough of the value of skill, to direct their whole minds upon acquiring it.

Not by the "haste which makes waste" is skill to be acquired: rather by going very slowly at first, studying just what is needed to be done, and then practising until the precise mark is struck every time. Skill thus reached step by step, is worth all it has cost; for however glutted the labor market may be, good men are always scarce and command high wages.

THE Hampton Normal School is again in full and prosperous operation. There are one hundred and seventy boarders and twenty-six day scholars: more are expected.

Students never came in so promptly. There was no delay in organizing classes and in getting to work. The corps of teachers is but little changed from last year. Mr. Edward H. Sears, a graduate of Harvard College, is appointed vice Mr. John H. Larry resigned. There are three gentlemen and seven ladies engaged in the Academic department, two ladies in the Housekeeping, and one in the Industrial, departments. Besides the two regular apprentices in the Printing-office, there is a class of eight who set type an hour every day under the direction of Mr. Butterfield. Over forty men are on the Farm detail, in charge of Mr. Howe. The Mechanical force consists of three carpenters, three painters, and one blacksmith. In the new department of Engineering, superintended by Mr. Goff, there are two men.

Virginia Hall is nearly finished, and is occupied by the lady teachers and by sixty-five girls. The dining hall with its new appointments presents a fresh, bright and beautiful appearance. Cooking is done entirely in the oven and steam kettles. Meals are much better prepared and served than in previous years. A disciplined corps of ten waiters serves the food, while the tables are set and dishes are washed by the girls. The steam heating and cooking apparatus works admirably. Washing and drying are facilitated by steam, and hot and cold water are carried to all parts of the building.

The Institution has taken a new departure: it has become a civilizing power, and to that end it will more carefully than ever regulate manners and habits and build up a true manhood and womanhood. It gives labor its true place by providing appliances for work which assert its dignity. Cooking, washing and ironing are done in as large, airy and fine rooms as those in which history and mathematics are taught.

To lift the plane of this work to its present level has been a serious strain upon its resources. The total cost of Virginia Hall will be about $76,000. A little over $50,000 has been contributed from all sources. The balance due is $25,000. $6,000 of the Endowment fund have been applied to cancel this balance, but it must be returned to that fund. A lady in New York has offered to be one of five who shall give $5,000 each and thus lift the entire debt. The debt has been reduced by a contribution of $2,375 from the teachers of the school, and by a donation of $500 from a lady in Boston. Even in these bad times we look with confidence to our friends, believing that even when giving comes to be a real self-denial, there still will be liberal giving.

The present difficulties lay in the line of our work, which is to pay a larger debt. We are paying the larger now in good instalments, and the smaller one presses upon us.

We invite attention to the series of Sunday-school Lessons for the month of November published in this number. The editorial labors of this department are performed by Miss Susan P. Harrold, a teacher at this institute. The series will be continued regularly, and it is hoped will be useful to many.

Hereafter the SOUTHERN WORKMAN will be issued not later than the twenty-fifth day of the month preceding that for which it is published. This paper will be supplied at the following rates provided there shall not be less than five copies sent to one address:

For one year	60 cents.
" six months	35 "
" four "	25 "
" three "	20 "

The advantages of this offer are,

First, The cheapness of the papers.

Second, Postage will be *prepaid*.

Third, The short period for which the paper can be obtained, thus accommodating many who teach but few months in one place.

Those who may subscribe at these rates are reminded

First, That they must send *at least* five subscriptions, *cash in advance*.

Second, No commissions are allowed or premiums given.

Third, The greatest care must be taken to send correct Post-office address of subscribers, stating name in full,—town, county, and state.

Fourth, Money should be sent in registered letters, or in Post-office money orders.

The graduates of this institute, and all laboring in the Snnday-school cause are solicited to interest themselves in this fresh effort to scatter a cheap and good family and Christian literature among the industrial classes of the South.

WE have received a copy of Webber's "Manual of Power," containing Tests of Power required for Cotton and other Machinery by Dynamometers, and showing results of great variety and value to practical manufactnrers. Very numerous experiments are described, indicating the comparative efficiency of the various Cotton Openers, Pickers, Lappers, Cards and Frames.

Throstle Spinning, Ring Spiuning, and Mule Spinning occupy the larger part of the work. Several pages of tables are given relating to flax and Wool Machinery.

As a reliable collection of important facts it should be in the hands of every mill owner. It may be obtained by enclosing a Post-office order for $3.00 to Samuel Webber, C. E., Manchester, N. H.

THE Normal School graduates are scattered far and wide over this Commonwealth and in adjacent states.

L. B. Langford and Frank Trigg are at Ahingdon, Va.

Jane Bullard is at the State Normal School, Westfield, Mass.

Clement Spencer is at Malden, West Va.

Peyton M. Lewis is teaching in Liberty, Bedford County, Va.

D. A. Ellett is in Goochland County, Va.

Rachel Elliott is at Charleston, West Va.

Grace McLane has a school at High Point, North Carolina.

Eliza Nottingham, George Lane, and Richards are at Oberlin College, Ohio.

The following are in Princess Anne County:

Everett Williams, John M. Williams, Augustus Hodges, and Albert B. Roberts.

Undergraduates are stationed as follows:

Edward Canaday, George Cole, Charles Vanison, in Essex Co.; William C. Boyd, in Franklin Co.; Frank Hall in Middlesex Co.

Rachel Howard and George Taylor are in Gloncester.

James Fields is Principal of the Lincoln School at Hampton, assisted by Luke Phillips and George Lattimore.

Calvin Johnson is residing in Hampton.

Jeorge Davis is assistant at the Butler School.

The above mentioned are all, but four, engaged in teaching in the free school system, and give excellent reports of their treatment.

Gradustes are invited to send a record of their work with whatever they may think interesting in regard to it; and to report all changes in their address. We desire to report the whereabouts of each one.

Alphonso Holley of the Senior Class died at the Hampton Normal Institute on Tuesday, October 27th, at twelve o'clock M., of typhoid fever.

His funeral took place on the 29th instant at the Bethesda Chapel, and was attended by all his schoolmates among whom he was a general favorite.

He became a Christian and united with the church last term.

His remains will be taken to his home in Stannton, Virginia, during the winter.

IT is pleasant to mention a donation of fifty dollars received from Malus, Madura Mission, Southern India, in-

tended to be continued annually till the sum shall reach one thousand dollars and become a permanent scholarship in the Hampton Normal Institute. The donor, Rev. T. S. Burnell, in the midst of millions of wretched Asiatics, does not forget the great problem of his own country, which is to lift up into manhood the great masses of the ignorant and helpless who have been providentially thrown upon it to care for.

SHAPE OF ROADS.

We often see roads repaired hy depositing in the centre of the highway a line of material perhaps eight or ten feet in width and six to twelve or more inches in thickness at the centre, thus forming a crown to the road twelve inches or more above the sides. When asked why this is done, we are told that it will be all "flattened down" in less than three months, and also that it is the proper way to drain the water off into the gutters. This is all wrong—wrong in principle and wrong in fact. A road with great convexity has more water standing upon it—has deeper ruts, and is, by far, worse for travel, than though it were only a little crowning. What that little should be, let us draw from the experience of others. Telford, the best English authority, says: "A road should fall transversely from the centre to the water-tables, at the rate of one in twenty-four, along flats and level ground, and sharper in proportion as declivity increases." McAdam says: "I consider a road should be as flat as possible, with regard to allowing the water to run off it at all, because a carriage ought to stand upright in traveling, as much as possible. I have generally made roads three inches higher in the centre than at the sides when they are eighteen feet wide." This is one in thirty-six. "I think that more water actually stands upon a very convex road than upon one which is reasonably flat." Law says: "The drainage of the surface of the road is then the only useful purpose which will be answered by making it convex . . . The surface of a road is much better drained by a small inclination in the direction of its length, than by a much greater tranverse slope." Walker says: "The over-rounding of roads is also injurious to them by either confining the heavy carriages to one track in the crown of the road; or, if they go upon the sides, by the greater wear they produce, from their constant tendency to move down the inclined plane, and the labor of the horse and the wear of the carriage wheels are both much increased by it."

In speaking of stone roads, Herendeen says: "The middle should be higher than the sides, for the prompt drainage of the surface water. It does not, however, require nearly so much elevation as dirt roads, where the surface is softer and the water soaks into them more readily. One inch in thirty is about the proper elevation of a good stone road." Another writer, Edgeworth, says: "In all these schemes for carrying off water from the roads by the inclination of the ground, it seems to have escaped the attention of those who proposed them, that no lateral inclination of the ground, consistent with the safety of the carriages, would empty a rut three inches deep." French says: "Drainage of the surface is prevented rather than promoted by too great convexity. If the surface retains its even form without ruts, the water will run off at once, at a very low inclination. If a rut is formed even one inch deep, no practicable degree of convexity can empty it toward the side ditches."—*Massachusetts Ploughman.*

THE COW-PEA IN SOIL RESTORATION.

On almost every plantation in the cotton states there are worn-out cotton fields, which must remain unproductive until restored by fertilization. To find a fertilizer adapted to the wants of the soil, involving neither cost nor trouble of transportation, easy of application, and yielding the quickest and largest returns with the smallest outgo, is a great desideratum.

The cow-pea, as an agent in soil restoration, combines in a large degree these advantages. A planter in Gwinnett County, Georgia, reports as follows: Having a worn-out field of twenty acres which had been lying in broom-sedge for several years, he broke it up in the summer of 1868, plowing deep with a turn-over plow. In the fall he sowed it in wheat. The yield, carefully measured, was a little less than four bushels per acre. In 1869, immediately after harvesting the wheat, he sowed cow-peas at the rate of two bushels per acre. Early in October he turned the resulting crop under with a deep furrow. A few weeks later he sowed on this pea-sod wheat, harrowing it in carefully. He harvested nine bushels per acre. He repeated the same process in 1870, and realized seventeen and a half bushels per acre; and again in 1871, followed by a yield of twenty-seven bushels per acre; and again in 1872, with a promise at the time of reporting of forty bushels per acre. Throughout this experiment, covering five years, no fertilizer except the cow-pea was applied.—*How to Make the Farm Pay.*

A FIVE-ACRE FARM.

What a difference there is in men, and certainly what a difference in farmers. The *Country Gentleman* answers the question, "What can a man do with five acres of land?" by suggesting the way a Frenchman (gardener) would use it: "Monsieur Bonnot will take five acres. He will first put it in good condition, for Monsieur Bonnot cannot make five barrels of corn on the whole desert of Arabia with any means at his disposal; but Monsieur Bonnot will put his five acres in condition, and then they will yield him as much as is realized from a large farm. He will plant those things which bring the largest return for the amount of space occupied. Possibly he will give to strawberries one acre; asparagus one-half acre; celery half an acre; one acre in mixed grasses for his cow; space for kitchen, garden and dwelling, with out-houses, half an acre; for currants, grapes, gooseberries, pie plant, etc., one and a half acres; and the margin of the whole will be occupied hy the most profitable fruit trees. Monsieur Bonnot will not keep a horse, for he will eat up every month twelve dollars. He will keep a cow, because she will give him sixty cents worth of milk every day, and can live on the acre of mixed grasses with the refuse from the kitchen garden. Monsieur will have his poultry and eggs, and at the end of the year he will have more money than a big farmer."

PENS FOR SWINE.

The New York *Herald* says: A few days since the writer called at a neighbor's residence, who had a beautiful Chester White sow with three pigs about six weeks old. She brought forth nine, but overlaid six of them. The live pigs were worth five dollars each. Hence there was a loss of thirty dollars simply becanse his foreman did not understand how to prepare a suitable bed for a breeding sow. A large quantity of straw had been allowed to accumulate in her sleeping apartment, so that she had formed a deep hollow about the size of her body. As the young pigs could not get out of such a place, when the dam was about to lie down, they were smothered. Our own practice with brood sows has always been to remove all the straw from a sow's bed at least a month prior to the birth of her brood, and spread a few bunches of cut straw on the floor for her to lie on. Young pigs will never become entangled in such a bed, neither will they get cornered so that the dam will overlay them. When pigs are worth five dollars each it will pay the proprietor to prepare a suitable bed for the sow. Long straw should never be spread in a brood sow's sleeping apartment, except when no pigs are expected.

THE CURRANT WORM.—A friend here has a row of currant bushes six rods in length, bountifully loaded with fruit just beginning to ripen. A few days ago it was noticed that the worms had consumed the leaves on a few of the bnshes, and had taken possession of the whole row. Discouraged by previous experiments, another mode of attack was adopted. The ground under the bushes was free from grass and weeds. With a round stick we carefully rapped all the bushes, striking them with a quick stroke near the grounds as well as among the leaves. This threw the worms to the ground. Then with a sharp stick we carefully scraped out those that had fallen between the rods at the root of the bush, and then with a hoe carefully scraped over the ground, gathering the loose dirt and the worms into heaps, and with a spade buried them a foot deep in the ground, and trampled the soil on their grave. Many thousands of worms were thus buried, and hardly a dozen have been found on the bushes since.—*New York Tribune.*

The Teachers' Table.

It is often as necessary to place before the eyes of scholars the objects which immediately surround them, and which they might reasonably be supposed to be intimately familiar with, as those which are ordinarily beyond their observation. The perceptive faculties must be specially trained to do the allotted work, or they are likely to neglect it altogether. It is astonishing to mark how the mass of mankind passes through the world as if almost literally blind and deaf, beholding a thousand things day by day, yet getting no discriminating impressions of their parts and properties. "Seeing, they see not; hearing, they hear not; and they do not understand."

The writer was immoderately laughed at by some members of the school committee of a sea-port town, not long since, when conversing on this topic, because he happened to remark that it would be well for each school to have models of the various kinds of vessels in their illustrative cabinets, so frequent are the references in literature to the parts and purposes of sea-going crafts. "Models of vessels in the school-houses of this city, when almost every child sees vessels as frequently as he see houses!" exclaimed one of them, derisively.

"Let us test the need," was the writer's reply. So he went into a grammar school and put questions to its first class; and out of forty-six present, only three knew what the *hatchway* of a vessel is, only five knew the position and uses of the *keel*, and only a few of the boys could tell the distinction between *cabin* and *hold*. The committee-men incontinently subsided.

A writer in the *N. Y. Tribune* finds a striking illustration of the fact that the proprieties of language in speech and composition are learned from reading and the imitation of good usage, and not from the study of grammar as usually taught in schools, in the example of the late Millard Fillmore, whose early education was greatly neglected, and who, until the age of nineteen, had never seen a grammar nor a geography, yet who used language with much propriety. It remarks that "The accuracy with which so many of our half-educated or self-educated men write and speak English is surprising;" and adds, "Our American accuracy does not come of early drilling; it is to be attributed to the general habit of reading. It is in this way that the majority become tolerable grammarians by rote, and speak correctly; simply because they speak at all. These are facts which may well lead us to revise our notions of the necessity of studying grammar as it is usually taught in our schools.

THE STUDY OF BOTANY

may be introduced into the primary school with great benefit and interest, both to teacher and pupil, and with very little expense, thanks to a little volume called "The First Book in Botany," which has been prepared by Miss Eliza A. Youmans; published hy Appleton & Co. Only one book is necessary, for the teacher, the children studying from the plant itself, under his guidance. A previous knowledge of botany is not even essential to the teacher in using this little book. He may become a fellow-student with the child. The object of the book is to cultivate the powers of observation, and the practice of expressing what is observed; and this important end is attained in a way that excites and holds the interest of the pupil from beginning to end.

Miss Youmans says, "The method to be pursued by the aid of this book is the following: The child, first of all, collects some specimens of plants—almost any will answer the purpose in commencing. These consist of organs, each of which is made up of different parts, and these vary in form or structure continually in different species. The object of the learner is to find out these parts or characters and learn their names, so as to be able to describe them. Turning to the first exercises, he finds the parts of leaves represented by pictures acccompanied by the names applied to them. Guided by these he refers to his specimens, and finds the real things which the words and pictures represent. For noting down what he observes, a form or *schedule* is used, containing questions which indicate what he is to search for. He carefully observes his specimen, and writes down the character it possesses, with which he has become acquainted. Having done this, he pins the specimen to the paper describing it, and brings it to the teacher. For these the cheapest kind of paper will answer; or, slates will do just as well. Children can begin to study plants by this method as soon as they can write."

The eleven chapters of the book contain illustrated exercises upon the Leaf, the Stem, Blossoming, the Flower, the Root, the Seed, Woody Plants, the Leaf-Bud, the Stem and Root, the Fruit, and the Actions of Plants.

COMPULSORY EDUCATION

is receiving much attention in this and other countries. In Prussia it has been vigorously enforced since 1819. Out of 3,000,000 children of school age in Prussia in 1864, only 130,000 were out of school. At the chief recruiting station in the Kingdom, only three recruits were received in twelve years who could not read and write. Hence the superiority of the Prussian army. Education is compulsory in Austria. The poor in Holland are not helped unless they send their children to school.

In England a few years ago, the suffrage was largely extended, and compulsory education was at once found necessary to prevent a mass of ignorant voters from ruling the Kingdom. In three years there has been an increase of fifty per cent in the attendance. Our own new voters do not seem to need compulsion to education, but only a chance.

ALPHONSO HOLLEY.

DIED OCTOBER 27, 1874.

Our friend stands safe upon the other side:
He is at home once more,
In some among his Father's mansions wide,
With Him who called him o'er.

New tasks and lessons hitherto untried,
He finds his hours to fill;
New friends to love among the glorified
Are crowding round him still.

Can he remember, now that he is there,
And Jesus' face he sees,
The little joys that we were wont to share,
The sports that used to please?

Yes, he remembers;—little else we know
Of his new life above,
But love forgets not even here below,
And life in heaven is love,

THE FLORA OF HAMPTON.

SEPTEMBER—CONTINUED.

Cunila Marianna—*dittany.* Impatiens fulva—*orange-colored touch-me-not.* Coreopsis auriculata—*broad-eared tick seed.* Eupatorium fistulosum—*trumpet weed.* Hibiscus Moscheatos, variety flavescens—*yellow marsh hibiscus.* Hypericum mutilum—*dwarf St. John's-wort.*

OCTOBER.

Woodsia obtusa—*rock polypod.* Flagopyrum esculentum—*buckwheat.* Campanula divaricata—*bell-flower.* Isanthus cæruleus—*false pennyroyal.* Dianthus barbatus—*burnet pink.* Tragia urticifolia—*nettle-leaved tragia.* Verbesina siegisbeckia—*crown beard.* Gaura biennis—*biennial gaura.* Œnothera glauca—*evening primrose.* Gerardia tennifolia—*slender-leaved Gerardia.* Collinsonia punctata—*spotted collinsonia.* Nabalus altissimus, variety ovatus—*oval leaved drop flower.* Gentiana quinquefiora—*five-flowered gentian.* Liatris squarrosa—*blazing star.* Lespedeza repens—*creeping bush clover.* Calamintha repeta—*calaminth.* Symphoricarpus vulgaris—*purple wolfberry.* Heleneum autumnale—*autumnal sneezewort.* Heleneum parviflorum—*small flowered sneezewort.* Heliopsis lævis—*ox-eye* Gentiana Andrewsii—*Andrew's gentian.* Chrysopsis gramminifolia—*grass leaved chrysopsis.* Eupatorium perfoliatum—*thoroughwort, boneset.* Chelone glabra—*turtlehead, snakehead.* Mirabilis jalapa—*four o'clock, marvelworts.* Eupatorium fæniculatum—*dog fennel.* Gentiana saponaria—*soap gentian.* Oplismenus crus-galli—*barn-yard grass.* Monotropa uniflora—*Indian pipe.* Solidago bicolor—*white golden rod.* Aster corymbosus—*corymbed aster.* Polygonum sagittatum—*scratch grass.*

In concluding the Flora of Hampton, I wish it to be clearly understood, that the plants which have been recorded (about five hundred in number) do not nearly embrace all that grow in the neighborhood, but only such as have come under my own observation, in my rambles on foot in the country. I have dried specimens of all, and purpose arranging them in a *hortus siccus*, to be placed in the College museum for reference. Not knowing the names of the places where they were collected has prevented me from giving the exact locality this year; but having now obtained a map of the district, I hope, next year, to supply the deficiency, when printing the list in pamphlet form, for the use of the students, and as a guide to botanists who may visit the district for the purpose of collecting.

GEORGE DIXON.

SONGS.

ALFRED TENNYSON.

The splendor falls on castle walls
And snowy summits old in story;
The long light shakes across the lakes,
And the wild cataract leaps in glory.
Blow, bugle, blow, set the wild echoes flying;
Blow, bugle; answer, echoes, dying, dying, dying.

O hark! O hear! how thin and clear,
And thinner, clearer, further growing;
O sweet and far, from cliff and scar,
The horns of Elfland faintly blowing!
Blow, let us hear the purple glens replying;
Blow, bugle; answer, echoes, dying, dying, dying.

O love, they die in yon rich sky,
They faint on hill or field or river;
Our echoes roll from soul to soul,
And grow forever and forever.
Blow, bugle, blow, set the wild echoes flying;
And answer, echoes,—answer, dying, dying, dying.

HOME they brought her warrior dead:
She nor swooned, nor uttered cry:
All her maidens, watching, said
"She must weep or she will die."

Then they praised him, soft and low,
Called him worthy to be loved,
Truest friend and noblest foe;
Yet she neither spoke nor moved.

Stole a maiden from her place,
Lightly to the warrior stept,
Took the face-cloth from the face;
Yet she neither moved nor wept.

Rose a nurse of ninety years,
Set his child upon her knee—
Like summer tempest came her tears—
"Sweet my child, I live for thee."

For the SOUTHERN WORKMAN.

ALFRED TENNYSON.

The two beautiful little poems which we give on this page were written by the present poet-laureate, or poet to the crown of England, who is now a man some sixty years of age, and incontestably the greatest of living English poets. Born in 1810, the son of a Church of England clergyman, he was the third of a family of twelve children whose favorite amusement was writing stories and verses, and who had all the advantage culture can give. Alfred and his two brothers began to write early in life, and Alfred's first volume of poems was published before he graduated from the University of Cambridge, and contains much which is now recognized as beautiful, although at the time, it received but slighting notice from the critics. Of course no man's fame can be justly weighed while his life and rank are yet unfinished; but it is certain that few men have lived to receive such hearty and general acknowledgment of their power, or to feel that their genius had reached such complete development, as has Alfred Tennyson; and it seems as if the tranquillity of his life had added by force of contrast to the glory of his work. He lived for many years in great seclusion near London, but latterly has made for himself a fitting home upon the lovely shore of the Isle of Wight, one of the most beautiful spots in all England. His most important works are "The Princess," "In Memoriam," and "The Idyls of the King," while his shorter pieces, his ballads and rhythmical stories fill several volumes which take a high rank among the treasures of English literature. "The May Queen," "The Miller's Daughter," "The Lady of Shalott," and a hundred others, are so exquisite and still so simple, that no reader of English poetry can be pardoned for not being thoroughly familiar with their beauties. We recommend our readers to the two examples of Mr. Tennyson's genius which we give herewith, trusting that they may be tempted to search for themselves in the treasure house of his poetry.

For the SOUTHERN WORKMAN.

WILL THE ICE BEAR?

Our illustration for this month warns us that once more winter is at hand, and that before many days have passed, chill winds and frosty airs will deliver us over to the power of the Ice-king, whose sway is so powerful and so relentless, and whose kingdom extends almost to the extreme southern limits of our continent. Frost and snow will soon be here, and more than one eager voice will echo the question which we fancy we can hear from the young girls in the picture, "Will the ice bear?" What pleasure they are promising to themselves, these pretty maidens, if their query shall be answered in the affirmative; and how real they and their surroundings seem. Look at the frozen, shining surface of the pond, with its snow-covered banks, and the bare, brown trees stretching up their tall, straight stems into a brilliant winter sky. See the half-broken path down which the skaters have come, the merry little rascals who stand laughing and shivering on the shore, the good-natured man in the background whose strong arms are ready with shovel and broom to clear some smooth corner of the ice, whereon the expert skaters may cut circles and figures, or, perchance, if they are great in the art, their own initials, while those who are new to the deceitful foothold may make the smooth glare of the freshly swept ice an excuse for all their tumbles and eccentric performances. What can be gayer, more exhilarating, more wholesomely exciting to mind and body than this brisk, delightful exercise of skating,—the flash and ring of the steel upon the ice, the swift rush through the cold, sparkling air, the spice of danger, all combining to make the amusement one of the chief delights which inexorable winter brings, at least to the younger portion of the community, while even the elders must enjoy the bright scene, and feel some interest in the important question, "Will the ice bear?"

For the SOUTHERN WORKMAN.

OUR SIGNAL SERVICE.

Among the Government Reports for the year 1873 is one which illustrates very satisfactorily the growth and highly important department of the public service; for in the "Annual Report of the Chief Signal Officer to the Secretary of War," we find that the annual account, during the few years since the work began, has increased in more than geometrical ratio. General Myer, the chief of the bureau, reports that there are one hundred and eighty-one observers, of whom eighty-eight are sergeants and ninety-three assistants, occupying seventy-eight stations. It is not possible to give within our limits anything like a detailed description of the doings of the Signal Service establishment, and we must content ourselves with giving our readers merely a general idea of a very valuable work. In additiou to the publication of the "Probabilities" of the weather, which are so familiar to all of us, the postmasters in all country districts are furnished with printed slips containing similar forecasts, which they are expected to put up in conspicuous places for the benefit of the public. The state of the water in our principal rivers,—its temperature and other special points are also reported, while a record is furnished of the weather for long periods continuously at distant places, as, for example, the Island of St. Paul, off Alaska, and the vessel *Polaris* in the North Polar expedition; also we get records from the summits of Mt. Washington and Mt. Mitchell, N. C., which present some curious facts; and indeed it is difficult to speak too highly of the interest and importance of this whole work. The Signal Service has made it possible to prepare with so much certainty for changes of the weather, that farmers and business men who are likely to be affected by such changes, are beginning to depend with great confidence upon the reports officially furnished; while there are few people who see a newspaper without turning instinctively to the "Probabilities," to learn what to-morrow is to bring forth.

For the SOUTHERN WORKMAN.

AFRICA.

We trust that our readers keep up their interest in the work for which the brave Livingstone lived and died, and that the efforts which in one shape or another are constantly being made to suppress the internal slave trade of Africa, continue to command their attention and sympathy.

Perhaps the latest plan recommended as having a fair chance of success is that of Lieutenant Cameron of the English Navy, who, in March last, reached Ujiji, the famous meeting place of Livingstone and Stanley, and there prepared a report on the slave trade. He says "that the whole country from the coast to Lake Tanganyika is infested by slave-hunting brigands, who attack native villages and sometimes passing caravans, or, kidnap men working in the fields. Some of these bands are the young men of native tribes of a warlike disposition, others are composed of runaway slaves; and often when an Arab is in bad circumstances he will arm a party of men and travel about fomenting wars between neighboring tribes, and then, joining the stronger side, obtain his share of the plunder in slaves. The Arabs who have settled in Eastern Africa require great numbers of slaves to work on their farms, or to serve as carriers in their caravans; and in all parts of Africa wealthy natives invest their money in slaves."

Lieutenant Cameron, in view of this state of things, does not hesitate to declare that the "suppression of the slave trade is, and will continue an impossibility until communication with the civilized world is opened up"; and to this end he advises the immediate construction of a railway from Bayamoyo to Ujiji (to cost, at a rough estimate, about $4,000,000), with branch lines to Victoria, Nyanza and Urori. This line, he thinks, would at once pay five per cent, and lines connecting with it could gradually be carried further into the interior, where the fertile soil produces cotton, grain, coffee, spices, India-rubber, etc., which articles it would, of course, pay largely to export.

To most people, the plan of a railroad which shall pierce the heart of Africa seems somewhat visionary; and it is certainly very doubtful whether the condition of African society would be greatly changed by the fact of a path being laid between Ujiji and the outer world; but, at least, such reports as this of Lieutenant Cameron show us how great the need is, how frightful the darkness in which thousands of our fellow-beings are lying, and how serious is the responsibility resting upon the nations of Christendom.

For the SOUTHERN WORKMAN.

POULTRY.

The common hen and her nest of eggs and horde of chickens are such important features of our domestic life, that it is a little remarkable how few farmers or housekeepers take any pains to inform themselves as to the proper treatment of fowls, and management of poultry yards. To raise the rarer breeds of fowls in this country requires, in the first instance, a comparatively large investment; that is, there must be several acres of land, well-built, dry and warm houses, intelligent labor, etc.; while the actual cost of the finer varieties of eggs is from $5.00 to $25.00 per dozen, while the fowls themselves run up to $50.00 a pair. Now of course such expense as this can be gone into only by rich men for amusement; or by poor men as a business investment; and although, in the latter case, experience has shown that with care and skill it is a business which yields a handsome profit, it is not to either of these classes of poultry breeders that we wish here to speak. It is, on the contrary, to a few out of the thousands of families who own ten or twenty or fifty "common" hens, that we desire to give a few hints, taken mainly from the reports of French egg dealers, it being generally acknowledged that French hens are the best for eating and the most prolific layers in the world. The principal fact, perhaps, is that the French farmers scarcely feed their hens at all, but allow them to run about and pick up what they please in the fields and hedges; and that, secondly, the districts in which the hens thrive best and lay most freely are those in which the soil contains a large proportion of silex. It is an established fact, that when fowls are removed from these districts there is a marked diminution in the number of their eggs, so that the English poultry fanciers who have of late years imported large numbers of hens from France in the hope of improving their native breeds, have universally been disappointed in the fowls thus procured.

The whole theory of the ordinary hen-farmer in France rests upon his experience of the necessity of plenty of room for the fowls to run, and plenty of silex in the soil wherein they pick. Give him those two conditions and he is sure of a steady, handsome profit on very common breeds of fowls; and there is no reason why his experience should not hold good in this country. If the silex does not exist in sufficient quantity in any given soil, it is possible to make it up to the fowls by artificial means, as is done to a certain extent by farmers living near the seacoast, who often supply their hens with pounded clam shells, and similar delicacies. But this hardly ever takes the place of the natural supply; and at present there is no doubt that hens thrive better upon certain soils than upon others, which, to the eye, are just as favorable.

If anything more is attempted than to provide the hens with plenty of space, and a suitable soil, the subject becomes of such difficulty as to require very great study and care. A scientifically arranged poultry-yard is an extremely interesting scene, the arrangement of the houses, regulation of food, preservation of breeds, etc., being matters which require a large amount of judgment and skill. But once more we repeat, that hen-raising can be made profitable on a different, and less pretentious basis, provided the two requirements of plenty of room and plenty of silex be fulfilled.

A VIVID DESCRIPTION.

The following, says the St. Louis *Republican*, is an extract from a letter written by Mrs. S. D. Barrett, formerly of Cambridge, Illinois, but now residing in Nemaha County, Kansas. Her home is in the track of the northern column of the devastating grasshoppers, and we presume her vivid description of the scene will give our readers a clearer idea of the magnitude of the pest than they have hitherto been able to form:

"It looks very sad and dreary to me to-day. The sun is quite hidden by the clouds of grasshoppers flying all around alighting on everything. They are pelting against my doors and windows as fast as hailstones ever came. I can scarcely see through my screen door for them, and look out as far as eye can see, it looks like a snow-storm;—as they fly their wings look white like flakes of snow in the air. They destroy everything they alight on. They have destroyed acres and acres of corn, and now they are going in our corn-fields by clouds, and will destroy it all in a day. Every shrub and tree is covered with them. You know we read of Pharaoh's plague, where the insects got into the kneading troughs. I think this is one of them. I went out by the door to try and drive them off, and they flew all over me, and I had to change my dress to get rid of them. Instead of rain, we are having showers of grasshoppers. Our six windows are completely covered with them; and as I write, they are pouring down the chimney and coming down the stove-pipe.

"Father has just come in. He cannot work out doors, for they blind him; and they are coming faster, and are now eating the netting off my doors and windows, and the heat and close air are stifling. I never saw anything so terrible in my life. The ground is now completely covered, and they cause such an offensive smell that but for an occasional breeze to carry it off, I know not what we should do.

"Please excuse mistakes, as I feel so bad and nervous under this awful scourge and desolation."—*Exchange.*

If thou hast any good in thee, believe still better things of others, that thou mayest preserve humility. It will do thee no harm to put thyself below everybody, but it will hurt thee very much to put thyself before any one.—*Thomas a Kempis.*

THE TWO ANCHORS.

It was a gallant sailor man
Had just come home from sea,
And as I passed him in the town,
He sang "Ahoy!" to me.
I stopped and saw I knew the man—
Had known him from a boy;
And so I answered, sailor-like,
"Avast!" to his "Ahoy!"
I made a song for him one day—
His ship was then in sight—
"The little anchor on the left,
The great one on the right."

I gave his hand a hearty grip.
"So yon are back again?
They say yon have been pirating
Upon the Spanish Main;
Or was it some rich Indiaman
Yon robbed of all her pearls?
Of course yon have been breaking hearts
Of poor Kanaka girls!"
"Wherever I have been," he said,
"I kept my ship in sight,
'The little anchor on the left,
The great one on the right.'".

"I heard, last night, that yon were in;
I walked the wharves to-day,
But saw no ship that looked like yours;
Where does the good ship lay?
I want to go on board of her."
"And so yon shall," said he;
"But there are many things to do
When one comes home from sea.
You know the song you made for me?
I sing it morn and night—
'The little anchor on the left,
The great one on the right!'"

"But how's your wife and little one?"
"Come home with me," he said;
"Go on, go on; I follow you."
I followed where he led.
He had a pleasant little house;
The door was open wide,
And at the door the dearest face—
A dearer one inside!
He hugged his wife and child; he sang—
His spirits were so light—
"The little anchor on the left,
The great one on the right!"

'T was supper-time, and we sat down—
The sailor's wife and child,
And he and I; he looked at them,
And looked at me, and smiled.
"I think of this when I am tossed
Upon the stormy foam,
And though a thousand miles away,
Am anchored here at home."
Then, giving each a kiss, he said,
"I see in dreams at night,
This little anchor on my left,
This great one on my right!"

—*Harpers' Magazine.*

For the SOUTHERN WORKMAN.

A SCENE IN NORWAY.

Mr. Shorey has given us a curious picture for this month, has he not? A cold country it must be, where the people have to wrap up in furs like that—very different from the sunny South. All the way over the great Atlantic, and far up toward the North pole lies Norway, almost the most northern country of Europe. Few of the summer travelers to the old world visit it, yet a most interesting country it is, of which we could tell some wonderful stories if there was time. The picture shows how the Norwegians get their fish in their long winters. They have cut a hole in the ice, you see, and if a fish shows his nose he will be speared in a hurry.

For the SOUTHERN WORKMAN.

A COLORED VILLAGE IN CANADA.

The Buxton Mission.

I gave the readers of the SOUTHERN WORKMAN some items of information concerning the colored race in Canada, and promised them a sketch of perhaps the most interesting of the colored settlements there, the village of Buxton, in the province of Ontario, twelve miles from Chatham.

Inquiring while in Chatham, for the most reliable sources of information upon the general subject of my investigations, I was referred among other letters to the Rev. William King, the founder of the Buxton Mission, as it was once called. A twelve miles ride in search of him was delightful in itself, for the beauty of the scenery, and the richness of the country passed through; and though I did not find the patriarch at home in the midst of his flock, the disappointment was softened by the cordiality with which I was received in the ancient mission house by his hospitable wife, and the Rev. Horrocks Cocks from England, who was visiting Canada in the interest of British emigration. Dr. Cocks kindly showed me over the mission, and I am indebted to him for much of the information that may be given in this article.

The peculiar interest of the Buxton Mission is that it is the accomplishment of a noble idea wrought out in self-sacrifice. That it was founded by an Irishman for the good of colored men is another interesting fact, in consideration of the inborn enmity supposed to exist between the two races—an enmity which can only result, however, from ignorant selfishness, and which must disappear before education and Christianity.

Mr. King was a native of Ireland, a resident of Louisiana, and intimate with the Southern aristocracy in his influential connection with the college at Jackson. He was also a slaveholder himself, but on a somewhat peculiar basis, for he gave his slaves the proceeds of their own labor, and bought them only to set them free, training them carefully for freedom, while waiting till the legal obstacles to his purpose could be removed.

A SCENE IN NORWAY.

As soon as this was accomplished, he sold his plantation, and took his slaves with him to Canada, thus giving them their liberty. He established his own home among them, and settled them around him. The British Government made the little settlement a grant of land, and it was thus organized under the name of Buxton, in honor of Sir T. F. Buxton, the great English philanthropist.

As this was toward the close of the year 1849, the young colony received immediate accession from the throng of refugees driven into Canada from the northern states by the passing of the Fugitive Slave bill. This influx, however, seemed to do it more harm than good. The fugitives did not receive the welcome they had reason to expect on British soil from the white settlers. The cry was raised that their coming would interfere with white labor, and a persecution followed, all the more bitter when directed against an organized effort like the Buxton Mission, that seemed to be based on permanent principles of Christian benevolence. It is sad to think how much noble energy and intellect that might have told with mighty effect upon the peaceful progress of the little colony, had to be turned into the struggle for life with its enemies. Its pure-minded, self-sacrificing founder was assailed with slanders and misrepresentations innumerable, and every possible influence was brought to induce the government to withdraw its aid. But though the good work was hindered, and some of his benevolent plans frustrated, he did not falter, and God did not desert this vine of His own planting. A church and school-house were put up, the forest began to fall under the settlers' axes, roads were built, and the land drained. Each settler received a fifty acre lot if he wished it, to be paid for at two dollars and a half an acre in ten annual instalments with interest. He was also required by the contract to put up a house on it, not inferior to a certain model which was of log, twenty-four feet by eighteen, and twelve feet high. The land was heavily timbered, but the soil was good, and the manufacture of black salts—used in the making of pot- and pearl-ash—from the ashes of the timber cut, converted the wood into a marketable article of great value.

Settlers came in every year, some of whom brought a little capital with them; a saw and grist mill was put up, a brick yard, and various industries added, farming still continuing to be the principal occupation.

In 1866, sixteen years after the little band of freedmen invaded the unbroken forest to dispute possession with the wolf and the bear for the foundation of their colony, its historian writes: "There are now four schools with an attendance of three hundred scholars. Two hundred attend the Sabbath-school. Seven hundred have already passed through the mission school and received a good, common education, while others have been trained as teachers, and are occupying important posts in Canada and the United States. Two are surgeons in the hospital at Washington. The schools are now all self-supporting; the settlers have subscribed this year, fourteen hundred dollars for educational purposes. The mission church is well attended, and Mr. King conducts a Bible class for adults at his own house. The mission church is Presbyterian; there are also Methodist and Baptist churches which are largely attended. Two thousand acres of forest land have been cleared and cultivated, and twenty-five miles of road opened. Two hundred and fifty families have made themselves comfortable homes and support themselves by their own industry. Nothing that intoxicates is sold in the settlement, and drunkenness is almost unknown. The natural taste of the colored race for music has been cultivated by the formation of singing classes by one of themselves."

Writing in February, 1866, Mr. King himself says: "This settlement is a standing protest against the charges brought against the negro, of idleness and inapacity to manage his own business. Just at this critical period in the reconstruction of the slave states, and the settlement of other questions connected with the freedom of the slave, it is well that we have at least one community of freedmen of whom it can be said that they are self-supporting and industrious. Enjoying all the rights of freemen, they are well behaved, and exercise their civil rights with as much judgment as any other settlers coming into the province. To-day the thermometer stands five degrees below zero with snow a foot deep. Yet every able-bodied man in the settlement is in the woods with axe and cross-cut making staves for the foreign market and taking saw logs to the mill. The settlement has never been more prosperous than it is this year."

As far as I could learn, its prosperity still continues, though market values are not as high as they were at the close of the war. The change emancipation has brought to the condition of the colored race in the United States, has naturally prevented the rapid growth of the settlement; but its population has at least not diminished; and its noble founder who still lives in the log mission house to which he came twenty-five years ago, has reason to thank God for the fruit of his labors, and the prosperity of the great cause to which he has devoted his fortune and his life.

REBECCA, THE DRUMMER.

A TRUE STORY OF THE WAR OF 1812.

It was about nine o'clock in the morning when the ship first appeared. At once there was the greatest excitement in the village. It was a British war-ship. What would she do? Would she tack about in the bay to pick up stray coasters as prizes, or would she land soldiers to burn the town? In either case there would be trouble enough.

Those were sad days, those old war-times in 1812. The sight of a British war-ship in Boston Bay was not pleasant. We were poor then, and had no monitors to go out and sink the enemy or drive him off. Our navy was small, and, though we afterward had the victory and sent the troublesome ships away, never to return, at that time they often came near enough, and the good people in the little village of Scituate Harbor were in great distress over the strange ship that had appeared at the mouth of the harbor.

It was a fishing-place in those days, and the harbor was full of smacks and boats of all kinds. The soldiers could easily enter the harbor and burn up every-thing, and no one could prevent them. There were men enough to make a good fight, but they were poorly armed, and had nothing but fowling-pieces and shot-guns, while the soldiers had muskets and cannon.

The tide was down during the morning, so that there was no danger for a few hours; and all the people went out on the cliffs and beaches to watch the ship and to see what would happen next.

On the end of the low, sandy spit that makes one side of the harbor, stood the little white tower known as Scituate Light. In the house behind the light lived the keeper's family, consisting of himself, wife, and several boys and girls. At the time the ship appeared, the keeper was away, and there was no one at home save Mrs. Bates, the eldest daughter, Rebecca, about fourteen years old, two of the little boys, and a young girl named Sarah Winsor, who was visiting Rebecca.

Rebecca had been the first to discover the ship, while she was up in the light-house tower polishing the reflector. She at once descended the steep stairs and sent off the boys to the village to give the alarm.

For an hour or two the ship tacked and stood off to sea, then tacked again and made for the shore. Men, women and children watched her with anxious interest. Then the tide turned and began to flow into the harbor. The boats aground on the flats floated, and those in deep water swung round at their moorings. Now the soldiers would probably land. If the people meant to save anything it was time to be stirring. Boats were hastily put out from the wharf, and such clothing, nets, and other valuables as could be handled were brought ashore, loaded into hay-carts and carried away.

It was of no use to resist. The soldiers, of course, were well armed, and if the people made a stand among the houses, that would not prevent the enemy from destroying the shipping.

As the tide spread out over the sandy flats it filled the harbor so that, instead of a small channel, it became a wide and beautiful bay. The day was fine, and there was a gentle breeze rippling the water and making it sparkle in the sun. What a splendid day for fishing or sailing! Not much use to think of either while that war-ship crossed and recrossed before the harbor mouth.

About two o'clock the tide reached high water mark, and, to the dismay of the people, the ship let go her anchor, swung her yards round, and lay quiet about half-a-mile from the first cliff. They were going to land to burn the town. With their spy-glasses the people could see the boats lowered to take the soldiers ashore.

Ah! then there was confusion and uproar. Every horse in the village was put into some kind of team, and the women and children were hurried off to the woods behind the town. The men would stay and offer as brave a resistance as possible. Their guns were light and poor, but they could use the old fish-houses as a fort, and perhaps make a brave fight of it. If worse came to worse, they could at least retreat and take to the shelter of the woods.

It was a splendid sight: five large boats, manned by sailors, and filled with soldiers in gay red coats. How their guns glittered in the sun! The oars all moved together in regular order, and the officers in their fine uniforms stood up to direct the expedition. It was a courageous company come with a war-ship and cannon to fight helpless fishermen.

So Rebecca Bates and Sarah Winsor thought, as they sat up in the light-house tower looking down on the procession of boats as it went past the point and entered the harbor.

"Oh, if I only were a man!" cried Rebecca.

"What could you do? See what a lot of them; and look at their guns!"

"I don't care. I'd fight. I'd use father's old shot-gun—anything. Think of uncle's new boat and the sloop!"

"Yes; and all the boats."

"It's too bad, is n't it?"

"Yes; and to think we must sit here and see it all and not lift a finger to help."

"Do you think there will be a fight?"

"I don't know. Uncle and father are in the village and they will do all they can."

"See how still it is in town. There 's not a man to be seen."

"Oh, they are hiding till the soldiers get nearer. Then we 'll hear the shots and the drum."

"The drum! How can they? It 's here. Father brought it home to mend last night."

"Did he? Oh! then let 's——"

"See, the first boat has reached the sloop."

"Oh! oh! They are going to burn her!"

"Is'nt it mean?"

"It's too bad!—too ——"

"Where is that drum?"

"It 's in the kitchen."

"I 've a great mind to go down and beat it."

"What good would that do?"

"Scare 'em."

"They 'd see it was only two girls, and they would laugh and go on burning just the same."

"No. We could hide behind the sand hills and the bushes. Come, let 's——"

"Oh, look! look! The sloop 's afire!"

"Come, I can't stay and see it any more. The cowardly Britishers to burn the boats! Why don't they go up to the town and fight like——"

"Come, let 's get the drum. It 'll do no harm; and perhaps——"

"Well, let 's. There 's the fife, too; we might take that with us."

"Yes; and we 'll——"

No time for further talk. Down the steep stairs of the tower rushed these two young patriots, bent on doing what they could for their country. They burst into the kitchen like a whirlwind, with rosy cheeks and flying hair. Mrs. Bates sat sorrowfully gazing out of the window at the scene of destruction going on in the harbor, and praying for her country and that the dreadful war might soon be over. She could not help. Son and husband were shouldering their poor old guns in the town, and there was nothing to do but to watch and wait and pray.

Not so the two girls. They meant to do something, and, in a fever of excitement, they got the drum and took the cracked fife from the bureau drawer. Mrs. Bates, intent on the scene outside, did not heed them, and they slipped out by the back door, unnoticed.

They must be careful, or the soldiers would see them. They went round back of the house to the north and toward the outside beach, and then turned and plowed through the deep sand just above high-water mark. They must keep out of sight of the boats, and of the ship, also. Luckily, she was anchored to the south of the light; and as the beach curved to the west, they soon left her out of sight. Then they took to the water side, and, with the drum between them, ran as fast as they could toward the mainland. Presently they reached the low heaps of sand that showed where the spit joined the fields and woods.

Panting and excited, they tightened up the drum and tried the fife softly.

"You take the fife, Sarah, and I'll drum."

"All right; but we mus' n't stand still. We must march along the shore toward the light."

"Wo'n't they see us?"

"No; we 'll walk next the water on the outside beach."

"O yes; and they 'll think it 's soldiers going down to the Point to head 'em off."

"Just so. Come, begin! One, two,—one, two!

Drum! drum!! drum!!!

Squeak! squeak!! squeak!!!

"For'ard—march!"

"Ha! ha!"

The fife stopped.

"Don't laugh. You 'll spoil everything, and I can't pucker my lips."

Drum! drum!! drum!!!

Squeak! squeak!! squeak!!!

The men in the town heard it and were amazed beyond measure. Had the soldiers arrived from Boston? What did it mean? Who were coming?

Louder and louder on the breeze came the roll of a sturdy drum and the sound of a brave fife. The soldiers in the boats heard the noise and paused in their work of destruction. The officers ordered everybody into the boats in the greatest haste. The people were rising! They were coming down the Point with cannons, to head them off! They would all be captured, and perhaps hung by the dreadful Americans!

How the drum rolled! The fife changed its tune. It played "Yankee Doodle,"—that horrid tune! Hark! The men were cheering in the town; there were thousands of them in the woods along the shore!

In grim silence marched the two girls, —plodding over the sharp stones, splashing through the puddles,—Rebecca beating the old drum with might and main, Sarah blowing the fife with shrill determination.

How the Britishers scrambled into their boats! One of the brave officers was nearly left behind on the burning sloop. Another fell overboard and wet his good clothes, in his haste to escape from the American army marching down the beach —a thousand strong! How the sailors pulled! No fancy rowing now, but desperate haste to get out of the place and escape to the ship.

How the people yelled and cheered on the shore! Fifty men or more jumped into boats to prepare for the chase. Ringing shots began to crack over the water.

Louder and louder rolled the terrible drum: Sharp and clear rang out the cruel fife.

Nearly exhausted, half dead with fatigue, the girls toiled on,—tearful, laughing, ready to drop on the wet sand, and still beating and blowing with fiery courage.

The boats swept swiftly out of the harbor on the outgoing tide. The fishermen came up with the burning boats. Part stopped to put out the fires, and the rest pursued the flying enemy with such shots as they could get at them. In the midst of it all, the sun went down.

The red-coats did not return a shot. They expected every minute to see a thousand men open on them at short range from the beach, and they reserved their powder.

Out of the harbor they went in confusion and dismay. The ship weighed anchor and ran out her big guns, but did not fire a shot. Darkness fell down on the scene as the boats reached the ship. Then she sent a round shot toward the light. It fell short and threw a great fountain of white water into the air.

The girls saw it, and dropping their drum and fife, sat down on the beach and laughed till they cried.

That night the ship sailed away. The great American army of two had arrived, and she thought it wise to retreat in time!

Rebecca is still living, old and feeble in body, but brave in spirit and strong in patriotism. She told this story herself to the writer, and it is true.—*St Nicholas.*

AUDUBON.

A little incident related in the "Life of Audubon," the celebrated naturalist, forcibly illustrates the patient, persistent, painstaking manner in which men of science as well as men of letters, prosecute their investigation. It was while Audubon was hunting in the forests of Louisiana that he discovered a tiny little woodbird hitherto unknown to the ornithologist. It was not so big as a wren, and was clad in a coat of such plain, sober gray, that none but practiced eyes would detect it flitting in and out among the similar colored branches of the peculiar species of trees it inhabited. But, however humble the bird might be, to Audubon it was one of the charming and curious race of beings that interested him above all other living things, and to ascertain its history and habits was a matter of as much importance as though it were chief of the tribe. He, therefore, bent every energy of his intense and eager nature to the study of it. One night he came home with the exciting news that he had found a pair which were evidently preparing to build a nest.

Next morning he was up and off to the woods by daybreak, taking along with him a telescopic microscope. Erecting this under the tree that sheltered the almost invisible little creatures he was anxious to observe, he made himself a pillow of moss, and then laid quietly down on the ground, with his eye to the instrument and remained throughout the livelong hours until nightfall, watching the movements of the secret and unsuspecting architects. This course he repeated day after day, for three weeks, without respite or intermission, and then he was able to tell, with minute and accurate details, just what material these builders in the heart of the wild wood choose for their dwellings, just how they put it together, and the number of days required to complete the process of incubation. In short, by this noiseless, solitary, tireless vigilance, he had gathered up all the various chapters in the history of this nameless forest-inhabitant, and bound them together in a complete and unique volume. It was thus that Audubon made himself acquainted with the peculiar and characteristic traits of the birds of America, and came to know them as he knew the faces of his wife and children, and could draw each one of them in the most natural and life-like attitude, with every spot of color and adjustment of feather exactly as it should be and always with the accompaniment of some spray of plant or branch of tree, that, growing near its favorite haunts, was especially identified with it.—*Exchange.*

At Home.

FRIGHTENED BIRDS.

"Hush! hush!" said the little brown thrush,
To her mate on the nest in the elder-bush;
"Keep still! don't open your bill!
There 's a boy coming bird-nesting over the hill.
Let go your wings out so
That not an egg nor the nest shall show.
Chee! chee! it seems to me
I 'm as frightened as ever a bird can be!"

Then still, with a quivering bill,
They watched the boy out of sight o'er the hill.
Ah, then in the branches again,
Their glad song rang over vale and glen.
Oh! oh! if that boy could know
How glad they were when they saw him go,
Say, say, do you think next day
He could possibly steal those eggs away?

—*Selected.*

Respect Due to Women.—Every man who prides himself upon being an American citizen should remember that one of the greatest glories of American civilization is the respect and consideration it shows to women. This respect to women is a test of civilization in every country. The savage and heathen nations have little or none of it. The Indian husband loafs around his wigwam all day when he is not amusing himself with hunting or scalping his enemies, and lets his wife do all the drudgery. He walks along smoking, and his squaw carries the buffalo meat, and the bent poles, as well as the baby. The women of China and India and Turkey are miserable slaves; and a mother weeps when her child is a daughter, to think of all the wretched life before her. If she can throw the little girl baby into the river as a sacrifice to her cruel god, she thinks it a happy escape—and so it is. The Christian nations of Europe give honor to women in direct proportion to the extent of civilization through their society. In some of them, while the educated classes treat her with respect and tenderness, the lowest classes make her almost a slave. The boast of America is the general diffusion of knowledge and civilization through all classes of society, and consequently, also, the general respect shown to woman. Remember this: No man can be worthy the name of American citizen who tyrannizes over his wife, and treats any woman with rudeness.

Here is a good motto for grumblers, and every one else:

TWO KEYS.

"Hearts, like doors, can ope with ease
To very, very little keys,
And don't forget that two are these—
'I thank you, sir,' and 'if you please.'"

It is a curious fact, illustrating the necessity of cleanliness, and of keeping the pores of the skin open, that if a coat of varnish, or other substance impervious to moisture, be applied to the exterior of the body, death will ensue in about six hours. The experiment was once tried on a child at Florence. On the occasion of Pope Leo the Tenth's accession to the Papal Chair, it was desired to have a living figure to represent the Golden Age, and so a child was selected and gilded all over with varnish and gold leaf. The child died in a few hours.

Newspapers Domestically Considered.—Too low an estimate is apt to be set on the domestic value of newspapers. After reading them, they are thrown aside and forgotten. But to suppose their usefulness bounded by their news columns and the waste-basket, is a thriftless mistake.

In the first place there are the household recipes, to be found in stray corners, often excellent, and deserving a refuge on the fly-leaf of the family cook-book. Then come the pretty verses, the strange and droll stories, the brief biographies and reminiscences which, pasted in a scrap-book, are a source of never-ending pleasure, not only to those who do not care for richer intellectual food, but to those who have only odd minutes for reading.—*Scribner's Monthly.*

Correspondence.

From our London Correspondent.

LONDON, *July*, 1874.

Some little time ego, I was advised by Professor B., one of my teachers, to procure if possible, a ticket of admission to the Library of the British Museum, as it contains some veluable booke on music, of which there are only two or three copies in the world, besides every book relating to music or musical education, which is of any value—and here let me say, that by law, every bookseller and publisher in the United Kingdom, of whatever class, is obliged to give a copy of every book he publishes to this library; so you may imagine what an immense stock of novels, history, science, art, etc., is always on hand. On presenting myself at the Museum, I was furnished with the proper form of application, to be filled out by the person desiring admittance, and found that it was also necessary to have the name of some well known professional character signed to a voucher on the reverse side. As I have no acquaintance with any public character here, I called on Mr. Moran, Secretary of the American Legation; but he, too, wanted a letter of introduction, which I could not obtain from home in less than a month; and I was returning to my lodgings somewhat disgusted with the red tape of the business when I bethought myself of Dr. W., who attended me in a slight attack of illness last spring, and who had proved not only an excellent physician, but a truly kind friend. He settled the difficulty at once by filling out and signing the paper (long life to him!) and now I can go there for a quiet reading time whenever I like. The reading room is splendidly arranged for comfort; it is circular and about two hundred and twenty feet in diameter. The top is a large dome probably some hundred and fifty feet high. All the light comes from windows in the sides and top of the dome. There are two galleries running around it, and these are full of books; in fact, from the floor to the point where the dome begins, the walls are nothing but a mass of books; and yet all these books and some others in the centre of the room, upward of two thousand, are only *catalogues*, the library and books being in other apartments. The desk of the Superintendent is in the centre of this circular room. Around it are three rows of desks containing the "Old" and "New" "General Catalogues" in some hundred volumes, the "Musical" and "Patent Catalogues," and also catalogues of all the MSS. in the library. Outside of these circular desks, and radiating like the spokes of a wheel, are the reading desks, with six seats on each side, very wide and roomy, provided with pens and ink, and an arrangement for holding books that can be adjusted at any angle, high or low—most convenient when consulting several books of reference at the same time. There is also a movable shelf for holding extra books—national or anything else. The room is carpeted with leather, and the desks are covered with it (the chair castors also are covered with leather); so that it is almost impossible to make a noise by any carelessness in dropping books. The MS. department is especially valuable to me in my orchestra study. Here is Mozart's "Marriage of Figaro" in his own score, his own handwriting, and unaltered by the mistakes which creep into the printed editions. Here I can study the scores of the Masters from the original manuscripts, which is a great assistance to me.

As a museum, I believe the South Kensington is generally considered superior to the British. At any rate, I consider it a most wonderful collection of curiosities of every description. I have visited it several times, always finding something new, rare and beautiful, to admire; but the attempt to write a description of any such place is most unsatisfactory to me, for of the thousand and one things to be seen it is almost impossible to single out anything especially worthy of description more than all the rest. I think the picture galleries are the most interesting to me. There are some most beautiful bits of landscape, and many of Landseer's animals—all exquisitely done. I saw several recent trophies of the Ashantee war—King Koffee's umbrella for one, and some masks and name' heads, etc., made of pure gold—of great value; also an executioner's sword, which looked like an antiquated saw. The exhibition of tiling is very handsome—parts of the building are finished in tiles—some antique and some modern ones. The lunch-room is elegantly tiled from floor to ceiling.

Last week F. and I went to the promenade concert at the Royal Botanical Gardens, Regent's Park; here, again, we are indebted to the kindness of our good friend, Dr. W., who sent us tickets of admission, none of which are sold. These concerts are very select and aristocratic entertainments, no gentlemen being admitted except in full dress. The gardens are lovely, and the whole scene a very brilliant one; here nobility,—even royalty itself—promenades to the music of some of the royal bands, and special officers are stationed at various points to see that ordinary mortals do not intrude; but *you* see that sometimes they do. The three bands of the Coldstream Guards, the Grenadier Guards, and the Horse Guards are under the leadership of the Godfrey brothers, and are of nearly equal standing in regard to fame and merit—the Grenadiers, perhaps, rather taking the lead. This is the band under the leadership of Dan. Godfrey, which went over and took part in the great Peace Jubilee, at Boston in 1872.

F. and I had rather an amusing adventure last evening, crossing Hyde Park on our way to call on some American friends. We stopped awhile to watch the young "gamins" at their evening swim. Morning and evening the Serpentine at certain point is used by these youngsters for bathing, under the watchful eye of the London "bobby" (which is, being interpreted, policeman), and the protection of five boats with life-preservers, and men all ready for a rush the instant any one of them begins to show any signs of sinking or symptoms of cramp, or in getting into difficulty of any sort. The little Arabs seem perfectly delighted with the sport and shout and spatter each other to their hearts' content. By going out of our way to witness the above mentioned performance we found it necessary to retrace our steps or else cut across an unfamiliar part of the park, which, as it was getting rather late for our call, we thought best to do; and after leaving the park, and following along a somewhat dimly lighted street, we brought up in a stable yard. Here, again, one only way was to go back or take another "cut" through a church yard, which would take us in the desired direction, though just *where* we did not exactly know. While we were dallberating, a man passed us, climbing over the low railing, as the gates were locked for the night; and as he was evidently bound for the same point as ourselves, we followed. I should think we walked a quarter of a mile through the grave yard—it certainly was the longest grave yard I ever entered; and when at last we had made our way across it and came in sight of the entrance, we found to our dismay that it came out directly on Brompton Road, a busy thoroughfare always brilliantly lighted and full of people and vehicles; and what was more, the fence here was an ornamental one and fully twelve feet high. We did not much like the idea of climbing up and descending into that crowd; but our guide did it, and feeling that we were in for it, over we went. But scaling a twelve foot iron fence is not a thing to be done in a hurry, and it seemed to me half an hour before I was down in the street and merged in the crowd below. Several persons eyed us rather suspiciously, but we crossed the street and went on our way unmolested; but we don't take any more short cuts through grave yards. We had walked in the forenoon from our lodging in St. John's Wood to the heart of the city and part of the way back; and now, not finding our friends at home, we walked up Picadilly to the Quadrant (Regent St), and there took a bus for home. On consulting our maps and measuring out our day's walking, we found it to be ten and a half miles, though it did not seem nearly so much; and after a good night's sleep we are all ready to start again to-day.

K.

Messrs. Editors,—The contest for a seat in Congress from the fifteen southeastern counties of Virginia, though very warm, is marked by a disposition of the leaders on both sides, to allow each other a fair hearing.

One of the three candidates, Mr. John Goode, is a representative man of the old style of Virginia gentleman. Himself an ex-member of the Confederate Congress, an able lawyer and speaker, and holding a prominent social position,—if anything can be said for the conservative view of politics, he may be expected to produce it in the present canvass. Mr Platt, the republican candidate is a shrewd and efficient manager, and has strong claims upon his party for past services and zealous championship. The third candidate, Mr. Robert Norton, wants to be elected because he is a colored man; and is competent to exhibit the full strength of his claim. Joint discussions are peaceably held between Mr. Goode and Mr. Platt, in which the utmost freedom of speech is indulged. As an impartial report of such a debate is not too common in this district, I attempt a brief sketch for the benefit of your readers.

On the 13th of October, in the city of Portsmouth, before a very large and attentive audience of all classes from the twin cities, Mr. John Goode opened the debate by a speech of half an hour. He referred to the financial distress of the country,—the suspension of mills,—the misery of laborers. For this he blamed Mr. Platt and his party, because in the last congress they had proved utterly incapable of dealing with the subject of finance. Mr. Goode promised if he was elected that in so far as was in his power, equal justice should be shown to all citizens. He appealed to Virginians whether any man from elsewhere, *could* be competent to represent the peculiar people in Congress. He did not now however object to Mr. Platt because of the place of his birth, but because he was a fomentor of discord, a disturber of the peace, an organizer of one race against the other. He reviews the course of Mr. Platt on the Civil Rights bill, showing that he had consistently favored it in Congress, and denied it on the stump. He asserted that however crooked the gentleman's course on this subject, there was one measure on which he was always to be counted on; namely, the Salary Grab bill. The manipulation of the Navy Yard was shown to be systematically applied to Mr. Platt's ends, and a list given of the assessments on the employees from foremen to water boy. An autograph letter signed by Secretary Robeson was shown, and it pronounced the partisan use of the Navy Yard to be entirely unauthorized by the Navy Department. Mr. Goode promised protection to the men who should act on this letter, and come out and vote as their conscience dictated, refusing to pay such assessments. But the crowning inequalities of Mr. Platt in the eyes of Mr. Goode were, his voting to suspend the sacred writ of *Habeas Corpus*, and his application to the President to send troops to Petersburg at the recent election in that city, in time of peace, and in violation of the Constitution, which made each old subject only to the call of state governors who were unable to preserve the peace.

Mr. Platt in reply remarked upon the negative character of his competitor's address. Much fault was found with the state of the country, but no practical remedies indicated. Mr. Goode was called upon to state what he proposed to do about the currency, and what measures he would recommend to restore activity to the factories and forges. He, Mr. Platt, was in favor of a tariff for protection, and opposed to direct taxation. He was also in favor of a national banking system. What system was Mr. Goode in favor of? "I have here," said Mr. Platt, "a greenback. I show it as the currency which the Republican party has provided: as valuable in one state as in another; and here," said he, waving a Confederate note, "is the money issued by the party of Mr. Goode." The prostration of the old Mother State followed a condition of wealth and happiness, under the best of governments. Its present misery resulted directly from the war, into which Mr. Goode and his friends forced two-thirds of the people against their will.

Mr. Platt defends himself from the charge of sending troops to Petersburg by showing his reasons for believing that the lives of United States' officials and the property of the United States, were in danger from a mob. In regard to suspending the writ of *Habeas Corpus* Mr. Platt asserted that it was the only possible way of checking the Ku Klux butcheries. "If," said Mr. Platt, "I voted once to suspend that writ, I can prove that Mr. Goode voted three times in the Confederate Congress to suspend the same sacred bulwark of freedom."

Mr. Platt showed that previous to the Salary bill, the California and other distant members received $7500.00 per year for their mileage and salary. He voted, therefore, to equalize the pay of members of Congress by raising all salaries up to the rate paid the western members. This ingenious plea was made more tolerable by the statement that the Salary bill provided for the abolishment of the franking privilege and allowance for stationery, etc.

"The Navy Yard matters were" said Mr. Plott, "under the control of the Republican Executive Committee;" and if the Conservatives were in power the Yard would be just as much used for political purposes, with the great disadvantage to the working men, that not nearly so much work would be done here, as if they sent a representative in accord with the Administration.

Mr. Platt stated that his course on the Civil Rights bill had been simply to urge the matter to a decision, so that there might be peace on that subject. As for mixed schools he did not approve them because nobody wanted them. He spoke of the quarrels among the children and the bad feelings of parents which would result, and appealed to the colored people present to say whether they wanted such an absurdity. But he insisted on an equality of educational advantages.

In conclusion Mr. Platt asked that Mr. Goode should drop his personalities, and talk about practical measures.

Mr. Goode's rejoinder was much in the same vein as his opening address. Outside of Mr. Platt's record he did not seem to care to wander.

Want of space has compelled the omission of many interesting points touched upon by the speakers; but the specimen bricks introduced will perhaps show upon what materials each champion relies in building up his cause.

To the Editors of the Southern Workman:

I should not have made any further reply to "Observer," had he not mentioned some draining that was done on the Agricultural Institute farm at Hampton. From inquiry and personal examination, I am satisfied it was ruined by two circumstances: *inexperienced workmen* and *want of depth*. The draining of flat lands requires great care, and can only be done *properly* by experienced drainers. In a sandy subsoil, like the one at Hampton, if the pipes are near the surface, in heavy showers the water finds its way into them *in a direct stream*, carrying with it sand and mud, which soon fill them up, and render them worse than useless. All the early draining in England had this fault, and the pipes had to be taken up and put down deeper. The water should only enter the pipes by percolation, the subsoil acting as a filter, and freeing it from every particle of sediment.

Irrigation is extensively practiced in England as well as Colorado, and it is an established fact, that land deeply drained is benefitted most by the application of water to the surface. If "the pioneers at Greeley" would try deep draining, in connection with their irrigation, they would soon be convinced of its advantage. Farming on scientific principles is adopted to *all soils, all climates*, and *all situations*. To carry it on at random and by guess-work, can never insure the husbandman of a crop. It is like the quack, who administers his nostrums without a knowledge of the nature of the medicine he employs, or the functions of the human system into which it enters,—whether it kill or cure is all accident.

The farmers from England end the North, have mostly purchased worn-out lands; and, not retaining sufficient capital to restore them, have not been able to make a living, and have returned disappointed. A few, who purchased good, improvable farms, and retained capital to stock them, by adopting the Northern and English system of husbandry, are obtaining crops very superior to their southern neighbors, and many of the latter are abandoning their old plans, and adopting an entirely new system of husbandry, based upon scientific principles. Every well-wisher of the state should endeavor to bring about this change as quickly as possible.

GEORGE DIXON.

HAMPTON, VA., *Sept.* 21, 1874.

Mr. Workman,—Since I left your school, to teach, I have met with good success. I have taught in two different localities, and have found the people kind, and anxious to receive instruction.

The white citizens have encouraged me a great deal in my work of teaching, and show great anxiety for the improvement of the colored people. Where an opportunity presents itself for imparting information to the benighted mind, they give it readily, willingly and anxiously. They say that the colored people, to be good citizens, must be educated.

I have found teaching to be no easy work; but *labor omnia vincit* is my motto, and which I shall not put down till disarmed by death.

Three examinations I stood, and came off tolerably well, but had nothing to brag of. Mr. Peek, the superintendent, said they were not hard; but I failed to see it.

Ignorance and superstition walk hand in hand among the majority, but there are signs of a better future, not very remote. The thing most needed is an enlightened ministry; and until this is obtained the dark cloud of superstition, which so much impedes our progress, can never be dissipated. The people, most of them, are poor; but many are accumulating property notwithstanding the discouragement they met in the downfall of the Freedman's Savings Bank. Some have nice homesteads and little farms consisting of from five to ten acres.

The standard of morality is low, but not so low as heretofore, there being a gradual improvement with better hopes for the future. The chief vice to which most of them are addicted is the use of whisky and tobacco. A great many work hard all the week and on Saturday night throw away all of their earnings by buying whisky, tobacco and candy, and call it sport; on which account many suffer, when sick, for medical attendance.

The Sunday-schools are well supplied with Bibles and Testaments; but are greatly in need of papers and competent teachers. I have taught some in the Sunday-schools, but recently stopped, and am now taking Bible lessons under Mr. George Dixon at the Butler School.

Few colored people take papers or go to the post-office to get their letters; but have them sent to the care of their pastor and then go to the church on Sunday and get them.

The white and colored people in this community get along together remarkably well; and as to "civil rights" we don't care a fig. I hope to see the day come when the white and colored in South Carolina, Louisiana and Texas, will get along as well together as we do in tide-water Virginia.

I am, your old pupil,

JAMES. A. FIELDS.

P. S. In 1875, if nothing happens, I expect to return again to your school.

To the Editor of the Southern Workman:

You will continue the "Southern Workman" to my address on the receipt of 75 cents, the charge made to teachers. I find the "Southern Workman" to be my best companion in the rural district, and don't see how I could well do without him.

W. P. B.

Sunday-school Lessons on the Life of Christ.

LESSON I.

NOVEMBER 1, 1874.
THE CHILD JESUS.

MATT. ii. 1–10.

1. Now when Jesus was born in Bethlehem of Judea in the days of Herod the king, behold, there came wise men from the east to Jerusalem,
2. Saying, Where is he that is born King of the Jews? for we have seen his star in the east, and are come to worship him.
3. When Herod the king had heard *these things*, he was troubled, and all Jerusalem with him.
4. And when he had gathered all the chief priests and scribes of the people together, he demanded of them where Christ should be born.
5. And they said unto him, In Bethlehem of Judea: for thus it is written by the prophet,
6. And thou Bethlehem, in the land of Juda, art not the least among the princes of Juda: for out of thee shall come a Governor, that shall rule my people Israel.
7. Then Herod, when he had privily called the wise men, inquired of them diligently what time the star appeared.
8. And he sent them to Bethlehem, and said, Go and search diligently for the young child; and when ye have found *him*, bring me word again, that I may come and worship him also.
9. When they had heard the king, they departed; and, lo, the star, which they saw in the east, went before them, till it came and stood over where the young child was.
10. When they saw the star, they rejoiced with exceeding great joy.

Golden Text.—WHEN THEY SAW THE STAR, THEY REJOICED WITH EXCEEDING GREAT JOY.—Matt. ii: 10.

Our lesson records the strange and eventful journey of tha wise men from the East, who came a distance of nearly a thousand miles to welcome the babe, whose advent to our world is the most important event in its annals.

This child, born at Bethlehem, a little village six miles sonth of Jerusalem, was God's beloved Son whom he sent to be the Saviour of the world. From his birth we data A. D., the year of our Lord.

Was it not a wonderful way by which these wise men were led to "the place where the young child was?" But it was God who planned the way, and then sent the star to lead them to Christ; and God is continually "doing wonders." He has sent to us the Bible, his own Word, ministers and teachers,—all to do the same thing—to bring us to Jesus. May we, as did the wise men, follow all that leads to Christ. Let us journey with them. They come first to Jerusalem. This was the chief city of the Jews. Upon their arrival, they at once inquired "Whore is He that is born King of the Jews?" How astonished they must have been to find that the Jews knaw nothing about it! Though God had told the Jews very plainly how the Messiah was to come, they were so anxious to have a great earthly king, that they were not willing to look for him among the lowly ones of earth; and to this day, the Jews do not acknowledge him as their Saviour.

Herod—the Roman king—for the Jews were then subjects of the Romans—was very much troubled when he heard of their question, for he feared if this rival, of whom they spoke, should appear, that he would lose his kingdom. Herod was a very wicked man. He, too, desired very much to know where he might find the Holy Child, but for a very different purpose from that which induced the wise men to "search diligently" for him. Although he told them to bring him hack word, artfully giving as a reason "that I may come and worship him also," we may well believa that murder, even then, was in his heart.

The wise mon then went their way, God's guiding star going beforo thea until it brought them to Bethlehem. When they found that the star had indeed led tbem to Jesus we read "they rejoiced with exceeding great joy." And had they not great occasion for joy! If we wish for true joy we must follow God's leadings; and he has not left us without guiding stars. As soon as these men found Christ they opened their treasures and presented their gifts. Though we may not be able to bring such gifts to Christ as the wise men did, yet it is in the power of each of us to bring acceptabla gifts to Jesus,—our love—our service—onrselves—and may none of us be so ungrateful as to withold these gifts from Him who so loved us that he "gave himself for us."

LESSON II.

Nov. 8, 1874.

THE FLIGHT INTO EGYPT.

MATT. ii. 13–23.

13. And when they were departed, behold, the angel of the Lord appeareth to Joseph in a dream, saying, Arise, and take the young child and his mother, and flee into Egypt, and be thou there until I bring thee word; for Herod will seek the young child to destroy him.
14. When he arose, he took the young child and his mother by night, and departed into Egypt:
15. And was there until the death of Herod: that it might be fulfilled which was spoken of the Lord by the prophet, saying, Out of Egypt have I called my son.
16. Then Herod, when he saw that he was mocked of the wise men, was exceeding wroth, and sent forth, and slew all the children that were in Bethlehem, and in all the coasts thereof, from two years old and under, according to the time which he had diligently inquired of the wise men.
17. Then was fulfilled that which was spoken by Jeremy the prophet, saying,
18. In Rama was there a voice heard, lamentation, and weeping, and great mourning, Rachel weeping *for* her children, and would not be comforted, because they are not.
19. But when Herod was dead, behold, an angel of the Lord appeareth in a dream to Joseph in Egypt,
20. Saying, Arise, and take the young child and his mother, and go into the land of Israel: for they are dead which sought the young child's life.
21. And he arose, and took the young child and his mother, and came into the land of Israel.
22. But when he heard that Archelaus did reign in Judea in the room of his father Herod, he was afraid to go thither: notwithstanding, being warned of God in a dream, he turned aside into the parts of Galilee:
23. And he came and dwelt in a city called Nazareth: that it might be fulfilled which was spoken by the prophets, He shall be called a Nazarene.

Golden Text.—FOR HE SHALL GIVE HIS ANGELS CHARGE OVER THEE, TO KEEP THEE IN ALL THY WAYS. —Ps. xci: 11.

When Herod found that the wise men did not return to tell him what they had learned concerning Christ he was very angry.

These men probably did not know what Herod's intentions were; but God, who knows the hearts of all men, knew his wicked plans and defeated them by warning tha wise men in a dream not to return hy tha way of Jerusalem. God often made known his will to his ancient people by dreams and visions. He does not do so now, for we do not need to learn God's will in this way. We have his own Word which ha inspired "holy men of old" to write for our instruction, which, if we follow its teachings, will surely lead us to Jesus and the heavenly home.

All danger, however, to the Holy Child was not yet over, for Herod, in his rage, was so determined to kill the infant Prince that he sent forth and slew all the babes from two years old and under, thinking thus he would be sure to accomplish his object. But in this also he was disappointed; for God, by his overruling providence, was guarding the child against all that the great king could do. God, by a dream again, told Joseph to take the young child and his mother and flee into Egypt. Egypt was only sixty or seventy miles south of Bethlehem; but although it was so near, if he was onec beyond the line, tha persecuted babe would be safe, for Egypt had a different king, and Herod would have no right to touch him there. God made use of natural means to save the life of the infant Saviour. It is God's part to direct, ours to obey; and Joseph's prompt obedience saved tha child whom Herod's hatred would have destroyed. God's warning voice comes to us all in various ways,—sometimes by his providences—oftener by "the still small voice within—and if we, like Joseph, take heed to its warnings we shall be forever safe.

Herod's death speedily followed that of the children whom he slew. A Higher Kiag soon called him to judgment. As soon as Herod was dead, Joseph, by still another dream, was directed to return to Judea. Hearing that Harod's son, who was very much like his father, was on the throne, he was still afraid that some harm would come to Jesus, and he hesitated as to what course he should take, when a fourth vision bade him go to Galilee, which was much furthur off; and he made his home in a city called Nazareth. Here Christ lived natil he was thirty years old. Of this period of his life we have only one incident given in the Gospels, and that is his interview, when twelve years old, with the doctors in the templo. Besides this we are told that he "was subject to his parents"; and that "he increased in wisdom and stature and grew in favor with God and man" (*Luke* ii: 51, 52). What a beautiful example the Lord Jesus Christ—the perfect child—has here left for all children! How kind and condescending it was in him to come to earth and live a child's life, so that he might be the children's pattern as well as their Saviour! Now if we want to be Christian children we must follow in his footsteps and daily try to do as he did when he was a child on earth.

All the incidents of this lesson are remarkable fulfillments of the prophecies in regard to Christ and his coming. Thus God by the strongest evidences andeavors to convince men that Jesus of Nazareth is tho appointed Messiah—the Saviour of the world.

LESSON III.

Nov. 15, 1874.

BAPTISM OF JESUS.

MATT. iii: 13–17.

13. Then cometh Jesus from Galilee to Jordan unto John, to be baptized of him.
14. But John forbade him, saying, I have need to be baptized of thee, and comest thou to me?
15. And Jesus answering said unto him, Suffer it *to be so now*: for thus it becometh us to fulfill all righteousness. Then he suffered him.
16. And Jesus, when he was baptised, went up straightway out of the water: and, lo, the heavens were opened unto him, and he saw the Spirit of God descending like a dove, and lighting upon him:
17. And lo a voice from heaven, saying, This is my beloved Son, in whom I am well pleased.

Golden Text.—AND THERE CAME A VOICE FROM HEAVEN, SAYING, THOU ART MY BELOVED SON, IN WHOM I AM WELL PLEASED.—Mark i: 11.

Our lesson to-day brings us to the time when Jesus was to come out from his retirement and enter upon his public ministry. God sent a man, named John, whom he had been fitting hy a solitary life in the deserts for tha work he had for him to do as his forerunner. John's mission was to speak to the people and tell them that Christ was soon coming among them, and how they should prepare for his coming. A single verse contains all that wa know of his childhood and youth: "Tha child grew and waxed strong in spirit, and was in the deserts until the day of his showing unto Israel." His first startling words were "Repent ye." Tha substance of all his preaching was repentance,—a change of heart and life. When, by John's preaching, the people were convinced of their sin, and wore truly sorry for it, and ready to forsaka it, they came to John and said so by being baptized. The first verse of our lesson tells us that Jesus came unto John to be baptized of him. Why did Christ come to him for such a purpose? We may well ask. We can see at once why it was right and proper for all other people to be baptized,—confessing their sin—but Christ had done nothing to be repented of, for he had never sinned. John was surprised at his reqnest, and he was unwilling at first to baptize him. Conscious of his own sinfulness he shrank from doing that which would seem like making himself greater than Christ. But Jesus gives a sufficient reason why he should "suffer it to be so now"; namely, "for thus it becometh *us* to fulfill all righteousness." Jesus was coming to be one with us. Ha had no sin of his own. He took our sins on himself; and to show this he was baptized. Besides, he wished to do all that God had appointed, and that men should see him as the "meek and lowly Jesus." He humbled himself, and God exalted him.

As soon as John obeyed God's will and baptized Jesus, the heavens were opened and "he saw the Spirit of God descending like a dove, and lighting upon him." God's Spirit always comes with light and comfort to those who obey its requirements. In addition to this evidence of sight God testified by a voice from heaven: "This is my beloved Son, in whom I am well pleased." How much pains God has taken to prove to us that Jesus is his own dear son, in order that we may love and trust him as our Saviour. We, alas! are not, like him, without sin; but if we believe in Jesus and try to fulfill all righteousness, that is, make it our aim to do as Christ would do if he were in our circumstances, we shall be baptized with his gentle and loving Spirit, and God, our Father, will look down npon us, for Christ's sake, as though we had never sinned.

LESSON IV.

Nov. 22, 1874.

THE TEMPTATION OF JESUS.

MATT. iv. 1–11.

1. Then was Jesus led up of the Spirit into the wilderness to be tempted of the devil.
2. And when he had fasted forty days and forty nights, he was afterward a hungered.
3. And when the tempter came to him, he said, If thou be the Son of God, command that these stones be made bread.
4. But he answered and said. It is written, Man shall not live by bread alone, but by every word that proceedeth out of the month of God.
5. Then the devil taketh him up into the holy city, and setteth him on a pinnacle of the temple,
6. And saith unto him, If thou be the son of God, cast thyself down: for it is written, He shall give his angels charge concerning thee: and in *their* hands they shall bear thee up, lest at any time thou dash thy foot against a stone.
7. Jesus said unto him, It is written again, Thou shalt not tempt the Lord thy God.
8. Again, the devil taketh him up into an exceeding high mountain, and sheweth him all the kingdoms of the world, and the glory of them;
9. And saith unto him, All these things will I give thee, if thou wilt fall down and worship me.
10. Then saith Jesus unto him, Get thee hence, Satan: for it is written, Thou shalt worship the Lord thy God, and him only shalt thou serve.
11. Then the devil leaveth him, and, behold, angels came and ministered unto him.

Golden Text.—FOR IN THAT HE HIMSELF HATH SUFFERED BEING TEMPTED, HE IS ABLE TO SUCCOR THEM THAT ARE TEMPTED.—*Heb.* ii. 18.

Immediately after his baptism Jesus permitted himself to be led up into the wilderness to be tempted of the devil. Jesus came to earth to be a man, and it was a part of his plan of love to endure all that men have to endure, so that he might know how to sympathize with them. A man is tempted of bad man or devils when they try to influence him to do wrong. This is Satan's work. God permits these temptations or trials to come npon us; and by them our characters are tested; but God *never* tempts men to sin (James i: 13). As we consider the three temptations which came to the man Christ Jesus, may we learn how to resist our own successfully.

Jesus had fasted for forty days and forty nights, and he had begun to feel keenly the pangs of hunger, when Satan suggested to him that he should use his powar and turn the stones about him into bread. But Jesus had takan upon himself man's nature and condition, and to have worked a miracle for his own benefit would have been to fail in his mission at the outset. Ha quoted a passage from Scripture (Deut. viii: 13) which referred to God's fatherly care of his people in the desert; and tha temptation to supply his needs hy unlawful means had no further power over him. When poverty tempts us to break God's law for our daily wants, we share Christ's temptation. If we distrust God's providential care of his obedient children wa yield to it; but we resist it if we "seek first the kingdom of God and his righteousness," and leava him to provide all other needful things.

In his next attempt Satan quoted Scripture himself—tempting Jesus to presume upon God's watchful care over him; bnt Jesus showed by tha passage (Dent. vi: 16), with which he met him, that tha quotation was no support to presumption but belonged only to him who humbly waited God's time and will. If we ran into needless dangers or neglect our dnties and unwarrantably trust to God for good results, we yield to a like temptation. We resist it when wa do only what he calls us to do; and in humble trust wait for him to bring about results in his own time and way.

In his last temptation Satan points ont to Christ a short and easy way by which he might at once receive the kingdom without coming to it through God's appointed way of self-sacrifice. Christ indignantly repels the insulting suggestion, and calling him by his right name dismisses him by the word of command, and be quotes "Thon shalt worship the Lord thy God, and him only shalt thou serve" (Deut. vi: 13).

Christ's work and the methods of it were to be directed by none hut God. When we in any way do evil under the delusion that good may come of it, we yield to this form of temptation. We resist it when we make supreme love to God in all things the rule of our hearts and lives.

Christ's weapon with which he conquered Satan was the Holy Scriptures. How needful it is that we should study and know these Scriptures in order that we may be ready—as was Christ—to meet all the fiery darts of the adversary.

LESSON V.

Nov. 29, 1874.

THE MINISTRY OF JESUS.

MATT. iv. 17–23.

17. From that time Jesus began to preach, and to say, Repent; for the kingdom of heaven is at hand.
18. And Jesus, walking by the sea of Galilee, saw two brethren, Simon called Peter, and Andrew his brother, casting a net into the sea; for they were fishers.
19. And he saith unto them, Follow me, and I will make you fishers of men.
20. And they straightway left *their* nets, and followed him.
21. And going on from thence, he saw other two brethren, James *the son* of Zebedee, and John his brother, in a ship with Zebedee their father, mending their nets; and he called them.
22. And they immediately left the ship and their father, and followed him.
23. And Jesus went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people.

Golden Text.—NEVER MAN SPAKE LIKE THIS MAN. —John vii: 46.

Christ had passed through the time of sore temptation, and having refused the glory of this world was now prepared to lay the foundation of that kingdom which shall stand secure when all the kingdoms of earth are forgotten.

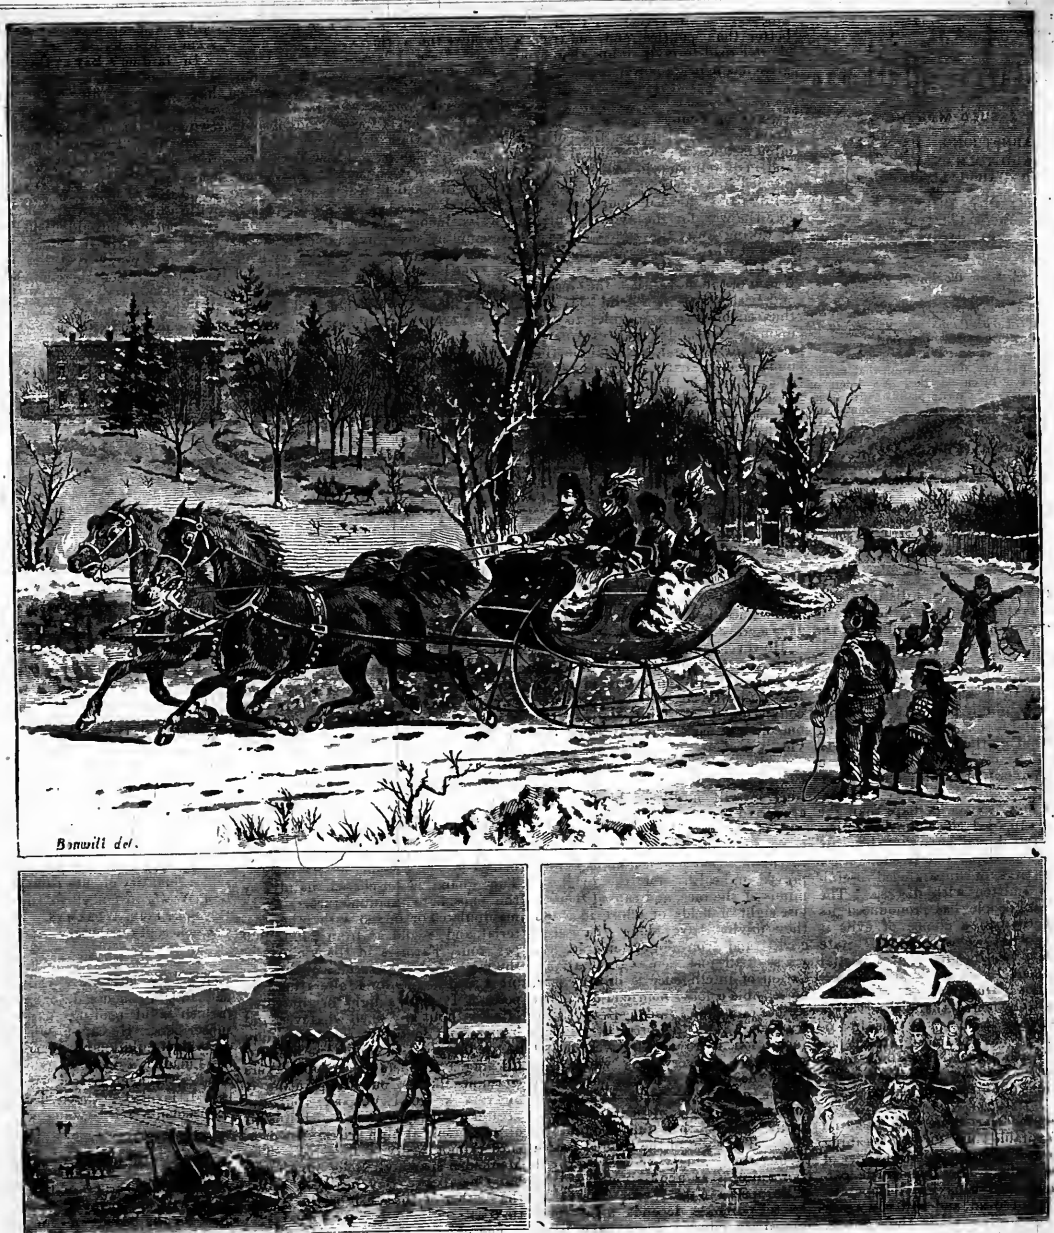
What a lesson of sincere humility Christ teaches at the very beginning of his ministry. He simply takes up the solemn cry of John, and in the very words first uttered by his faithful forgrunner, he preaches the same plain duty of repentance. He did not seek to display himself. He only desired to call men into the kingdom of God.

We find, too, a very practical lesson in the prompt obedience of the disciples whom ha called. They stopped for no question of loss or gain, but "straightway left their nets and followed him." The holy call should be obeyed at whatever cost of personal interest or sacrifice. We may not, indeed, in his service, be able to lay up for ourselves treasnres on earth; bnt if we are his loving disciples here, he will see to it that we find laid up for us abundant treasures in heaven. Neither have God's children to wait for all their inheritance until they enter she heavenly home; for God's peace, which the world can neither give nor take away,—better than all earthly good—is the portion of his people in "the life that now is." Notice, too, that Christ did not call them to be simply idle followers, bnt they were to share his labors—"I will make you fishers of men." Christ calls us and saves us that we may be good and do good. Do we realize how blessed a privilege it is to be a colaborer with Christ? As "Jesus went about all Galilee," teaching, preaching, comforting and healing filled up his busy, helpful life. Of all who sought his healing ministrations none ever went away unblessed of Jesus. This gracious Teacher,—Preserver—Physician—Friend—is ours; our very present help in trouble. We may bring our griefs and cares and sorrows all to him, andas truly and fully as thay "from Galilee and from beyond Jor received help and healing, so may we receive all needful blessing from the gracious ministry of Jesus.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. III. HAMPTON, VA., DECEMBER, 1874. NO. 12.



A MERRY CHRISTMAS.

For the Southern Workman.

MERRY CHRISTMAS.

The picture on our first page is of scenes, familiar enough to our Northern readers, but, perhaps, demanding some explanation to such of our friends as have never seen for themselves a landscape of snow and ice, and never felt the brisk exhilaration of a frosty air.

Surely it is "Merry Christmas" with the gay party in the big, comfortable sleigh; "Merry Christmas" with the gliding, graceful skaters; and "Merry Christmas" even with the busy men who are driving the snow plow, and cutting the smooth, blue ice. Even the horses are frisky with the general glee; and as for the boys and girls on the sleds, and the mischievous, snow-balling urchins,—why, there are no words to describe the fun which they are getting out of this short, bright winter's day. Nobody can stand still long in this atmosphere; there is no place for laziness here; brisk movements and light hearts best befit such days as these, and the dwellers in milder climates can hardly fancy how great is the stimulus of our Northern winter air.

But even in the picture it is not all play: we have the luxurious ladies in the sleigh, and the gay, laughing company on skates; but we have also the hard-working men, who are cleaning and cutting and sawing the thick ice into great blocks to be stored into the ice houses in the background, whence it will be brought when the hot days, which now seem so distant, are with us again, and a glittering ice cake shall look to us the most beautiful thing in the world. So there is work to be

done even in the "Merry Christmas" time, and hand in hand with the luxury and the joy, go poverty and sorrow,—a thought which we cannot put away from us, and which should guard us all against a merely selfish enjoyment of this blessed season. Perhaps, after all, the best thing which Christmas brings in North or South is the kindliness of feeling, the fresh warmth of our hearts toward our fellow-men, the re-kindling of love which makes us wish for rich and poor, for young and old, for all men everywhere, "A Merry Christmas."

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, } *Editors.*
RICHARD TOLMAN, }
J. F. B. MARSHALL, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE. To Clergymen and School Teachers Seventy-five Cents in advance.

The Southern Workman should enter every hamlet and cabin. Agents are wanted in every county and town in the South. Liberal terms are offered to all who aid in circulating this paper.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

Southern Workman.

HAMPTON, DECEMBER, 1874.

Some four years ago a distinguished colored orator addressed to the students of Hampton a statement, which in the light of the recent elections, seems prophetic. He reminded his hearers that men make or mar *their own* careers. "If," said he "the colored youth reach high positions of responsibility and honor, it will not be owing to the aid of their Northern friends, but to their own persistent ambition in the pursuit of wealth and knowledge."

And now, sooner perhaps than the speaker supposed, the colored man has his own good qualities *only* to lean upon. The great party of freedom, after a brief time of unparalleled usefulness, is smitten with disease. The American people has pronounced its verdict that in a choice of evils it will try what seems tho least. State after state has decided that a partial government is not worse than a mercenary one; that legislative stealing is more to be feared than conservative judges; that inasmuch as the Democratic party has the most intelligence in the South, it shall have one more trial, to see whether it has amended its ancient definition of justice to the negro.

Since the war there has been no more favorable time for well meaning men to unite in burying all manner of race jealousies. The Democratic party is on its best behavior. Republicanism is not dead, and will rise again if the new leaders abuse their power. Their interest is therefore to accord to the colored man, all the privileges to which his citizenship entitles him. No impassable gulf of hatred exists between the two races. The Conservatives in Louisiana, do not blame the negro for their troubles. It is the universal feeling among them that the negro has behaved better than could have been expected. There is nothing in the way of the duty and interest which alike point the Democrats to conciliation and fair dealing. With these powerful guarantees, the colored people can afford to leave prejudice to time. They need have little fear of the future, so long as they deserve respect by being honest, peaceable, law-abiding and industrious. Their grand opportunity is in reaching material prosperity; by which their children and children's children shall obtain culture and receive the honor, which written law will forever be powerless to secure unless it is deserved. Patience better than politics, and industry a shorter road to civil rights, than Congress has it in its power to make.

Senator Schurz has attempted to draw a parallel between the political circumstances of the colored people and of foreigners in America. He alluded in a recent speech to the powerful party formed four years before the war, for the avowed purpose of taking away the rights of a large body of white men, because they were from Europe. He gave as the real reason of the move, that the Germans and Irish voted in a solid body; and thus enabled their enemies to work upon the fears and prejudices of natives of all parties, and to combine them under the cry that "Americans should rule America." The Senator is afraid of a similar combination against the colored people, under the plea that a "white man's government" is necessary to secure low taxes and competent officials. He showed that the European emigrants found safety in reversing the maxim: "United we stand." "No sooner," said he, "did they break ranks and divide, than both sides stood up for them with equal zeal." The Senator advised the blacks to a similar course, and urged them to vote for the best men, irrespective of party lines: lest the white people combine against them.

However sound this argument may be in the State of Missouri, or wherever the colored people are in a hopeless minority, it will scarcely carry conviction in the Gulf States. It is one of those cases where a friend's advice is far better than his reasons. If the colored people, where they are superior in numbers, are to abandon party lines, it will hardly be because they are afraid of the white leagues.

A better reason why the counsel of the Senator is timely, may be found in the fact that political ambition has proved unhealthy for the brightest minds of the race, and caused them to lose sight of fields of effort in which they might have done themselves credit, and won for their race the praise of all just men. Until a foundation of intelligence is broadly laid, no sensible colored man could wish to see his race take a leading part in government. The opportunity of this generation is to acquire wealth and knowledge. Everything which distracts the people from the pursuits of honest industry, is to be deplored as contrary to their ultimate advancement. The South is full of cheap estates. The right of the colored people to buy them singly or in organized companies, is as unquestioned as that of Europeans in the West. Their ability to purchase depends upon their immediate effort. They have little time to waste upon politics, with such prizes awaiting them. Land ownership will lift the race into comparative wealth, and bring forward a generation among books, newspapers, social advantages, and the observation of men and things which comes from travel. After fifty years of such progress the colored people will be as unwilling to be represented by such men as now speak for South Carolina, as are the white people of to-day.

The colored people can afford to let politics severely alone. By voting steadily for the best men irrespective of party, no calamity is likely to overtake the race so serious as has already resulted from placing unfit persons in positions of responsibility. There is no power, if indeed there is any disposition, on the part of the leading Conservatives, to prevent the colored people from acquiring wealth and education. These are the levers with which the next generation may be able to move the world.

From the Capes of Virginia to East Quaddy Head, Maine, the Menhaden fisheries dot our coast and form an important branch of the fish and oil trade. In Virginia these fish are called the Oldwives; in Delaware and New York Mossbunkers; in Connecticut and Rhode Island, Menhaden; in Massachusetts and Maine, Porgies. They are from six to twelve inches in length, short, stout, resembling shad; averaging in weight half a pound. In Virginia they average one hundred and fifty to a bushel, and the yield of oil is two and one-half gallons to one thousand fish; in New York seven gallons per thousand; in Maine fifteen gallons per thousand. The present year the yield has been very abundant. The season begins in Virginia, April 1st; in New York, May 1st; in Maine, from the 18th to the 24th of June. It closes in Virginia, November 1st; in New York, a little later; in Maine, September 1st.

The Menhaden move in great schools, sometimes skimming the ocean with mouths wide open, and sometimes in masses twenty feet deep, often covering the ocean for ten miles and spreading over more than ten thousand acres. Ships have sailed for days in these immense schools. They feed on a very small insect, invisible to the naked eye, which they *suck*; it resembles the food of the right-whale, but is smaller. They first appear in early spring, north of Cape Hatteras, and pass along the coast line, droping into all inland waters, where they spawn, and grow fatter as they go north.

Millions of dollars are invested in the business of catching them and manufacturing oil, and thousands of hands are employed. About a million gallons of oil are annually produced, and one hundred thousand tons of fish guano—the leavings of the fish after the oil has been expressed—which brings $15.00 per ton at the factory. This guano is purchased mainly by the phosphate manufacturers to be manipulated or mixed with other material, and is sold at from $40 to $60 per ton. Farmers in the vicinity of the factories buy quantities of it. The oil is used largely for adulterating purposes. It is of a light bright color, often without any smell whatever, and brings from 36 to 40 cents per gallon at the factory. It cannot be used for burning. Tanners and ropemakers consume it; for outside painting it answers a good purpose; but the greater quantity is mixed with linseed oil and so sold at high prices. Its presence cannot easily be detected. The Menhaden spawn all along our shores, but Chesapeake Bay has been called the mother of these fish on the Atlantic coast.

The chief factories in this region are in Northumberland County, Virginia, at the mouth of the Wicomico River, at Cockle's Creek and at Little Bay. A million dollars of capital are there invested in boats, nets, factories and general gear; about three hundred and twenty-five hands are employed. This is the result of northern enterprise sustained by southern labor until the whole business is now controlled by residents (whites) and the labor is done mostly by negroes.

The factories are very prosperous, and as a result the property in Brewington's Neck has increased in value nearly tenfold. Land, that five years ago sold for five dollars per acre, now brings a hundred dollars. For miles around, the country has been benefited.

This business does not destroy the better kinds of fish. Enormous seines which draw in from ten to one hundred and fifty thousand fish per day, do not in that time catch enough palatable fish for a crew's mess. They seem indestructible.

In Gardner's Bay at the east end of Long Island, New York, where there have been over fifty fisheries for forty years, they have done better the past two years than ever before.

The laws of Virginia are indulgent to this interest in cert in counties on Chesapeake Bay, allowing fish to be caught anywhere. Catching them within less than two miles from shore is in general forbidden, and only residents are allowed to engage in the business. Foreign capital is rigidly excluded. Were there no such restriction the shores of this noble bay would be lined with factories, land would rise in value, hundreds of laborers would find work, money would abound, and this whole region cease to groan under its burdens. We are reliably informed that those who live in the neighborhood of the factories do not complain of offensive smells. They are in no sense a nuisance, and in many ways a blessing. There is no reason why New York or New England should reap ten times the benefit that Virginia does from this inexhaustible source of profit.

Hereafter each number of the Workman will contain a picture illustrating Oriental scenery and the work of the American Board of Foreign Missions, of Boston, in foreign countries, who have kindly loaned the cuts used in their valuable periodical, the *Missionary Herald.*

The Southern Workman is also under many and continued obligations to Messrs. J. R. Osgood & Co., of Boston, for the use of their costly electroplates, which have added so much to the appearance and value of this paper.

Mr. John L. Shorey, publisher of the *Nursery*, has furnished a steady supply of excellent and of most suitable pictures for our children's columns.

The American Tract Society has just sent a quantity of cuts from the *Christian Weekly* to embellish the pages of the Southern Workman. They will please accept our hearty thanks.

We have lately declined to insert new advertisements, desiring rather to furnish solid reading matter to our subscribers. Hereafter, when the increased circulation of this paper shall have made it a really valuable medium of advertisement, a special sheet will be issued, devoted to that object, and advertisements will be solicited.

SUNDAY-SCHOOLS, ATTENTION!

The last two pages of the Southern Workman are printed on a separate sheet for the benefit of Sunday-school teachers and pupils, and are for sale at the rate of a *cent apiece*, cash in advance, in case not less than *ten* shall be ordered at a time to be sent to one address.

This sheet will be printed every month according to the demand for it, and sent out in time for the first Sunday lesson to be given. It will contain not only a lesson for each Sunday in the month, but a beautiful and instructive picture, illustrating Oriental scenery and missionary work in various parts of the world.

THE HAMPTON BAR OYSTER COMPANY has recently opened under the management of Mr. George Dixon.

This is a coöperative company which undertakes to send the celebrated Hampton Bar oysters to all parts of the country. Being packed in ice, they will keep for weeks. Boxes containing a dozen or more quart cans, or kegs containing a gallon and upwards, ranging in price, according to quality, from 25 to 45 cents per quart, are shipped by express, or if desired, as freight, to any distance.

Orders should be sent to George Dixon, Hampton, Va., who is known to the editor of this paper as reliable in the highest degree. He generously gives his services to help the freedmen in this town in a coöperative effort. Avoid middlemen and get your oysters at headquarters.

THE GREAT HOOSAC TUNNEL.

AN AMERICAN WONDER OF THE WORLD.

It is supposed that the close of the present year will see the completion of one of the most difficult and wonderful achievements of modern science and industry,—the great Hoosac Tunnel. That indeed will be

A TRIUMPH FOR 1874.

Let us see what this wonder is. It is nothing less than a hole twenty feet wide, twenty-four feet high and nearly five miles long, pierced through a mountain of granite, seventeen hundred and fifty feet in height. In other words, the largest railroad tunnel in the world, except one in Switzerland. To build this great tunnel has taken twenty years of labor, and thus far, twelve millions of money. Many times it has almost become a by-word as an impossibility and a folly, but

LABOR CONQUERS ALL THINGS,

and to-day, the finished work is a monument of American Enterprise, which generally *puts through* anything it undertakes —even a road through a mountain of granite.

WHAT IS THE USE OF IT?

The Hoosac Mountain rises in the northwestern part of Massachusetts. It is a bold, beautiful mountain, and the eight miles drive over it in a stage coach is one of the most delightful in New England.

From one of its two crests we look down into the deep gorge through which the Deerfield River flows down from the north, while a hundred mountain peaks rise beyond and around us, and melt away in the purple distance. From the other crest we have almost as fine a view of the valley of the Hoosac River.

The mountain is beautiful indeed, and all the objection that could ever be made to it was that it was—very much in the way!—exactly in the way, indeed, of the direct line of communication between the East and the West; between Boston and Albany, and thence to Chicago.

LONG AGO,

Before railroads were thought of in America, in 1825, the fact that the mountain was in the way became so evident to our grandfathers, that they about made up their brave minds to tunnel it for a canal. It is as well that they did not try it, for it would have been a hopeless struggle, with only the means they knew of then. In their circumstances, the longest way round was the shortest way home, and in accordance with this old proverb, the Boston and Albany railroad was built some years later, making a long loop round the southern end of the mountain. This answered for some time, but then the people, especially the towns off the railroad, began to discover that the distances were too great, the grades too heavy, the freight charges in proportions, and that *they* were left out in the cold. So they sent out their engineers to take another look at the mountain.

There it stood, stern and uncompromising, a true New Englander of the primitive style. It would not yield a single inch; but it had found its match, and a company was formed who undertook to tunnel it in *seven* years. I will not weary you with a history of the twenty years of labor and disappointments that followed; the experiments with contractors and machines. The mountain was vigorously assailed with steam and gunpowder, but little was accomplished till they substituted for these,

AIR AND OIL.

That sounds strange, and I must explain. The only successful instrument for boring the hard granite rock has been the "Burleigh drill,"—an American improvement upon a machine in use at the Mount Cenis Tunnel in Switzerland. It is a simple steel drill fastened to a piston which plays in a cylinder. The piston is driven by the power of *compressed* air. Air is compressed by machinery till it has a pressure of ninety pounds to the square inch, and drives the drill at the rate of three hundred strokes a minute. A number of these drills are fastened to a frame and applied to the wall at which they all pound away at once with a deafening noise.

Thus, all fouling of the air of the tunnel by the smoke of a steam engine is avoided.

So much for the air power. Now as to the oil explosive. You have heard of nitro-glycerine,—an explosive which has come into use within a few years, and is vastly more powerful than gunpowder. Perhaps you did not know that it is manufactured from simple glycerine,—which is an essential element of all animal oils—by the addition of strong nitric and sulphuric acids.

To make this terrible explosive safer to handle, it is sometimes mixed with an unexplosive powder, and then it is called dualin. Nitro-glycerine is the principal agent employed in blasting the Hoosac Tunnel. After the drills have bored their holes, a little tin case of it is put in each, and all fired together by electricity, the workmen retiring to a safe distance till it is time to remove the ruins of the blast for another drilling. How wonderful are these inventions which find such terrible power in the simplest elements of nature!

So the great mountain has been pierced, and one of the greatest triumphs of the work has been the exactness with which the lines of the tunnel have been kept. It would be impossible in this article to explain the delicate instruments by which this has been done. By their aid it has been possible to start the tunnel from both sides of the mountain at once, and work in to a common centre. Not only this, either, but to sink a shaft from the top of the mountain to the level of the centre of the tunnel, and then work both ways from that toward the portals, thus hastening very much the operations. It was a grand day of triumph to the engineers, the 12th of December, 1872, when the miners working from the shaft east, and those working in from the east portal met and shook hands over the lines which came together within one sixteenth of an inch!

THE SACRIFICE TO THE MOUNTAIN.

It is sad to think that the tunnel has not only cost twenty years of labor (as many as eight of which may be called wasted) and twelve millions of dollars, but one hundred and thirty-six human lives by various accidents. The greatest of these was the burning of the building above the central shaft, in 1867, when thirteen men who were working in it perished at once, by fire, or by the water that rushed in when the pumps stopped working. Yet the miners like their work. It is well that they do.

THE DESCENT OF THE SHAFT,

is an interesting experience. I went through it without regarding it as a remarkable undertaking, but was told afterward, that I was only the third lady who had ever attempted it. There is certainly no difficulty in it.

You put on a rubber cloak and hat and carry a miner's lantern. Thus attired, we stepped into a square box or cage, the word was given, and down we slid in a well one thousand and eighty feet deep, at a rate of ten feet a second, the seconds seeming remarkably long, I confess. A little time is necessary to accustom you to the darkness in which you emerge at the bottom. We walked then about two thousand feet toward the east portal with our guide, Mr. Cole, who kindly pointed out the objects of interest. We came to the men at work in roofing the tunnel with brick, and would have liked to stay and watch them, but on being quietly told that miners have been killed by the fall of masses of rocks from the dripping roof over our heads, we concluded that it was time to return to upper air.

THE OYSTER TRADE.

Among the most important interests of this section of the country, is the oyster trade. Many of our citizens live almost, if not entirely, on the profits arising from it. To some it furnishes wealth and comfort, to others but a scanty subsistence. In order to realize anything like a handsome competence, the business must be prosecuted actively, extensively, and with that perfect knowledge of its chances, fluctuations and necessities which is only acquired by long experience and close observation.

To give the reader some idea of the number of bushels handled by parties residing in this county, a gentleman long connected with the business has furnished me with the following rough estimates:

Tennis and White handle about 40,000 bushels a season; Sam'l Watson about 12,000; Dexter and Hewins 8,000 to 10,000; Jno. Wilson 8,000 to 10,000; David Williams 6,000 to 8,000;—aggregating something like 80,000 bushels. Besides these there are several persons operating on a somewhat smaller scale in Back River, Mill Creek, and Hampton Creek. These are all buyers as well as planters of oysters. In other words, while they employ crews to tong up the oysters, for planting in more favorable grounds, they also buy extensively from those who depend upon the number taken each day from the natural beds, or rocks, as they are called, for their daily subsistence.

The principal rocks are Hampton Bar, Craney Island, Broad Rock, Chucketuck, Nansemond and other James River rocks. It has been erroneously supposed that the oysters have been diminished in quantity by the constant taking of them up, but on the contrary there are more oysters in James River now than there were forty years ago. The rocks through the process of tonging up on them have gradually increased in size until some of them are now double and trebles their original extent. True, the oysters are not so thick as formerly, nor can a man take up as many in a day, but still there are really more oysters and they are of better quality and shape and much more marketable.

As they are taken from the rocks they are assorted into "extras," "big oysters," "culls" and "cullenteens." The two latter are transplanted to the rivers and creeks where they are allowed to remain until large enough for market, generally about two years. The two former are either shipped directly to market or are put down on a sandy bar for a few weeks to cleanse.

The life of the oysterman is truly a hard one. He is exposed to the most dangerous and the most uncertain of the elements,—wind and water; and it is when most exposed that he has the opportunity of making the most money. Last winter was unusually mild, but in one respect at least it was severe upon the oystermen. The open weather allowed constant work, and consequently the markets were always full and the prices very low.

Hands employed as crews by the buyers average about eighteen dollars per month, and rations, but those who go out in their own canoes and take up for sale, hardly average more than fifteen dollars per month and have to support themselves and families from that. It frequently happens that for several days at a time the wind is too high or the weather too intensely cold for them to venture out.

There is no business where an inexperienced man can more easily lose money than by investing in oysters. And no subject has ever been brought before our general Assembly for legislation, more difficult of equitable adjustment than this. For years our legislators have been tinkering, amending, repealing and re-enacting the oyster laws, and are now as much perplexed to discover the best and most equitable mode of taxation as ever. One year they put it on the oyster and the next on the craft, now they license each boat engaged in the trade, and now they rent out each acre of ground occupied by the planta.

Whatever else our legislature may or may not do, it is always safe to calculate on a change in the oyster law.

TILES ONCE MORE.

Messrs. Editors,—'T were a pity that the discussion on drainage should close with Mr. Dixon's last article, because it contains errors about the experiment at Hampton. The drains there had abundant fall, not less than twelve inches to the hundred feet. They were carefully laid from two and a half to three and a half feet deep, on boards where the bottom was sandy; and were covered well with straw. They worked perfectly for a year, and finally were allowed to become choked at the outlet, because they had failed in causing ground naturally dry, to be extra early. These facts are not derived from second-hand sources, but from personal knowledge. Yet they are not claimed to be conclusive against the wisdom of trying *cautious* experiments on clay soils at Hampton, by men who can afford to lose money.

My critic speaks of emigrants from the North and England. "A few," says he "by adopting the Northern and English systems of husbandry, are obtaining crops very superior to their Southern neighbors." Can he name one single man out of the "few," who is making money by adopting an English system of drainage in any such climate as Norfolk? If he has one instance, let him not conceal it under any pretext. It would be worth something to the world.

Our friend gravely recommends drainage in the Colorado desert. No reason is given except that it pays in England. Yet even in England the two following reasons *chiefly*, indnce farmers to lay tiles.

First, They want to remove water which would become stagnant.

Second, They want to admit air to the roots of plants. How would these things appear to a Colorado farmer? In the first place there is no possibility of his land suffering from stagnant water; and in the second place, a free admission of parching air to the roots, would render several times as much water necessary as the streams will furnish.

If an Englishman could carry with him his oceanic climate, he would need also his heavy overcoat, water-proof boots, and tile drains in Colorado. Surrounded by his own atmosphere he would sustain himself like a needle on water, in defiance of gravity. But under the cloudless suns of a continental climate whose air does not deposit moisture, but drinks it up wherever it can find it, no Englishman could long deny that true scientific farming means the adaptation of treatment to climate and soil; and that drainage is not a *panacea*, merely because it is good in cool, moist climates.

OBSERVER.

EFFECTS OF FODDER CORN UPON LAND.

It was held in the discussion, at the recent State Fair, at Rochester, that corn in orchards was an advantage, owing to the cultivation which the land received; and it was further mentioned in the remarks elicited, that corn sown for fodder, in which case there were no ears to draw substance from the soil, improved rather than depleted the land, by the vegetable matter which the roots furnished the soil. This is on the principle that land improves by grazing. The grass is fed off without going to seed. The cases are parallel, as corn is a grass. It is encouraging to those who grow corn for fodder that this is so. Good crops can thus be realized for feeding green during the summer; or, if not all needed, saved for winter feed, the land remaining the same, or better fitted for other equally good or superior crops. Clover is still more beneficial to land. The two should be more grown, especially for the purpose of feeding in a drought, or when the grass becomes rank and hard, and also as a feed during the hot days, particularly the hot noons, when cows should be put up or have access to shade, and then fed. Cows giving milk should be thus treated, as exposure to the hot sun begets fever, and the effect is communicated to the milk.—*Country Gentleman.*

If we can raise corn fodder and supply our cattle with good food at a time when they very much need it—midsummer or later—and yet have our lands constantly improving, it certainly will be a great gain, and many who have heretofore held back from raising corn fodder to any considerable extent, will be led to sow corn in future. It stands to reason that it will not exhaust the land so much as a crop of corn would; for in the latter case a heavy draft is made upon the soil to produce and ripen the crop of grain. What say our practical farmers to the article we quote?—*The Congregationalist.*

ODE

On The Morning of Christ's Nativity.

JOHN MILTON.

This is the month, and this the happy morn,
Wherein the Son of Heaven's Eternal King,
Of wedded maid and virgin mother born,
Our great redemption from above did bring;
For so the holy sages once did sing,
That he our deadly forfeit should release,
And with his Father work us a perpetual peace.

That glorious form, that light unsufferable,
And that far beaming blaze of majesty,
Wherewith he went at Heaven's high council-table,
To sit the midst of trinal unity,
He laid aside; and here with us to be,
Forsook the courts of everlasting day,
And chose with us a darksome house of mortal clay.

Say, heavenly Muse, shall not thy sacred vein
Afford a present to the infant God?
Hast thou no verse, no hymn, or solemn strain,
To welcome him to this his new abode,
Now while the heaven, by the sun's team untrod,
Hath took no print of the approaching light,
And all the spangled host keep watch in squadrons bright?

See, how from far, upon the eastern road,
The star-led wizards haste with odors sweet:
O run, prevent them with thy humble ode,
And lay it lowly at his blessed feet;
Have thou the honor first thy Lord to greet,
And join thy voice unto the angel quire,
From out his secret altar touched with hallowed fire.

THE HYMN.

It was the winter wild,
While the heaven-born child
All meanly wrapped, in the rude manger lies;
Nature, in awe to him,
Hath doffed her gaudy trim,
With her great Master so to sympathize.

. . . . . .

Nor war, or battle's sound,
Was heard the earth around:
The idle spear and shield were high up hung,
The hooked chariot stood,
Unstained with hostile blood;
The trumpet spake not to the armed throng;
And kings sat still with awful eye
As if they knew their sovereign Lord was by.

But peaceful was the night,
Wherein the Prince of light
His reign of peace upon the earth began:
The winds with wonder whist,
Smoothly the waters kissed,
Whispering new joys to the wild ocean,
Who now hath quite forgot to rave,
While birds of calm sit brooding on the charmed wave

The stars with deep amaze,
Stand fixed in steadfast gaze,
Bending one way their precious influence;
And will not take their flight,
For all the morning light,
Or Lucifer that often warned them thence;
But in their glimmering orbs did glow,
Until the Lord himself bespake and bid them go.

And though the shady gloom
Had given day her room,
The sun himself withheld his wonted speed,
And hid his head for shame,
As his inferior flame,
The new enlightened world no more should need;
He saw a greater Sun appear
Than his bright throne or burning axle-tree could bear.

The shepherds on the lawn,
Or e'er the point of dawn
Sat simply chatting in a rustic row;

. . . . . .

When such music sweet
Their hearts and ears did greet,
As never was by mortal finger strook.

. . . . . .

At last surrounds their sight
A globe of circular light,
That with long beams the shamefaced night arrayed;
The helmed Cherubim
And sworded Seraphim
Are seen in glittering ranks with wings displayed,
Harping in loud and solemn quire,
With unexpressive notes to Heaven's new-born Heir.

Such music (as 'tis said)
Before was never made,
But when of old the sons of morning sang,
While the Creator great
His constellations set,
And the well-balanced world on hinges hung;
And cast the dark foundations deep,
And bid the weltering waves their oozy channels keep.

Ring out, ye crystal spheres,
Once bless our human ears,
If ye have power to touch our senses so,
And let your silver chime
Move in melodious time;
And let the bass of Heaven's deep organ blow;
And with your nine-fold harmony,
Make up full consort to the angelic symphony.

For if such holy song
Enwrap our fancy long,
Time will run back, and fetch the age of gold;
And speckled vanity
Will sicken soon and die,
And leprous Sin will melt from earthly mould;
And Hell itself will pass away,
And leave her dolorous mansions to the peering day.

Yea, Truth and Justice then
Will down return to men,
Orbed in a rainbow; and like glories wearing,
Mercy will sit between,
Throned in celestial sheen,
With radiant feet the tissued clouds down steering:
And Heaven, as at some festival,
Will open wide the gates of her high palace wall.

But wisest Fate says no,
This must not yet be so,
The Babe yet lies in smiling infancy,
That on the bitter cross
Must redeem our loss
So both himself and us to glorify:
Yet first, to those ychained in sleep,
The wakeful trump of doom must thunder through the deep:

With such a horrid clang
As on Mt. Sinai rang,
While the red fire and smouldering clouds out-brake;
The aged earth aghast,
With terror of that blast,
Shall from the surface to the centre shake;
When at the world's last session,
The dreadful Judge in middle air shall spread his throne.

. . . . . .

But see, the Virgin blessed
Hath laid her babe to rest;
Time is, our tedious song should here have ending;
Heaven's youngest teemed star
Hath fixed her polished car,
Her sleeping Lord with handmaid lamp attending,
And all about the courtly stable
Bright harnessed angels sit in order serviceable.*

* It has been necessary to omit parts of this beautiful hymn on account of its great length.

For the Southern Workman.

JOHN MILTON.

Early in the seventeenth century, John Milton, a member of the respectable family of Miltons in Oxfordshire, was disinherited on account of his embracing the Protestant religion, and being obliged to give up his studies at Oxford, went up to seek a livelihood in London. Here, on the 9th of December, 1608, a son was born to him, a second John Milton, who from his early youth was dedicated by his father to the pursuit of literature, and whose eagerness for study soon justified his father's judgment. In his seventeenth year, the boy, being already an accomplished scholar, was sent to the University of Cambridge, from whence after a residence of seven years, he went to his father's house in Buckinghamshire, having won the affection and respect of his fellows, but having also incurred the enmity of many of the officials of the University who disapproved of his political and religious opinions. During the five happy years which he passed at home, he composed several of his minor poems, among them, *Comus*, *Lycidas*, *L'Allegro*, and *Il Penseroso*; and then, being much affected by the death of his mother, resolved to leave home and visit the Continent. He traveled through France and Italy, but as he was on the point of starting for Greece, received tidings of the outbreak of civil war in England, and "esteeming it dishonorable to remain abroad while his fellow-citizens were contending for their liberty at home," returned at once to his native country. He espoused the republican cause with all the vigor of his nature, and clung always to the conviction that the trial and execution of King Charles were justifiable and legal, while his religious opinions were as intense as his political, and involved him in many and bitter controversies. He began his work after his return by taking a few boys as scholars; and soon married, but was almost immediately deserted by his wife, Mary Powel, who returned to her own family, and left him to write his famous treatises upon *Divorce*. A reconciliation took place however, and they lived together until her death, which took place in 1652. Early in the same year his unwearying application to books and pen, caused the complete loss of sight with which he had long been threatened, and threw him into a comparatively helpless condition from which he never again emerged. He married twice after the death of his first wife, and had three daughters, by whose assistance he was enabled to carry on his studies, as they learned to read to him in six different languages without themselves understanding any of them.

And thus it was that Milton's great genius developed and attained its final triumph. In the midst of suffering, blindness, loss of fortune and friends, "encompassed with dangers as well as darkness," he composed *Paradise Lost*, that poem which has been said to be the "greatest continuous effort of the human imagination," and which is certainly a grand theme grandly treated. It is the description in poetical form, of the temptation of Adam and Eve, their fall, and final expulsion from the Paradise to which they had forfeited their right: and to it has been accorded the highest place in English literature.

Its author lived but a few years after its publication; in it he seemed to have reached the culmination of his force, and wrote little of note from that time till his death, which took place in 1674, from an attack of the gout, to which he had long been subject.

His nature and his intellect were so strong, and his convictions so intense and forcibly expressed, that in his day, which fell in stormy times, he had many enemies and bitter critics; but his fame, like that of every true poet, has ripened as the years went on, until now two centuries have passed over the dust of his grave, and no man disputes his title to the immortality of genius.

THE WINTER MONTHS.

The three months of our winter season, December, January and February, all retain their original names, which have each a distinct and easily traced derivation and meaning. The first month in our present calendar was also the first month in the Roman calendar, and takes its name from Janus, one of the gods of Roman mythology, who was believed to be the keeper of earth, sea and sky, and the porter of heaven. He was also held to be the guardian of gates and was usually represented with two heads, one looking in one direction, and the other in the opposite; and the month of January was dedicated to him because it was considered to look back into the old year and forward into the new.

February, the second month of the year, comes from the Latin "februo," to cleanse or purify. It has twenty-eight days in every year except Leap-year, when it has twenty-nine; and the Romans always set it apart for their great festival in honor of the god Pan.

December in the Roman calendar was what its name signifies, the tenth month of the year, and was consecrated to the god Saturn. Our Saxon ancestors called it the "mid-winter month," or "Yule-month," which latter name was derived from the Saxon word for wheel, and was emblematic of the sun's revolution.

So much of our language, so many of our customs, have been handed down to us directly from ancient Rome, that in spite of the lapse of centuries, our connection with the old "Mistress of the World" seems in some respects very close, and it is sometimes strange to realize how greatly her civilization has affected ours; to feel that we, English-speaking, nineteenth-century Americans, are using the same words that were on the lips of Roman citizens two thousand years ago, and even yet have so much in common with a nation so long dead. But the winter months of these heathen lands were broken by no Christmas holiday, and the names which to them were associated with the feasts of their false gods, for us have little meaning; for to us a great gift has been given, the glad tidings of great joy, which has changed the face of the earth.

For the Southern Workman.

VENTILATION.

Just at this season of the year our readers may feel that an article with the above heading is quite superfluous, and suggestive mainly of draughts and chill discomfort; but "ventilation" means now just what it always means; namely, "good air versus bad," and the winter is the season of all others wherein we are most in danger from the impurity of close, over-heated rooms. When the weather is fine, the air clear and mild, we open our doors and windows by instinct, and seek involuntarily the fresh wind and warm sun, which bring with them life and health. But as the frosts of winter get into our veins, and the outer air grows nipping and eager, we close every cranny, shut fast doors and windows, and cower over the grate, or, far worse, over the stove or furnace, whose breath is too often only a warm, comfortable poison.

We forget or are ignorant of the fact that when we overheat our air we deprive it of its life-giving properties, and that by carefully guarding as we do against any change of air in our rooms, we ensure its becoming saturated with the unwholesome exhalations from our bodies, our clothing, the articles in use in the room, etc. The fact that "zymotic" or "bad-air" diseases are far more frequent in cold weather than in warm, shows us that a large proportion of the human race are in the habit of breathing, during the winter months, air which is actually impure, and deficient in life-giving material. We shut ourselves up with such mistaken carefulness that we bring upon ourselves the very evils we are seeking to avoid, and keep our rooms at an equal and too high temperature, at the expense of our vital powers; for the first essential of a healthy animal is pure air and plenty of it.

Now the question is whether we cannot keep our rooms comfortably warm and at the same time healthfully fresh—and this question is, we confess, not always an easy one to answer. To ensure perfect ventilation every room should have an open fireplace, and a ventilator opening directly out-of-doors; but of course this is not often attainable, and we must do the best we can under less favorable circumstances. Open fireplaces, however, are worth trying for, always and everywhere, and stoves may be set down, by wholesale, as abominations, the old-fashioned Franklin stove being the only one which ought to be admitted into any room inhabited by any number of people. In most cases it is well (in a room in common use) to have one window open from the top, the width of the opening being regulated by the external temperature, while in sleeping rooms that is almost indispensable. In any room which during the greater part of the day is filled with people, as, for example, school rooms and churches, the occupants should be turned out at stated intervals and *all* the windows opened, so that the air may be effectually changed. Such simple precautions as these are easily taken and will go far toward preserving health during the trying winter months; for, as we entreat our readers to remember, nothing is more essential to the prevention of colds, fevers, etc., and to the maintainance of robust health, than the pure air which Heaven provides and we recklessly waste.

BATHING THE BABY.

It seems strange and unaccountable that so many of the really intelligent class act as if in ignorance of the necessity and benefit of bathing. It seems almost incredible, but there are many ladies most particular as to dress and fashion, who almost wholly neglect this matter. Some mothers think, when their children get beyond two or three years of age, the frequent entire bath can be dispensed with. If some of the main facts of physiology were well known and understood, every one would perceive that cleanliness of the skin is one of the conditions of good health. We learn that the skin has innumerable minute perspiration tubes opening on the cuticle, and these openings are called pores. These tubes are hollow, like a pipe stem, lined with wonderfully minute capillaries, which are constantly exhaling the noxious and decayed particles of the body, just as the lungs pour them out through the mouth and nose. It seems clear that injury, more or less, must ensue if this drainage for the body becomes obstructed. It happens when bathing is disregarded that the lungs

kidneys, or bowels, have more than their own apportionment of work. If these are strong and healthy they may bear the tax with little apparent injury, but in most cases a lowering of the vitality and tone of the system ensues. Large bath tubs are pleasant and convenient, but not indispensable to the proper cleansing of the skin. A speedy sponging of the body in pure water, followed by friction in pure air, is all that is necessary. When disinclined to use water, a thorough application of the flesh brush to the whole person is an admirable substitute; especially on retiring, it relieves nervousness, equalizes the circulation, and induces quiet sleep. Mothers, above all, should see that their children are well bathed. If their skins are kept active and healthy there will not be half the danger from fever, colds, and eruptive diseases. If your little one is cross or troublesome, and finds no occupation that pleases him, try the effect of a bath. Sometimes it is magical, and if tired he will go to sleep, and awaken bright, cheerful, and happy. Do not, though, as we have seen some parents do, plunge a child into cold water, when he screams and shrinks from it, thinking you are doing a good deed. Nature must be the guide. If your child has a nervous constitution a shock of this kind is only exhausting and injurious.

THE CHRISTMAS GIFT FROM HEAVEN.

BY E. F. T.

The little children's angels, singing in the glory of Heaven,
Said to each other, "Christmas is coming, what do you think can be given?
What do you fancy our children would like best for their tree?
If the dear Christ gave them a beautiful gift, what would they wish it to be?

"They have books and toys and goodies, safely hidden away;
The air is so full of secrets, they are too happy to play."
"I know," said a little angel, very quick and bright,
"For I was listening to my dear little boy as he said his prayers to-night.

He had counted on his fingers the presents for all the rest,
And then said, 'Please, God, send Harold a baby, for I should like it best.'
Let us tell the angel that lives in the garden where all the babies grow,
Let us ask whether there is one for Harold—perhaps the angel will know!"

And they went in their little dresses shining and white and fair,
Like a soft, downy cloud of doves, went singing on through the air!
Till among the tall sweet lilies, and the roses white and red,
They came where the dear little babies slept on the violet bed.

There was such a number of babies, with brown eyes and with blue,
Shining between the violet beds like for-get-me-nots peeping through.
Little soft babies all crowing, sweet, and pink, and fair,
The angels said, "May we have one, please, because of Harold's prayer?"

And one day when the children were sleeping, and the earth was all at rest,
The angels brought the present they all thought was the best;
Tho little shining things came down softly, when no one could see,
And said, "This is a Christmas present for Harold and Dorothy."

And there in the early morning the baby lay and smiled;
"Such a sweet, dear little baby," cried every happy child.
They thought it was glad to see them: it could not speak, and say
"I am thinking of my beautiful garden in heaven far away."

But the children's angels whispered to each little heart that night,
"You must all be good, and teach the baby nothing but what is right;
Never let it forget the garden,—it is your garden too,
And some day a Christmas-tree will be there shining for all of you.

BRINGING CHRISTMAS GREENS.

The beautiful old custom of dressing our houses and churches with evergreens on Christmas day is spreading, we are glad to see.

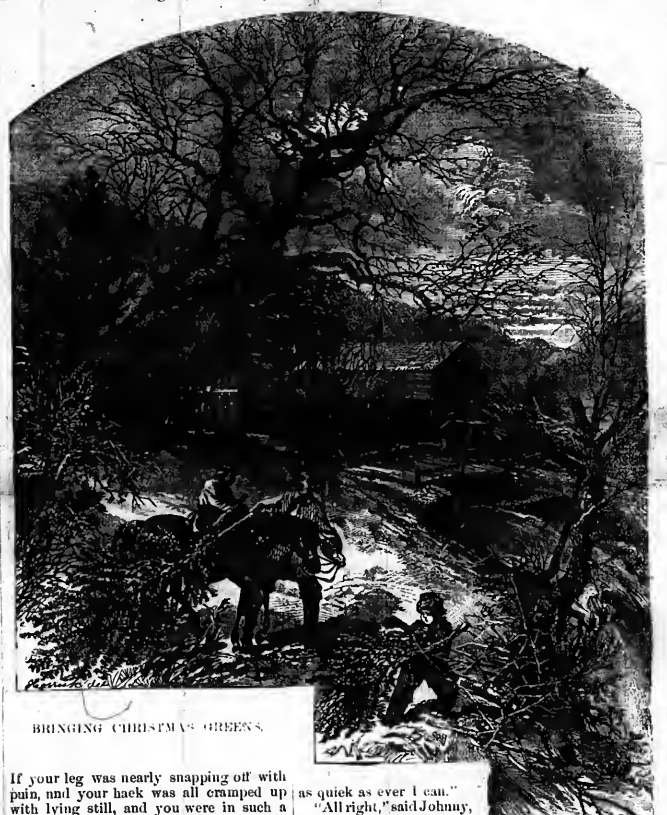
These Christmas rejoicings keep the heart ever green, they elevate and Christianize us. It is something to have at least one or two days in the year when every one feels an obligation to be loving and amiable. Perhaps our pretty picture for which we are indebted to the American Tract Society, will remind some of the young graduates of Hampton, of this pleasant gathering round our Christmas-tree, last year. We send them all a Christmas greeting, and we all shall remember the one who, with us then, will spend this Christmas day in Heaven.

SANTA CLAUS' MEAL-BAGS.

"Oh, dear me! this old leg has spoiled all my fun," said Johnny. "I'd just like to give it a good slap and done with it."

"Now, Johnny, you should n't be a repining, as I have often told you. You 've got a heap of mercies; just think of all the poor children who have n't—"

"Oh, yes," said Johnny snappishly; "just think of all the children who have n't any homes nor friends nor Sunday-schools; I know what you are going to say, but I 'm sick of hearing it; so do stop.



BRINGING CHRISTMAS GREENS.

If your leg was nearly snapping off with pain, and your back was all cramped up with lying still, and you were in such a fidget all over that you 'd like to knock somebody down, and instead of having a jolly time with the fellows this afternoon, as you expected, you had to lie here with a broken leg, I guess you would n't talk much about Sunday-schools and mercies and things, and I just wish—boo-hoo-hoo."

You see Johnny was n't an heroic boy in the way of suffering; most boys are not, I guess, so he just burst out into a good hearty cry, although he would have assured you ten minutes before, that nothing could make him cry, "not much."

So in a few minutes he felt as ashamed of himself as though he had done something dreadful, and choked and swallowed, trying all the time to look as if nothing had happened.

Poor Aunt Roxy was dreadfully shocked; but Aunt Roxy could never think of the right thing to say till long afterward, so she rolled up her eyes, clasped her hands and said, "Now, Johnny, do n't; oh, deary me! oh, the poor motherless boy! oh, my!"

Johnny felt better after his cry, as people generally do if they can have it out, and then began, as I told you, to feel ashamed of himself. He looked up slyly at Aunt Roxy, and found that she was putting on her bonnet in preparation for going out.

"Excuse me, aunty," he said, "I did n't mean to be cross and rude, but it 's awful for a boy to be laid up like this, and at Christmas time, too."

"Law sakes, now, Johnny, do n't take on so. You can't be patient and submissive like, as if you was a girl; it aint in the nature of men and boys; only getting cross do n't make things better. Now if you only had n't climbed that dangerous tree you would n't have fallen and broken your leg. Now, another time—"

"Well, well, aunty," said Johnny, looking very much inclined to snap out again, as he called, "you know you 've told me that a good many times, so please do n't say anything more about it."

"Well, I 'm going to the store," said aunty. "I wont be gone but just one minute, so you need n't be scared about staying alone; I 'll watch the house and hurry back as quick as ever I can."

"All right," said Johnny, quite glad to show that in spite of his crying he was no baby; "I 'm not afraid."

So Aunt Roxy went out, and Johnny listened to her steps which grew fainter and fainter in the distance, till at last he could hear nothing but the singing of the teakettle in the kitchen adjoining. The humming soon soothed him to sleep, before he knew that he was getting sleepy. All at once there was the queerest noise at the door. I could n't begin to tell you what it was like; it was a sort of a thump, bump, bang, when the door flew open and in rolled a meal-bag. Did you ever know anything so funny? No, of course not; but wait till I tell you the rest. In another minute, in rolled another bag, and then another, and another, and so on until there were eight meal-bags rolling around the room, bumping into each other, and doing the queerest things that bags were ever known to do.

Johnny thought he was dreaming, so he pinched himself and pulled his eyes open, but found he was indeed awake. There the bags continued to roll under his eyes, till all of a sudden there was a little low whistle, when behold! all the bags stood up on end, and eight heads popped through the openings of the eight bags, and Johnny saw the eight laughing faces of eight of his schoolmates turned toward him.

"Well, I declare!" said Johnny; "I did wonder what on earth you were."

"We were sent by Santa Claus," said one of the boys, "to show you some of his tricks of magic. Presto, change!"

With that the eight bags were opened wide, and out jumped the eight boys. Each one pulled something out of his bag and began running around the room, climbing chairs, moving tables, and to Johnny's astonishment, in a few minutes the walls of the poor, bare, forlorn little old bedroom were all festooned with Christmas greens, and there was a wreath in the window, and a bunch of bright-colored berries on the table. You can't think how pretty it all was; and as for Johnny, he thought he must have died and gone straight to heaven, for surely there could be nothing so beautiful in this world as this room, which a few minutes before had been as bare and forlorn as a place could be. Johnny couldn't speak, but he opened his eyes as wide as possible, and tried to sit up in his bed so as to get a better view of what was going on; but that was too great an effort just now, so he was obliged to keep quiet.

Pretty soon Joe came out from his hiding-place, bringing something with him. Johnny could n't see what it was, till suddenly there appeared on the bed in front of him—what do you think? a lovely little Christmas-tree, which looked as bright and sweet as the day itself. There were little bits of apples hung on by bright-colored strings, and nuts, and little pieces of candy. Then each boy had hung on some little present with his name attached. One boy gave him a pen-wiper, one a little hook-mark, one a slate-pencil, one a lead-pencil, one a piece of rubber, one a little peach-pit basket, one a rubber-ring of his own whittling, one a little bag containing a few marbles.

"Now," said Johnny, at last finding his tongue, "this is what I call splendid. I tell you what, fellers, I—I—what made you do all this anyhow?"

"Cause we were in for having some fun," said Tommy, "and we felt awful sorry to think of you cooped up here, you know. Here let me help you off with those gim-cracks."

By this time Aunt Roxy had finished her errand at the store, had talked for five minutes with every one she met on the way, assuring them all the time that she had n't a minute to spare and must run home as fast as ever she could go. She came quietly through the door, and nearly fell over the pile of bags on the floor.

"Law sakes alive!" she exclaimed, "what is this? oh where is my boy? he 's dead and they are laying him out I do believe. Johnny! Johnny!"

"I 'm all right, Aunt Roxy," said Johnny. "Just see what the boys have done for my 'Merry Christmas!'"

"Well, now, do tell!" said Aunt Roxy, dropping into the nearest chair. "Whatever in this world did put such thoughts into your heads?"

"Oh, we are a society," said Bill Flint, "and here are our badges, see," he said, pointing to his jacket where a little piece of blue ribbon was fastened. "The business of our society is never to let a day go by without doing somebody a kindness. Sometimes one of us sees a cow in someone's yard; well, you see, we just go and drive her out. Sometimes a little girl is going along and looks cold and tired, so whoever sees her takes her home, and puts her on his sled, and trots home

with her. Yesterday Tom's mother's pump got frozen up and we fixed it all up for her as quick as wink. We get kind of interested in hunting up things to do. Once a week we meet at somebody's house, and if any one has any money, we have some peanuts for refreshments, but if he has n't we have just as good a time without, because we play games, you know. Then we have the rule that if any one has gone through the week without doing somebody a kindness every day he just can't come to the 'good-time night;' so that settles him, you see."

"But this aint any kindness," said Jimmy Black, "it 's only fun—this don't count."

"Oh my, no!" said they all, "this is good fun."

"Only we thought you might like it, Johnny. We could n't do much you see because we had n't much money, but we had our hands and feet and we kept those going lively."

"I should think you had done a great deal," said Johnny.

"Oh, but you know we could n't buy you any presents worth having, 'cause we had n't any money, so Tom he whittled yonr basket, and Jim he made that bookmark, and Jerry made that ring, and the marbles were some that I had, but I thought you would n't mind that for they are tip-top ones."

Aunt Roxy sniffed and wiped her eyes so much and looked so upset, that Jerry, who could n't see what in the world there was to cry about, remarked sympathizingly,—

"You 've got an awful cold in your head, marm, have n't you?"

"I should like to join your society as soon as I get well," said Johnny.

"All right," said Captain Bill. "Come on, boys, we must be off. Good-by, Johnny, we 'll give you three cheers outside, it would make too much noise in here."

"Good-by," said one and all, and off they went.

Johnny did n't sleep much that night for his leg was very painful, so he felt donbly thankful for the pretty scene before him. In every wreath or festoon he could see a token of the tender thoughts of his little playmates, and behind all that he was forced to remember who had put it into the hearts of those boys to do all this for him.

"Ah," he sighed, "I grumble too much. I guess I have a good many mercies that even Aunt Roxy don't harp upon. Well, —oh my, that was an awful twinge of pain! —if I ever do get well I 'll do my best for other sick people, and I 'll never let Christmas go by without seeing to it that it is the jolliest sort of a day for every one I know."—*The Christian Weekly.*

BUY YOUR OWN CHERRIES.

A Temperance Story, Founded on Fact.

BY JOHN WILLIAM KIRTON.

[This beautiful story was written in England and we have taken the liberty of changing the terms of English money, mentioned in it, to our American currency for the better understanding of our readers. It is not otherwise altered, except to be slightly abridged, to suit our columns].

It was about three o'clock on a scorching hot Saturday afternoon in July, when John Lewis, the carpenter, laid down his hammer, and putting his hand in his pocket, drew out a few coppers, "Just the price of a pint," as he said to himself, so he resolved thereupon to step across to the "Golden Eagle," and have some ale to quench his thirst. Just as he opened the door which led to the "Bar," what should he see laying on the polished counter, hut a plate of beautiful ripe cherries; the sight of which made John's mouth water so freely, that ere he knew exactly what he was doing, his hand was stretched out to take a few, when the shrill voice of the landlady from behind called out,—

"You touch them if you dare, sir!"

John was startled; but before he could reply, the landlady added,—

"The idea of your taking such liberty, I should like to know what you are thinking about?"

"Well, missus, I was only going to take one or two to wet my whistle."

"You had better not try it," she said with warmth.

"Why you won't mind my having a few; I was so thirsty, and they looked so tempting," said John, thinking she was joking.

"No sir, not one; I have just bought them as a treat for my children: they are a peculiar sort, and very expensive."

"Well, just let me try one."

"No, not one," she answered, with determination in every look; "if you want any, 'buy your own cherries!'"

"Well, I was going to have a pint of your best,"(?) replied John, "but I think I 'll take your advice, and go and buy some cherries instead;" and turning round, he walked out of the shop.

The landlady saw in a moment that she had committed a mistake, and called loudly for John to come back, but this only made him quicken his steps, and get away as fast as possible.

"Well, I've done it," she said, as taking up her plate of cherries, she passed into the parlor: "what a stupid I was, not to let him have one or wo: he is too good a customer to lose: I must look out, however, when he comes to pay his score, and coax him: he must be won over again if possible." And with such reflections, she tried to calm down her disturbed feeling.

Meantime John hastened down the street, looking out for the first shop where fruit was displayed, and as soon as he caught sight of the things he wanted, he called out,

"Here, master, let me have six cents worth of those cherries, will you?"

"Yes, sir," said the man, and quickly placed in his hands a small bag containing the cherries, which when John received he returned again to the workshop. All this had taken place in a few minutes, and the events had crowded so quickly one upon the other, that when he laid the bag of cherries on the bench and put one in his mouth, its sweetness aroused vividly within him the treatment of the landlady, even with additional force; and her words seemed so to "stick in his throat," that as he swallowed the juicy fruit, each seemed to give birth to the landlady's words, "Buy your own cherries!"

"Yes," said John, "and this is the way you serve a fellow, is it, after spending many a dollar with you? and now to begrudge even a paltry cherry!" and striking his hammer on the nail as he muttered the words, its echo seemed to answer back to him, "Buy your own cherries!".

All the rest of that afternoon the words haunted him, and do what he would, even the saw and the plane echoed the same advice, and at times he appeared to grow desperate, while from his lips would rush the words, "Buy your own cherries!" "Ah, yes," said he, his wounded conscience galling him, "I have bought them too long for her and her children; I will take care of number one for the future, and soon can have not only cherries, but many other sweet things beside."

At length the bell rang for leaving work, and John walked to the counting-house and received his wages, which amounted generally to about eight dollars; for although he was in the habit of paying frequent visits to the public-house, he was not by any means what people would call a drunkard; indeed, he would have felt insulted if any one had dared to apply such a term to him, and no doubt would have been prepared in *his way* to prove that he only took what he considered did him good. And if he did on a Saturday night sometimes get over the score, while the friendly glass went round more freely than usual, and the cheerful song caused the time to fly fast, so that he went home later than usual, it was simply because he was a good fellow, who must do as others do; and if, at such times, the wife complained that the money left was barely suffieient to purchase the needful things for the coming week, he was apt to tell her to "mind her own business," and a few sharp words between them would be the result. But alas! such scenes are too well known to need description, and Mary, like many others, had grown weary with complaining, but nevertheless, she determined to do her best to keep the house as comfortable as her limited means would allow; and by kind words and looks to make the home as attractive as possible, feeling assured that by such means she was more likely to draw him *from* the public-house: whilst the opposite course would most likely *drive* and keep him there.

However our friend John is standing at yonder gate, with his wages in his hand, evidently hesitating what he shall do. Let us draw near, and by doing so we shall hear what he has to say.

"Well, what shall I do? I must go and pay my score, for I don't wish to be dishonest: if I knew how much it was I would send it; but never mind, I 'll go and pay her and have done with her;" so away he went.

The moment the landlady caught sight of John, she put on her best smiles, and without giving him time to utter a word, she said, "I am so glad to see you, John; we have just tapped a fresh barrel of our best;" and drawing a glass and holding it to him, she said, "I wish your opinion of it."

"No, thank you, I don't wish any," said John; "I want to pay what I owe you: how much is it?"

"Come," said Mrs. Boniface, "it's all stuff: take a glass, man, what's your hurry?"

"No, not a drop," said John, "I want to be off."

"Well, will you have a glass of something short?" said the landlady.

"No, nor long either," said John.

"But," said the landlady, "Tom Smith is in the parlor, and Dick Bates will be here directly: you won't go just yet."

"Will you let me know how much I owe you?" said John, getting impatient, "or I shall go without settling."

"Ah I see now," said the landlady, "that I put my foot in it this afternoon, and offended you; but I hope you won't mind a few words spoken in haste: come let us be friends once more."

"Not a dram will I take here or anywhere else if I know it," said John; "and as to offending me, that don't matter that I see, so long as you get your money."

"But," said the landlady, while she was looking after the P's and Q's (pints and quarts), "I don't like to quarrel with any one, especially with you: now do let us make it up, and as for the cherries, I have kept them for you; see (fetching them out of the parlor), here they are."

"No, thank you," said John with a smile, "I took your advice, and went and bought some, which were very delicious; and now take what I owe you out of this sovereign, I want to be off."

"I don't like," said the landlady, "really to change this without your tasting something; what *will* you take?"

"Nothing, I say again," said John, speaking decidedly; and taking up his change, he walked out, and soon found his way home. He reached it much to the surprise of his wife, long before his usual time: she, however, had only to put the kettle on, and while preparing the tea-things, the water boiled.

John sat almost in silence, and took his tea. Mary was on the point of asking him how it was that he was home so soon, when all at once, he put his hand in his pocket, and takiag out some money, threw it into her lap, saying, "I suppose you'll be going to market soon, Mary."

"Yes," said Mary, and she would have added, "and I shall be glad to go soon;" but she had learut by past experience, that she must not say too much on Saturday night; so taking up the money she went into the bed-room to get her bounet and shawl, and then with a women's curiosity, looking to see how much he had given her, was surprised to find about a dollar more than she usually received.

"I wonder whether he knows how much he has given me," said Mary; but fearing if she returned to ask, he might want it back, she quickly passed down stairs, and out into the street, afraid every moment he would be after her for the extra change. She had not gone far before she heard some one running fast behind her, and in a moment looked round, thinking it was he, but it was only a little boy playing; so on she went, and quickly visited the different shops, and being a thrifty body, spent her money as wisely as possible, the extra money enabling her to add to the comfort of the family during the next week. When she returned laden from market, she found from what the children told her, that father had been out almost all the time, and she feared after all, he had gone in search of her. However, when he came in soon after, nothing was said on either side, and thus the night ended. (It is strange how drink ehills the intercourse between man and wife; is it not?)

Sunday was spent in John's usual manner: in the morning he went out for a walk, and after dinner, staid at home to read the paper; when the shades of evening gathered around, he strolled out, and did not return until after ten o'clock. (How many thus waste God's holy day through the cursed drink!) This being a regular thing with him, no notice was taken of it, yet Mary thought John quiet and dull, and onee asked him kindly whether he was well, hnt he said he was all right, so she did not venture to question him again. All the next week passed away at home without any perceptible change; but John, not liking to return home sooner than usual, went on the Monday night to a Temperance meeting, and was so much interested, that when another meeting was annonnced to be held not far from there next evening, he decided to go, and from what the speakers said of the good it had done them, *he signed the pledge.*

On the Saturday, when the bell rang, and John weat to the office for his wages, he felt a thrill of joy run through him after receiving them, and retired to a quiet corner of the work-shop. Looking at the dollar bills which lay in his hand, he said, "If is many a long day since I could say that ye all belonged to me; and now I have got ye, I'll take good care that I don't part with ye unless I get plenty out of ye;" and elasping his hand, aad putting it and its contents into his pocket, you might have heard him say, "I'll buy my own cherries, that I will."

Mary was much pleased to see him return even sooner than the week before (for reasons known to our reader), and soon placed the tea before him, and while bustling about the room, and doing her best to keep the children quiet, she felt almost inclined to say how pleased she was, but cheeked herself, lest he might when giving her the money, stop some for the last week's mistake.

When he had nearly finished his meal, he said, "Here, Mary, you'll be wanting to go a-marketing directly, I suppose; there's the money," throwing it into her lap.

An utterance of surprise escaped from her as she said in a whisper, "Is all this for me, John?"

"Yes," said John, "and I hope you will spend it well."

"I hope," said Mary, trembling, "you haven't done anything wrong to get so much, John?"

"No, my dear," said John, while his heart trembled with emotion, "I have done wrong long enough, and I am going to do right for the future."

"But," said Mary,—

"Never mind, now," said John, "get your bonnet and shawl, and let us both go to market."

Mary did not need a second order to get ready, all the while wondering how it was to be accounted for; resolving, however, while she was tying her strings, that she would quietly wait until John thought proper to give her an explanation; so after bidding Sally and Tommy take care of the other children and the house, they went on their way. John then briefly told her the decision he had come to, and hoped she would forgive him for the past, and help him to do better for the time to come; to all of which Mary listened with tremhling yet joyful interest.

Meanwhile the children at home had their talk about the matter.

"How funny," said Tommy, "to see father and mother go out to market together!"

"Yes," said Sally, "isn't it?"

"I wonder," said Tommy, "whether anybody that father knows has died and left him some money." And with similar child-like talk they were engaged when a sharp rap at the door disturbed them.

Sally went to the door, and there stood a butcher-boy with a basket and a leg of mutton in it.

"Does Mister Lewis live here?" said the boy.

"No," said Sally, "there is no one of that name lives here."

"It's strange," said the boy, "I was told this was the house; isn't this No. 20?"

"Yes," said Sally, this is No. 20, but no one of that name lives here."

"Well, who does live here?" said the boy.

"My father, and mother, and us," said Sally.

"And what's *your* father's name?" said the boy.

"They call him Jack Lewis," said Sally.

"Well that's the same man, Mister and Jack's all the same," said the boy, "and here's a leg of mutton for him."

"Oh I'm sure you're wrong," said Sally, "we never have such things as them come to our house."

"But I tell you it's all right," said the boy, and it's paid for."

"Well if it's paid for, I'll take it in, but I'm sure you'll have to come and fetch it back again," said Sally.

"Oh it will be all right," said the boy, and away he went.

"Isn't it a wopper?" said Tommy, "only fancy if this was our'n, wouldn't we have a splendid dinner?" And the little fellow danced about the room for joy; and while he was cutting his capers in this manner, another knock was heard at the door.

"Here he comes, shall I bring it?" said Tommy. But on opening the door a baker's boy presented himself with three large loaves.

"Does Mr. Lewis live here?" said the boy.

"Well," said Sally, thinking it strange, 'my father's called Jack Lewis, if that's him."

"All right, here's these loaves for him."

"Are they paid for?" said Sally.

"Yes," said the boy; "come, make haste."

"Well, I'll take 'em in, being as how they are paid for, but we never have such big loaves as them, and I'm sure you'll have to fetch 'em back again; there's a mistake somewhere."

"There, that's all fudge," said the boy, and off he went.

"Ain't them busters?" said Tommy: "See, sister, they are new, and well baked, too, ain't they? Only fancy if they *was* ours, wouldn't we make a hole in them soon?"

And again he started off with a dance and a shout, in the midst of which another rap at the door was heard

"Here they are," he said, "I'll bring them to the door."

But upon the door being opened there was a lad with parcels of tea, sugar and coffee, and the same question was asked. But Sally by this time had decided to take in all that was paid for, at the same time telling each one "They needn't be surprised if they had to fetch 'em back again."

The grocer sent potatoes and cabbages; the butterman eggs, bacon, and butter; and a few other articles from different shops arrived, until the table began to be quite full.

"I do wish father and mother would come home," said Sally; "suppose a policeman was to come and find all these things here, what should we do?"

"I wonder," said Tommy, "whether father's going to keep shop?"

"Don't be silly, Tommy; it would make you still, I know, if we had all to go to prison," said Sally.

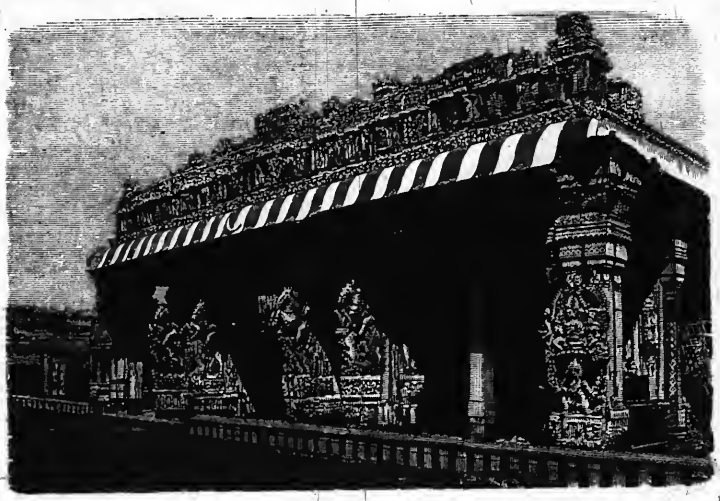
In the midst of this dialogue, much to the joy of the children, father and mother returned, and soon told them that the things on the table were for the coming week, and that all of them would have a share if they were good; and giving them a piece each of the new loaf and a bit of cheese, off they were sent to bed, and told to be very quiet.

In a short time John found that he could buy clothes for his children, and then for himself and wife; and then it began to be whispered that he was getting proud, for he moved into a better neighborhood, where he only had to pay about the same rent nevertheless. And soon after he began to put his savings in the Building Society, and this enabled him to build a cottage for himself. Meantime the master, finding him more than ever attentive to his work, appointed him as foreman, at an advanced rate of wages. And step by step he arose, until he became a master himself; and instead of working, he had men to look after it and do it for him. His children have been well educated; added to all this, he and his wife are hearty supporters of the Temperance cause, and by the blessing of God have become consistent members of a Christian church.

Working men, the moral is soon told: It is not how much money a week you earn, but *what you do with it* when you get it. How many home comforts, in the shape of carpets, sofas, chairs, books, etc., are lost, by the simple fact that the money goes in the wrong way. If you learn nothing else from this sketch, you may learn this, that if you are to have a "Home, sweet home," you must "BUY YOUR OWN CHERRIES."

THE NEW CHŌLTRY—MADURA.

The picture is a view of one of those magnificent monuments of antiquity built by the old Tamil kings, centuries ago, in the city of Madura. It is called "Puthu



NEW CHŌLTRY—MADURA.

Mandapam," in Tamil,—in English, "New Chol'try." It is also distinguished by the Tamil name "Vâsânt&," which means in English, "Spring." It is said to have been so called in consequence of having been built as a cool and delightful retreat for the god Siva, during the sultry month of May—in Madura the hottest month of the year. It is surrounded by a narrow watercourse, made of stone; intended, it is supposed, to cool the air during the hot months. This edifice, which in the beautiful finish of its work, and in its grand magnificence, excels all others in Madura, is three hundred and thirty-three feet long and eighty-one wide, divided, internally, into a nave and two side aisles, with passages at both ends. The roof is flat, being constructed of immense granite slabs, resting upon one hundred and twenty eight massive pillars, each twenty-five feet in height, hewn from a single block of granite, and carved in the ordinary Hindoo style. The labor of carving must have been enormous, and it is difficult to conjecture how the pillars could have been placed in position by any power which the Tamilians are known to have possessed in that dark age. Among the ornaments are ten groups of sculptured stone images, which represent the ten Pandian kings, larger than life, with their wives in smaller figures, placed in front of ten of the massive pillars. Tirrumala Nayagan, the last of the dynasty and the munificent founder of the "New Chol'try," stands first in the row of groups on the right, with his two wives, one on each side, and a female servant. The first thing which attracts attention on entering at the front is the massive platform, occupying nearly the whole width of the nave, which, together with twelve large, beautiful pillars, smooth as glass and black as jet, supporting an ornamented canopy, is wrought out of a beautiful stone, composed of dark syneite sprinkled with a green variety of scapolite, known as the "*black Madura granite.*" The authority which puts the date at £20,000, the date of beginning the work 1626, and the time of completion seven years, is the most credible. It has been justly said, that "this and the other solidly constructed and highly ornamented buildings which engaged the attention of Tirrumala Nayagan, could not have been built by any other than a despot possessed of boundless wealth." This man, the greatest of all the Pandian rulers, was crowned king of Madura in the month of January, 1623, when he was between thirty and forty years of age, and his successful reign extended over a period of thirty-six years. During his time the Jesuit missionaries gained great influence in Madura. Robert de Nobili, the most famous of them, assumed the garb of a Hindo ascetic, and professed to be a high caste Brahmin, from Rome. Thus, as a Christian propagandist in disguise, he schemed and labored many years. He made a considerable number of proselytes, with the direct countenance and assistance of the king over whose mind he is said to have gained an extraordinary ascendency. Some say that Tirrumala Nayagan was converted, and on this account was clandestinely murdered by the Brahmins. But the Jesuits seem not to have believed it; for their records declare that he died as he had lived, an impenitent sinner.

Whatever the truth may have been in his case, one thing is certain, two or three centuries of missionary labor by the Franciscans and Jesuits made no permanent impression upon Hindóo society. No missionaries were ever more indefatigable; nor persistent. They were unscrupulously deficient in their methods; they had unbounded means at their control; and the influence of kings was exerted to forward their schemes. No other missionaries were ever so favored on the human side; and yet, beyond the building of a few churches and the considerable number of proselyted heathen, to whom they gave Christian names, and a baptism of water without a previous baptism of the Holy Spirit, they accomplished nothing, or next to nothing. The citadel of heathenism continued as firm and unshaken as the old stone palaces and temples. The Brahmins retained all their former influence, and caste and superstition were in no degree weakened. In the line of human progress nothing had been done. Every old custom and institution remained intact.

It remained for Protestant missionaries to introduce, with the preaching of a purer Christianity, education for all classes, and to inaugurate the innovations which are fast changing the social habits of the people and their time-honored institutions. *Vastly* more has been done within the last fifty years to enlighten and elevate the people, not to speak of Christianizing them in the true spiritual sense, than was done by the labors of the Romanists in *three centuries*. Give us fifty years more, and the world shall see not only Madura, with her two millions, but all India, with *two hundred millions*, by the blessing of God on the preaching of a pure Gospel, transformed, evangelized, and numbered among the Christian nations.—*Missionary Herald.*

The Teachers' Table.

A PRETTY PIECE TO SPEAK

at Christmas time, if you have a celebration in your school, is the little poem we print in another column: "The Christmas Gift from Heaven." Remember that the chief secret in good speaking or reading is a good understanding and feeling of what is to be spoken or read. When an actor wants to perfect himself in a new part, he studies carefully the author's words and meaning, and then tries to feel it—or to seem to at least.

TEACHING GRAMMAR.

Is not grammar the bugbear of teachers and scholars? Children think they never *can* understand it. Teachers dread the labor of teaching such a dry study. Yet nothing can be more simple and beautiful; and the more simple, the more beautiful. It is possible to interest even primary scholars in it by not overwhelming them with rules and names which have no meaning to them. Let them see the significance of every name you give them. Don't use a text book with the younger ones. Here is a little lesson on

NOUNS.

Children, grammar, you know we said, is the study that teaches us to use the right words, so as to say just what we mean. There are only nine different kinds of words in our language. That is not many, and you will soon learn them all. But we will begin with the most important.

If you went to a country where no one could talk English, and you could not talk the language there, and you wanted some bread, how would you make them know? Wouldn't you point to it? Or, if you wanted to sit down, you'd point to a chair. Then, if some one told you the name of it, you could ask for it, just by repeating the name. You wouldn't have to use any words but just the name. So the names of things would be the most important words for you to learn.

Now, what words does the baby learn to say first? (Let the children tell.) Aren't those the names of things too? He can get along without any other words for some time.

Well, we call all words that are the names of anything—Nouns—that *means name.* We can't talk or write or even think about anything without using Nouns. Now let us see how many we can think of. (This is an exercise children will be greatly interested in, and soon learn to distinguish common and proper nouns.)

PICTURE READING.

Don't forget the picture reading exercise. Our pictures this month are beautifully adapted to it.

JAMES LEFFEL'S
TURBINE WATER WHEEL.

POOLE & HUNT,
MANUFACTURERS FOR THE SOUTH & SOUTHWEST.
Nearly 7000 now in use, working under heads varying from 2 to 240 feet 1 Twenty-four sizes.
The most powerful Wheel in the Market, and most economical in use of Water.
Large ILLUSTRATED Pamphlet sent post free.
Portable and Stationary Steam Engines and Boiler, Babcock & Wilcox Patent Tubulous Boiler, Blaugh's Crusher for Minerals, Saw and Grist Mills, Planing Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.

Sunday-school Lessons on the Life of Christ.

LESSON I.

DECEMBER 6, 1874.
THE BEATITUDES.

MATT. v: 1–10.

1 And seeing the multitudes, he went up into a mountain: and when he was set, his disciples came unto him:
2 And he opened his mouth and taught them, saying,
3 Blessed *are* the poor in spirit: for theirs is the kingdom of heaven.
4 Blessed *are* they that mourn: for they shall be comforted.
5 Blessed *are* the meek: for they shall inherit the earth.
6 Blessed *are* they which do hunger and thirst after righteousness: for they shall be filled.
7 Blessed *are* the merciful: for they shall obtain mercy.
8 Blessed *are* the pure in heart: for they shall see God.
9 Blessed *are* the peacemakers: for they shall be called the children of God.
10 Blessed *are* they which are persecuted for righteousness' sake: for theirs is the kingdom of heaven.

Golden Text.—BE YE DOERS OF THE WORD, AND NOT HEARERS ONLY.—James 1: 22.

When Jesus entered upon his ministry he not only taught in the synagogues or Jewish churches, but, as we learned in our last lesson, he was continually doing good as he had opportunity unto all men. It is not at all surprising that the good news which he brought—the ability to do wonderful works of healing such as no other man ever did—and even more, his willingness to give help and sympathy to all the wretched and needy ones who were brought to him—served to spread his fame, and that great multitudes from all that region were constrained to follow him. As Jesus looked about and saw the great crowd of people which had gathered around him, he went up into a mountain and embraced this opportunity to teach them more fully than he had yet done the nature and principles of that spiritual kingdom which he had come to set up. Christ commences this memorable "Sermon on the Mount" by showing the new and heavenly character of the subjects of his kingdom. If we would enter Christ's kingdom above, these are the qualities we must begin to cultivate on earth. As we consider those whom Christ pronounces "blessed," or happy, may we be led to see and realize that true happiness is very different from what the world thinks it to be—that its seat is in the heart and disposition rather than in external circumstances.

The first mentioned are the poor in spirit—the opposite of high spirited and haughty. They acknowledge their own unworthiness, and are conscious of doing nothing good. The proud and self-righteous feel that they can take care of themselves, and the world counts them happy. The lowly have rights in Christ's kingdom. The kingdom suits them, for he came to call sinners," and having no proud, lofty spirit to hinder them they enter at once by repentance and confession, and "theirs *is* the kingdom of heaven" even here on earth.

Second, They that mourn. God's true children mourn not alone on account of trials and disappointments, but they are often burdened and sorrowful in spirit because they come so far short of the perfect example set for them by their Lord and Master. There is comfort for them in the kingdom—"We shall be like him; for we shall see him as he is"(1 John, iii: 2).

Third, The meek: those who are mild and gentle; both in their treatment of others and in the way in which they receive treatment from others; who can bear trials and contradictions without showing an angry and revengeful spirit. They shall inherit the earth. They do not think much about themselves, so that they are not disturbed or unhappy if they are lightly esteemed by others; and in the upper kingdom many of the meek and lowly ones, who considered themselves last here, will doubtless be surprised to find themselves first there.

Fourth, They that hunger and thirst after righteousness. A hungry and thirsty man desires nothing so much as food and drink, and he can be satisfied with nothing else. Christ, who is himself bread to the hungry and water to the thirsty soul, promises complete satisfaction to those who earnestly desire and strive to be conformed more and more to his image.

Fifth, The merciful: those who are kind and compassionate not only to the deserving but to the ill-deserving. They shall obtain mercy. They who live to promote the welfare and happiness of others will find their own happiness cared for and secured to them by their Heavenly Father, "whose mercies fail not."

Sixth, The pure in heart. This goes deeper than the outward actions. It extends to the secret motives which prompt us, and requires that they should be pure and honest. The pure in heart realize that they are living under the eye of the heart-searching God; and having nothing to hide they can enjoy his constant presence. What state could be more blessed!

Seventh, The peacemakers: those who exemplify the gospel of Christ, which is "Peace on earth, good-will to men" in their words and lives. They are not merely peaceful, but carrying ever with them the spirit of peace and quietness they become makers of peace—themselves a blessing wherever they may be or go. And all such peacemakers are included in God's own dear family; for they shall be called the children of God.

Eighth, The persecuted for righteousness' sake. Those who, because they are trying to lead holy lives such as God will approve and bless, are reproached or ridiculed or persecuted in any way by wicked men, are among the blessed ones if they patiently endure; for they have our Saviour's promise "theirs is the kingdom of heaven." They can even "rejoice in tribulation" as they look forward to the kingdom beyond "where the wicked cease from troubling, and the weary are at rest."

Are we living from day to day so as to make these blessings our own? is the practical question for each of us to ask ourselves. If so, we shall find much happiness by the way, even here; for "Wisdom's ways are ways of pleasantness" and hereafter "fullness of joy." Shall we not be blessed indeed if we attain unto this glorious inheritance?

LESSON II.

Dec. 13, 1874.

TEACHING TO PRAY.

MATT. vi. 9–13.

9 After this manner therefore pray ye: Our Father which art in heaven, Hallowed be thy name.
10 Thy kingdom come. Thy will be done in earth, as *it is* in heaven.
11 Give us this day our daily bread.
12 And forgive us our debts, as we forgive our debtors.
13 And lead us not into temptation, but deliver us from evil: For thine is the kingdom, and the power, and the glory, for ever. Amen.

Golden Text.—ONE OF HIS DISCIPLES SAITH UNTO HIM, LORD, TEACH US TO PRAY.—Luke xi: 1.

Christ having spoken of the character and blessedness of the subjects of his kingdom, goes on to teach his disciples that they were not to strive to gain notoriety by their good deeds, but that in all things they were to have respect to the judgment of God, and not to the praise of men. Before giving them the model of prayer which bears his name, Christ gives them two cautions: First, Be not as the hypocrites. He does not here speak against public prayer but against the spirit which prompts to any display. "That they may be seen of men." This is mocking God—treating him as if he did not know the heart, and putting man's favor above His. Christ's method is the very opposite of the hypocrite's plan. We regard his counsel when we seek in presenting our petitions to God, to withdraw as much as possible from the notice of men. Both classes receive their reward. The hypocrites did it to be seen, and they gained what they sought; they *were* seen. But "God is not mocked." The merited *punishment* will be meted out at the judgment day. The honest and sincere worshipper is assured that the Father who seeth in secret—who needeth not to listen to words, but who searcheth the heart and knoweth the thoughts of men, will reward him openly.

The second caution is, Use not vain repetitions. Much praying is not condemned, but "much speaking"—the repeating of words which are expressions of the lips only and not the sincere desires of the heart. We learn (verse 7) that it is not the design of prayer to inform God of our condition, for he knows our needs before we ask: but it is the means through which he has chosen to confer his blessings. The brief prayer which follows and which Christ has left us as a model, "After this manner therefore pray ye," is so simple that a child can understand it; and in it, at the same time, is included, all that is needful for our well-being here and hereafter. It is to be feared, however, that there is much thoughtless, and therefore meaningless repetition of our Lord's own words. Let us notice carefully and try to find out the real meaning of these petitions. The first three relate to God. First, His name. We ask that his name may be hallowed or held sacred; and if we earnestly desire what we ask it will be our aim to so control all the thoughts of our hearts and the words of our lips that they may do him honor.

Second, His kingdom—"Thy kingdom come." This is a petition that God's kingdom, which is a kingdom of righteousness, may be established on the earth. We may show our sincerity here by first becoming ourselves his willing subjects, and then using all the influence we may have to bring those about us into the same blessed kingdom.

Third, His will—"Thy will be done." In these words we pray that God's purposes may be accomplished and his commands obeyed as cheerfully and unhesitatingly on earth as by the angels in heaven. If our actions correspond with our words, that is, if we honestly seek to know and endeavor to do God's will, our daily lives will prove the genuineness of our prayer.

The last three petitions are for ourselves. First, "Our daily bread." As often as we take these words upon our lips we should be reminded of our continual daily dependence upon God for the supply of our temporal wants as well as for spiritual blessings.

Second, The pardon of our sin. We are all sinners against God, needing and professing to desire forgiveness from him. Christ gives us no warrant to expect his Father's forgiveness if we indulge an unforgiving spirit toward those who have wronged us. If we offer this prayer without freely forgiving our enemies, we are in reality making a fearful request for ourselves—"As we forgive."

Third, Help from God—"Lead us not into temptation, but deliver us from evil." In these words we ask God to shield us from such influences as would cause us to do wrong, or, with the temptation, to make a way of escape. We come very far short of the spirit of this petition if we heedlessly and unnecessarily place ourselves where we know we shall be tempted to do what is wrong; for in this as in all other things, "God helps those who help themselves."

If we are God's obedient children we esteem it an unspeakable privilege thus to come unto him in prayer; and it is our joy and rejoicing that He whose "is the kingdom, the power and the glory forever," permits us to approach him as "Our Father who art in heaven."

LESSON III.

Dec. 20, 1874.

THE TWO FOUNDATIONS.

MATT. vii: 21–29.

21 Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven.
22 Many will say to me in that day, Lord, Lord, have we not prophesied in thy name? and in thy name done many wonderful works?
23 And then will I profess unto them, I never knew you: depart from me, ye that work iniquity.
24 Therefore whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man, which built his house upon a rock:
25 And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock.
26 And every one who heareth these sayings of mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand:
27 And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell: and great was the fall of it.
28 And it came to pass, when Jesus had ended these sayings, the people were astonished at his doctrine:
29 For he taught them as *one* having authority, and not as the scribes.

Golden Text.—OTHER FOUNDATION CAN NO MAN LAY THAN IS LAID, WHICH IS JESUS CHRIST.—1 Cor. iii: 11.

In the closing portion of the Sermon on the Mount, parts of which we have been considering for the last two Sabbaths, Christ tells the people plainly and forcibly who will and will not enter the kingdom of heaven. He has before told what is Christian character; he here tells upon what Christian character alone can be founded. "Not every one that saith unto me, Lord, Lord." Words of acknowledgement of Christ as Lord and Master will never be sufficient to prove any one an heir of the kingdom; "But he that *doeth* the will of my Father." The true profession of faith is found in the life rather than on the lips. Those who are connected with the kingdom of God only by external profession and protestations of zeal may appear to their fellowmen to be Christ's followers; and we are here solemnly taught that it is a possible thing for them to deceive themselves; but God reads the heart, and it is vain for any to hope to deceive him.

When Jesus was teaching he often made his meaning more clear to the people by parables or short stories; so at this time he closed his sermon with the story of the wise and foolish builders. Every one can see the folly of building on no more solid foundation than shifting sand. The house might and probably would stand in pleasant weather, but when the winds and the storms which must come sooner or later beat upon it, there was nothing to keep it from falling—"And it fell: and great was the fall of it." It is worthy of notice that both *heard* and both *built*. The foolish man's house may have looked as well to passers-by as the wise man's, but there was a great difference between them. The difference was in the foundation. Christ makes his own application of this parable, so that we are left in no doubt as to his meaning. All are builders. Each must build for himself, and each can build but one house. Our lives are like the building: in the Bible they are often so spoken of (1 Cor. iii: 9–16); (1 Peter, ii: 5). They that so believe in him as to lead them to *do* as well as hear his sayings are likened unto the wise man who built his house upon a rock. All such are upon the sure foundation, for, following his directions, they are building upon Jesus himself as the chief Corner-stone. When the storms of life, that is, earth's trials, disappointments and afflictions, beat upon them, they will have no cause for fear, but being founded upon the Rock they can calmly say with the Apostle "Who shall separate us from the love of Christ," etc. (Romans viii: 35, 39). How different the fate of the other builder! Hearing Christ's sayings but doing them not he is likened unto the foolish man who built his house upon the sand. The sand represents anything except Jesus. Some rest their lives on wealth, some on earthly honor, some on pleasure, others on their own good works; but they are all alike sand. There is but one Rock; we see there may be many kinds of "sands"; but they are the same in this: none of them have any power to save, and what is built upon them will surely come to ruin. Which house shall we be like?

The people who listened to our Saviour's sermon were "astonished at his doctrines." He taught simple truths that they all could understand; and his words brought to them comfort and hope. The people, therefore, as we are told in another place, heard him gladly. Let us not forget that if we desire his commeadation we must, in addition to hearing him gladly, do his will cheerfully. How much we owe to Christ for the Sermon on the Mount! Were its blessed precepts loved and obeyed by all, should we not have heaven on earth?

LESSON IV.

Dec. 27, 1874.

POWER TO FORGIVE SINS.

MATT. ix: 1–8.

1 And he entered into a ship, and passed over, and came into his own city.
2 And, behold, they brought unto him a man sick of the palsy, lying on a bed: and Jesus seeing their faith said unto the sick of the palsy, Son, be of good cheer; thy sins be forgiven thee.
3 And, behold, certain of the scribes said within themselves, This man blasphemeth.
4 And Jesus knowing their thoughts said, Wherefore think ye evil in your hearts?
5 For whether is easier, to say, *Thy* sins be forgiven thee; or to say, Arise and walk?
6 But that ye may know that the Son of man hath power on earth to forgive sins, (then saith he to the sick of the palsy), Arise, take up thy bed, and go unto thine house.
7 And he arose, and departed to his house.
8 But when the multitudes saw *it*, they marvelled, and glorified God, which had given such power unto men.

Golden Text.—IF WE CONFESS OUR SINS, HE IS FAITHFUL AND JUST TO FORGIVE US OUR SINS, AND TO CLEANSE US FROM ALL UNRIGHTEOUSNESS.—1 John, 1: 9

When Jesus had finished his matchless sermon he came down from the mountain and followed up his wonderful words with mighty acts of love and mercy, thus carrying out and exemplifying in his own life the precepts which he had enjoined upon all who would be numbered among his true followers. A few of these wonderful works are put on record for our instruction (John xx: 30, 31). The healing of the leper comes first; next, the centurion's servant; then they brought unto him many afflicted ones, and he healed them all. He showed, too, his power over the winds and waves by stilling the tempest, and over the evil spirits by permitting them to go into the herd of swine, and thus freeing the demoniacs who had hitherto been under their power. This brings us to Christ's next miracle which is the subject of our lesson to-day. The scene of this miracle was Capernaum, "his own city," so called because during the last three years of his life, it was, more than any other place, his residence. Mark, who enters more into the particulars of this case than Matthew (Matt. ii: 1–12), tells us that Jesus was on a house teaching a multitude, who had gathered together to hear him when this poor "man, sick of the palsy" was brought unto him to be healed. His friends could not make their way through the crowd to Jesus, but they were too much in earnest in what they had undertaken, to allow themselves to be overcome by any obstacle.

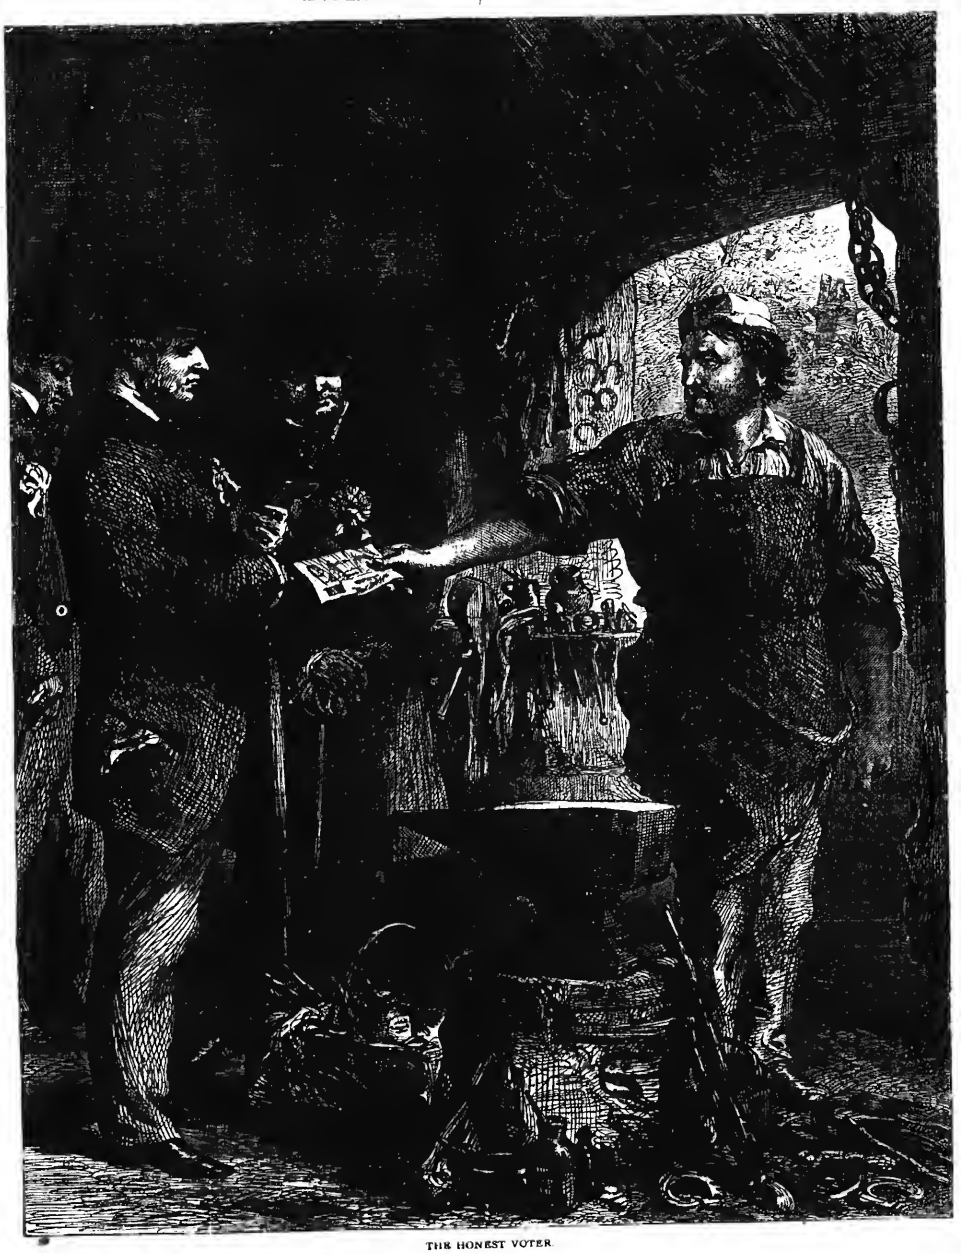
The great question with them was how to bring this man to Christ's notice. They thought of a very strange way. The houses in that country were built with flat roofs, so that it was possible to get on the roof—which they did—and "let him down through the tiling with his couch into the midst before Jesus." It was a strong belief in Christ's willingness and power which led them to take this step. The spirit which prompted them and the act which was the evidence of the spirit, Jesus commended in the words "seeing their faith." When we are conscious of our own helplessness and have learned and believed enough concerning Christ to induce us to go to him for help and strength, we have the same faith which prompted the paralytic and his friends. How encouraging to the poor man were the first words from the Master's lips, "Son, be of good cheer." It would seem from the words that follow, "Thy sins be forgiven thee," that Jesus, who could read his inmost thoughts, saw that he had brought to him for healing, as well as a paralyzed body, a penitent heart and a broken spirit because of his sins.

Certain scribes said in their hearts, "This man blasphemeth." They were right in judging that no mere man had power to forgive sins. They were wrong in failing to see Christ's true character when made so plain by his works. To show his right and power to forgive, Christ performed an instant cure which was proved by the hitherto helpless man walking away with his bed. The scribes could not see sin pardoned and they questioned his authority; but they saw the man cured and then were silenced. But they did not want to be convinced and give God the glory; for we read, not the scribes, but the multitudes when they saw *it*, marvelled and glorified God. Let us never forget that not by words only, but by daily, well-ordered lives we may glorify God "for his goodness and for his wonderful works to the children of men."

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., JANUARY, 1875. NO. 1.



THE HONEST VOTER.

THE HONEST VOTER.

The picture to which this title belongs is taken from an English paper, and represents a scene quite unfamiliar to American eyes. The gentlemen, that is, the well-dressed individuals with the rosettes upon the breasts of their coats, are bidding directly and without concealment for the vote of the blacksmith, who turns from his forge to resent the insult which they offer him.

Now although there are plenty of dishonest voters in America, there are few men who are willing either to buy or sell a vote so openly as this, and the example of the indignant blacksmith would undoubtedly be followed by a large majority of American freemen.

The temptation to a dishonest use of the franchise in this country comes usually in a subtle and less easily disposed of form; and just for that reason voters who intend to maintain their independence, need to be specially on their guard against the frequent inducements to make capital out of their voting power. One of the chief causes of dishonest voting is ignorance, and sound political education is a primary necessity if we expect sound political action. Men must know why, and for what or whom they are voting, and must then use their knowledge conscientiously before they can be called "honest voters"; and though perhaps there is many a man among us who would not deliberately sell his vote for a twenty- or fifty-dollar bill, yet surely there are not many who are guided by intelligence and restrained by conscience in their use of the franchise, though once more we say that it is only such men who are worthy to rank with the "Honest Voter," of our picture.

Southern Workman.

HAMPTON, JANUARY, 1875.

In reference to our recent article on cotton spinning at Norfolk, Va., a gentleman thoroughly posted, writes us as follows:

"I feel very sanguine of the eventual success of manufactures in the South if they can only start in such places as will furnish *labor* in sufficient quantity and quality at a low rate. By beginning with the coarser fabrics, with the large surplus female population of Norfolk, I think the cotton manufacture might be made successful. The more skilled labor of the North will be driven on to finer fabrics. I was told yesterday in Lowell that the mills on coarse goods were beginning to feel the effects of Southern competition. If we regain some of our export trade, and the South can deliver goods in New York suitable for the South American and Eastern market, instead of sending the cotton North to be manufactured and returned, I do not see why Southern mills should not reap the profit of the operation."

For such coarse goods as are recommended above, an engine of 100 Horse-power would be required to run 4,000 spindles. That number would, however, be too small for economy. Our correspondent says "I should not advise a mill of less than 10,000 spindles. Ordinarily, at least, $30.00 per spindle should be allowed for cost of plant. At the present time the machinery complete for a mill could be bought for $10.00 per spindle, and the engine and shafting could also be got on the very best terms."

We thank our correspondent for his interesting facts, and only wish he would add to our obligations by directing the attention of cotton spinners to those advantages of our climate and location, which must sooner or later drive New England heavy domesties out of the market. The Eastern States have the capital and experience, while the South has the cheap labor. To bring the two together is to cement a real peace between the sections. Outside aid is our only hope for the next decade. At Norfolk, for instance, it will be long before $300,000 of home capital will desert familiar methods of investment, for the almost untried path of cotton manufacture. Success without experience would be problematical. The capital of Norfolk is spread very thinly over the lumber, oyster, banking, trading, or real estate business, and is utterly inadequate to cover the ground. We can only point to our splendid natural advantages, and say to our friend and others like him, "Come over and help us!"

We note with pleasure the establishment of the "Hodo Savings Bank" of Norfolk, Va., designed to do all the good for the colored people hereabouts, that the broken Freedmen's Bank might have accomplished, had it been properly carried on. We believe the new institution to be in careful hands, and feel safe in recommending it to all who have funds to deposit. Its directors are among its largest stockholders, and have therefore an immediate concern in making only the most prudent loans. The downfall of the old Freedman's Bank, was largely due to the vicious system of sending away the funds for investment at Washington. The new Company is not a branch of any other concern, and keeps its money at home for the accommodation of the business men of the vicinity. The Bank pays six per cent on deposits. The large experience of H. C. Percy, Esq. as Cashier of the old Bank, has fortunately been secured to the same important position in the new institution. Of the advantage and necessity of such a bank there can be but one opinion; and we wish the enterprize the success which it deserves, in a long career of profit to itself, and of usefulness to the colored people of this section.

The following extracts from Southern papers show that the colored people are deeply stirred by recent political events. Like any other people, they will in the end collect in those regions where they are best treated and best paid.

It is of paramount importance to the welfare of any region of country to have an intelligent and contented laboring population. Georgia and Alabama cannot spare their colored people, but are likely to suffer from an exodus. These states can by wise and kindly measures retain the best of their workmen; and if the class that calls itself "superior" is really so, it will hasten to quiet the black mans fears and teach him that there is sincerity in the oft-repeated expression of Southerners that they are really the negroes' best friends.

Now is the best of all times to prove this, and we are glad to notice in all the late utterances of prominent Southerners, hearty assurances to the colored people, of protection and good care. The negro will lose his last chance if he rejects this proffered encouragement and persists in believing his old master to be his mortal enemy.

"The Mobile *Register* says that the negroes about Montgomery, Alabama, held a large meeting the other day to consider what they were going to do about the Democratic victory in the state. Some spoke in favor of emigration immediately, but others advised waiting awhile and making an appeal to Congress. This was substantially what was resolved upon. A resolution was passed calling a State convention of the negroes at Montgomery in December, to make another report of "outrages" to the Federal authorities.

The Augusta (Ga.) *Constitutionalist* says: "There is a big scare just now about a negro exodus from Georgia to other states, notably Texas. The railroads, it is said, will take the laborer to Texas for half fare, but charge him full price for returning. If the colored people choose to go to Texas, we do not see how they can be prevented, unless superior inducements are offered for them to remain. We dare say enough will remain for all practical purposes, and if a great many idle white men will be thereby impelled to work, the calamity will be not an unmitigated one after all, but rather a blessing in disguise."

The Atlanta (Ga.) *Herald* of Nov 26th, adds the following: "As a subject of engrossing interest and importance, we present some further facts bearing upon the threatened emigration of the negroes from Georgia. Mr. Houston, of the Atlanta and New-Orleans line, replies to the charge that his line had forced the Western and Atlantic Railroad to reduce the rates, by saying that the Western and Atlantic Railroad forced his line to reduce the rates. This is exactly the point that we made. A ruinous and cut-throat competition between the roads forces the price down to such figures as absolutely tempt the negroes to leave the state. It makes very little difference to the public which line commenced the 'cutting' business. The mere fact that this negro pledger can get transportation for 1,500 negroes from Atlanta to Vicksburg for $10 a head, and a free ticket to one in every twenty-five, is all that the public have to deal with. This is the one thing that it must deplore and condemn. We still believe that a convention of State magnates of these three routes, and abolition of their low emigrant rates, would stop the wholesale exodus of our negro population. The negro is remarkable for his love of locality. He generally prefers to stay around the old farm-place, where he was raised, and will do so unless all the conditions tempt him to leave it. The single obstacle of full, high-priced railroad fare would settle the matter with two-thirds of them."

Virginia Hall although not yet fully completed, is answering its purpose admirably. The steam heating and cooking apparatus works well, and under the skillful management of Mr. Goff the engineer, is proving itself a most efficient and economical substitute for stoves and ranges. Mr. Cake, with his diminished force of workmen, is making good progress toward the completion of the carpenters' work; and what is better than all, our friends are nobly coming to the rescue in this time of our great need, with liberal contributions which have enabled us to pay off the balances due our workmen, and many of the outstanding bills for material. We confidently hope to be able to complete this noble building and have it clear of debt before the close of the coming year. We cannot express our gratitude to those generous friends who have done and are doing so much for the school.

The poem on Home, which our readers will find in another column, was sent us by H. M. Dow of the Soldiers' Home, as original. After it was in type, we found the same lines in the November number of the *Aldine*, credited to the well-known poetess, Mary B. Dodge. Notwithstanding this fact, Mr. Dow still claims the authorship, and another "Rock me to Sleep, Mother" controversy seems to be impending. The lines do credit to the writer, whoever he or she may be, and are not unworthy of the fair fame of the fair poetess to whom the *Aldine* gives the credit. Still, if our neighbor Dow is the author, we trust he may not be shorn of his laurels by any Dodge whatsoever.

The presidents of the various colored societies of Memphis, Tennessee, have organized "The Knights' Brotherhood and Monumental Association," the object of which is to discard old political ties, and maintain permanent peace with the white people of the South.

In their Resolutions they say:

"We regret the blindness of the past that has alienated the kind feelings of our true friends, and in our effort to improve in the future, we pledge our faith mutually to each other, and to all whom it may concern, that hereafter we will sustain no man for office unless he be thoroughly identified with the people of the soil, and in full, truthful accord with our earnest desire to cultivate peace, harmony and industry among the races."

Left to their inclinations the colored people naturally identify themselves with local issues and interests. It has been only a great, wide-spread dread of injustice that has led them to cling so closely to the Northern party. All ground of fear once removed they will act with either party according to circumstances.

AN EXCURSION.

III.

In my last article I made a promise from which I would now like to back out. The word withdraw would perhaps be more elegant and dignified, but it does n't meet the case so well as the plain old term back out. You know I promised to write about the people of Fox Hill. My "better-half" here suggests that the word inhabitants would be more classical and imposing; and that indeed the words inhabitants, people, and population are all derived from a foreign language and that, too, a dead one. Well, I am no literary resurrectionist, and am very well content to let the dead rest. At some future time I may give my ideas (no! I wont say ventilate, now there!) about mixing up all sorts of words from all sorts of languages so that a body can't tell whether he's got the right word in the right place, or indeed whether he's speaking English or Dutch.

But to my promise. The difficulty in writing about the people—I tell you I am going to stick to people; it's a good Bible word; it sounds loyal, too; "We, the People" begins the immortal Declaration—I say the difficulty in writing about people of any place is, that if you tell the truth, some touchy, sensitive plant sort of a fellow will be sure to say that you are personal in your remarks, etc. And if you don't tell the truth, they will all say—and with very good reason—that you are telling a—well, you know what I mean. However, it is a well established maxim of law that the intent constitutes the crime; so without more ado I will give my impressions of Fox Hill people. If you wish to see genuine, unpolished humanity in all its simplicity and honesty; if you wish to see how little of wealth it takes to make man comfortable and happy; if you wish to see the most generous hospitality in proportion to ability,—go down among the people of whom I am writing. You need not be particular at whose house you call—they all have the same social creed, inherit the same hospitable spirit and practice, the same mode of entertainment. The best they have is at the visitor's command; he is invited to make himself at home and expected so to do: not to do so would be construed as signifying that the company and place were not good enough for him.

They are industrious in their habits, frugal in their expenses, and their manners are modeled rather after the common than the statute law of society. They have preserved the customs of their forefathers with remarkable fidelity—and copy them with the most scrupulous exactitude. The spinning wheel and cotton cards are heirlooms in every family (what was your remark, wife? I "ought to say house-hold Gods? or better still *Lares* and *Penates*?" I sha'n't do any such thing. Do you want to make out the Fox Hillians to be idolaters or heathen? Besides, I am not sure that I know what those outlandish words mean). As were the fathers so are the sons, and the daughters have only to copy the mothers to perfect them in the duties pertaining to their sphere. There is among them a wonderful unanimity of thought and feeling. Not that there is not some diversity of talent, manner, and such things; but there are certain currents of thought into which they all run, and certain points of argument upon which they all agree. On one point they are peculiarly sensitive. They are very apt to attribute any fancied slight to the fact of their poverty. Guard well against this point and you will not have much difficulty in obtaining their esteem, so long as you conduct yourself with ordinary propriety. From their very childhood they are taught to work, barter and trade. Those who do not voluntarily assume their independence are thrown upon their own resources at a much earlier age than that prescribed by law. Take the word in its broadest sense, and they are probably the most independent people in the world. They ask no

They work out the problem of life, as it presents itself to their ingenuous minds, with brave, honest hearts, and strong right arms. The corruption of modern society has not tainted the purity of their morals; the follies of fashion have not beguiled them into extravagance or show; and the glitter of wealth cannot seduce them into dishonesty or fraud. Plain, sober and industrious, they pursue the even tenor of their way, not caring what the great world may think or do so long as they can provide for themselves and their dependents.

The world would be the gainer if we had more such people. CAAB.

VIRGINIA HALL.

The question has been raised among some friends of the Hampton Normal Institute, whether it is wise to build expensive and ornate edifices for the instruction of teachers of primary schools. The erection of Virginia Hall—one of the finest buildings in the State, though costing only $76,000—has seemed to some an outlay disproportioned to the intended purpose. A statement of the results already attained, and to be attained by such an expenditure, may be of interest:

1st. The roof of Virginia Hall covers six stories of rooms, adapted to various purposes. Every foot of this space is needed, and is being rapidly appropriated. Where so much room is called for, economy of construction requires height.

2d. The desire to avoid repairs has caused the whole work to be done in the most permanent and substantial manner.

3d. Out of the million and a-half brick used, not more than twenty-five thousand have been employed merely for architectural effect.

4th. A large yearly expense for cooking, heating and washing, is saved by having a single building and using a steam-engine. Fire risks are also greatly lessened by having abundant supplies of water on every floor, with two-inch outlets, capable of deluging the building in a very few minutes. The engine pumps water into tanks at the roof, whose elevation of fifty-two feet furnish head enough for all purposes.

5th. Taking durability into account, there is no cheaper method possible in this region than that of a large brick building, of providing accommodations for one hundred and fifty young women and their teachers, besides three hundred boarders; furnishing a chapel seating four hundred persons, an industrial room, laundry, a roomy printing office, repair shops and store-rooms.

6th. Had a simple structure been erected, in factory style, without regard to appearances, the feeling of pride among graduates in their Alma Mater would have been changed to something like contempt. As it is, the reputation and influence of the school have been doubled among the colored people by the mere fact that such a noble building is dedicated to their elevation. The facilities of selecting the best of the race as students, and thereby using most effectively the unsurpassed educational facilities offered at Hampton, are greatly enhanced.

In view of the fact that the same style of building in New York would have cost $25,000 more, we feel assured that no apology for Virginia Hall can be needed by those who have seen it, and that the heavy outlay, even in these times, is abundantly justified by the results.

Correspondence.

From our London Correspondent.

LONDON, *Aug.* 5, 1874.

The fierce heats of midsummer and dog-days are upon us, and we are longing to get away from London, and exchange its stifling, burning atmosphere for something cooler and fresher. I am by no means in love with the climate of Old England, nor can I see any superiority in it to that of its much-abused namesake. The changes here are quite as great and the weather at times quite as unseasonable here as there; for instance, July came in with a cold, chilly rain, when a fire would not have been uncomfortable. Before the week was out the heat was simply awful—the days and nights close, suffocating and almost intolerable. It is now the vacation season, lessons are over, teachers and pupils scattered, and we are planning where and how we shall spend our few weeks of leisure. The Lakes of Scotland, the Channel Islands, Switzerland with its Alps and its River Rhine,—all attract us, and we find it hard to decide which route shall have the preference—only on one point are our minds firmly made up: we *must* see Paris, and after that hold a conference with our time and our purses before deciding upon further movements. We intend to be on our way thither in a few days, and my next letter may be dated from that gay metropolis.

In this letter I will try to give some account of my visit to Westminster Abbey, though I feel that it is almost impossible to give any accurate or satisfactory description of that wonderful old pile. It is one of those vast, solemn pieces of architecture—the date of whose commencement is almost lost even to history. It is generally supposed, however, that the foundation was laid as early as the sixth century, and, although during the succeeding ages, kings have vied with each other in adding to its magnificent adornments, —those ancient walls are now an imposing part of this majestic building. Here are the tombs and monuments of some of the great ones of the world; all that remains of many whose names have been a power to the earth, and often too a terror to it, lies here around or beneath you; truly one may read here a lesson on the vanity of earthly pomp and pride. The Poets' corner, so called because so many of the English poets and authors are buried here, first attracted me. Here are monuments and tablets, some very elegant and elaborate, and others very plain, to the memories of Addison, Shakspeare, Spencer, Chaucer, Ben Jonson ("O rare Ben Jonson," engraved on the stone), David Garrick, Macaulay, Thackerey—and under the pavement, beneath a plain black marble slab, lies Charles Dickens. There is an elegant monument to Oliver Goldsmith, whose body, however, rests in the old Temple church. Gey's epitaph reads queerly—he wrote it himself:

"Life is a jest, and all things show it,
I thought so once, but now I know it."

The monument to Handel is very beautiful. He is represented as standing with his left arm resting on a group of musical instruments, with the "Messiah" before him, open at the words, "I know that my Redeemer liveth"; he is apparently listening to an angel who is playing a harp overhead. An interesting coincidence in connection with this monument is that the sculptor, the celebrated Rouhillac, first attained celebrity by his statue of Handel, which was placed in Vauxhall Gardens, and this most excellent and correct likeness of him on his monument was the last work which Roubillac lived to finish. In the main body of the church (west transept) is the grave of Robert Stephenson, and very near it, is a white slab, diamond-shaped, engraved with the name, age, etc., of D. Livingstone. This stone is not larger than an ordinary sized dinner plate—a small memorial of so great a man. One of the many beautiful windows is dedicated to Robert Stephenson and represents some of his famous works—Victoria Bridge, Brittania Bridge and others. Sir Isaac Newton's monument is also a grand work of art, a bas-relief representing some of his various employments; in one place he is seen weighing the sun in a scale. In the north transept are the monuments of Wm. Pitt, Earl of Chatham; Warren Hastings, Lord Palmerston, Pitt and Fox, the rival statesmen; and among other miscellaneous ones in this neighborhood, I noticed that of Major Andre; here, too, is George Peabody's; and, on a large square of the pavement is an inscription that his body reposed here for a certain time previous to its removal to America.

The remains of royalty are enshrined in some of the chapels, of which there are some eight or ten, called after the name of their founders or some saint to whom they are dedicated; of these the most magnificent is Henry VII.'s chapel, founded by that monarch, and expressly designed by him for a burial place for himself and his successors; and in his will, he directed that none but those of the blood royal should be placed here. The gates of this chapel are of brass, of very curious workmanship, the panels being filled with the portcullis and rose-crown, fleur-de-lis, falcon and fetter-lock, thistle, and many other significant devices. The ceiling is considered one of the most wonderful parts of the whole Abbey, being carved entirely of stone, yet so benutifully and delicately done, as to look almost like lacework; there is much of this exquisitely carved stone-work in others places of the Abbey, in organ, screens, arches, gateways, etc. The stalls or seats in this chapel are also wonderful specimens of carving in wood; the banners of the Knights hang over their respective stalls; their coats-of-arms too are emblazoned on the sides and seats, the walls themselves are very curiously wrought and are a very interesting study, being covered with all manner of quaint figures—patriarchs, saints, martyrs and confessors. In this chapel are buried Mary, Queen of Scots; Margaret, Countess of Richmond, and mother of Henry VII; Queens Elizabeth and Mary, Edward V., and other royal personages; but the principal object of admiration both for its antiquity and workmanship, is the tomb of Henry VII. and his queen, the last of the house of York who filled the English throne. It is ornamented with many devices significant of his family history, among others roses twisted and crowned in memory of the union of the houses of Lancaster and York.

Then there is St. Paul's Chapel, then the chapel of Edward the Confessor whose tomb is directly behind the altar; here also are the remains of Queen Eleanor (A. D. 1290), Queen Philippa, Henry III., Henry V., Richard II. and his queen, and Edward I. The pavement of a part of this chapel was laid in the year 1260, and it is in good order now. Here also is the coronation chair which has been used by every sovereign since the time of Edward I.—a wretched looking thing, a real, back-country, kitchen chair, all hacked up and scores cut all over it. It is however, covered with drapery when in use. Underneath the seat is a stone said to be a part of Jacob's pillow, on which he dreamed of his future greatness and glory. On this stone all the Scottish kings were crowned, and it was brought from Scotland by Edward VI. of Scotland, when he became also Edward I. of England. Another chair stands by which was made to match this more ancient and venerable one, when Queen Mary was crowned with her royal husband William III. In St. John's Chapel is a very large tomb on the top of which are the marble effigies of the Duke of Exeter, and on his right his first wife. The space at his left was intended for his second, but as she did not choose to be represented on the left side, the space remains unfilled. The chapels of St. John the Evangelist, St. Andrew and St. Michael, are now thrown into one. The most remarkable monument here is that of the Nightingale family, a most wonderful work of art by Rouhillac; it represents the wife in her husband's arms, while Death is coming out of a tomb and hurling a dart at her. It is a horrifying picture, but most exquisitely done. In this chapel are the remains of John Kemble and Mrs. Siddons. St. Edmund's Chapel contains the tomb of Lady Jane Seymour, Edward III's children, Lord John Russell and others of lesser note. In that of St. Nicholas are Philippa, Duchess of York (A. D. 1433), Sir Humphrey Stanley, Sir George Villiers, etc. There are also the chapels of St. Faith, St. Benedict and perhaps more, but I do not remember any others, and only wish I could have given a more adequate description of the wonders and beauties of this most truly wonderful and beautiful place. Of course at one visit I could not see all that was worth seeing and remembering; and, of course, too I cannot remember, still less accurately describe all that I did see and admire. One is almost overpowered by the intensity of thought and feeling which the place suggests. Just think of it! these stones which we look at now were placed by hands, and the work was watched by eyes, which have been dust for twelve hundred years; and who shall say that twelve hundred years hence other eyes will not read these inscriptions and gaze upon these monuments of ancient greatness, with, if possible, a deeper feeling of interest and awe than that which they now inspire! K.

STUDENTS AND GRADUATES.

The following extracts from letters from students of the school will be interesting to those who wish evidence in regard to the treatment of colored teachers by state officials in Virginia, and in regard to the condition of the freedmen. Two young women who were recently sent to Bedford County write as follows:

"We are all quite satisfied and contented here. We went to the Superintendent's Wednesday afternoon, to be examined and had a written examination. He was quite pleased with our answers and asked us some questions verbally, which, we answered, he said, to his satisfaction. He is just as nice a man as he can be; he receives us so kindly and takes so much interest in us. He asked us to bound Virginia, which I did, and it pleased him so much he just clapped his hands.

We have all received our certificates, and are to go before the Board on Monday and sign our contracts and open school on Tuesday. We have very good schools as far as we have seen or heard about them. Moulton is down to a cross road, and Marietta to Bunker's Hill. I am at the turnpike. My school will have seventy or seventy-two pupils, and Marietta's is over one hundred; Moulton's is over sixty. We are anticipating great success. Our number in examination is seventy-two. We are kindly treated and cared for everywhere."

A graduate, W. H. Lee, writes from Nansemond County:

"The great misfortune is that schools don't go on long enough in one place to give the patrons of the school encouragement. The children hardly get a good understanding of what they have gone over before the term closes.

"I generally find their moral characters very indifferent, some good and some bad. I find a great many trying to accumulate property, buying land very frequently, and working very hard to pay for it. Others lay around the whiskey shops to a great extent, and this is the misfortune of the colored race; they love liquor most too well to ever make much progress.

"One trouble is that we have teachers going through the country who are not competent to teach the children, and leave them in a worse condition than they were at first. Then the public schools here don't encourage competent teachers to stay. They don't pay enough; they don't carry on the schools long enough, only three months in a year, and the teacher has sometimes to wait nine months for his pay. I am encouraged more by the whites than by the colored to go on and try to make intelligent, useful citizens. I have more encouragement for Sunday-schools than any other, but they need papers and Bibles. I have had more than two hundred applications for Bibles. I always find my school more crowded on Sunday.

"The colored ministers encourage me very much. Sometimes it is the only consolation I can get, to go to some old preacher and talk about the work I have to do."

James A. Fields, Principal of the Lincoln School at Hampton, reports as follows:

"The present attendance is two hundred and seventeen, and the first of December the number will advance to about two hundred and eighty. As a general thing the children are advancing admirably well, but many are confined by their parents, who say, when they have sent them to school about one month that they are not advancing in their studies, and must therefore be sent to another school."

Ackrel E. White writes, "Since the 17th of Nov., which was the time I left your school, I have been located in a very hilly and rocky country—among the Blue Ridge mountains. It is a very delightful country. Its mountains are tall, and its climate is healthful. The land is so very rocky that I asked some of the people if they could plow it, and they said yes, without any trouble.

"I find that most of the people are uneducated—whites, as well as blacks. The whites who are educated are those who have wealth, and they are very few. The poor class of whites are as badly off for learning as the colored people. I am happy to see the colored people so anxious to learn, and the whites so anxious to have them. The two races walk hand in hand. The whites seem to esteem their colored neighbors as highly as they do their white ones; and the colored do the same. The poor class of whites seem as if they had rather go to their colored than to their white neighbors for such things as they need. The people all live in the old style—common and plain; but the greatest need in this country is education. I have seen some of the ex-slaveholders and talked with them, and they say that they want to have all who ever belonged to them educated.

"I have now on the roll of my day school thirty-nine scholars, and after Christmas I expect to have more. I am happy to say that I have a large Sunday-school of both old and young; and I think much good can be done in Sunday-school, for the children and their parents all come out, and the old people are very anxious to learn to read the Bible. I have no one to help me to teach yet. I have those read that can read, and then I explain to them the best I can. I am sorry to say that I have but a very few that can read the Bible, but those that cannot read are very anxious to hear it read. They say that they never knew what the S. S. meant before, and now they think there is nothing like the S. S. I am happy to say that the minister they have here is an educated man, and also a good preacher. He and his wife are the only colored persons about here that are educated. I have tried very hard to get some of the people to subscribe for the SOUTHERN WORKMAN, but they say that they cannot read. I may get some to subscribe on account of the Sunday-school lessons, and I hope to get them soon."

H. Whitted writes from Hester's Store, Person county, N. C.: "Very probably there will not be any school here next year, on account of the scarcity of money in this township. I have on roll eighty pupils, and some very good scholars. When my school vacates I shall go home to Hillsboro. There we have a very large Sabbath-school, also one in Goldsboro. I shall introduce your paper in both of them. Had I known that you were printing a Sabbath-school paper at Hampton, I would have subscribed for it immediately after my school convened last summer. I don't know any paper that I like better for Sabbath-school. The more I read them the better I like them. I think all our teachers down South will concur with me that it is the best paper for our field, existing. I shall work in its behalf wherever I go. I am now getting up subscribers for the SOUTHERN WORKMAN. I am sorry that I did not get your request concerning that paper sooner, though I have several now of which I will send you in two weeks."

George W. Cole writes from Tappahannock, Va.: "I have a large school, and it works me day and night. I have also quite a large Sunday-school, which is doing well. I have whites as well as colored. They mix in the classes and all enjoy their lessons together. We are having quite a nice time in day- and Sunday-

school too. The County Superintendent was out to see me last Tuesday. He was well pleased, and complimented the school by saying it was the best in the county. When he first put me to work he said he would not allow me full wages; but he says now that I am welcome to full rates."

Thomas H. Hardy writes from Bellville, Nansemond County, Va.: "I succeeded in getting the school to which I was appointed. I opened my school November 17th. I now have a fine school, numbering forty pupils. My school has been very poorly instructed—they scarcely know anything. I am working hard to give them a fair start to make good scholars. I see bright prospects for a thrifty school. And I hope, before the close of my term here, I may have quite a number of subscribers to your paper. I am sorry that the present situation of my school will not allow me to have a Sabbath-school; but I have been taking Friday afternoons for Bible lessons."

NOTE

TO GRADUATES AND EX-STUDENTS.

The Treasurer would remind graduates and ex-students who are still in debt to the School, that it is in urgent need of all the money that is due, and that all sums, however small, will be gladly received.

[A Southern lady sends the following lines with this statement: "It is the story of one of my husband's tenants who lives alone in a little cabin near us. He told me his history in words more pathetic than mine, and when I read him my version of it, he drew his hand across his eyes several times, saying 'Dat 's a fac', mistis, dat 's a fac'.' "]

UNCLE JONAS.

BY OBRA LANGHORNE.

"Uncle Jonas, what makes your head so white,
And your shoulders stoop so low?
Just look at your hands, how they shiver and shake,
And your steps are so feeble and slow!"

"Ah! young master Tom, I was active once,
As nimble as you and Jim;
Nobody then ever called me slow,
I was sound of mind and limb.

"Old master called me his very best hand,
I was strong and stout of heart,
I had been born and raised on his land—
Sure I never thought we could part.

"And many a happy year we passed;
But when I was growing old
My troubles began, for old master got broke,
And his people all had to be sold.

"The traders then my children took—
Old master meant no harm—
My wife she mourned awhile and died,
And I was sold with the farm."

"But, Uncle Jonas, the black folks are free,
The Yankees have set them free;
No one can buy or sell you now,
Any more than Jim, or me."

"Yes, child; they say the good time 's now come
And all the slaves are free,
And each man who will work can win him a home
For himself and family.

"But I am old and feeble grown"—
And the old man heaved a sigh—
"Wife and children I have none;
And old Jonas is free to die!"

[We publish below the first of a series of articles intended, originally, to be printed in pamphlet or book form for the exclusive benefit of our students. It has been thought best to publish them in the WORKMAN to extend their usefulness. Many who take this paper have no need whatever of such information; but they will admit the general lack of nicety in respect to manners and etiquette, and the wisdom and need of sound and simple advice upon these subjects. The authoress is a lady of high culture and thorough knowledge of the best English and American society.—ED.]

TO THE STUDENTS OF HAMPTON:

To be truly a gentleman or lady, in the best and broadest meaning of the words, is to be something more than most of us think of when we apply the terms in a general way, or as a mere class distinction.

It is not to those who are rich; it is not to those to whom the accident of birth may have given special advantages; it is not even to those who are educated, or who claim the title for themselves, that the name "gentleman" or "lady" rightfully belongs; and as, with very few exceptions, we all desire to win this honor for ourselves, our first need is to make sure that we know just what we want—that we know what it is that is really meant by the words so frequently upon our lips.

Long ago one of the old English poets wrote this beautiful description of our Saviour:

"A soft, meek, patient, humble, tranquil spirit,
The first true gentleman that ever breathed."

And here, indeed, we find the example wherein is summed up all the graciousness which goes to make a "gentle" life. Do not think, then, that I aim too high when I tell you that to be gentlemen and ladies is to be pure, conscientious and honorable, to be delicate and unselfish, careful always of the rights of others, and refined and gentle in the manner of our lives—that, in a word, it is to reach the highest type of man—and woman—hood.

But of the great lessons which we must all learn in order to mould our natures after this perfect model, it is not my business now, and here, to speak. It is only with the "outward, visible sign of the inward, spiritual truth," that I have to deal with in these pages, which I am permitted to dedicate to you, and I have to offer you, first of all, a few words of explanation as to the nature of the work which lies before us.

You have already, doubtless, realized that Society (by which word we mean all the various combinations of men and women, all the numerous conditions under which men and women mingle with each other,) makes certain demands upon each of its individual members; and you have also begun to see that just in proportion to the development of society, and the height to which you rise in the social scale, are the number and stringency of these demands. That is, that while in the backwoods cabin you may eat in the coarsest fashion, or go unwashed for days without exciting surprise, you will find that among another class of people such behavior would result in your own social disgrace.

Now, among the most refined classes of the most highly civilized nations—that is, among people who have had the greatest advantages of birth, education and nature—there exists a code of social law which is just as inexorable as the law of the State. It has grown with the growth of civilization, and among the people who live within its influence, has produced certain habits and customs which you must study and follow if you desire to gain the external attributes of gentility, and live on an equality with the gentlemen and ladies of society.

While honesty and purity of life are the surest foundation for true refinement of character, the details of daily life wherein such refinement shows itself are a study by themselves, and demand your careful attention. In the following pages I shall try to give you the principal laws of good society, and as many of its minor regulations as are likely to be of use to you, trusting that your own earnestness and persistence may make this little book a real and permanent assistance toward a better life.

M. F. A.

THE ETIQUETTE OF THE TABLE.

There is no place where it is easier to recognize refinement, or the want of it, than at the table; and to those of you who are beginning to understand how good a thing it is to be real "gentlemen and ladies," that is, to be really refined and delicate in the manner of your lives, I offer the following simple rules, assuring you that society will always be largely influenced in its judgment of you by your behavior at table, and that, if you wish to associate with well-bred men and women, you must do your best to become at ease in the details of table etiquette.

Taking for granted that you understand already the necessity of making your dress and person as neat as the nature of your work will permit, before you present yourself at table, I must ask you to remember that haste in eating or helping yourself before others is simply unpardonable, being so gross a violation of good manners, that I trust your own instinct and kind feeling will make it unnecessary for me to do more than allude to it.

Premising therefore that you have seated yourself quietly (and I would here remark, that, as in well ordered households there is no irregularity in the time of meals, so there should be promptness on the part of individuals), I want you to be careful always to exchange polite and kindly greetings with those who sit at meat with you, whom you may not have previously met during the day. A cheery "Good-morning," a bright smile, a bow to any one who may not be near enough for a word, serve to make the meeting pleasant, and to open the way for the conversation, which is, or ought to be, an important part of every meal. That is, while loud or careless talk is of course inadmissible, it is a wise and pleasant thing to converse, in low tones, easily, upon topics of general interest (never in whispers or upon purely personal matters); for this prevents you from falling into the graceless and unwholesome habit of fast eating, and when you have been working hard is often a mental rest and relief.

And now your repast is before you, and the first question which presents itself, is one which I trust you will have no difficulty in answering, that is, "Whom will you help first, your neighbor or yourself?"

Surely I do not need to tell you that you have no more important duty at table as every where else, than to attend to the comfort of your companions. You must see that those about you are served, you must assist them so far as your position will permit (never stretching out your arms or standing up to reach anything), and you must continue your vigilance so long as you remain at table, passing dishes which are within your reach, asking politely if your neighbors want anything which you can give them, never helping yourself greedily or taking the last of anything unless you know that a second supply is to be had, and finally never on any account rising from the table until every one else is ready, or you are excused for some reason of real importance.

There are certain well-known rules in regard to the manner of eating, which you must obey *absolutely* if you intend to make yourselves gentlemen and ladies.

The knife must be held in the right hand, and the fork in the left, when you are eating anything which requires to be cut; but in eating fish, or other substances which do not need to be cut, the knife should be laid down, the fork taken in the right hand, and a piece of bread in the left, by the aid of which you take up your food upon your fork, and convey it to your mouth. To eat with your knife is one of the cardinal sins at table; it stamps you at once as ill-bred, or unpardonably careless. In taking soup, tea, coffee or any fluid food, you must carefully avoid making any sound while drinking; swallow the liquid, whatever it may be, in small quantities and quietly, while in using a spoon there must be no gurgling or spilling.

The fingers should never be used directly, if it is possible to avoid it; for example, when you want to dip bread or crackers into gravy, milk, syrup, etc., you should do it by breaking the bread or other solid into the fluid, and conveying it thence to your mouth with a fork or spoon.

Your own share of the table furniture, that is, your plates, cups, glass, knife, fork, spoon, etc., are for the time being your own private property, must never be used by others, and in the case of the last three, must not be used by you in helping yourself from any dish, from which others are eating.

Butter-knives, salt-spoons, table-spoons, etc., are for the general use, and must never be superseded by your private knife, spoon or fork, and you must never pass your plate with any of these upon it, but must remove them, and lay them upon the cloth beside you until your plate is returned.

To pour anything from your cup into your saucer is not allowable, and you must not drink with the spoon in your cup, but after stirring your tea you should put the spoon in the saucer, being particularly careful to place it there when your cup is passed.

Do not blow any kind of food, but have patience until it cools without your help, and avoid if possible any close examination of dishes which are passed to you or of anything that is upon your own plate. If you find anything disagreeable remove it yourself as quietly as you can, or hand it without calling attention to it, to the waiter.

If you have preferences in regard to different parts of a dish, do not hesitate to mention them, if you are asked, but not otherwise; and as a general rule it is best to make no remarks upon the food while you are at table. After the meal is over is the proper time to discuss, criticize or mention to those in authority anything unusual, that you may have noticed at table.

If it is necessary to remove from the mouth anything which may have found its way into your food by accident, this may be done usually under cover of your hand or your handkerchief, but always in such a manner as to attract the least possible attention.

The use of the toothpick should be postponed, if possible, until after leaving the dining-room, but if it is used at table it must be behind your hand or handkerchief, and with the greatest care.

Your position at table should be erect; there must be no lounging, no pushing back or tilting of the chair (which should be placed at a convenient distance from the table and your neighbors, and never move until you are ready to rise), and above all no leaning of the arms or head upon the table, or the back of your neighbor's chair.

Keep your food upon your plate or plates as much as possible, bread being the only thing which you can with invariable propriety lay upon the cloth beside you.

If you are obliged to cough or sneeze, the head must be turned entirely away from the table, and the mouth and nose covered with the pocket-handkerchief.

You should avoid blowing your nose at table, and must not arrange your dress, hair, or any part or your person, as these things can be done properly only in your own bedrooms, or in places set apart for that purpose. Never speak while in the act of eating, and never under any circumstances over-fill your mouth.

The above rules include all that you most need to know in regard to the proprieties of the table, and I can add to them only the one broad rule, that you should never do anything which may offend the sense of the most refined person present, because, while there may be a certain latitude allowed in general society, the laws of the table are exact, and unvarying.

At Home.

MOTTOES FOR THE NEW YEAR.

People like to begin the new year with new resolutions, and if honestly made, it is a good plan, even though they may not all be fully carried out. Here are some which a business man thinks are good to begin each day with:

MORAL COURAGE IN DAILY LIFE.

"Moral Courage" was printed in large letters and put as the caption of the following items, and placed in a conspicuous place on the door of a systematic merchant in New York, for constant reference, and furnished by him for publication:

Have the courage to discharge a debt while you have the money in your pocket.

Have the courage to do without that which you do not need, however much your eyes may covet it.

Have the courage to speak to a friend in a seedy coat, even though you are in company with a rich one, and richly attired.

Have the courage to speak your mind when it is necessary that you should do so, and hold your tongue when it is prudent that you should do so.

Have the courage to own that you are poor, and thus disarm poverty of its sting.

Have the courage to tell a man why you refuse to credit him.

Have the courage to tell a man why you will not lend him your money.

Have the courage to cut the most agreeable acquaintance you have when you are convinced that he lacks principle—a friend should bear with a friend's infirmities, but not with his vices.

Have the courage to show your respect for honesty, in whatever guise it appears, and your contempt for dishonesty and duplicity, by whomsoever exhibited.

Have the courage to wear your old clothes until you can pay for new ones.

Have the courage to prefer comfort and propriety to fashion in all things.

Have the courage to acknowledge your ignorance, rather than to seek for knowledge under false pretences.

Have the courage in providing an entertainment for your friends, not to exceed your means.

HANG UP THE BABY'S STOCKING.

Hang up the baby's stocking,
Be sure you don't forget—
The dear little dimpled darling!
She ne'er saw Christmas yet;
But I've told her all about it,
And she opened her big bright eyes,
And I'm sure she understood it,
She looked so funny and wise.

Dear! what a tiny stocking!
It doesn't take much to hold
Such wee little toes as baby's
Away from the frost and cold.
But then, for the baby's Christmas
It will never do at all;
Why, Santa Claus wouldn't be looking
For anything half so small.

I know what will do for the baby;
I've thought of the very best plan—
I'll borrow a stocking of grandma,
The longest that ever I can;
And you'll hang it by mine, dear mother,
Right here in the corner, so!
And write a letter to Santa Claus,
And fasten it on to the toe.

Write, "This is the baby's stocking
That hangs in the corner here;
You never have seen her, Santa,
For she only came this year;
But she's just the blessedest baby,—
And now, before you go
Just cram her stocking with goodies,
From the top clean down to the toe."

CROUP.—As this is the season when the little ones are in special danger of croup it is well to know just what to do in the emergency of a sudden attack. Croup causes death by suffocation. The entrance to the windpipe is very small, a little cold causes the parts to swell and partly close the opening. The inflammation causes phlegm to form and harden around the opening, sometimes closing it entirely and stopping the breath. Anything that will dissolve this phlegm so that it can be coughed away will save the child. Medicines that induce vomiting have this effect. A tea-spoonful of powdered alum mixed with a little sugar to make it pleasant to take, will immediately vomit, giving great relief in a minute sometimes. Flannels dipped in ice-cold water changed every two minutes and squeezed a little so as not to dribble and wet the clothing, is an excellent remedy, because it cools the parts and relieves the inflammation which causes the phlegm. Flannels dipped in water as hot as can be borne, and applied to the throat, changed every two minutes, carry off the

heat by evaporation, and irritating the surface brings the blood away from the interior thus preventing the increase of phlegm.

NEW YEAR SONG.

BY LUCY LARCOM.

There's a New Year coming, coming
Out of some beautiful sphere;
His baby eyes bright
With hope and delight;
We welcome you, Happy New Year!

There's an Old Year going, going
Away in the winter drear;
His beard is like snow
And his footsteps are slow:
Good-bye to you, weary Old Year!

The New Year comes smiling, smiling,
While the Old Year hastens away
Unwilling to be
The one sorrow to see
In a world so enchanting and gay.

The Old Year goes sighing, sighing,
Once he was a baby Year;
His welcome was glad,
But his farewell is sad;
He has nothing to stay for here.

There is always a New Year coming;
There is always an Old Year to go;
And never a tear
Drops the Happy New Year,
As he scatters his gifts on the snow.

For the SOUTHERN WORKMAN.

DIGNITY AND IMPUDENCE.

Sir Edwin Landseer who died about a year ago was one of the greatest of modern English painters. He was a great lover of animals, and it is worth while to cross the ocean to see his beautiful pictures of noble stags at bay, and splendid dogs and horses in every graceful and spirited attitude. Queen Victoria herself was very fond of his paintings, and so indeed were all lovers of art; he received a great deal of praise from those who understood it and those who did not; but he once painted a portrait of himself at work on a picture with some handsome, wise-looking dogs watching his progress, over his shoulder. No doubt they admired it, and no doubt he would have thought them his best judges.

As we cannot all go to England to see his beautiful paintings, is it not a fine thing that the art of engraving brings them, in form though not in color, within the reach of so many of us? This one, (for which we are indebted to the New York *Christian Weekly*, as for many other beautiful pictures) is well named, is it not? The calm, stately repose of the great hound, his powerful paws hanging at ease, his intelligent face expressive with good nature—what a fine contrast with the funny little terrier who has pushed in beside him, all full of fuss and fury to the very tip of his saucy nose. "Bow-wow-wow" he is saying—"what do you want of *us*?" Have you ever seen any men like that?—little men pushing for big places, and making more noise about it than if they were twice as important as they want to be. The men who are really strong whether it be in muscle or mind, can afford to be gentle and quiet about it, but it is the coward who is the bully, the empty head that makes the most noise. If the position could make the man it would be some comfort, but a little man in a great office only looks all the smaller, like a rat-terrier in a hound's kennel. If you want to take a larger place in life, look first to see whether you fill the one you are already in.

AN OLD-FASHIONED HAT.

A long time ago, when we old folks were young, when girls wore big bonnets—and never dreamed of wearing a hat like a boy's.—there was in fashion a small fairy-like hat of silver or gold, to wear on the finger. Every girl had one, and was taught to use it almost as soon as she was out of her cradle; young ladies wore it nearly all the time, and as for mothers—why, they scarcely took it off to go to bed.

They were very pretty little things made of gold or silver, as I said, and though they are somewhat out of style just now, I think you will like to know a little about them. The Germans call them finger-hats, and our English forefathers, who had time to give long names to everything, called them thumb-bells; but of late the world has got into such a hurry that we've shortened that pretty name into thimble, and now, of course, you think you know all about them.

You may know how one looks, and what it is for, though, thanks to sewing-machines, you don't have to wear it much, and the time is long gone by when it was necessary to every girl's good name that she should embroider a "sampler" full of letters and figures, and have it framed and hung up before she was a dozen years old. But I don't believe you know how it comes to be a dainty little finger-hat instead of a silver spoon, or a gold ring.

I can assure you it has a history of its own, and it has been through many trials and wonderful adventures since the time it was sleeping in its native bed under the ground. It would be as interesting as a fairy story if you could have the true story of a thimble, either of gold or silver.

DIGNITY AND IMPUDENCE.

Why, how many persons do you suppose it has taken to bring it from the state of tiny specks to the pretty little thing it is? Not to count miners, or crushers, or refiners, or any of those people, but to begin when it enters the thimble factory, it takes about twenty workmen, besides lots of machinery, to make it.

It begins with the rollers—monstrous great rollers of steel—which think nothing of rolling a bar of silver out as thin as a sheet of paper if thinness is wanted. For thimbles, however, it is rolled about a twentieth of an inch thick, and cut into strips two inches wide. It looks like a beautiful silver ribbon, and one hates to see it go to a remorseless steel punch, which champs away all day, taking out bites about as big as a silver half-dollar (an old-fashioned American coin you may have heard your grandmother mention).

These round silver pieces are the future thimbles, as you'll see before they get through their tribulations in this house.

The next torturing machine turns up the edge all around, making the foundation for the future rim. No one would suspect this round flat thing could ever get into the shape of a thimble, but the very next machine does the business. The unfortunate bit of silver is put into a press, a dreadful great steel thing comes down with a smash, and, behold! there is your thimble, perfect in shape, though plain silver without figures.

The next thing is to turn over the edge and make it firm, and the thimble is ready for its "dimples," as some one calls the little holes made to catch the needle.

The smooth silver finger-hat is put into a lathe—a machine that does nothing but turn things around—a workman sits down in front with a suitable tool, shaped something like a hammer, and while the thimble is whirling on the lathe he proceeds to cover the top with holes. First, he makes the one in the very middle, then a ring close around that,—look at one and you'll see,—and so he goes on across the top, and down the sides as far as it is wanted.

Now, there's a curious thing happens while this bit of silver is whirling on the lathe. It makes very sweet musical sounds, higher or lower in tone as it turns fast or slow. Workmen sometimes get so expert that they can vary the sounds, by changing the speed, and fairly make the thimble sing a tune. That must be the moment of glory for the little thimble, for it is the first and last sound it ever makes.

From the lathe the little thumb-bell goes to be polished, to have its number marked on it, and its pretty little border of leaves or figures engraved by sharp steel tools, and by the time it is ready for the shop, it has only plain silver enough left to put your name on when you buy it.

Brass and steel thimbles are made in very much the same way, though many of them, you know, have no tops, and are destined to the shops of tailors.

When the finger-hat is of gold, the process is a little different. It is not cut from a solid piece like the silver thimble—by no means—in fact, the gold thimble is a humbug and a sham, and goes through life on false pretenses, for the gold is only skin deep, and the rest is—common steel.

Pope immortalized a thimble by describing one adorned with the face of a queen; but sewing-machines are getting so perfect that perhaps before Pope is forgotten, there will have to be a note at the bottom of the page, explaining the use of that antique tool—the thimble.

Silver and gold, and steel and brass, are not the only kinds of thimbles. There's the droll little black one, sometimes ornamented with a vine of gold leaves. That is made of hard rubber, and is very good for use, but not so pretty as silver. Then they have been made of ivory and china, but these were only to look at, I suspect.

Whom we are to thank for the gift of thimbles we do not know, except that the inventor was a woman. Some writers say they came from industrious dames of Holland with their quaint name of finger-hat, while others claim the invention for some small-footed lady of the Flowery Kingdom.

I think the probabilities are in favor of the Hollanders.

It is not quite two hundred years since they were introduced into England. How do you suppose ladies did the wonderful embroidery that has come down to us from those old times, book-covers, robes, and almost everything else, when they had no stout little thumb-bell to protect their fingers?

THE WRONG BIRD.

About three miles back of the little village of Gramvilla, on the Putan River, not far from its junction with the Osouri, lived one of the happiest boys in the world. His name was Isham Ricks; his father and mother were two colored persons; his home was a very small and rather dilapitated log-cabin; his week-day clothes consisted of one shirt, one pair of trowsers and one suspender; and on Saturday night his mother generally washed the trowsers and shirt for Sunday.

In the establishment of the Ricks family meal-time came very irregularly. It was often quite impossible, judging merely by the time of day, to tell whether a meal was breakfast, dinner, or supper; and as one meal was generally very much like another, there was often no other way of finding out.

Still it made but little difference to the Ricks family. When his mother called him to come and eat, Isham was always ready. He did n't care whether it was dinner or supper. You might have called it *dejeuner a la fourchette*, if you liked, and it would have been all the same to him, if you only gave him plenty of bacon gravy.

There were but two things that caused Isham sorrow. One of these was to have his mother come to the door of the cabin and call out, "You Isham!". Then he knew she wanted him to do something,—to go after water, to cut wood, or something of that kind. When she called out, "O! Isham!" then he ran gladly, for he knew it meant corn-bread and bacon fat. Now as Isham's nature did not crave work, he very much disliked the sound of "You Isham!"

Another thing that sometimes troubled this generally jolly little boy, was hot water and soap.

But we will not enlarge upon this topic now. Isham was almost always free to do as he pleased, and he was fat and happy.

He fished in the creek, he set traps for hares, and he climbed trees for bird-nests (for which he would have been whipped had his father been the right kind of a man). On the whole, bird-nesting was Isham's greatest delight. He could climb the tallest trees, and go out on branches where it would make you tremble to see even an opossum venture. He had brought home eggs of nearly every kind of bird that could be found on Putan River, and the whole ones were strung on a string and hung up over the fireplace at home. If he had had anything but his pockets to carry his eggs in, his string would have been longer, but a great many eggs were broken, of course, before they reached the cabin; and Isham's mother sometimes remarked, late of a Saturday evening, that she "washed more egg outer dat boy's breeches pocket, every week, dan would a hatched a gang o' turkeys,—ef dey'd been turkey eggs, and had been kep' in de shell."

One day in spring, when Isham's mother had looked all the morning as if she were on the point of singing out "You Isham!" the boy was glad to get an invitation from Uncle Andrew Barnes to go with him to the mountain to get tan-bark. Uncle Andrew had a pair of old mules and a wagon, and he wanted Isham to mind the team while he collected the bark.

The "mountain" was four or five miles away, and was covered by a forest, and it was always a rare treat to Isham to go there.

About noon the old mules stopped beneath a big tree near the foot of the mountain, and, after a "snack" of ash-cake and potatoes, Uncle Andrew went to work cutting and stripping oak-bark from the trunks of trees he had cut down on a previous visit, and Isham set about minding the team.

This he did by unbuckling one of the lines and tying the mules fast to a black-gum tree, waiting, however, until Uncle Andrew had commenced work at a little distance.

"Dar now," said Isham. "Ef dey pull dat tree up by de roots dey's smarter mules dan I takes 'em fur."

So off he went, bird-nesting.

He did not find his search very encouraging, for he rambled a long distance without discovering any signs of a bird's nest. But at last he was rewarded by seeing a large bird fly from the top of a tall tree that stood by itself in a somewhat open place in the forest.

Isham instantly ran to the tree, and peering up through the branches, his quick eyes perceived a great mass of sticks and twigs, that he knew must be a nest. "But what a whopper! It seemed big enough to hold him, and his father and mother besides.

"Dat dar big bird must a been a turkey," said Isham. "What a pow'rful dumb turkey dat ar is, to bil she nes' up a tree! Laws a massy! S'pose she's done gone and laid it full o' eggs!"

This thought had no sooner darted through his brain than Isham began to climb the tree. He went up rapidly; barefooted and active, he climbed like a young monkey.

When he had nearly reached the top, Isham noticed, in a big crotch in the tree, a part of the skeleton of some animal, apparently that of a sheep or a pig; and as he looked up, he saw other bones projecting out from the edge of the nest.

"Whew!" said Isham. "T'aint a nest, may be? P'rap it's nuffin' but a pig's berryin' groun'! No, 't aint! Dey could n't git up so high."

At this in tant there was a rush and a whir in the air, and right at Isham came an enormous eagle!

With wings outspread, eyes flashing, and great talons and beak ready to tear him to pieces, the eagle dashed at him; but, quick as a flash, Isham entrenched himself behind a large limb. For a moment he was too much frightened to open his mouth; but as the eagle made lunge after lunge at him, which he avoided only by slipping around the limb, he cried:

"Go 'way dar! *Uncle Andrew!* O, *Wuncle And*——! Stop dat! Git out! Uncle An-d-r-e-w!!"

The eagle did not seem to mind this shouting, but continued his attack, without, however, gaining any advantage, Isham being so very nimble.

Then the eagle offered a little truce, and flew up to his nest to see if anything there had been disturbed.

Now Isham thought his chance had come, and he began to slide quietly from behind the limb.

But as soon as he moved, down came the eagle, and Isham was glad to take his former position of safety.

The eagle soon left him again, but the poor boy was afraid to move.

He knew now that it wasn't a turkey that had attacked him, nor even a buzzard. He didn't think about eagles, but had an idea that it was some kind of an elephantine chicken-hawk. But he did not puzzle his brain about what it was. He was only anxious about what it was going to do and he was very much afraid that his bones would be added to those in the nest above.

Now he yelled louder and louder for Uncle Andrew; but his voice disturbed the eagle, which again came down to offer war.

Isham began to be desperate.

"You git out, dar!" he cried. "Ef I could git a stick, I 'd bat you head in!"

But there was no stick convenient.

Just as he was considering the propriety of defending himself with some sheep-ribs that were stuck in a crotch near him, Isham heard a shout from below.

Uncle Andrew had heard his cries, and had come at last.

"Look out dar, you Isham!" cried Uncle Andrew; and up came a big stick, hurled with all the strength of Andrew's strong arm. Isham dodged, and so did the eagle. Then up came another stick, and another, and a heavy stone, and a mass of roots and earth, and anything that Uncle Andrew could lay hands upon. Isham came within an inch and a quarter of having his brains knocked out, but the eagle got the worst of it. Several of the missiles struck him, and, astonished at this sudden attack, he flew away.

Isham lost no time in getting down out of that tree.

"You done got de wrong bird dat time," said Uncle Andrew, grimly.

Isham hung his head.

"I mus' go mind dem mules," said he; and away he ran.

After that, Isham lost his taste for bird-nesting. He would not go up a tree after any nest, no matter how small it was. This adventure made such an impression upon him, that the fear of meeting an eagle was added to his two chronic sorrows; and as for eggs, he lost all taste for them, and gave the string he had collected to little Lija Allen.—*St. Nicholas.*

For the Southern Workman.

LYING.

"Lord, Lord, how the world is given to lying!"

Lying is divided into two classes, the lie direct, and the lie implied.

The lie direct may be subdivided into two classes. Those who use falsehood for a specified and definite purpose, to accomplish certain ends; who study and plan how they may overreach others, and prosper and become rich without labor; and those who give unbridled reins to the passions and commit all manner of crimes, and fear the result of having the truth revealed, and falling into the hands of the law, endeavor to conceal and suppress the facts by direct lying,—belong to one class.

Those who lie from habit or have a great love for the marvelous; who draw upon their imaginations, for the facts to sustain their assertions; who do not reason, from cause to effect; whose mental operations are so loose and inaccurate, that they see not clearly the lines which separate the true from the false,—belong to the other class.

This includes a great number. Many speak from the impulse of the moment, the meaning of their words passing from their minds almost with the breath that uttered them. With such there is a great desire to talk, to be social, but a total ignorance of the true relation existing between man and man. What one human being wishes to hear from another is, how life with its great thoughts and feelings really appears to him. We want no evasions or equivocations, but the plain, unvarnished truth.

Women are especially open to this objection of thoughtlessly lying—and most emphatically so, in what is called fashionable society. They pass compliments, express the greatest interest in each others' welfare, and unbounded delight at meeting, as though their happiness depended on being together: and yet in nine cases out of ten, they do not mean what they say, or feel. Nay do not mean one-half they express, nor do not remember an hour after they have done speaking, what they have said. Any little gossip, of which almost every neighborhood furnishes an ample supply, is passed along from mouth to mouth with many additions and alterations, and all who have touched it have added their influence to spread what may have been untrue at first, but whether or not, is now an accumulation of direct lies.

Women lie from vanity—as regards their own person or their family, or from envy of others' good looks, or pretty children or fine establishments.

Men lie to make money, to be successful in business, or to rise in public life. A politician will lie to get into office, and lie when he is in it.

Direct lying seems to pervade every department of business, and in every occupation we find some who come under one or the other class of the lie direct—men engaged in trade, in recommending their goods or in making promises which they never mean to fulfill.

Some live a life of fraud and untruth, and the last record on their gravestones is a lie. The common practice of lying in epitaphs is so palpable, that a witty fellow visiting Pere le Chaise, a cemetery near Paris, wrote over the entrance, "Here lie the Dead, and here the Living lie!"

Some say they do not mind telling little white lies, as they call them, for amusement or to play off a joke. It is always a dangerous game. What is done in sport may sooner or later become earnest, and end in not being believed when the truth is spoken.

A person who consents to lie for any purpose, whether for a good or a bad cause, seldom succeeds in what he wishes to accomplish. He gets into unforeseen difficulties, which he finds it hard to lie through. The first untruth often requires a second to sustain it; and so on—

"O, what a tangled web we weave,
When first we practice to deceive."

I am inclined to believe that a great number of liars are unconsciously so. They brag and boast of what they can do, or what they have done, for the purpose of bringing themselves into notice, until the habit of exaggeration has become so fixed that they have lost the ability to speak the plain truth; yet they are not aware of it.

Some to cover mistakes, laziness and neglect of duty, patch up their shortcomings by numberless excuses, which if closely examined would prove to be utterly without foundation.

Some think that the requirements of society force them sometimes to act untruthfully; that politeness occasionally demands of them certain expressions, whether they be true or false. Away with all such belief! Better live like a hermit than lie! We are never required to be untrue for any purpose. The world is full of shams and false pretenses. Let us be true though the heavens should fall.

Those who come under the head of the lie indirect or implied are also a multitude. It is not only the words which convey the idea; the look, the voice, the manner help to communicate the thought; and while the words we use may be literally true, the impression made has been utterly false. We may "Keep the word of promise to the lip, and break it to the hope."

Many who are said to drive a good bargain lie indirectly. In trade a poor article is often sold only because the seller conceals some defect, which, if the buyer knew, he would not take. The seller exonerates himself by saying a man's eyes are his market, he cheated himself! But a strict adherence to truth would not allow this to be. Whenever our silence or a subject tends to give a wrong impression, we are bound to speak. If we are untruthful it matters not whether it is in word or deed.

Let the heart be pure and kind and loving, and out of its abundance let the mouth speak without fear and without reproach.

And precious far above rubies is he whom no bribe of wealth or power can turn aside from the straight and narrow path of truth and duty.

No nobler words can be spoken of a man, than *He never lied.* Veritas.

HOME.

It is not by walls, be they humble or grand,
That the dearest of words in our tongues we define,
No measure, or lesser or larger of land,
Can hold by its firman a thing so divine.
Home! sweetest of places beneath the broad sun,
Who is it thy sweetest of sweetness has won?

Nay—the lord in his palace, though smooth acres sweep,
To the verge of his vision, his owo—all his own,
Though sunshine his seasons delightsomely steep
Thy beautiful grace he may never have known,
Home! brightest of places beneath the broad sun,
Who is it thy brightest of brightness has won?

And the cotter who rests him on Saturday night,
When the snow sheeted world wins a glow from the fire,
When thrift all about him is smiling and bright
Not always for him is there crowned his desire.
Home! rarest of places beneath the broad sun,
Who is it thy rarest of rareness has won?

Ah! the hamlet and half may be equally blest,
With comfort that welcomes, with welcomes that cheer,
And better than any may each be confest,
Yet home that is home finds no anchorage here.
Home! subtlest of places beneath the broad sun,
Who is it thy subtleness truly has won?

They only have won thee, they only have known
What thy poor little letters express of pure bliss,
That dwell amid sweetness whose seed has been sown,
In a region above, ere transplanted to this.
Home! Eden that blesses, though veiled be the sun,
It is *love* and *love* only thy essence has won.

The flowers of thy garden may all fade away:
Through exile, love's landmarks be mistily lost:
But the spirit of home is not mortal as they,
And it lives howe'er sadly our looging is crossed.
Home! rest of the soul under shadow or sun,
Who ever has woo thee, forever has won!

Mr. Editor,—Having discovered a poem on Home written by myself, and republished by one of our magazines, I am prompted to resume the task and endeavor to explain the meaning of that precious word. There are no words in the language which suggest so much of blessing and interest as the word Home. After all, when one comes to think of it, there are not many homes. There are innumerable, places which go by the name of home, called so for want of a better designation, or because everybody calls the place where they eat and sleep home; but when we come down to the real sober facts, homes are comparatively scarce.

A home is a refuge place from the storms and worry of life. It is a place where the husband comes to the sanctuary, where smiles and loving words unsweetens his smiles and loving greetings.

Home is our first school. Here are learned the first lessons for the conduct of life. Here are found instructors, whose lessons are held longer than any others. Even when the old man cannot tell what happened yesterday, or last year, he croons the old Home lullabies, and lulls to sleep repeating the prayer he learned at his mother's knee.

Home gives inspiration to the workers of earth. For the comfort of the children, for the help of the wives and mothers, are blows struck upon anvils, and hands put to the plow. For the sake of Home do miners delve in the earth, mariners turn their ships into the waters of every latitude, fishermen patiently drag from the deep, food for their families, and means to drape the walls of home with pleasantness. favors, seek no office, and expect no help.

Home keeps men pure, and stirs in them honorable ambitions.

When tempted to meanness, the thought comes, "Disgrace will fall upon the wife and children through me," and evil is resisted. Home joys and the prospect thereof send many singing to their work, and give them courage, endurance and hope.

Home keeps our loved ones. Not its splendor, not its rest, not its ministry of hope, of beauty and of quiet, give it its essential blessedness. The faces that shine there, the voices that greet us, the eyes that beam on us, the arms that embrace us, the hearts that beat responsive to ours,—these make home the best place under the broad sun. Home is where the heart is. But we cannot keep our dear ones there; our arms cannot hold them; they go away and do not come back; there are empty chairs in the home, and voices which once we loved to hear are silent.

Home here derives its blessedness from the purity of its inmates. Palaces and oriental magnificence cannot give satisfaction to those homes where guilt and shame sit at the well laden tables. While there are homes among the poor where poverty is always at the threshold, where there is no rest with the struggle with want and care, yet the peace of grateful hearts, the blessings of righteous lives are never absent.

But a single bitter word may disquiet an entire family for a whole day. One surly glance casts a gloom over a household, while a smile like a gleam of sunshine, may light up the darkest and weariest hours.

Like unexpected flowers which spring up along our path, full of freshness, fragrance and beauty, so do kind words and gentle acts and sweet dispositions make glad the home where peace and blessings dwell.

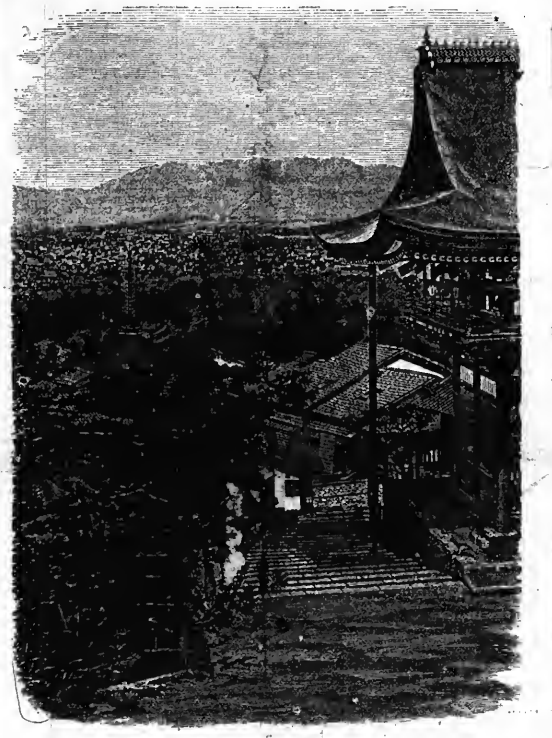
No matter how humble the abode, if it be thus garnished with grace, and sweetened with kindness and smiles, the heart will turn longingly toward it from all the tumult of the world; and a home, be it ever so humble, will be the dearest spot beneath the broad sun.

Home is not merely four square walls,
Though hung with pictures nicely gilded.
Home is where affection calls,
Filled with shrines the heart hath builded.

Home is not merely roof and room,
Home needs something to endear it,
Home is where the heart can bloom,
Where there's some kind lip to cheer it.

GEORGE M. DOW.

WASHING MUSLINS LINENS, SILKS, ETC.—In washing colored muslins and linens, there are several very essential points to be observed, whereby the colors are preserved from injury. In the first place, they should not be soaped or soaked over night, as the more delicate of the hues would be deteriorated by such process. When ready for washing, they should, if not too dirty, be put into *cold* water and washed up very speedily; if very dirty, the water may be lukewarm and no more. *But above all be careful not to use the smallest particle of soda.* The best soap for washing articles made of this material, is the common yellow. It is much better than the mottled, because it is less harsh, and removes the dirt in a shorter period. The soap should not be allowed to remain any time on the linen; the latter should be soaped and washed as rapidly as possible, and not lie in the water during any length of time. One article should therefore be washed at a time, and immediately rinsed, the others remaining in a dry state by the side of the tub until they are taken to be washed each in its turn. The liquid in which the articles are to be rinsed in succession immediately as they are washed, should consist of three or four gallons of cold, soft water, with a handful of table-salt dissolved in it. The moment an article is taken from the rinsing-tub, it should be wring very gently, being twisted as little as can be helped. Silk pocket-handkerchiefs require to be washed by themselves. Many very just complaints are made of the state in which these articles are sent home by professed laundresses. We have often seen a new handkerchief at the first washing returned, not only of a different color from what it was when sent to the wash, but bearing the appearance of an old one. These pocket-handkerchiefs, which constitute one of the most expensive parts of a gentleman's wardrobe, are generally treated with less care and ceremony than any other part of his toilet. Silk handkerchiefs containing snuff should be put to soak by themselves in lukewarm water. Two or three hours after, they should be rinsed out and put to soak with the others in cold water for an hour or two. They should then be washed out in lukewarm water, being soaped as they are washed. If all the stains are not out of them, they must be washed through a second water of the same description. When finished, they should be rinsed in cold, soft water in which a handful of common salt has been dissolved. They may be rinsed altogether, being thrown as fast as they are rinsed into a dry tub, whence, when all are done, they are all transferred to the rinsing tub.



KIOTO, JAPAN.

KIOTO—THE SACRED CAPITAL OF JAPAN.

THE only considerable body of fresh water in Japan is Lake Biwa, a few miles from the southern extremity of which lies Kioto, the ancient capital of the country, till about seven years ago the residence of the Mikado, the acknowledged ruler of the Empire.

In point of population, Kioto stands the third city in Japan, only Yedo and Osaka outranking it in that respect. Her rulers claim to represent a dynasty that has outlived every other,—one that has seen the rise, or the rise and fall, of every empire and every dynasty that has held sway from the time that Nebuchadnezzar led his hosts from Babylon against Zedekiah, king of Israel, to the present. Like the eternal city of Damascus, Kioto lies in an extended plain of great beauty, environed with hills; but unlike her ancient compeer, not a beggar to be seen in her streets, nor are any met with who seem to be scantily clad, or half-fed, among all her population, which numbers the same as that of Damascus—300,000.

The streets, which are generally straight, and cross each other at right-angles, exceed in width and cleanliness those of any other Japanese city. A large portion of the houses are of two stories covered with tile-roofs and painted. The streets are all lighted with painted paper-lanterns, which are hung from the eaves, or from the verandahs, at intervals of twenty or thirty feet.

Beautiful temple grounds, filled with ancient forest trees, are scattered all over the city, while some adorn the surrounding hillsides, affording public parks and pleasure-grounds always open to the people.

The picture of Kioto is taken from the grounds of the Kio-midsu, or temple of the pure heart, a Buddhist temple of great size, situated upon the hills at the eastern limit of the city, and looking westward.

The end of the temple building is the most prominent feature of the picture. It is said that, occasionally, votaries, after offering their petitions to Buddha or Shaka, leap from the verge of the lofty verandah of the temple, which overlooks the valley at a height of fifty feet. The belief of the devotee is, that if his prayer is heard by the god his life will be saved, but if his prayer is not heard, he professes to prefer death to a life without the favor of the gods. Some, taking this fearful leap, would be killed, while others would escape with life; but few could escape without broken bones and frightful injuries.

In the near foreground of the picture we see the top of a pagoda of the Chinese style, with its lofty spire of bronze. Filling the plain, and stretching far away toward the western hills, lies the city. The large roofs to be seen in the city are those of temples. The narrow thread of white, extending from near the corner of the verandah-roof, is the plastered wall of the parapet of the Governor's castle. The locality of the Mikado's palace is hidden from view by the end of the temple. This is a city wholly given up to idolatry. The intelligent, ingenious, and in some senses accomplished Japanese, are a benighted and devoted heathen as any people on earth.—*Missionary Herald.*

THE many friends of Rev. J. H. Larry, in this vicinity, will be interested to know of his welfare and prospects. He has the pastoral care of a small parish in Scytheville, a village of New London, N. H., where he has opened the "Kenrsage Home School." He says, "We have twenty-one scholars, and shall be ready for boarders next term. We are commencing at the bottom of the ladder for school work, but I think we are doing well for a beginning. I enjoy my work in the 'Vineyard' very much. A deep religious interest prevails throughout the place—such an one as you would enjoy, I think, as all denominations here take hold together heartily."

We bid him Godspeed in his good work.

The Teachers' Table.

GIVING HINTS TO CHILDREN.

So little time, so much to do! This difficulty confronts every teacher, whether with twenty pupils to look after or sixty. Perhaps we may find some consolation in a thought we are likely to overlook; that is, the value of hints to children. You may not have time to give regular lessons on Botany, but if you show a child a lilac leaf, for instance, and ask for leaves of like form, your desk will be heaped with heart-shaped leaves the next day, and from time to time long after, you will have other specimens brought in, with questions and comments about their forms. Print or write a few words on the blackboard, and soon many copies will appear, the voluntary work of admiring imitators, gladly giving themselves more practice in a short time than could be exacted from them in weeks. I remember the spring morning when I first noticed the ants building their houses. My mother showed them to me with a few words to excite in me intelligent interest in them; all through my childhood after that, I watched these little creatures, and walked carefully on my way to school to avoid spoiling their work.

Lose no opportunity, therefore, of beginning a good work in a child's mind, even if you cannot be sure of returning to it. Once show a pleasant path, and eager little feet will seek it again and again.

THE SPELLING CLASS.

The *Rhode Island School Master* says that more than one-half of an intelligent class in a grammar school recently gave an incorrect spelling of the word "which." Many very common monosyllables are frequently misspelled, like "salt," "soap," "boards," etc. If there are not enough such short words in the spelling books, as sometimes is unhappily the case, the teacher should make such lists and use them. The children will be interested in spelling the names of the objects they see around them—the books, desks, benches, etc., or the parts of the body. A useful and pleasant exercise may thus be made to vary the regular lessons.

BE KIND TO THE LITTLE ONES.

"In a school carried on by sheer cruelty, whether it is presided over by a dunce or not, there is not likely to be much learned. I believe our boys were, generally, as ignorant a set as any schoolboys in existence; they were too much troubled and knocked about to learn: they could no more do that to advantage, than any one can do anything to advantage, under the load of constant misfortune, torment and worry."

CHARLES DICKENS.

OBJECT LESSONS ON PRONUNCIATION.

Lesson 1: *The Lips.*

TEACHER.—Now let us talk about the lips. What are the lips used for? There is a little girl smiling. How can you tell when she smiles? Is it not by the shape of her lips? You see they are open a little, and turned up at the corners. Ah! now they are opening wider—she is laughing. So she smiles with her lips. What then are the lips used for?

CHILDREN.—To smile with.

T.—Well; are they good for anything else? If a man had no lips, his teeth would always be bare, and his face would'nt be pleasant to look at, would it?

What else then, are the lips good for?

C.—Good to cover our teeth.

T.—Yes; are they good for something else still? When we talk we make a good many sounds with our lips. Say *paper*, all of you.

C.—*Paper.*

T.—Now say *baby, mamma, papa.* What did you pronounce the words with?

C.—With our lips.

T.—What else then are the lips good for?

C.—Good to talk with.

If the children are far enough advanced, this lesson may then be put upon the blackboard and used as a reading lesson, thus:

READING LESSON.

What are our lips good for?
Our lips are good to smile with.
Our lips are good to cover our teeth.
What else are our lips good for?
Our lips are good to talk with.

Sunday-school Lessons on the Life of Christ.

LESSON I.

JANUARY 3, 1875.

THE MISSION OF THE TWELVE.

MATT. x: 5–15.

5 The twelve Jesus sent forth, and commanded them, saying, Go not into the way of the Gentiles, and into any city of the Samaritans enter ye not:
6 But go rather to the lost sheep of the house of Israel.
7 And as ye go, preach, saying, The kingdom of heaven is at hand.
8 Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give.
9 Provide neither gold, nor silver, nor brass in your purses;
10 Nor scrip for your journey, neither two coats, neither shoes, nor yet staves: for the workman is worthy of his meat.
11 And into whatsoever city or town ye shall enter, inquire who in it is worthy; and there abide till ye go thence.
12 And when ye come into a house, salute it.
13 And if the house be worthy, let your peace come upon it: but if it be not worthy, let your peace return to you.
14 And whosoever shall not receive you, nor hear your words, when ye depart out of that house or city, shake off the dust of your feet.
15 Verily I say unto you, It shall be more tolerable for the land of Sodom and Gomorrah in the day of judgment, than for that city.

Golden Text.—HOW SHALL WE ESCAPE IF WE NEGLECT SO GREAT SALVATION?—Hebrews, ii: 3.

The disciples were called to join themselves to Christ at different times, and, obeying his call, they consecrated themselves to a life devoted to his service. They gave up at once their regular occupation and accompanied him in his missionary tours through Galilee. By this coming under his personal instruction, and also seeing his methods of dealing with the people, they were fitted to receive and carry out the commission which our present lesson records. The apostles were, plain, unlearned men, but they had shown, by giving up all for Christ that they had the best qualifications for his work: namely, thorough earnestness and self-sacrificing devotion to their chosen Master. These are the qualities that are still needed for true Christian labor; not necessarily so much learning or native talent of any kind as sincere love for Christ and consecration to him.

As a sign of their divine appointment he gave the apostles power to work miracles. The same message with which John the Baptist and Jesus himself began their ministry was to be theirs—"The kingdom of heaven is at hand." If all men could only have a realizing sense of God's nearness and their personal obligations to him, it would lead them to prepare themselves for his coming. As they went preaching they were commanded to "heal the sick, cleanse the lepers, raise the dead, cast out devils," that by such acts they might show that "good-will to men" was included in the doctrine of the kingdom. Kind actions are the sweet fruits of the gospel of love.

"Freely ye have received, freely give." As these gifts had been freely bestowed upon them, in like manner, they, "without money and without price," were to relieve the ills of all the needy ones who came to them. They were not to make this power to work miracles a means of gain. The directions, as to their outfit, simply mean that they were to make no preparation but to go just as they were; "for the workman is worthy of his hire." This may have a twofold application: First, that God, in whose service they were engaged, would see that they lacked no good thing; and secondly, without doubt, he intended to teach that those to whom they were sent should provide them with all things needful for their support. A worthy people will gladly render what is due to him who ministers unto them in spiritual things. He directs the apostles to enter into their cities and homes with courtesy—manifesting a friendly spirit in the salutation, "Peace be to this house;" but they were not to force themselves upon those who thrust them off. If they were inhospitable to them and their message they were to pass on, their peace returning to them. The peace which comes from bearing with sweetness and patience the ill treatment of another is in itself a blessing. The offer of salvation is freely made to all men, but the treasures of the gospel will never be forced upon any. They were at liberty to accept or refuse; but the solemn words of Christ teach us that the fate of those doomed cities, Sodom and Gomorrah would be less dreadful, at the day of judgment than that of the rejecters of the gospel message. The lesson to be borne in mind is that the clearer the light against which people sin, the greater will be their condemnation at the great judgment.

LESSON II.

Jan. 10, 1875.

JESUS AND JOHN.

MATT. xi. 1–11.

1 And it came to pass, when Jesus had made an end of commanding his twelve disciples, he departed thence to teach and to preach in their cities.
2 Now when John had heard in the prison the works of Christ, he sent two of his disciples,
3 And said unto him, Art thou he that should come, or do we look for another?
4 Jesus answered and said unto them, Go and shew John again those things which ye do hear and see:
5 The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them.
6 And blessed is *he*, whosoever shall not be offended in me.
7 And as they departed, Jesus began to say unto the multitudes concerning John, What went ye out into the wilderness to see? A reed shaken with the wind?
8 But what went ye out for to see? A man clothed in soft raiment? behold, they that wear soft *clothing* are in kings' houses.
9 But what went ye out for to see? A prophet? yea, I say unto you, and more than a prophet.
10 For this is *he* of whom it is written, Behold, I send my messenger before thy face, which shall prepare thy way before thee.
11 Verily I say unto you, Among them that are born of women there hath not risen a greater than John the Baptist: notwithstanding, he that is least in the kingdom of heaven is greater than he.

Golden Text.—THEY SHALL BE MINE SAITH THE LORD OF HOSTS IN THAT DAY WHEN I MAKE UP MY JEWELS.—Mal. iii: 17.

Jesus, having sent out the twelve, did not remain idle or leave all to them, but set an example of diligence by instantly proceeding with his own work of teaching and preaching. During this journey he received a message from John the Baptist who had been cast into prison, not because he had done anything wrong, but because of his fidelity in reproving the wickedness of King Herod (Matt. xiv: 3). It is not strange that under these trying circumstances John should have become downhearted, and even desponding. In this hour of darkness he took the best way to solve his doubts. He applied immediately to Jesus himself—sending two of his disciples with the question of verse 3. Gently and wisely the Saviour met his doubts, not with a direct reply but told his disciples to report to John the miracles that had been performed in their presence. These would furnish him with the most conclusive proof of his Messiahship.

When the disciples of John had gone away, Jesus, feeling so sure of John's faithfulness to himself began to talk to the people about him in terms of the highest commendation. He told them that John was not like a reed shaken in the wind—one day saying and believing one thing, and the next the opposite. Neither was he a man seeking his own pleasure and comfort; such men were more likely to be found in palaces than in the wilderness where John lived. His clothing was skins; his food was locusts and honey; he thought and cared little for himself. John was a prophet and more than a prophet. He was entrusted with a higher commission than any who had preceded him. He was the messenger sent from God to prepare the way for Jesus (Isaiah xl: 3.) Many hundred years before these words had been written, and now they had come to pass. The greatest praise that could be given to a man was given to John (v. 11) by Jesus himself "notwithstanding he that is least in the kingdom of heaven is greater than he." One may be great in one respect and not in another. John was great in nearness to Christ and on account of his important mission; but the humblest Christian is greater in knowledge—has clearer and more helpful views of Christ's work than John the Baptist, who was beheaded by the wicked Herod before that work on earth was finished. How rich are our privileges! God holds out this greatness to us all. The free invitation is "Come, for all things are now ready." Do we accept?

LESSON III.

Jan. 17, 1875.

THE GRACIOUS CALL.

MATT. xi: 25–30.

25 At that time Jesus answered and said, I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes.
26 Even so, Father; for so it seemed good in thy sight.
27 All things are delivered to me by my Father: and no man knoweth the Son, but the Father; neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal *him*.
28 Come unto me all ye that labor and are heavy laden, and I will give you rest.
29 Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls.
30 For my yoke is easy, and my burden is light.

Golden Text.—HIM THAT COMETH TO ME, I WILL IN NO WISE CAST OUT.—John vi: 7.

The invitation of our present lesson was a practical illustration of the poor having the gospel preached unto them. The proud and wise-in-their-own-eyes had rejected Christ's gospel. He had just pronounced fearful woes upon all such, and at the same time thanked his Father that though by their own self-conceited wisdom these things had been hidden from the "wise and prudent," that they were revealed unto the "babes"—the humble, lowly ones; and he acknowledges to God his justice in letting the proud alone in the words, "Even so, Father, for so it seemeth good in thy sight." Not self-confident wisdom, but an humble, teachable spirit is needed to understand the things of the kingdom. No man knoweth the Father save through the Son, and though we never can fully understand the relations of the Father and the Son, yet the very presence of Christ was to those who received him as the Son of God, the visible evidence of the abounding love of the Father in Heaven. And the Father hath delivered all things into the hands of this tender, pitying Saviour, who died that we might live. How fitly then follows close upon this assurance the gracious call, "Come unto me all ye that labor and are heavy laden." The invited ones are those who are weary of their sin and feel it to be a burden. They are seeking for rest—and it is rest that Christ offers. He goes on to show them how it may be obtained—"Take my yoke upon you and learn of me." They are to become learners in his school. He was an example of meekness and lowliness, and it was his delight to do his Father's will. It is by becoming like him, in humble obedience to the will of God that we are to find rest unto our souls. In his humility of life and spirit is to be found the fair model which we are to copy. All men are either under the yoke of Christ or of sin. Serve we must, but we have our choice—the service of the world with the burden of sin on our conscience, or the service of a Saviour whose yoke is made easy to us by reason of the strength he gives and which is sufficient for every burden we are called to bear.

If we come unto him in this—his own appointed way—we shall surely receive his forgiveness for all our past sin, and with it the peace that passeth understanding, which the world can neither give nor take away.

LESSON IV.

Jan. 24, 1875.

THE PARABLE OF THE SOWER.

MATT. xiii: 18–23.

18 Hear ye therefore the parable of the sower.
19 When any one heareth the word of the kingdom, and understandeth it not, then cometh the wicked *one* and catcheth away that which was sown in his heart. This is he which received seed by the way side.
20 But he that received the seed into stony places, the same is he that heareth the word, and anon with joy receiveth it;
21 Yet hath he not root in himself, but dureth for a while; for when tribulation or persecution ariseth because of the word, by and by he is offended.
22 He also that received seed among the thorns is he that heareth the word; and the cares of this world, and the deceitfulness of riches, choke the word, and he becometh unfruitful.
23 But he that received seed into the good ground is he that heareth the word and understandeth it; which also beareth fruit, and bringeth forth, some a hundredfold, some sixty, some thirty.

Golden Text.—BE YE DOERS OF THE WORD, AND NOT HEARERS ONLY, RECEIVING YOUR OWN SELVES.—James i: 22.

Our lesson to-day contains the words of Jesus as he sat in a boat drawn to the shore of the sea, speaking to the crowds of people who stood upon the land near by. This first story or parable he interpreted to his disciples; that is, told them what truths he meant to teach by it. The sower in the first place was Jesus himself, and then all who speak for him. It matters not whether the sower is old or young, learned or unlearned, if he only has the good seed and scatters it. The seed thrown from the hand of a child will grow just as well as that sown by a farmer. The seed is the word of God,—the truth of the gospel,—the glad tidings that Jesus Christ came into the world to save sinners. The ground represents the hearts of those to whom the Word of God is spoken. The sower and the seed are the same, but the difference is in the ground on which the seed falls. The trodden path, the stony places, the thorny ground and the good soil are the various kinds of human hearts that receive the seed. If, while we are hearing the Word of God with our ears we are inattentive and do not try to understand or remember it—if other thoughts occupy our minds—thoughts of our dress, our plays, our studies,—then our hearts are like the trodden pathway. We are allowing the wicked one to take the good seed from us just as the birds watched their chance and picked up the seed that fell by the wayside. Some hearts are like the stony ground. What soil there is, is soft and impressible, but the trouble is, there is no depth of earth and the seed cannot sink deep enough to take root. It springs up and grows well for a short time, but as soon as the sun shines hotly upon it it withers away. So it is with people who "anon with joy receive the word." Their consciences are tender, their feelings are easily touched, but they have no firm root—no strength of purpose. They are willing to serve Christ as long as they can do so without any trouble; but when trials come and they find it harder to live a Christian life than they at first supposed, little by little they give up their religion, and having no root, the blade of promise soon withers away.

Some hearts are like ground where thorns and weeds were growing with the good seed. But the thorns and weeds choked it so it could not half grow and it never bore any fruit. These are the people who hear God's word and for a time obey; but they allow the thorns of care or wealth or pleasure to come in and choke the word, and they very soon get tired of serving God. They would rather have the pleasure or favor or riches of this world than be children of the Heavenly King.

It is pleasant now to turn from those three classes who were hearers only, to the fourth whom the good soil represents. These hear the good word attentively; they understand it; that is, receive it into pure and honest hearts. They not only hear and understand but they actually obey it; and as a result they bring forth the precious fruit of pure and holy lives. To which class of hearers does each of us each belong?

LESSON V.

Jan. 31, 1875.

JESUS WALKING ON THE SEA.

MATT. xiv: 22–33.

22 And straightway Jesus constrained his disciples to get into a ship, and to go before him unto the other side, while he sent the multitudes away.
23 And when he had sent the multitudes away, he went up into a mountain apart to pray: and when the evening was come, he was there alone.
24 But the ship was now in the midst of the sea, tossed with waves: for the wind was contrary.
25 And in the fourth watch of the night Jesus went unto them, walking on the sea.
26 And when the disciples saw him walking on the sea, they were troubled, saying, It is a spirit; and they cried out for fear.
27 But straightway Jesus spake unto them, saying, Be of good cheer; it is I; be not afraid.
28 And Peter answered him and said, Lord, if it be thou, bid me come unto thee on the water.
29 And he said, Come. And when Peter was come down out of the ship, he walked on the water to go to Jesus.
30 But when he saw the wind boisterous, he was afraid; and beginning to sink, he cried, saying, Lord, save me.
31 And immediately Jesus stretched forth his hand, and caught him, and said unto him, O, thou of little faith, wherefore didst thou doubt?
32 And when they were come into the ship, the wind ceased.
33 Then they that were in the ship came and worshipped him, saying, Of a truth thou art the Son of God.

Golden Text.—AND BEGINNING TO SINK, HE CRIED, LORD, SAVE ME.—Matt. xiv: 30.

Shortly after Christ had spoken the seven parables, the first of which we considered last Sabbath, the news of the cruel death of his faithful friend and forerunner John the Baptist, was brought to him. He was doubtless greatly affected by the sad tidings, and immediately "retired into a desert place apart." But the people soon learned whither he had gone, and great multitudes followed him on foot out of the cities, among whom were many sick. The compassionate Jesus—forgetful of his own griefs, pitied and healed them all, and in the afternoon when he found they had nothing to eat, he fed "five thousand, with women and children" by the miraculous increase of "five loaves and two fishes." The people were so impressed by this wonderful miracle that we see from John vi: 14, 15, they were ready to take him by force and make him their king. Nothing would have better pleased the disciples either, than that Jesus should have been made king then and there; for though he had repeatedly told them his kingdom was not of this world, yet it was hard for them, as it was for the rest of the Jews, to give up their strong desire that Christ should manifest his power by taking the kingdom to himself and making them the greatest and most honored of the nations of the earth. To avoid this he constrained the disciples to get into a ship and go to the other side, and then he sent the multitudes away. He himself went alone up the mountain side to pray. The old temptation of Satan had here been again presented to him (Matt. iv: 8). This made prayer proper for "the man Christ Jesus" on his own account; and then there was need to pray for the misguided people. Here is an example to us. "Enter into thy closet." Any particular need in ourselves or in others should be the occasion of special prayer.

While Jesus was upon the mountain in prayer a violent storm had overtaken his disciples on the sea, and they were in great peril, tossed by the winds and waves. Had Christ forgotten them? No; they had gone out obedient to his command. "He saw them toiling in rowing" and was ready to come to them with his help at the right moment. About three o'clock in the morning when they were weary and wet, not knowing what to do next, Christ came down from the mount and walked on the sea to the place where they were. Christ always comes with help and succor to all who, like these tempest-tossed disciples, are trying to obey him though they find it very hard to do so. It seems as if they ought to have known that it was the Lord coming toward them, for they had seen him perform many works as wonderful as this; but they cried out with fear, superstitiously thinking they saw a ghost. But when he spake, "It is I, be not afraid," he did not need to tell them his name; they knew his voice, and it must have sounded very sweetly to them above the raging billows. Peter—rash, but ardent, always eager to show his love for the Saviour—asks permission to go to him on the water. Christ bade him come, and boldly and gladly he stepped out of the ship. For a few steps, while he looked only at Jesus, all was well; but as soon as he began to notice the winds and the waves he was afraid. As he was sinking in the waters he cried "Lord, save me." No one calls on Christ in vain even when brought into peril by his own presumption. The strong hand was stretched forth for his rescue. When Jesus had "caught" Peter they both came into the ship and the wind ceased. All felt safe and more than ever convinced, as their words testified, that He who could calm the stormy sea was—"Of a truth"—"the Son of God." Let us learn from Peter that we are safe only while looking to Jesus;—that if we look away from him we shall find, as he did, our strength weakness, and shall be instantly overcome by the waves of temptation and sin.

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., FEBRUARY, 1875. NO. 2.

"UNTIL HE GRASPED THE BURNING BRAND, AND FLUNG IT FAR AWAY."

AN UNNAMED HERO.

(A TRUE INCIDENT.)

In sunny Carolina sits fair Charleston by the sea
Famed are her sons for generous hearts and deeds of chivalry.
But there was one brave gentleman I would I knew his name—
Who plucked his spire from death's white hand and 'mid the smoke and flame

Stood up between high heaven and earth, the hero of the fire
The savior of the city when he saved St. Michael's spire.

For 'mid her thousand homes it stood and each home had its share
In the chiming bells that set themselves to many a hope and prayer

That sent the ships and men away with "God speed" in their tone.
And when the homeward bound drew near rang out a "Welcome Home!"

Whose service bells bade old and young hear what the preacher said.
And blessed the herds as it passed and tolled above the dead.

But the fairest homes in Charleston were now in smoke and flame
And onward like a sea of fire the burning tempest came.

The hot, thick air around the church was full of blazing brands
That smote the spire as they were flung by cruel fiendish hands.

While the city Fathers council took within the crowded square,
How they should shield the homeless poor and save the house of prayer—

And as with anxious eyes they watched the brands of living fire
One flung with fierce and fateful force alighted on the spire.

Far far above the reach of those who kept the roof for love.
But saw with failing hearts their foe, the dizzy height above.

While through the tumult and the cries the
Mayor's voice rang higher—
"Charleston hath love and gold for him who
saves St. Michael's spire!"

Then from the band upon the roof a gentleman
stepped out,
And the watching city poured her heart in one
triumphant shout.
But as he slowly, painfully toiled up the daring
height,
A speechless awe sealed every lip—and in the
ruddy light
The white, wan faces lifted up, made such a
piteous prayer,
That the good angels knew their hour, and
swiftly hastened there.

They held the weary clinging feet, each foot
within a palm,
They made the fingers strong as brass—his
prayer turned to a psalm
That gladder grew as he went on his dim and
perilous way,
Until he grasped the burning brand and flung
it far away.

Then men looked in each other's eyes, but not a
word was said,
Until the hand upon the roof received alive
their dead,
His face all glowing with the light of that bright
Border Land,
Where mortals, in diviner hours touch the Immortal Hand.
And then rang out, the strong glad shout, while
at St. Michael's gates,
A surging crowd, with plaudits loud, upon the
Haro waits.

None of thy brave young sons, that boast their
noble race and name,
None of thy cultured citizens, with strong nerve
and clear brain,
No soldier from the garrison did this grace unto
thee;
No sailor trained to wondrous feats upon the
restless sea.
The man who periled life and limb fair Charleston's homes to save
Stood up among the lieges there—a black man
and a slave.

They made him free with wild acclaim, and for
a moment's space,
They saw the naked, noble soul—not the black
human face.
His heart touched theirs with mighty power.
"the right divine of Can."*
He was no longer Charleston's slave, but
Charleston's gentleman;
The sacred, secret Hand of God had given him
place and fame.
Would that I knew, the shining signs with which
to spell his name!

—*The Christian Weekly.*

HAMPTON, FEBRUARY, 1875.

NOTHING can be more dark than the future of the colored race as forecast by certain of the old school of Southern gentlemen. "Raised" among dusky playmates on the plantation, they naturally suppose that what they do not know of negro capabilities, is hardly worth knowing. As the new order of things is not moulded upon their theories, they anticipate the funeral of the race. As an unanswerable argument, these gentlemen point to the comparative death rates, with a mournful "We told you so;" and ominously ask what can prevent the Freedman from sharing extinction with the Indian, or disappearing as the Moors did from Spain?

We answer these questions by denying that there is any sufficient analogy between the cases. The Indian has generally refused to make use of those means of support which civilization renders necessary; and which the Anglo-Saxons are themselves obliged to use or perish. The negro on the contrary is decidedly agricultural, and shows a disposition to learn from those who know better than he does, how to make a living by civilized methods. War and chase do not attract him as they do the Indian. The negro being able to live on pork and meal for fifty cents per week, is often indolent, because his artificial wants are as yet few. But this is no proof that when he learns more, he will not feel the need of as many of the comforts of life as the white laborer has, and exert himself accordingly to obtain them.

The case of the Moors is yet more inapplicable to the present problem. Their numbers, even after their expulsion from Granada, continued to increase more rapidly than those of the Spaniards. Only the most savage religious bigotry could have driven them out. Despite all sorts of disabilities, persecution, and injustice, the dark skinned race steadily gained upon the whites, so long as it was allowed to remain in the country. And though it was finally forced to fly, the analogy fails, because in America it is absurd to expect a like violent expulsion of the negro.

The argument from the death rates if closely examined is equally fallacious. At most it proves that the transition state from slavery to freedom is unfavorable to long life. Suppose the colored people of Richmond do, as is asserted, die twenty per cent faster than the whites. It is to be considered that the blacks are comparatively poor; that a much larger proportion of them live in unplastered houses, have scant medical attendance, and are inexperienced in self-control. To argue that there will be no improvement in their manner of life, is to assume that the negro is incapable of profiting by the discipline of necessity. It is to condemn him before trial, and on the evidence of observations made when he was abnormally relieved from responsibility for his own maintenance.

The many instances of discretion and trustworthiness related of the house slaves, afford grounds for higher hopes. He who could learn to be provident for his master can much more learn to be provident for himself. In the remarkably peaceable behavior of the colored people; in their surprising zeal for knowledge; in their love for religion, and progress from the merely emotional type; in their disposition to save money and buy homes;—we see evidences that they are likely to form a valuable and permanent class of citizens, worthy of the kindness and most hearty encouragement from every true lover of the commonwealth.

WHILE good men and women from all quarters are throwing their strength and treasures with new spirit and purpose into the educational movement at the South as the best means of redeeming it from the ruin threatened by ignorance and corruption, it is remarkable that the general government is passive. It calls the ex-slaves its wards, and although their greatest need is light, and it declines to give it; yet the duty of instructing them is national rather than individual. While the personal rights of negroes are insisted on, reformatory measures, the only possible support of enlarged privileges, are neglected.

Poverty-stricken and war-ridden Virginia is taxing herself to build school-houses and pay teachers for all her children, but after wonderful effort and unparalleled progress, her schools are too few, sessions are short, salaries are small, and her educational machinery far from adequate.

She vainly asks Congress to help provide for the "nation's wards" although many years ago she responded to the country's need with immense grants of her domain out of which nearly three new states were created.

Other Southern states are making similar but hardly equal effort; in general they have undertaken to educate all classes by taxation. As for mixed schools the whites won't have them and the blacks don't want them. The march of education should not be stopped for a useless, hopeless battle on that line, because it can go on without it, and can go on in no other way.

Freedom for the slave is power to do better or worse; its lesson is eternal vigilance and eternal toil; the mass of the blacks have not learned this and never will till they know more. The duty to free them was no greater than that to enlighten them. The latter duty has been neglected by the party in power simply because it does not care enough about it. Not the colored race only but the whole country suffers in consequence. The ignorant classes, black and white, are as millstones hung about the necks of our people. Is there not a better time coming when our national legislators will regard the appeal of patriotism of humanity and of religion, to consider the claims and the needs of those over whom they have assumed especial charge?

GERRIT SMITH.

In the death of this eminent patriot and philanthropist humanity loses one of its mightiest champions, and the country one of her noblest and purest sons. Born to a princely inheritance, he looked upon his great possessions as a trust committed to his stewardship to be used for the benefit of his less favored fellow-men. The son of a slaveholder he became from conviction one of the most radical and outspoken abolitionists, never ceasing to denounce slavery as a crime against humanity, for which he arraigned both North and South as equally guilty. Yet with all his intense love of human freedom, he held none but the kindest feelings toward those who differed from him, and at the close of the war was one of the most strenuous advocates of conciliatory measures toward the South, and joined with Horace Greeley in signing the bail bond of Jefferson Davis. After the war he became deeply interested in the education of the Freedmen, and for this object used his great wealth with unsparing liberality. The Hampton School was one of the institutions in which he took great interest. It was his purpose to attend the last Commencement but ill health prevented. On another column will be found a letter written a few weeks before his death which was accompanied by a generous contribution toward the building fund of Virginia Hall. The school loses in him a liberal benefactor. He has been well styled "the last of New York's baronial chieftains."

Gerrit Smith was born in Utica, N. Y. March 6, 1797. His father Peter Smith, was a partner in the fur trade of the famous merchant John Jacob Astor, where he amassed great wealth, which he invested in land, of which he owned at one time more than a million acres. Gerrit was educated at Hamilton College, and being the inheritor of most of his father's landed estate, which had greatly increased in value, found sufficient occupation in its management. Had he been inclined to amass wealth he would soon have been the richest man in the land. But he became deeply impressed with a sense of his responsibility to God for the right use of such an immense estate, and declared his intention to distribute his wealth in his lifetime among the needy. An article in the *Syracuse Journal* gives the following instances of his judicious liberality. Previous to 1847 he had given forty acres apiece to three thousand colored men; in all 120,000 acres; the only condition imposed was that the recipient should be landless, strictly temperate, and honest. In 1850 he selected five hundred poor white men to whom he gave forty acres apiece. He also gave fifty dollars apiece to six hundred and forty poor single white women.

He was a generous patron of education, and in his benefactions made no distinctions between race or color. He gave within the past year $20,000 to Hamilton College his *Alma Mater*. Many of his benefactions were given directly in aid of schools for colored people. He was an ardent advocate of temperance, and to this cause, as well as to the anti-slavery societies, he gave liberally of his time and his substance. He was elected to Congress but found political life distasteful, and resigned in order to devote himself more fully to the cause of freedom. In Congress he was popular with all classes and parties, and drew around him in social intercourse both slaveholders and abolitionists, notwithstanding his radical position on the slavery question. His hospitality in his own home was literally baronial. At his great house his hospitality was no respecter of persons. A score of guests was not unusual at his table, and the black man and the white were equally welcome. Around his ample board bankers and distinguished men from abroad met American slaves as equal guests. His home was a magnet which had an irresistible attraction for many men in advance of their time.

Mr. Smith held peculiar and independent views on religious questions, and announced his opinions with characteristic candor. His firm test of all men, doctrines, and institutions was, Do they promote human welfare? A writer in *The Christian Union* says,—

"His changes of opinion, however, did not diminish the fervor of his piety or the sweetness of his reverence for Christ and all sacred things. His house was more like a heaven upon earth than any other that it was ever our privilege to enter. Family devotion there was not a ceremony, but a spontaneous outbreathing of the soul toward God. Hardly ever at such times did he take a bible in his hand, but recited from memory, with a fervor that moved all hearts, such passages as he deemed appropriate—sometimes a psalm and sometimes a selection from the Gospels or the Epistles; and then, after a familiar hymn, in the singing of which the members of the family joined their voices with his, he knelt down and prayed in a manner so simple and yet so earnest and impressive as to bring into the conscious presence of God the soul of every listener. Under every phase of opinion, he was a man of prayer and of supreme devotion to God.

"But the most striking feature of Mr. Smith's character, and the one for which his memory will be most deeply cherished, was the generosity with which he employed his large pecuniary resources for the benefit of his fellowmen. He had a keen sense of his responsibility as the steward of God, and no man of his generation could with more truth and justice than himself have adopted the words of Job: 'When the ear heard me then it blessed me; and when the eye saw me it gave witness to me: because I delivered the poor that cried, the fatherless, and him that had none to help him. The blessing of him that was ready to perish came upon me: and I caused the widow's heart to sing for joy. I put on righteousness and it clothed me; my judgment was as a robe and a diadem. I was eyes to the blind, and feet was I to the lame. I was a father to the poor: and the cause which I knew not, I searched out.'"

Truly this was a righteous man.

HAMPTON IN WINIER.

The place for a winter sojourn has long been a desideratum among those who dread a northern climate. As the vicinity of Hampton Va. is rapidly growing in favor with such, we give a few reasons for this result, together with some figures in regard to temperature and rainfall observed only twelve and one-half miles distant by Professor Webster of Norfolk.

Records of four consecutive winters present the following averages:

In November the average Temperature was Fifty degrees and three-tenths; in December, Forty-three and fifty-one hundredths; in January, Forty-two and seventy-five hundredths; in February, Forty-three and fifty-nine hundredths.

In November the average Rainfall was Four inches and forty-four hundredths; in December, Four and thirty-eight hundredths; in January, Three and sixty hundredths; in February, Five and sixty-seven hundredths.

On the thirtieth day of December last, several ripe strawberries were picked from an open field on the Hampton School grounds. A few light frosts after the berries were nearly grown had not prevented these stragglers from coming to perfection. In the preceding month the second crop of strawberries formed an attraction on a number of the market stands of Norfolk.

In the fenced gardens of Hampton it is not very unusual for roses to bloom every month in the year. Snow seldom falls and slush does not linger. Occasionally there are a few days skating on the shallow ponds.

The above facts indicate that after October, there is probably no healthier sea climate to be found than that of Hampton; because they show it to be free from severities, while sufficiently bracing.

The traveler leaving New York at 9 A. M. reaches Hampton at day-break the next morning, after only seven hours railroading, and a comfortable night on one of the splendidly managed Bay Line steamers. The famous Hygeia Hotel at Fort Monroe is most convenient to the landing and is admirably kept, having recently been rebuilt and refurnished. To reach Florida is a three days journey and the cost is three times as much.

All sorts of fish and oysters are waiting to be eaten at Hampton. The society of the town and of the neighboring fort is excellent. Daily steamers run to Norfolk and Baltimore. Two or three times a week excursions may be taken to Washington, Fredericksburg, Richmond, Yorktown, Eastern Shore, etc., in well appointed boats.

The water scenery of the place is an unfailing delight. A quarter of a mile below the wharf, the roomy creek whose sheltered stream is seldom too rough for the most timid rowers, opens upon the landlocked seas of Hampton Roads and Chesapeake Bay, where the bolder yachtman finds unlimited room for his skill and courage. The harbor before a storm is crowded with vessels of many nations, and alive with countless oyster sloops and canoes. With its distant shores of forest lifted by mirage, and its waters touched by the glow of the most brilliant sunsets, it forms pictures not to be forgotten.

A WALK ABOUT TOWN.

This walk was not to obtain an item for the press, such a thought did not enter our mind at the time. But the satisfaction afforded, suggested the propriety of a word on the subject to our readers.

The new and improved private dwellings and public edifices of Hampton, are marked signs of the thrif, and enterprise of the people. But personal and familiar intercourse with the people themselves, made the deepest and happiest impression; Our reception, wherever we called, was very cordial. We could talk freely about the past, and yet be treated with the same candor and kindness which we endeavored to manifest. It was gratifying to be assured by one and another of those who formerly held slaves, that they never regretted emancipation; and to hear them speak in such high terms, of our Normal School. They testified, in particular, to the excellent deportment of the scholars; their uniform courtesy; adding that whatever the rowdyism at any time in Hamptou, they never knew any of our students engaged in it. We rejoice in the evidence that it is not in vain that we labor to teach our pupils that to be respected, they must be respectable; that it is what they are, not what they merely claim to be, that will determine their position in society. And in all our work, may we ever deserve from our Southern friends the kind consideration which we have received—making our school a blessing and honor to the Town and the State.

TO THE GRADUATES OF THE HAMPTON N. AND A. INSTITUTE:

It is proposed to institute a POST GRADUATE COURSE of *one year*, in order to afford to those who have been for some years in the field an opportunity to refresh their knowledge of former studies, and to pursue new and higher branches. The studies of the course will not be decided upon fully until the class shall organize, and its wants be known, but will probably include among others, the following:

General Review of Normal Course, Political Economy, Logic, Outline Study of Man, General History, Biblical Studies.

Special attention will be given to fitting young men for Christian work in Churches and Sunday-schools. The class will be organized October 1, 1875. Both sexes will be admitted, and on the following conditions:

1st. Applicants must have graduated at least three years before the proposed course.

2nd. They must have taught school not less than three periods of four months each.

3rd. Their debts to the Normal School must have been paid up in full.

4th. They must have maintained an unblemished character.

5th. Since it is desirable that as much time as possible be devoted to study, they will be expected to pay two-thirds of their board bills in cash, and will be allowed to work out the remainder.

6th. They will be subject to the general terms, regulations and discipline of the Institution, and will be expected to set an example of faithfulness and propriety in all respects.

7th. In special cases other than Graduates will be admitted to the Post Graduate Course.

Those desirous of entering will please make prompt application, in order that provision may be made for the class.

S. C. ARMSTRONG, *Principal.*

HAMPTON, VA. *January*, 1875.

SAVING.

Mr. Editor.—I rejoice in every effort of your school and your press to improve the condition of the Freedmen.

One point, in which many of them need improvement, is at *saving things*. Most of them know how to *earn*, but very few have correct notions of *saving*. Yet saving is, at least, half the battle with those who are struggling for a living. Let me illustrate what I mean.

Passing along one of the streets of Hampton, I saw a woman, who took in washing, just in the act of pouring a tub of suds in the street.

"Why, Auntie," said I, "what makes you so wasteful to throw all that valuable stuff in the street?"

"Lor, Mr. ——its nothing but dirty soap suds. What is it good for?"

"Good for!" said I, "Why, to make cabbages out of. Far better cabbages than you have in your garden can be made from that soap suds." Saying this, I pointed to some growing in her garden, as good as are usually found on ground half cultivated.

"Now," continued I, "let me tell you something that will do you good, as long as you live, if you will mind it."

"That I will," said the good woman, "and thank you too."

"Well then, never, as you have a garden, throw soap suds in the street, nor ashes, either. The ashes and suds that you make in a year, will cause your garden to produce at least twice as much as it does now."

"Well rully!" said she, "I never hearn tell of that, in all my born days."

"Probably you never did," said I, "but *try* it and you will see."

"Indeed, I'm much obliged to you, I will."

Now that good hard working woman had not the slightest idea that dirty suds or ashes were of any use on a garden. There are thousands equally ignorant and equally careless. The consequence is that thousands of dollars are actually thrown away that might be and ought to be *saved*.

Not only are ashes and suds valuable as manure; but so are all sorts of *bones* and *all the offal* of the cook room and chamber. Let them all be saved and put on the land; you will find that they will pay.

One other thought. An old farmer, who was advised to put his money in a bank, replied that "the best bank for his money was a *Sand Bank*." That is emphatically true of the Freedmen generally. Experience and observation teach us that "Freedman's Saving Institutions" and "Freedman's Stores" are very uncertain. Some of you know this, by bitter experience.

Now let me advise those who have a little money, and are earning more, to put it in a *Sand Bank*; that is, buy a piece of land, and *save* all your surplus earnings, not to waste in *frolicking* and *dress*, but to improve that land. Have a home of your own and take care of it.

KECOUGHTAN.

WORDS OF CHEER.

A clergyman of Cambridge, Mass., who visited our school two years ago, writes to us as follows: "Enclosed I send three dollars for subscriptions to SOUTHERN WORKMAN. I have been very much pleased with its constant improvement. I intend to have the back numbers of your paper bound and to place the volume in Harvard University Library, that the record of its excellent work may be preserved. You are laying the foundation of a system which I believe is destined to do more for the South than any other enterprise undertaken by philanthropists. The beginning may be forgotten in the next century, but the future historian shall find a record in this ancient University."

Another Cambridge subscriber writes as follows: "Something like a year ago, my wife was induced by a lady friend, to subscribe for the SOUTHERN WORKMAN. We have been so well pleased with it, that we wish to continue it, and I enclose one dollar for another year. We admire the spirit of its editorials and also the general character of the selections, and feel that such a paper can not but exert a good influence wherever it is circulated. You have best wishes for your success."

LETTERS FROM GRADUATES.

LIBERTY, VA., *January* 12, 1875.

Dear Teacher,—Since I graduated I have been engaged in teaching in this town. Of my success as a teacher it does not become me to speak much; but I will say that so far I have been able to make friends among both white and black.

My main efforts since I have been out teaching have been to impress upon the colored people how important it is for them to unite in an effort to get the Public School System thoroughly on foot in their behalf. In this section they seem to begin to understand that the education of our children depends chiefly upon our own labors in this direction.

The colored people of this county seem greatly aroused to a sense of their duties toward their children with respect to educating them.

Throughout this county where there can be a school-teacher, and a number of children sufficient to keep up a school, they let nothing else deter them. If there is no school-house, it seems that all they want is a proper leader, and they go to work, and in a few days build one.

While it is a fact that the condition of our people literally, morally, and to some extent religiously, is deplorable; yet I say with *great confidence*; and *assurance*, that the only things now needed to elevate them from these low and grievous positions are true men and women to go in advance with the great work of improvement, and call them up from the disgraceful and untimely standard to which they are not wholly responsible for being.

And let me say just here to those who may expect to engage in the great and good work of teaching the colored people; Try to prepare yourselves to lead them in every case; be at all times and in every instance an example of something many degrees higher and more noble than they really are now.

There is one fault common among many of our young teachers who go to teach, which I hope will be gotten rid of. It is this; numbers of us seem to allow our ideas to soar so loftily while we are away improving ourselves until it is very difficult for us to stoop to the lower grades of our people for the purpose of lifting them to our level. Of course I do not mean to say that some of this is not right, but simply that it must be dealt with wisely, and to its proper limits only. I beg my mates and friends to be careful of this. Condescend to persons of low estate that they whom we can best serve may be benefited by our labors.

There are now employed in this county twelve Hampton students. They all sustain the highest reputations both as teachers and in every respect, with white and colored.

Mr. Editor, I would say more, but knowing how limited your space is, forces me to say no more.

Yours, P. M. L.

Jennie L. Ivy, of the Class of 1873-4, writes as follows:

WHITLOCK, HALIFAX CO., VA., *December 7*, 1874.

My Dear Teacher,—I received your letter and the papers, and was more than glad to hear from you. Here is a list of the names of those who will take the SOUTHERN WORKMAN for one year.

I have a very nice school of forty-nine scholars, and I enjoy the work very much.

I feel that there is a great deal for me to do. I also take great delight in teaching my Sabbath-school, which is a great comfort to me.

The parents of the children seem to be very anxious for them to go to school, and they come very regularly and learn very fast. I hope to give you a full account of my school when I write again. I write this time to send you the list of the subscribers.

EFFECT OF SHOES ON HEALTH.—Wooden shoes are highly recommended by some of the scientific societies, and in some instances by the governments of Europe, it having been ascertained that not a few diseases resulting in impaired constitutions, and even in the loss of life, have resulted from the practice of wearing leather shoes in wet weather. An experienced workman from France was a short time since called to Germany to superintend the manufacture of wooden shoes on an extensive scale in the latter country. These are represented as being light and easy to wear, and are provided with a small cushion within the upper side, to obviate any pressure on that part of the foot; they are also said to be of neat and pleasing appearance, blackened or varnished, are made large enough to accommodate comfortable stockings, and are furnished with leather straps.—*N. Y. Tribune.*

NATIVE PEACHES.—Some varieties of this fruit have their individualities so indelibly stamped and fixed, that they may be raised from the seeds with little or no variation. Others may be naturalized, and, in the course of a few generations, become acclimated and hardy.

It is well known that thrifty young trees of spontaneous growth, when properly attended to, are more hardy and healthy, and equally as prolific as the finest improved standard varieties. Knowing this to be true, those farmers who are compelled to plant in frosty situations, by a little attention may derive most of the advantage possessed by those having the best situation and climate.

For this purpose, we would advise a selection of the seeds of the most vigorous and hardy sorts, that are known to be true to their kind, and plant them *just where they are to stand in the orchard.* Of this character are several fine late sorts, known in Virginia as the "Georgia Heath Peaches," and there are several other distinct kinds of both standard and natural fruits that possess this quality in a high degree.

Trees raised in this way have decided advantages over grafted trees: 1st. They retain their tap roots intact to secure them from high winds, and to supply moisture in dry seasons, and mineral substances at all times from the lower strata of the subsoil. 2d. They are not dwarfed by transplanting; they live longer and grow larger than those that are grafted or budded. 3d. The trouble and risk of budding is dispensed with, and they generally come sooner into bearing, as no time or vitality is lost by transplanting. In saying this, we do not favor the neglect of the popular standard varieties—they are indispensable.—*Carolina Farmer.*

TO THE STUDENTS OF HAMPTON.

II.

CARE OF THE PERSON.

One of the fundamental conditions of civilized, not to say refined, society, is cleanliness. The house, from the cellar to the garret, must be clean; the table, in all its appointments, scrupulously neat; and above all, the body should be guarded in every particular against even the suspicion of uncleanliness. The first step in this direction is the morning bath, a necessity and a luxury which should never, in winter or summer, be omitted. No matter how hurried you may be, or how unwilling to make what seems at the moment an exertion, you should never fail to bathe yourself thoroughly from head to foot in cool, fresh water, before you dress yourself for the day. The simplest and pleasantest way to do this is to have a large tub of tin or wood half-filled with water, into which you can step, and with a large sponge or piece of coarse cloth, and plenty of soap, rub the skin upon every part of your body until all impurities are removed and the senses of sight and smell both assure you that you are beginning the day with a clean body. In case it is not convenient for you to procure or to use a tub, a large basin must take its place, though of course you cannot stand in this, but with the sponge or coarse cloth must be equally careful to rub every portion of your skin. Having by the use of the soap (which you must apply with your sponge or cloth) removed or neutralized all the secretions of the skin and all the foreign substances which may adhere to it, you should then rinse off the soap with pure water, and finally rub and dry yourself thoroughly with a clean towel, the coarser the better.

This then is the general outline of the morning bath with which every civilized man and woman should begin the day, and without which no one has any right to consider himself or herself clean.

But there are also some details which require your attention, and I shall take them in what might be called their natural order, beginning with the hair.

The hair and the skin of the head must be washed as often as once or twice a week with clean water, without soap. The use of oils and pomatum is as a general thing a mistake, as they clog the pores of the skin and are more likely to produce than to prevent diseases of the hair, in addition to which, their odor is usually unpleasant. The use of pure water, and thorough brushing once or twice a day with such combing as is necessary to keep the hair from matting, will in most cases ensure the cleanliness of both the hair and the skin of the head.

The ears must be carefully washed with a sponge or soft cloth. Nothing hard or rough should be used in cleaning them, and the wax which collects in them should never be removed except by washing, as the delicacy of the ears is such that it is possible to produce deafness by carelessness in the treatment of them.

The teeth must be cleaned morning and night with a toothbrush, clear water and either toothpowder or soap. No powder should be used except that which can be procured from respectable druggists and dentists, for it is very easy to destroy the enamel of the teeth, and the quack powders used by many ignorant people are usually made of detergents so powerful as to increase rather than prevent the decay of the teeth. If it is possible to clean the teeth and rinse the mouth after each meal, it should be done; but in any case, a thorough cleaning should be given night and morning, for by this means only can you keep your teeth sound and white and your breath free from offense. If this habit is established in early childhood, a fine set of teeth is almost invariably the result, while toothaches are avoided and dentists set at naught, "a consummation most devoutly to be wished for."

The hands and feet need special care, for the nails of the former must be always carefully cut and cleaned with a knife or nail-scissors every day, while they must be washed several times a day, in particular, both before and after eating. The toes must be washed and dried carefully every morning, while, whenever it is necessary, the nails must be cut, and all corns or growths of that nature, must be pared with a knife or otherwise removed, in order to prevent the feet from becoming a source of great pain and annoyance.

The habits of cleanliness which will result from obedience to this above simple rules, will do much toward keeping your bodies in a healthy condition, for a clean skin is one of the essentials of health, so that you have a double motive to induce you to learn to be clean. In the fact that you can never have either health or refinement except upon the broad foundation of cleanliness.

PERSONAL HABITS.

In associating with our fellow-men and women, in general society, which we are all to a greater or less extent obliged to do, and in which many of us find our greatest pleasures, I want you to notice how closely the Christian law and the law of Society are united in respect to the principles of refinement. To be a Christian one must love one's neighbor as one's self—to be a gentleman or lady one must at least *seem* to do so, and must bear one's self in all things as if the comfort and well being of one's neighbor were the first and highest consideration. True politeness involves frequent, indeed continual self-sacrifice, and it is this unselfishness which makes it so hard for us to practice it in our homes, or at seasons when we fancy the eye of the world is no longer upon us and we can be rude and selfish without fear of being held up to ridicule and contempt.

It is of the details of this politeness, this habitual refinement, that I hope to teach you something, and I shall have now to ask you to follow me patiently through what may seem to you an unnecessarily minute account of the numberless social regulations to which gentlemen and ladies submit themselves, reminding you once more that there is no short road to the refinements of life, and that even those who are trained from their birth cannot rid themselves of the necessity for constant care and watchfulness.

Before, however, I begin upon this part of our work I have something to say to you upon a subject which is of very great interest to most people; namely, the subject of "Dress."

Now it is undeniable that our personal appearance does to a greater or less extent influence our lives, has often an intimate connection with our worldly success or failure, and, in short, is a matter worthy of sober consideration. To be shatterally, unneat, and careless, to dress in an extravagant, ill-chosen fashion, to wear uncomfortable and unnatural garments, to make either too much or too little of your clothes, is a serious mistake, and one against which I greatly desire to help you to guard yourselves. And what I want you first to remark is, that while as I have said, your personal appearance may and probably does affect your life, your life most certainly affects your personal appearance. Unconsciously perhaps to you, but still most surely, your vices and virtues are moulding with strong hands, your face, your form, your very dress; and are forcing you in spite of yourself to carry about with you an index to the manner of your life, which all the world may read. If you think this an exaggeration let me ask you to look about for a moment among your companions. Here is Laziness in the girl with unneat hair and collar awry, who, as you can see, has been unwilling to make the exertion which neatness requires; here is Courseness in the boy with dirty hands and person to match; here Vanity in the shape of tawdry ribbons and mock jewelry; and here, perhaps, Dishonesty in one who from a room-mate's trunk has taken some small article which may be used without detection, or may be said to have been "borrowed."

On the other hand, too, is it not pleasant to find Thrift, in the plain but well-cared-for dress of some boy who has little to spend and means to spend that little honestly; Modesty, in the quiet neatness of some sweet-faced girl; Unselfishness, in some simple garb which is bare of ornament in order that its wearer may help a needy friend?

While I do not by any means claim that in all cases one can trust to outward signs, yet surely they have much to do with the judgments which we form of one another, and are therefore of real importance in every station of life, and in both sexes.

In regard, then, to the clothes which we wear, two things may be considered certain; namely, that we shall in the main follow the prevailing fashion of our time and country; and that, in detail we shall follow the bent of our own taste, so that while the limits of our obedience to the fashion of the day will be regulated by our conscience, and our purse, our characters as individuals will have not a little to do with the cut and color of our garments.

Now I think there are few among you who will not confess that to be well-dressed is a desirable thing; but differences of opinion may very probably commence when we begin to discuss the meaning of this term "well-dressed," and much must necessarily be left to your own good taste and experience.

There are, however, two or three essentials, and these, as is proper, shall come first. Cleanliness and Fitness you will see at once are absolutely necessary and are within the reach of almost everybody, while the third essential, Comfort, is seldom sacrificed, except by unwise people who fancy that to distort and cramp different parts of their bodies is the way to obtain that grace and beauty which is undoubtedly one of the important ends for which we strive in the endeavor to dress well.

Having established then our three primary essentials, Cleanliness, Fitness and Comfort, we have come to a point where the differences in the dress of the sexes make it necessary for us to divide our subject, as the rules binding upon one sex are not always equally binding upon the other, and both fashion and common sense ordain that there shall be a marked distinction in the dress of men and women.

Our next article, therefore, will be especially for young women; and we bespeak for it beforehand the thoughtful attention of our Hampton girls.

Correspondence.

From our London Correspondent.

ABINGDON, ENGLAND, *Aug.* 22, 1874.

In my last letter from London I believe I gave a half-promise that my next should be dated Paris; but during a week's stay in that gay and brilliant metropolis, where there is so much that is novel, interesting and attractive to occupy the time and engross one's attention, I found scarcely an unappropriated moment in which to write even a few lines to home friends; but in this quiet spot, with the aid of my diary, a few occasional notes taken "on the wing," and drafts upon my own memory and that of my companions, I hope to send you a more connected and intelligible though necessarily very imperfect account of my short and somewhat hurried visit to that beautiful city, than I could possibly have done had I attempted it while there. I was in company with two friends, students like myself, bound to make the most of our vacation and especially to see just as much of Paris as our eyes could take in during our sojourn there; and though this was a little less than a week, I doubt if any one ever saw more of it or explored it more thoroughly in a fortnight's time than we did in that week—always going to and returning from any point of interest by different routes and studying our maps and guide-books pretty thoroughly before starting out upon any expedition. It was a continual rush, from a not very early hour in the morning until about the very latest ones at night, and of course we were all more or less used up by it, and very willing to forego further sight-seeing for the present, and come for a week or two to this quiet village where, with a small party of American friends, we are enjoying the refreshing rest and stillness so much needed after a year of work and study in London; to say nothing of a week in Paris at the end of it. Here, too, we can live over our adventures and enjoy them more at leisure, without fatigue or excitement; at least I hope to do so in writing them out for your entertainment; and to begin at the beginning, we had decided to take the boat from London to Boulogne for the sake of the more extended sea trip; and embarking at about 9.30 Saturday morning, August 8th, we proceeded down the Thames. The day was beautiful, bright and clear, with a good breeze; but the boat, small, dirty and uncomfortable to a degree I hope seldom surpassed. Our progress down the river was varied by frequent stops to avoid running down the coal-barges which are so numerous in the vicinity of London; but after clearing these, we went steadily on by the Greenwich Hospital, a very fine building, past Gravesend and in about three hours reached the mouth of the river. After this the water roughed up very fast and by the time we came in sight of Dover, the boat was fairly jumping, "and the subsequent proceedings interested me no more" until about 10 P. M., when we entered the harbor of Boulogne. Passing under the inspection of the Gens d'arms, who came immediately on board, we landed as speedily as possible and made our way to the nearest hotel, thankful to be on "terra firma" once more and solemnly declaring—in rather forcible language too—that we would sooner swim across the channel than try the "vin Boulogne" again. This being the height of the traveling season, we had some difficulty in finding accommodations; but after trying some half dozen hotels and having some amusing experiences in the way of French and English conversation with the landladies, porters and garcons, we succeeded in establishing ourselves very comfortably at the Hotel d' Angleterre and enjoyed a good night's rest after the disagreeable and exhausting experiences of the day. One of our company, C., being unexpectedly detained in London over Sunday, F. and I agreed to wait for him here, and in the two days of our stay, we explored the town and environs of Boulogne which is not however particularly interesting place. On Sunday we took quite a long walk into the country, going in a southerly direction. Every thing and every body had to us a foreign and picturesque appearance. The peasant women all wear little white caps, and the little children too, (the girls I mean) look very cunning in caps that would do for their great-grandmothers. They are very polite, too; as we sat resting awhile in a shady lane near a wayside shrine where was a crucifix with the figure of Christ nearly life size, a little girl of some eight or nine years came trotting along and greeted us with a pleasant "Bon jour, Messieurs" as she passed. On Monday we took a ramble along the beach, going two or three miles, saw a steamer start out for London, and amused ourselves with watching the funny bathing machines; these are small houses on wheels with steps at the back; they harness a horse to them, drive down into the water, turn round and leave the machine there for the bathers to come out at their leisure. This beach is magnificent, the sand is soft and fine, free from stones or shells. After gazing awhile at the bobbing heads in the water, we climbed up the steep cliffs, which are about two hundred feet high and almost perpendicular. It was tha hardest climbing I ever attempted, but we reached the top at last and were amply repaid for our trouble by the magnificent sight of the breakers rolling in and dashing over the rocks at the end of the cliffs, throwing the spray thirty feet or more into the air. It was truly a glorious spectacle. We also had a pleasant row upon the river before returning to our hotel to dinner. C. arrived by the Monday evening boat and at 2 P. M. of Tuesday we took the train for Paris. Arriving at ten and being somewhat tired of sitting still so long we walked directly across the city to the Hotel des Etrangers—in the Students' Quarters, or Quartier Latin as it is called, very near the Luxembourg Palace. Thus we took our first view of Paris by gaslight and found it perfectly fascinating; we all noticed, too, its similarity in many respects to New York, and to me it seemed more home-like than any place I have seen on this side of the Ocean. The buildings are six and seven stories high like those of Boston or New York, while in London, with exceptions, they are three or four only. London is more solidly solemn and dignified; while Paris looks bright and fresh and very charming; the rows of trees in the principal streets make a most delightful shade on the wide sidewalks, and the benches placed along at intervals everywhere, are very pleasant to rest upon and watch the stream of humanity drift by.

Wednesday morning we started out to commence our explorations. The Louvre was the first thing on our programme, so we crossed the Seine by the famous Pont Neuf and soon reached this wonderful museum. I wish I could convey to you the least idea of the beautiful paintings we saw there; one hall in particular surpassed my most vivid imaginings, in the richness and elegance of its decorations; the ceilings of several rooms are most beautifully painted, and in the last picture gallery we entered was the exquisite Madonna of Murillo and several other Madonnas and celebrated originals of which I have seen copies or engravings everywhere. The famous Venus de Milo is here also (what is left of her) and is in the centre of an admiring group all the time. We visited the Louvre again before leaving Paris, not feeling half satisfied with what we could see in one day, but weeks or months could not exhaust its resources. Before leaving London I had made an engagement to call on a friend in the Boulevard Haussmau, and on my walk thither passed the Column Vendome, in a state of reconstruction, and the Grand Opera House, a very beautiful building now nearly completed and occupying a whole square. It is covered with elegant sculptures and bronze statues, and the dome is surmounted by Apollo holding his lyre up to the sky.

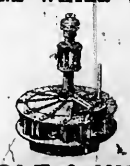
I really thought when I commenced this letter to have put more of Paris into it; but as I have already made it quite long enough for its proper allowance of space in your paper, I will postpone further description and send a second chapter on Paris to the next number.

K.

THE West in general offers good homes to men who work hard, have a little capital to keep them for a year or two, and are patient, self-denying and hopeful.

This sounds like a commendation of The West, but there is no country under the sun which does not offer good homes to men who have these qualifications. Virginia with her sister States of the Southern Atlantic has long sent out swarms of her children who have a kindly climate, a responsive soil, and the neighborhood of friends and cultivated society, to seek in an unbroken wilderness, or midst the wild turbulence of a frontier, the success which might here be achieved with a tithe of the toil, privation, self-denial and time that are called for.—*Norfolk Virginian.*

JAMES LEFFEL'S
TURBINE WATER WHEEL.



POOLE & HUNT,
MANUFACTURERS FOR THE SOUTH & SOUTHWEST.

Nearly 7000 now in use, working under heads varying from 3 to 240 feet! Twenty-four sizes.

The most powerful Wheel in the Market, and most economical in use of Water.

Large ILLUSTRATED Pamphlet sent post free.

Portable and Stationary Steam Engines and Boiler, Babcock & Wilcox Patent Tubulous Boiler, Blanch's Crusher for Minerals, Saw and Grist Mills, Flouring Mill Machinery, Machinery for White Lead Works and Oil Mills, Shafting Pulleys and Hangers.

THE CHRISTMAS BABY.

BY WILL CARLTON, AUTHOR OF "FARM BALLADS."

[Our December number contained a charming little poem on the same subject; but it seems that there are different ways of looking at such a "Christmas Gift from Heaven" as a baby.]

Hoot! ye little rascal! ye come it on me this way,
Crowdin' yersel amongst us this blusterin' winter's day,
Knowin' that we already have three of yo, an' seven,
And trying to make yerself out a Christmas present from Heaven?

Ten of ye have we now, sir, for this world to abuse;
An' Bobbie he have no waistcoat, and Nellie she have no shoes,
An' Sammie, he have no shirt, sir (I tell it to his shame),
An' the one that was just before ye we ain't had time to name!

An' all o' the banks be-smashin', an' on us poor folk fall;
An' Boss he whittles the wages when work's to be had at all;
An' Tom he have cut his foot off, an' lies in a woful plight,
An' all of us wonders at moruin' as what we shall eat at night;

An' but for your father an' Sandy a-findin' something what to do,
An' but for the preacher's woman, who often helps us through,
An' but for your poor dear mother a-doin' twice her part,
Ye'd 'a seen us all in heaven afore ye was ready to start!

An' now *ye* have come, ye rascal! so healthy an' fat an' sound,
A-weighin,' I'll wager a dollar, the full of a dozen pound!
With yer mother's eyes a flashin,' yer father's flesh an' huild,
An' a good big mouth an' stomach all ready for to be filled!

No, no! don't cry my baby! hush up, my pretty one!
Don't get my chaff in yer eye, boy—I only was just in fun.
Ye'll like us when ye know us, although we're cur'us folks;
But we don't get much victual, an' half our liviu' is jokes!

Why, boy, did ye take me in earnest? come, sit upon my knee;
I'll tell ye a secret, youngster—I'll name ye after me.
Ye shall have all yer brothers an' sisters with ye to play,
An' ye shall have yer carriage, an' ride out every day!

Why, boy, do ye think ye'll suffer? I'm gettin' a trifle old,
But it'll be many years yet before I lose my hold;
An' if I should fall on the road, boy, still them's yer brothers, there,
An' not a rogue of 'em ever would see ye harmed a hair!

Say! when you come from heaven, my little namesake dear,
Did ye see, 'mongst the little girls there, a face like this one here?
That was yer little sister—she died a year ago,
An' all of us cried like babies when they laid her under the snow!

Hang it! if all the rich men I ever see or knew
Came here with all their traps, boy, an' offered 'em for you,
I'd show 'em to the door, sir, so quick they'd think it odd,
Before I'd sell to another my Christmas gift from God.

ON THE POND.

It is a cold winter-day. The pond is frozen over, and the ice is thick and strong. Now is the time for skating.

Ah! the boys and girls are at it already. There is Charles on his skates, pushing Jane before him on his sled; and away they go over the ice. Come, Ponto, you and I will go out and see the fun. I must put on my cape-overcoat and my fur cap; and Ponto, if you have no objection, I'll take a cigar to keep my nose warm. It is a bad habit, I know; but you can't teach an old dog new tricks.

Here we are on the pond. How smooth the ice is! We must step very carefully, or we shall come down head-foremost, like that awkward boy over there. That would be no fun at all to a man of my weight.

What is this boy sitting down on the ice for? Oh! he has had a fall, and got a bump on his head. Never mind, my boy. Pick yourself up, and try again.

Ah! what have we here? Warm doughnuts? Well, this is something quite new.

Let me see! I have some change in my pocket. Six will be enough, little girl. Charley and Jane, come this way, and I'll treat you. Come, Ponto, we will go up on the bridge.—*The Nursery.*

FAITHFUL UNTO DEATH.

There is, in a quiet, shady corner of the Monument Cemetery in Philadelphia, a grave which has always had a curious interest for me. Above it is a plain slab with the name *Alfred* ——, *aged eighteen*, and the marble figure of a dog, life-size, with the legend below, "Faithful until death."

Not an ideal dog, by any means; not a poetic Newfoundland, or greyhound, superb in strength and grace. This is assuredly a portrait from life; an ugly, real dog of the mastiff kind, his head sunk between his forelegs, and his set jaws and steady eyes turned on you with all the meaning of an implacable foe, or unflinching friend.

What the story may be of the solitary grave and the dog watching over it, I never have tried to discover. One does not care to look closely into these hints and fragments of other lives that we meet every day, nor to rob them of their pathos and remoteness by too much handling. I like to believe, though, that the dog lies with his master in the grave below, and that one faithful beast, at least, has Christian burial among human beings who were not all faithful.

The grave reminds me of another dog, and his story, which I knew long ago. He belonged to that famous, nameless breed of yellow curs which Dr. Holmes has made immortal, and passed his early youth in a Western town, in certain disreputable practices common to dogs and boys not born or reared within the so-called pale of society. Chief among which practices, of course, came the getting his living by "progging," to use the Southern courteous word for that illegal sort of business.

He was the terror of scavengers and butcher-boys. He led a corps of other yellow dogs, low-born terriers and "mups," which became a well-known band of alley ruffians, back-yard Pikes and slop-tail Rangers, whose bloody battles were sung by all the boys in town.

It was in the depth of this doggish depravity that the nameless brute was adopted by Dick Frazer, washed by a souse in the river, fed, taken into the house and christened by the name of that most gentle gentleman, Don Quixote, familiarly—Don.

Never did boy or dog so suddenly yield and accept civilization. After that first two days' adoption and bath, Don abandoned all his evil ways, never even visited a back-yard, passed his old associates on the full trot, too princely, however, to snub them as King Hal did poor old Jack, but giving them a good-humored growl of dismissal.

"Even this ill-bred cur was loyal to our Dick," Dick's sisters said. They were school-girls, a little apt to be sentimental, and made our Dick a sort of hero. But in reality everybody liked Dick's dog, just as they liked anything belonging to Dick.

When the boy came bursting into school, his shoes unblackened, one suspender down and his handsome face alive with fun, the boys laughed, and the old doctor called him severely to order. But after all, the boys followed him in any prank he chose, and the doctor laid his hand tenderly on the boy's curly head, as on no other.

There never was a boy, probably, who had so much to do, or so many friends to help him in the doing of it, as Dick Frazer. Besides school, where he was the leader, as we have seen, there was the farm, where the boys came out on Saturday afternoons to help with the haying, or to go gunning for squirrels. Don soon learned to take an interest in these pursuits, and became so skilful that no dog to the manor horn could equal him in treeing a squirrel, or making a horrible rumpus on the hayfield.

ON THE POND.

There were lectures on chemistry, too, which Dick came in to hear at night, (the farm lying just on the edge of the town.) Mr. Perron, the professor, when he wanted an assistant, was sure to call on Frazer, whose face and laugh always put the audience in a good humor. For everybody, from Mayor House down to Tad Clemens, the one-eyed carter, knew the boy, and while they would allow the "riff-raff" of school-boys to rush past them unnoticed, were sure to hail him with "Hollo, Frazer!" and "What's going on at school now?" and "Top of the class;" or "Tail, Dick, eh?" And when he was gone they would remark, "Fine lad that, sir. He brings my own boyhood back, somehow," with a shake of the head.

Everybody knew, too, without its being talked about, what a generous, noble fellow he was, ready to give his last peanut to a boy, even one that he did not like; the kind of chap who would jump into the water and risk his life to save any other boy's, if need were. Mothers always felt safe when they saw he was in the party that their Sam or Joe had joined.

"If Dick Frazer is along, there'll be nothing done that's mean or ungentlemanly," they said.

In short there was not a boy in the town so much respected, as well as loved, which makes the end of it all the harder to understand.

One cold December evening, Don, trotting along behind his master from town out to the farm, noticed that he was joined by another boy whose appearance Don did not at all approve. He had an indefinable resemblance somehow to the underbred curs whose acquaintance Don had long ago dropped. Beyond a surly growl or two, however, he did not venture to express his feelings.

Presently the boy stopped at the door of an eating-house on the very edge of the town, and appeared to be coaxing Dick in. He shiv. red, too, and made his teeth chatter, as if quite overcome with cold, at which Dick laughed, and nodded, and finally went in.

When the boys came out it was with very red faces, and laughing more loudly than Don could find any occasion for. He did not like the looks of the shabby house, nor the smells that hung about it. He trotted to the gate a dozen times and looked back for his master to follow him. But Dick was slow to follow him. He loitered about the door of the place until it was dark, and then going home chose the path through the woods, and stole up to bed the back way.

After that day half of Don's fun was gone. Two months passed and Dick very seldom joined the schoolboys in their games. He always had some engagement with his new friend, and when it delayed them until after dark, they never failed to call at the shabby restaurant.

At home, too, there was an atmosphere of gloom and trouble that made Don shun the house. Old Mr. Frazer seldom smiled when Dick was in the room, and there were sometimes high and angry words between the father and son, while Dick's mother sat by, pale and weeping.

Dick plodded to and from town, now, with his head down. No more whistling or shouts to the neighbors, or races with the dog down the hills. In town, too, people did not now hail the boy as they met him. The men looked keenly at him and shook their heads, and the women watched him curiously and pitifully. Don used to slink behind, with his tail between his legs. He knew they were in disgrace.

At school, while he lay on the gravel path every day waiting for Dick to come out, he could often hear the teacher's voice within raised harshly, and Dick's sullen reply. Don always walked closer to his master on these days, licked his hand or frisked before him, clumsily trying to make him laugh.

Even his purblind, doggish eyes and sense told him that the boy needed a friend and kindness, rather than perpetual scolding. One day he heard, first the master's harsh voice, and the cracking of a whip's lash, and the next moment Dick rushed out, his face on fire. The dog ran after him, but he could not reach him, until the lad from the restaurant joined him, and the two boys disappeared down an alley. Don went home alone. Late that night he was wakened, as he lay asleep in the stable, by somebody's arms about him, and Dick's hot tears raining down on his face.

"Lie still, Don! Lie still, sir!" when the dog would have followed him.

There was a dark figure at the stable-door. "I'm ready, Joe; that's the only friend I have to say good-by to. Not one of the others will ever care to see my face again."

He shut the door. Don barked and

leaped against it, but it was of no use. The door was shut.

When it was opened in the morning Dick was not to be found in the house, nor on the farm, nor in the town. Don's begging eyes and whine asked of everybody where he was, but no one answered him.

Months and years passed. Don grew into a sober, grave dog, but Dick Frazer came to the old place no more. His father, as if unable to bear the disgrace which had fallen on him, sold the farm and moved to another part of the country; but Don remained behind, and lingered about Dick's old haunts as though he watched and waited for him to return.

One day late in the fall two men arrived in the village by a Western train, both shabby and disreputable in appearance; one a bloated, ragged man of twenty-two, bore more than the other every sign of hopeless dissipation and want. He came down from the platform of the depot into the street, with a cowed, furtive glance around, while his companion swaggered after him.

Several of the towns-people, who were gathered in a group near by, scanned the pair curiously. The miserable creature in advance came up to them.

"Good-evening, gentlemen."

They bowed coldly.

"You do not recognize me, captain?" to the station-master.

Captain Digby shook his head and turned his back on him.

The stranger hesitated a minute and then crept off, not too soon to hear Digby's loud comment,—

"It's that fellow Frazer, who left the town for the town's good long ago. I wonder what almshouse has sent him back?"

Frazer stood still for an instant, and then went up to his companion.

"You shall not follow me, Strong. I tell you that plainly. I'm going to make one more effort, God helping me, to go back to my old ways, and there's no chance for it with you at my back."

"Good luck to you Dick!" laughing; "going to give up your bitters along with all the other deviltry, eh?"

"Yes if there's one old friend left to take me by the hand, I'll do it," looking wistfully up and down the street. "I can't do it alone."

"Your old friends did not give you a very hearty welcome just now!" sneeringly.

"They never knew or cared for me. I have some good friends here though."

"All right," taking a seat and drawing out a cigar; "you go and find them, and if they are not to be found come back to me. Joe Strong'll not turn his back on you. We'll go down to the races by the next train. I'll wait for you here."

Dick Frazer turned from him and crept down the street. The shame and misery of meeting those people who had once known and loved him were almost more than he could face. Once or twice he stopped, half turning to go back, but walked on again, desperately. He bent his steps first toward home, but when he reached the outskirts of the farm an unfamiliar air about it bewildered him.

"My father would never have cut down those old poplars," he thought, and beckoned to a boy passing by.

"Who lives here now?"

"Squire Chester."

"Mr. Frazer—he—he is not dead?"

"No. They've moved away long ago."

Dick staggered up against the fence. Whoever turned against him he had thought his mother would be waiting with her arms outstretched ready to welcome her boy. She, too, was gone!

After awhile two men, neighboring farmers, friends of his father, who had often trotted Dick on their knees, rode down the hill. He went up to them, and laid his hand on the crupper of the saddle near to him.

"Don't you know me, Mr. Forbes?"

The farmer, a stern old Scotchman, looked at him sharply a minute.

"Yes, I know you, Richard Frazer. And I know very little good of you."

They rode past him without another word, not looking back.

Standing there in the dusty road with the sunshine hot about him, it seemed to Dick but a day since he had raced along the road, a happy, light-hearted boy. It was not so long ago! Not so long ago that every man's hand should be turned against him! He knew how he had sinned, what a bloated, drunken wretch he was, trembling even now for the need of liquor. But there was something within him alive, and eager, and strong; the old, boyish Dick Frazer, holding up his hands to God asking to be his old self again. God knew that! God pitied him. Could not one of these men pity him, hold out his hand, speak one friendly word?

He was not strong; the hold of liquor on him was like death itself. He could not free himself from it without help.

What did it matter? He would go back to Strong and to the races. He would not live long, drinking as he had been doing. The sooner it was over the better, perhaps.

Who was that coming down the hill on horseback? Surely, the old Prof. Perron, who used to make a pet of him in the class. He was a kindly soul—a gentleman. He would not turn his back on him.

Dick waited in the middle of the road. When the old Professor came up Dick took off his hat and looked at him, but he could not speak a word. It seemed to him he was on trial, whether he should live or die, and the verdict was about to be rendered.

He held out his hands. The old man threw him a coin and rode on.

The truth was, he thought Dick was a beggar.

Frazer stood stunned for a minute, and then turned and began to walk hastily toward the depot. He could see Strong waiting for him.

But as he passed into the street a dog rushed out of a house toward him, leaped on him, ran before and behind him wild with joy, licked his hand, and finally tugging at his trowsers challenged him to a race.

"The poor brute knows me; Don! Don!"

Dick sat down, weak and trembling, by the roadside. The tears were in his eyes. He hugged the dog, stroked him, laughed aloud at his joyous, clumsy antics. "He thinks I am a boy still! *He* knows there's no real change."

It gave him a strange comfort that this creature believed him to be the same. *He would be the same*; in spite of Strong, or the years gone, or the accursed liquor. He was not without friends. God cared for him—and Don.

He sat quietly awhile by the roadside, until the train had started, and then he walked slowly and thoughtfully down the lane, the dog close beside him laughing, as dogs can laugh.

Presently a horse galloped up behind, and the Professor sprang off hurriedly, his old face flushed with excited feeling.

"It is my old friend Dick! After I had passed you your face troubled me, I felt it was one I ought to know, and then I remembered! What are you doing here, my dear boy?" shaking his hands violently.

"Planning how I shall ever be the old Dick Frazer again," smiling sadly.

The old man laid his hand on his shoulder. "You wish to try? God help you. Come right home to me, and I'll do what I can to help, too."

How Dick went home with him, how for a year the deadly struggle went on between the boy and the thirst for drink that was dragging him to the grave, how the old man stood by him, and with prayers, and cheerful words, and incessant watchfulness, stanchly aided him, restoring him at last to his mother reformed—a noble, brave, helpful man—is too long a story for us to tell!

But the old Professor always says, "It was the dog who saved him, not I."—*Youth's Companion.*

HOW TO SUCCEED IN LIFE.

The question how to succeed in life is one which interests everybody. The highest success is not always money making it is true. To succeed in doing the most good may require an entire sacrifice of fortune sometimes; even to succeed in study merely, in science or in art may be quite inconsistent with that devotion of time and thought to business which is necessary to success in buying up riches. The world's greatest benefactors, its greatest authors and inventors and poets and artists have very seldom been its richest men. But even money making, if we will use the money as God's stewards and not for our own selfishness, may be a right object of pursuit, and it is interesting and well to know that the surest road to success in it is not by dishonesty and speculation, as some would have us think.

An interesting New York letter tells us how in that great city, among all its competition and corruption, some honest men have made

FORTUNES IN A SMALL WAY.

"One can count on his ten fingers the heavy merchants that have stood unmoved during a quarter of a century. The heaviest houses topple down and the richest men pass out of sight. But there is a class of men who maintain uninterrupted prosperity. These are men who began small, had a specialty, always sold the exact article they professed, kept grubbing on from year to year, and waited for fortune till she chose to appear. One of the heaviest paper houses in New York was begun by a man who was a rag picker. He began in the smallest possible way. When he had only a small basketful he assorted them fairly and honestly. It soon got the confidence of the trade. His rags were always the quality that he represented; and he walked over the course, always making progress, always making money. In his immense warehouse, to-day, buyers are sure to find when they get home the exact article that they purchased.

"Some years ago a man set up a little cigar store. His specialty was that he would not keep a domestic cigar on his shelves. The article that he sold was invariably good, and he made a fortune. There are half a dozen old caterers in New York. They are fifty and sixty years old. Two or three of them are in cellars or in small rooms. The floor is sanded; the seats are without backs; the tables are without cloths; the head of the house waits on his customers, coat off, white apron around his waist, the perspiration on his forehead; he broils and stews and fries for his customers. Everything about the room is just as it was thirty years ago. In these little dens, from twelve to two, one cannot sit or stand for the crowd. The first merchants in New York fill the place. Chops, beefsteaks, hams, English mutton, are specialties. The man who waits on these clerks and merchants could buy a house on Fifth avenue and live in it if he wanted to.

"In a little underground room, near Bleecker, half a mile west of Broadway, is the well known pork establishment of Tilston the Quaker. He has been forty years in that one place, and all the while dealing in one article—pig pork, corn fed. His specialties are sausages and miniature chop steaks. When he does not receive the article he wants, he will not buy anything. Often when his customers call for goods he has none. It is considered a great favor to get his chops and things. He divides what he makes among his customers. The aristocracy of New York and all up and down the river patronize him. It is no uncommon thing to see the coaches of Astor, Livingston, Taylor, and other wealthy people in front of the old Quaker's door. The room is without ornament, and almost without furniture, but it is spick span clean, and one could eat off the floor. The old Quaker does all his work himself; will trust nobody, and has amassed a fortune."

BOUQUETS.—When you receive a bouquet sprinkle it lightly with fresh water, then put it in a vessel containing soap suds; this will nutrify the stem and keep the flowers as bright as new. Take the bouquet out of the suds every morning and lay it sideways (the stock entering first) into clean water. Keep it there a minute or two, then take it out and sprinkle the flowers lightly by the hand with water; replace it in the soap suds, and it will bloom as fresh as when first gathered. The soap suds need changing every three or four days. By observing these rules a bouquet may be kept bright and beautiful for at least a month, and will last longer in a very passable state; but attention of the finer creatures, as directed above must be observed, or all will perish.

At Home.

A VERY OLD VERSE FOR THE NEW YEAR.

Devoutly look, and naught
But wonders shall pass by thee;
Devoutly read, and then
All books shall edify thee;
Devoutly speak, and men
Devoutly listen to thee;
Devoutly act, and then
The strength of God acts through thee.

LOOK AFTER THE EYES.—Multitudes of men and women have made their eyes weak for life by the too free use of eyesight, reading small print and doing fine sewing. In view of these things, it is well to observe the following rules in the use of the eyes:

Avoid all sudden changes between light and darkness.

Never read by twilight on a very cloudy day.

Never sleep so that on waking the eyes shall open on the light of the window.

Do not use eyesight by light so scant that it requires an effort to discriminate.

Never read or sew directly in front of the light of a window.

It is best to have the light from above, or obliquely, or over the left shoulder.

Too much light creates a glare and pains and confuses the sight. The moment you are sensible of an effort to distinguish, that moment stop and talk, walk or ride.

As the sky is blue and the earth green, it would seem that the ceiling should be a bluish tinge, the carpet green, and the walls of some mellow tint.

The moment you are instinctively inclined to rub the eyes, that moment cease to use them.

If the eyelids are glued together on waking, do not forcibly open them, but apply saliva with the finger, and then wash your eyes and face with warm water.

BABY IS DREADFULLY CROSS.—No, madam, not cross at all. He is sick. Babies do not cry for fun, nor from "total depravity." The cry is the only sign baby can give of discomfort; and because your dull vision cannot see what the discomfort is, it does not follow that there is none. The cry is the babe's unconscious appeal to the mother for help, at least for comfort and solace. Nothing makes our blood so hot with indignation as to see the answer the little ones sometimes get from the nurse, and even from the mother herself.

SMOKY WICKS.—The unsatisfactory light frequently given by kerosene lamps is often due to the wick. The filtering of several quarts of oil through a wick, which stops every particle of dust in it, must, of course, gradually obstruct the pores of the wick. Consequently, although a wick may be long enough to last some time, its conducting power may be so impaired that a good light cannot be obtained.

DESERVE friends and you will have them. The world is teeming with kind-hearted people, and you have only to carry a kind, sympathetic heart in your own bosom to call out goodness and friendliness from others.

CULTURE IN SAND.—Take a china bowl, glass dish, vase, or in fact anything of an ornamental character, capable of containing moisture; fill it with silver sand in the shape of a pyramid. In the centre plant a Hyacinth; and at equal distances round the sides three or more, according to the size of the vessel, filling up the spaces between with Crocuses, Snowdrops, Dwarf Tulips, Jonquils, Scillas, or a mixture of all. In planting, the bulbs should be carefully pushed into the sand, allowing the top alone to be seen. The vessel should then be immersed in a bucket of water for about five minutes, in order to fix the bulbs in their position. The bath must be repeated once a week, or oftener if required, for on no account should the sand be allowed to get dry. Place it in the dark for a fortnight, and afterward in any cool, well-lighted, airy room.

FROM MOTHER'S RECEIPT BOOK.

We have not opened Mother's receipt book for the benefit of our readers for some time. Here is a receipt which we think is one of the best in it, and all who try it will find it both wholesome and delicious.

RACHEL'S OAT-CAKE.—Mix together one teacupful of oatmeal, and two large tablespoonfuls of flour. Add one tea-spoonful of salt, or more, to taste. Boil together one and a half tea-cupfuls of water and one tea-cupful of milk. Stir into this while boiling the mixture of oatmeal and flour. Boil for five minutes, stirring constantly. Add a piece of butter the size of a large walnut. This makes a stiff paste. Bake it in an earthern pie plate, smoothing it over with a spoon with a little milk. Bake half or three quarters of an hour in a brisk oven. This receipt makes one cake.

AN INCIDENT WITH A MORAL.

A gentleman once entered the baggage car of a railroad train and desiring to read some manuscript he chose the car because it was airy and retired. A youngster about fifteen years of age was occupying, with great abandon, a chair. The gentleman wishing to sit near the open door of the car to obtain both light and air, thus accosted the youngster:

"Bub, will you exchange that chair for my seat for a few moments?"

"No, sir! this chair is engaged."

The gentleman was very polite, as he recognized the young man's right to the chair, by actual possession. It appears that he was temporarily in charge of some express matter, his father being the expressman on the route; but the moral of the incident we shall give in relating another incident which occurred very many years ago. There was a very plainly dressed, elderly lady who was a frequent customer at the then leading dry-goods store in Boston. No one in the store knew her even by name. All the clerks but one avoided her and gave their attention to those who were better dressed and more pretentious. The exception was the young man who had a conscientious regard for duty and system. He never left another customer to wait on the lady, but when at liberty he waited on her with as much attention as though she had been a princess. This continued for a year or two until the young man became of age. One morning the lady approached the young man, when the following conversation took place:

Lady—"Young man, do you not wish to go into business for yourself?"

"Yes ma'am," he responded; "but I have neither money, credit nor friends, nor any one to trust me."

"Well," continued the lady, "you go and select a good situation, ask what the rent is, and report to me," handing the young man her address. The young man went, found a capital location, a good store, but the landlord required security, which he could not give. Mindful of the lady's request he forthwith went to her and reported

"Well," she replied, "you go and tell Mr.——, that I will be responsible."

He went, and the landlord or agent, was surprised, but the bargain was closed. The next day the lady called to ascertain the result. The young man told her, but added "What am I to do for goods; no one will trust me?"

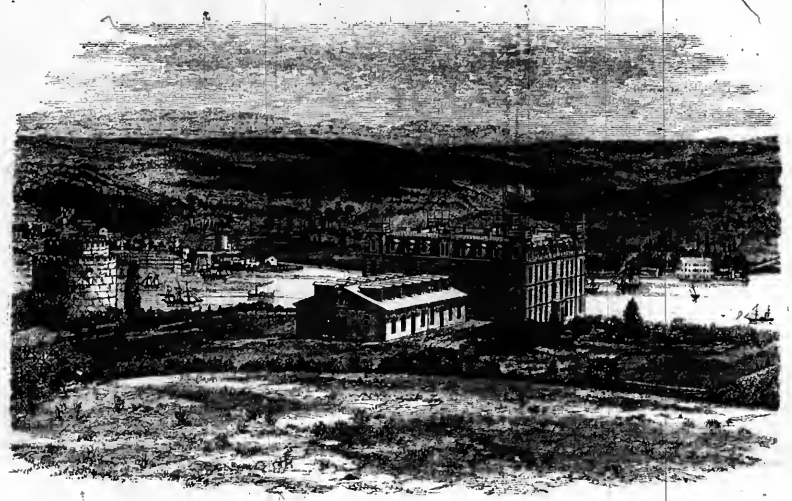
"You may go and see Mr.——, and Mr.——, and Mr.——, and tell them to call on me."

He did, and his store was soon stocked with the best goods in the market. There are many in this city who remember the circumstances and the man. He died many years since and left a fortune of three hundred thousand dollars. So much for politeness, so much for civility, and so much for treating one's elders with the deference due to age in whatever garb they are clothed. Now this gentleman in the baggage car *might* have been a director of the road or a very influential man otherwise, and he *is* a very observing man and a good judge of character; a different answer from the youngster might have interested him in his behalf and led to some future advantage.—*Ex.*

ROBERT COLLEGE.

BY REV. E. E. BLISS, D. D.

Robert College was founded at Constantinople in 1860. A benevolent merchant of New York city, Christopher R. Robert Esq., having a few years before visited Constantinople and become deeply interested in the missionary work there, especially in its educational aspects, conceived the plan of establishing a high school for the benefit of the youth of various nationalities in that great metropolis. His plan for a high school, in conference and correspondence with the missionaries, grew into plans for the college which now bears his name, and following the leadings of Providence, and the promptings of his own generous heart, he has increased his donations to the enterprise from one of 30 000 dollars to a total of nearly 150,000. In fact, with the exception of about 6,000 dollars, he has provided all the funds expended for the establishment of the institution. The college was opened for the reception of students in 1863, in a building formerly occupied by the Mission Seminary of the American Board, and still mission property, at Bebek, a village on the Bosphorus. In 1871 a change was made to the present quarters, at Hissar, another village on the Bosphorus, a short distance above Bebek. The picture on the opposite page gives a view of the new college building and its surroundings. The round tower on the left is a portion of an old castle, built by the Turks more than four centuries ago, when they were marching to the capture of the city of Constantinople, six miles below. On the opposite shore of the Bosphorus appears, between the tower and the college, the beautiful valley of the heavenly water, with its gardens and meadows, a place of quiet resort for Turkish women on holidays, especially on Fridays, the sacred day of Mohammedans. On the same side of the Bosphorus, and appearing to the right of the college, is a royal kiosk, a summer-house of the Sultan, a perfect gem of architectural beauty. The college itself with the American flag waving above it, occupies the centre of the picture. It is built entirely of stone quarried from the hill on which it stands. The main portion of the building (more than 100 feet square) has in the centre a quadrangular court, paved and open to the sky. Galleries extend around this court in the different stories, affording facilities for intercommunication and ventilation. The extension in the rear has been recently made, to provide a larger study room and chapel for the increasing number of students.



ROBERT COLLEGE, CONSTANTINOPLE.

Almost from the start the college has had as many students as the building occupied could accommodate. The present number is 230, representing more than fifteen different nationalities. The professor and teachers number twenty, of whom nine are Americans. As a large portion of the students and teachers lodge on the premises, the present quarters are altogether too strait; and Dr. Hamlin, the President of the college, has recently come to the United States to secure funds for the erection of additional buildings. The current expenses of the institution (salaries of teachers, etc.) are covered by what is received from the students, each individual paying 40 English pounds, or 200 dollars in gold. The site of the college is much more commanding than would perhaps be inferred from the picture. Standing by the flag staff upon the top of the building, the spectator looks down upon the Bosphorus, nearly four hundred feet almost directly beneath him, and can see almost the whole length (twelve to fifteen miles) of the valley of that beautiful stream, with its winding shores, numerous villages, palaces, mosques, gardens, shade trees and green fields,—a view often pronounced unsurpassed in the world. To the traveler passing up or down the Bosphorus, in caique or steamer, the college looks like some mighty castle perched on a hill to guard the passage below. It attracts the eye of every passer by.

Hardly less prominent is the position occupied by the college as an educational institution. The superiority of the discipline and culture it gives to students was soon made manifest. Its reputation in this respect is still on the increase. The number of graduates is indeed small compared with the whole number of students, for very many come for only a partial course of study, and a special preparation for business life; but some of these graduates are already in positions of great influence and usefulness. The college has, too, a very stimulating influence upon other educational institutions springing up in such numbers among the different nationalities in Constantinople and its vicinity. It is regarded as a model; its methods of instruction and discipline are watched with great interest, discussed, and ere long will, to a greater or less extent, doubtless, be copied.

The Teachers' Table.

BRIEF HINTS TO TEACHERS.

Go to school in season. Call school at the right time. Have the pupils come in promptly and quietly. Write out your order of exercises. Arrange your programme as well as you can. Carry it out to the minute. Consider it as necessary for you to follow it as for the children to follow it. Provide enough work for every pupil. Suppress whispering. Secure the co-operation of your pupils. Lead them to see that it is for their interest to have good order and a good school. Require hard study from the pupils. Lead them to love school. Give short lessons. Assign them so plainly that none may mistake their lessons. Have the lessons well studied. Require clearness, promptness and accuracy in recitation. A little, well known, is of great value. Let not "how much, but how well," be your motto. Do not assist the pupils at recitation. Cultivate their self-reliance. Self-help is their best help. Do not let them help each other. Excite an interest in study. Be enthusiastic yourself and you will make your pupils enthusiasts. Encourage those who need encouragement. Review often. Talk but little. Be quiet yourself. Speak kindly and mildly. Be firm. If you love the pupils, they will love you. Keep good order. Government is the main thing.—*Teacher.*

AIR THE SCHOOL-ROOM.

In a recent physiological work a very simple method of ventilating rooms is mentioned, which is said to prevent a draught from being felt—an inconvenience often experienced when rooms are ventilated by the windows. A piece of wood, three inches high and exactly as long as the breadth of the window, is to be prepared. Let the sash be now raised, the slip of wood placed on the sill, and the sash drawn closely upon it. If the slip has been well fitted there will be no draught in consequence of this displacement of the sash at its lower part: but the top of the lower sash will overlap the bottom of the upper one, and between the two bars perpendicular currents of air, not felt as draught, will enter and leave the room.

WHY EARS SHOULD NOT BE BOXED.

In "Physiology for Practical Use" (D. Appleton & Co.) we find the following: There are several things very commonly done which are extremely injurious to the ear, and ought to be carefully avoided. And first, children's ears ought never to be boxed. We have seen that the passage of the ear is closed by a thin membrane, especially that adapted to be influenced by every impulse of the air, and with nothing but the air to support it internally. What, then, can be more likely to injure this membrane than a sudden and forcible compression of the air in front of it? If any one designed to break or overstretch the membrane, he could devise no more efficient means than to bring the hand suddenly and forcibly down upon the passage of the ear, thus driving the air violently before it, with no possibility for escape but by the membrane giving way. Many children are made deaf by boxes on the ear in this way.

KNOCKING AT THE DOOR.

There are five young ladies tapping at the door of Columbia College of this city for admittance. The College was founded, according to the charter, "for the education of youth," and they claim to come under that head. One of these young ladies desires to enter the medical department, the other four the classical. While they are listening for the word to come from the inside officials, they are making studious preparations for their entrance. This is one of the nine ancient colleges of America, and has grown extremely rich from the enormous rise of property in New York city for the past hundred years.

WATCHING ONE'S SELF.

"When I was a boy," said an old man, "we had a schoolmaster who had an odd way of catching the idle boys. One day he called out to us, 'Boys, I must have a closer attention to your books. The first one that sees another idle I want you to inform me, and I will attend to the case.'

"'Ah!' thought I to myself, 'there is Joe Simmons that I don't like. I'll watch him, and if I see him look off his book, I'll tell. It was not long before I saw Joe look off his book, and immediately I informed the master.

"'Indeed!' said he, 'how did you know he was idle?'

"'I saw him,' said I.

"'You did? And were your eyes on your book when you saw him?'

"I was caught, and I never looked for idle boys again."

If we are sufficiently watchful over our own conduct, we shall have no time to find fault with the conduct of others. Time is short, and if your cross be heavy, remember you have not far to carry it.

Sunday-school Lessons on the Life of Christ.

LESSON I.

FEBRUARY 7, 1875.

THE CROSS FORETOLD.

MATT. xvi: 21–27.

21 From that time forth began Jesus to show unto his disciples, how that he must go unto Jerusalem, and suffer many things of the elders and chief priests and scribes, and be killed, and be raised again the third day.

22 Then Peter took him, and began to rebuke him, saying, Be it far from thee, Lord: this shall not be unto thee.

23 But he turned, and said unto Peter, Get thee behind me, Satan: thou art an offence unto me: for thou savorest not the things that be of God, but those that be of men.

24 Then said Jesus unto his disciples, If any *man* will come after me, let him deny himself and take up his cross and follow me.

25 For whosoever shall save his life shall lose it: and whosoever will lose his life for my sake shall find it.

26 For what is a man profited, if he shall gain the whole world, and lose his own soul? or what shall a man give in exchange for his soul?

27 For the Son of Man shall come in the glory of his Father with his angels; and then shall he reward every man according to his works.

Golden Text.—WHAT SHALL A MAN GIVE IN EXCHANGE FOR HIS SOUL?—Matt. xvi: 26.

Up to this time Jesus had taught the people that he was the Christ, and the faith of his immediate disciples had been so strengthened by his teachings and mighty works as to draw from them the acknowledgment through Peter: "Thou art the Christ, the Son of the living God." Jesus had before given them intimations of his coming trials and sorrows, hut they did not yet understand the whole truth in regard to him, for they still thought he was to be a great king on earth. Now that they are able to bear it because of their faith in him, he makes a clear statement of the events that are about to take place, and tells them plainly that he must die, and when and where he is to suffer. His terrible sufferings, even unto death, were clearly foreseen by him all the time; yet he willingly and joyfully endured them all because of the great love wherewith he loved us.

The disciples heard these words with great sorrow. Peter, with his usual haste, was the first to speak: "Far be it from thee, Lord: this shall not be unto thee." Peter loved his Lord, and could not bear to think that his foes should overcome him and put him to shame; but he ought not to have spoken thus, for Jesus knew what was before him, and that God's purposes must be carried out or the whole world would be lost. Now this man was ready to set up his own will against the will of God, and Jesus interrupted him with the same stern rebuke with which he met the tempter in the wilderness: "Get thee behind me, Satan." It was Satan that made Peter feel that he could not have the words of the Saviour come true. Should we not here learn from Christ—our example—that all counsel that would lead us from the path of known duty must be cast aside as evil—even though it come from the lips of our friends. Let no one, however much you love him, persuade you to do wrong. It is our highest duty to seek to know and follow God's will, not our own desires and feelings.

Jesus then goes on to show, that not only must *he* suffer, but that all who would be his followers must expect to suffer also in various ways. It was a custom in that country when a man was to be crucified that he must bear his own cross to the place where he was to die. Christ here teaches that if any man would come after him he must deny himself and take up his cross; that is, must be prepared, if needful, to endure hardship in his service—to say NO to self, to choose Christ in preference to worldly wealth or praise or pleasure, and to regard his approval as dearer than life itself. Let us ponder well the solemn questions of verse 26. If it were possible to gain even the whole world by shunning the cross, what real gain would there be if we lost our soul? for the world and the fashion of it soon passeth away, but the soul endureth forever. Is it not the part of true wisdom to deny self—take up a cross—lose all the world—risk life itself—so that when Christ shall come the second time in his glory, to reward every man according to his works, we may be prepared to receive him with joy, and enter upon the inheritance incorruptible, undefiled, and that fadeth not away, reserved in heaven for those only who are the loving and faithful subjects of his kingdom here below?

LESSON II.

Feb. 14, 1875.

THE TRANSFIGURATION.

MATT. xvii. 1–8.

1 After six days Jesus taketh Peter, James, and John his brother, and bringeth them up into a high mountain apart,

2 And was transfigured before them: and his face did shine as the sun, and his raiment was white as the light.

3 And, behold, there appeared unto them Moses and Elias talking with him.

4 Then answered Peter, and said unto Jesus, Lord, it is good for us to be here: if thou wilt, let us make here three tabernacles; one for thee, and one for Moses, and one for Elias.

5 While he yet spake, behold, a bright cloud overshadowed them: and, behold, a voice out of the cloud, which said, This is my beloved Son, in whom I am well pleased; hear ye him.

6 And when the disciples heard *it*, they fell on their face, and were sore afraid.

7 And Jesus came and touched them, and said, Arise, and be not afraid.

8 And when they had lifted up their eyes, they saw no man, save Jesus only.

Golden Text.—THIS IS MY BELOVED SON, IN WHOM I AM WELL PLEASED; HEAR YE HIM.—Matt. 17: 5.

It was six days after the announcement of his coming death that Jesus went up into a mountain to pray (Luke ix: 28), as he was in the habit of doing, and took three of his disciples with him. As Jesus prayed he was transfigured before them. His face grew like the sun and his clothes like robes of glory. With the dark prospect of suffering immediately before him, this moment's return of glory which he had laid aside was fitted to strengthen him for the trying scenes that awaited him, as well as to reassure the disheartened disciples. They had seen his trials and sufferings; now they got a glimpse of the glory to follow. He had hitherto appeared to them as the Son of man, sorrow stricken and afflicted; now he stands before them as the Son of God attended by the noblest of earth who had entered heaven. Moses, whom God buried, and Elijah who went to heaven without dying, came and talked with him. We read that they talked with Jesus about his death which was soon to take place (Luke 9: 33).

This is the sweetest truth that saints in glory can speak of; for if Christ had not died they never could have reached the heavenly Jerusalem, where they sing the new song, "Worthy is the Lamb that was slain." God, the Father, saved Moses and Elijah because Christ was to die. Peter felt it so good to be there—so much better than the suffering at Jerusalem which Christ had foretold—that he wished to stay. He thought he would like to spend all the rest of his life in such a blessed spot, with such holy company. But he knew not what he said (Luke ix: 30). No, Christ know better than Peter what was good for him, as he knows what is good for us far better than we ourselves. Christ knew that it was absolutely needful that he should descend from the mount of glory into the valley of humiliation, and become obedient even unto the death of the cross that they and a lost world might have redemption through his blood; for "without shedding of blood is no remission."

While Peter was saying what he would like, a bright cloud overshadowed them; and to add to Christ's glory, a voice—none other than the voice of God—spake out of the cloud, "This is my beloved Son; hear ye him." Do you remember when these words had been spoken before? (Matt. iii: 16, 17). As God's beloved Son, Jesus was far greater than Moses or Elias, for this was He of whom Moses and the prophets did write. They were henceforth to hear Him and Him only—who is himself the Way, the Truth and the Life.

When the disciples heard God's voice they were sore afraid. They knew they were weak and sinful men; and to feel God near always fills a sinful man with awe. No wonder they feared when they realized they were in the presence of the pure and holy God. But Jesus came and kindly touched them; and what comfort and courage his cheering words, "Arise, and be not afraid," must have brought to them. Looking up, "they saw no man save Jesus only"—their well-known and best-loved friend. The Father's word to us as well as to the early disciples is "Hear ye Him." This is God's command to all men, which makes it our bounden duty, as it is also our highest privilege, to hear and obey Jesus. "To hear him" is to earnestly study his Word, learn his will, follow his example, love him and serve him here; and then we may look for his coming to take us to he with him where "our bodies will be fashioned like unto *his* glorious body."

LESSON III.

Feb. 21, 1875.

JESUS AND THE CHILDREN.

MATT. xix: 13–15.

13 Then were there brought unto him little children that he should put *his* hands on them, and pray: and his disciples rebuked them.

14 But Jesus said, Suffer little children, and forbid them not, to come unto me; for of such is the kingdom of heaven.

15 And he laid *his* hands on them, and departed thence.

Golden Text.—I LOVE THEM THAT LOVE ME; AND THOSE THAT SEEK ME EARLY SHALL FIND ME.—Prov. viii: 17.

After the transfiguration, Jesus went back to Capernaum, his own city, and dwelt there for a time, still teaching the people and preparing his disciples for the sad future before them. Then he set out on his last journey to Jerusalem. It was on this journey, when he had come "into the coasts of Judea beyond Jordan" that they brought unto him young children that he might bless them. That Jesus, that good and holy man, should lay his hands on their little ones and bless them, was all the thought of these eager parents as they endeavored to bring those evidently too young to come of their own accord into his presence. Here is an example for the friends of children in all time. *Bring them to Jesus.* Christ's disciples considered the coming up of these children a great interruption. They thought Jesus ought not to be troubled with little children—that they were of no consequence in comparison with the grown-up people to whom he was talking; and they tried to turn them away. But Jesus was "much displeased" (Mark x: 14) and called them unto him (Luke xviii: 16). We can hardly be sorry that the disciples acted so, because of the words which they drew forth from the loving Saviour. Jesus gave these parents their desire and more, far more; for in blessing that little company of children, he blessed all the children of the world. "Suffer them to come to me" was spoken not to them alone, but long as time shall last, the sweet music of those words is for every home, for every little one, in every land.

Forbid them not. From that time none might say to the youngest, simplest child, "You cannot," or "You must not come to Jesus; you are too young, too thoughtless, too sinful." No, we are certain now. The Friend of children is his name; none shall dare to drive the little ones from his feet. For of such is the kingdom of heaven. Of just such children as these; that is, all children who come to Jesus, God's kingdom on earth is in part made up; for God has a kingdom in this world as well as in the world to come. Within it are gathered all who belong to him, however young or old. The boy or girl who loves the right and shuns the wrong for Christ's sake; who is growing up hating sin, striving to be like Jesus, and seeking forgiveness and help through him who died for them, are happy members of that kingdom. Many dear children, we are glad to believe, belong to this company. Christ, unseen, has laid his hands upon them and blessed them. And this is but the beginning of their joy. The kingdom though here, is not *all* here. Heaven is beyond the grave, where many a dear child lies sleeping cold and still. "In that beautiful home he has gone to prepare" are gathered many little ones called from earth in Life's morning; "for of such is the kingdom of heaven."

There is another and deeper lesson, too, to be learned from these words of Christ; that is, that all who would enter the kingdom must become *like* little children: "Whosoever shall not receive the kingdom of God as a little child, shall in no wise enter therein." This is a word for all—the wise, the great, the learned just as truly as the child at its mother's knee. All must become as children. But how can this be? We cannot all become young again. No; but God means that we must have the spirit and disposition of little children. Now a little child loves and trusts its parents more than anybody else, and is ready and glad to obey whatever it is told to do. This is the way every one ought to be toward God. He is our Father in Heaven. He calls us to give ourselves up to him with entire trust, to believe his word, to trust his care, to obey his will, to put away all proud thoughts of our own strength and goodness, and come to his dear Son as our only Saviour.

Doubtless, many dear children, as they have listened to this beautiful narrative—telling them how Christ received the little ones who were brought to him when he was on the earth, have been ready to say in the words of one of our Sahhath-school songs,—

"How I wish that his hands had been placed on my head,
That his arms had been thrown around me;
And that I might have seen his kind looks when he said
'Let the little ones come unto me.'"

We may well look back with longing to that happy time, for we all could wish—had it been possible—to have known Jesus here on earth. But though we cannot see his form or hear his voice; yet he is truly and always near. Now that he has gone to heaven he is the same all-loving, all-forgiving, Saviour. "Lo, I am with you alway," were his last cheering words to his friends. We may always ask him to do for us the things that we need, with the sweet assurance that he hears us, is ever ready to help us in our little as well as great difficulties, to cheer us in our troubles, to make us like himself who was once a child, and who himself left us an example that we should follow in his steps.

LESSON IV.

Feb. 28, 1875.

THE RICH YOUNG MAN.

MATT. xix: 16–23.

16 And, behold, one came and said unto him, Good Master, what good thing shall I do, that I may have eternal life?

17 And he said unto him, Why callest thou me good? *there is* none good but one, *that is*, God: but if thou wilt enter into life, keep the commandments.

18 He saith unto him, Which? Jesus said, Thou shalt do no murder, Thou shalt not commit adultery, Thou shalt not steal, Thou shalt not bear false witness,

19 Honor thy father and *thy* mother: and thou shalt love thy neighbor as thyself.

20 The young man said unto him, All these things have I kept from my youth up: what lack I yet?

21 Jesus said unto him, If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come *and* follow me.

22 But when the young man heard that saying, he went away sorrowful; for he had great possessions.

Golden Text.—WHERE YOUR TREASURE IS, THERE WILL YOUR HEART BE ALSO.—Luke xii: 34.

After the blessing of the little ones the next recorded incident of this journey is the coming to Jesus of the young man who was rich and had great power; for Luke tells us he was a "ruler." He came asking the most important question that ever comes into the thoughts of men: "Good Master, what shall I do to inherit eternal life?" Without doubt the question was proposed in all sincerity and with the honest intention to do what was needful—although the sequel shows that he was not equal to the self-denial that was required. He was so much in earnest in this matter that he came running to Jesus and kneeled to him, thus showing that he was not ashamed to confess publicly his interest in and respect for Christ. Why did Jesus reprove the young man for calling him "good"? Christ certainly did not mean to deny that he had a right to the title, but it was to show the young man his error in applying it to him while he regarded him simply as a man; for no merely human being has so perfectly kept the divine law as to deserve this appellation; and Christ would not receive it on any such ground. "There is none good but God; but if thou wilt enter life keep the commandments," Christ adds. The precepts of the old Jewish law are here referred to, especially the ten commandments given by Moses. This is the law of the unchangeable God, and is just as binding upon us as upon the Jews to whom it was first spoken. Jesus said this, doubtless, to try him and to convince him that he had, by no means, kept the commandments; and that in supposing he had, he had deceived himself. His confident reply proved that though he had been a strict observer of the outward form of the law he was ignorant of its true spirit. It was of great importance, therefore, to convince him that he was, after all, a sinner. Only by perfect obedience could eternal life be obtained on the ground of personal merit. Although self-righteous, this young man was evidently no hypocrite, for "Jesus, beholding him, loved him". (Mark x: 21). He possessed many lovely traits;—he was exemplary in conduct. "All these have I kept from my youth up"; he had done all he thought the law of God required; but he had no peace of mind—underneath all was a consciousness that something was wanting. Neither his wealth, nor his position, nor his morality satisfied him. He expressed his sense of need first by coming to Christ to obtain the inheritance of eternal life; second, by his question, "What lack I yet"? He would gladly believe that he was devoted to spiritual things; but the Saviour's answer led him better to understand his own true character. He declared that he had kept the law. That law required among other things that he should love his neighbor as himself. It required also that he should love the Lord, his God, supremely; that is, more than all other objects. If he had true love to God he would have made haste and delayed not to obey his word; if he had loved his neighbor as himself he would cheerfully have used his wealth for his benefit. Jesus did not apply any strange test to him. "If any man will be my disciple, let him deny himself, take up his cross, and follow me," is the general rule for all who would come to Christ. To part with his "great possessions" was *the* cross for this young man. He saw by this test that he had not kept the law as he before supposed; that he loved his riches and pleasures more than he loved God and his fellow-men. Many, like the young man, think they are willing to do anything that God requires of them in order to secure the heavenly inheritance; yet when they are told to forsake all and give up a cherished idol, they refuse. Turning his back upon Christ and refusing to take up his cross, did not make him happy: "He went away sorrowful." Lacking this "one thing" he lacked everything: for sincere love to God—a love that holds all things as from Him and is ready at his call to use all that he has given as he may direct—is "the one thing needful."

"Love is the fulfilling of the law." It makes every duty easy, every burden light. If we truly and heartily love our Father in Heaven the law does not trouble us; for that very love prompts us to "keep his commandments" and to find our greatest happiness in doing "the things that are pleasing in his sight."

This one interview with Christ is all we are told of the history of this young man. The last we see of him he is turning away from Christ, and so by that act choosing "treasures on earth" before "treasures in heaven." Christ had wisely led him to see for himself what he lacked, and with a saddened countenance he turned away; for he really desired eternal life, but could not consent to the required sacrifice. May none of us repeat the wretched choice!

"The consecrated cross I'll bear
Till death shall set me free;
And then go home my crown to wear,
For there's a crown for me."

Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IV. HAMPTON, VA., MARCH, 1875. NO. 3.

GOOD-NIGHT.

In connection with the beautiful illustration of the evening hour which we offer this month to our readers, we publish the still more beautiful little poem in which Longfellow, our famous American poet, has given us so charming a picture of "Good-night," and the merry hour which often precedes the going to bed of the children. In the family life of parents and children there is, or ought to be, no time when they are drawn nearer to each other, or when the intercourse between them, after the day's labor is finished, is pleasanter or more helpful. Those parents who are wise and loving enough to neglect no opportunity to win the complete confidence of their children, find that this evening hour may profitably be devoted to hearing the children's account of their doings through the day, and to giving them the assistance, which, if properly given, is of such life-long value. To make your children feel that you are their best friend, that you above all others are the one to whom they should come for help and encouragement, that from you they should hide nothing, and that if they fall into error or sin, your love and experience is their best reliance, is true wisdom, and is the only permanent foundation for affection between parents and children. And while the intercourse between the older members of a family should be based upon mutual confidence and love, even the very little children, can be made to feel the guidance and authority of their parents, and very early in their lives can be trained into habits which in reality are the foundations for their future education.

Our picture suggests one of these habits of which it is almost impossible to estimate the value; and to the mothers among our readers we would especially say: "Form in your little children the habit of nightly prayer." The little child who, with its mother's arm about it, says every night its little simple prayer, is unconsciously building a bulwark which in later life may keep out many a mortal enemy, and save from many a deadly assault. When your little children say, "Good-night," teach them to say, too, "Our Father;" and their lesson which they learn from you of human love, may lead them to a clearer knowledge of the Source from which that love springs.

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, RICHARD TOLMAN, } *Editors.*
J. F. B. MARSHALL, *Business Manager.*

THE terms of this paper are not changed; it is sent postpaid for one dollar a year. We hope, however, that our friends who can afford it will send ten cents extra for postage. Will not those who think the SOUTHERN WORKMAN worth encouraging kindly renew their subscriptions, and get their friends to take it? One great object accomplished by its publication is, that it affords to ten students at the Hampton Institute an opportunity to learn the printing trade. While the SOUTHERN WORKMAN will be sent postpaid for one dollar, we hope those who can afford it will send ten cents extra for postage.

Terms: ONE DOLLAR a year IN ADVANCE.

AGENTS WANTED.

Liberal Terms offered.

Specimen copies sent upon application.
To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

Southern Workman.

HAMPTON, MARCH, 1875.

A MISFORTUNE resulting from the late civil war is, that the feeling of Southern communities is peculiarly liable to be misconstrued. The newcomer from the North expects to be met half way in his overtures of friendship. Disappointed in this, he naturally attributes to hatred, that distant demeanor which results mainly from an entire difference of early training and habits of life. Misconception deepens into bitterness, fancied hate is repaid by real contempt; until in some cases, the longer a northern man lives in the South, the less capable does he become of giving a true picture of southern sentiment.

Much as we regret the impossibility in the South, that the principal of judging men or ideas on their merits should at once take root, and expel the traditions of a most uncompromising aristocracy, yet we cannot but think there is a touch of absurdity in the attitude of many northern men upon the subject. It were surely as wise to reproach nature for sending no rain, as to be angry at the indifference of southerners. The only possible remedy is to make the best of the facts, and go to work to irrigate the South with a stream of emigrants.

On the bleak solitudes of the prairies the settler lives without society. West of the Mississipi he carries a pistol and a bowie-knife. Farther on he braves the acquaintance of neighbors who value his scalp more than his life. The same courageous enterprise if diverted southward would find nothing but shadows to encounter. Men and money would sweep away the bugbears of uncongeniality and social ostracism, and lift the South to its proper rank as the most favored region of the Union. Under these circumstances no well-wisher of the South can afford to nurse jealousies. By suppressing the light tints and deepening the shadows in their reports, northern residents may hold back the development of the South for twenty years to come. The impression may continue that southern feeling is really as formidable to the settler as are the pistols and scalping knives of the West. Lands whose produce brings twenty cents per bushel, may still be preferred to those whose vicinity to market gives them intrinsic value. Prejudice may remain, sectionalism again run riot, another generation may not see a real concord;—mainly because northern residents have answered indifference with folly, neglect with contempt, and have foolishly expected cordial, social relations with a brave, proud, intelligent, but ruined aristocracy whom they have impoverished and humiliated by conquest and irritated by a policy of reconstruction antagonistic to the most cherished traditions and theories of the South.

GENUINE progress is quiet; real forces act without bluster. There is, especially in the Southern States, a social and political tumult and business prostration, that is likely to lead many to think that the South will not soon see better days, and that the black ward's future is enshrouded in hopeless gloom.

But certain facts foreshadow a different destiny. Not only are the Southern States entering year by year more earnestly into the educational and reformatory work, but there are powerful moral forces acting upon the very root of southern evils which the papers do not herald, and which no one but the close and interested observer makes account of.

There are various benevolent societies doing a wide and useful work whose statistics are not within our reach. The last report of the American Missionary Association states that that organization alone had under special instruction ten thousand colored youths, many of whom are in higher schools, and that seven hundred and ten of former pupils are this year teaching sixty-four thousand pupils. This work is like good seed sown by faithful laborers. There will by and by be a rich harvest.

The columns of black children who are preparing to enter into the kingdoms of manhood and womanhood are steadily advancing unnoticed in the turmoils of the day. The real progress of any race is measured by the steps its youths are taking. To those who are impatient of the negro's blunders and of his incompetence for some of the positions he may wish to fill, we say "Put yourself in his place and what would you be good for? Generations of culture may have done much for you; give these people as good a chance and you may condemn them if they fail. It is folly to pronounce upon them without fair trial."

THE Hampton Student-singers have commenced a singing campaign to raise $25,000 for the erection of a boys' dormitory at the Hampton Institute. They expect to sing in and about New York City for two or three weeks, and to proceed thence up the Hudson River and westward, taking the principal cities in N. Y. State. If reduced rates of travel can be obtained they hope to visit California and spend April and May in that State, singing in Salt Lake City, Denver, and other places on their return. The company has been reorganized with great care. It is composed of ten members and includes the remarkable bass and soprano voices that have given it such celebrity. They hope to be present at Commencement on June 10th.

OUR stock of paper gave out just before the late cold snap, and we were prevented by the ice from receiving a new lot as early as we expected. This is our excuse for being late this month, and we know that our patrons will accept it.

VISIT OF THE COMMITTEE ON SCHOOLS AND COLLEGES.

Shortly after the present session of the Virginia Assembly began, General Armstrong invited the two Committees on Schools and Colleges of both branches, to visit Hampton and acquaint themselves by n personal examination, with the methods and system of the Normal School. The invitation was accepted and a party of twenty, including six ladies, left Richmond, February 16th, on this excursion. The Old Dominion Steamship Company very courteously offered the party a passage to Norfolk from Richmond, and all speak in high praise of the unremitting attentions of Captain Walker and officers of the *Old Dominion*.

The Steamers of the Baltimore Steam Packet Company being embargoed by the ice, Commodore Stevens, commandant of Portsmouth Navy Yard, very kindly put his despatch boat at the service of the school to convey the committee to and from Hampton, where they arrived about 10 A. M. The morning was spent in visiting the different class-rooms and listening to the recitations of the students, at the close of which the school was assembled in the Assembly-room, where they sang some of their Plantation Songs; after which they were addressed by Colonel Magruder, chairman, Doctor McRae, and other members of the committee. The speakers expressed their satisfaction with what they had seen, with the progress and the bearing of the students, and assured them that the sentiment of Virginians was strongly in favor of the education and improvement of the colored race. The school was then dismissed to dinner, and after an inspection of the buildings, dinner was served to the guests in the teacher's dining room in Virginia Hall. After dinner the company enjoyed a sail to Old Point and a ramble over Fortress Monroe. A visit to the Soldier's Home was given up for want of time. After tea all attended the concert of instrumental music by the excellent Band of the Artillery School in the chapel of Virginia Hall, for which rare musical treat the school is greatly indebted to the kindness of General Barry. During the intermission the Hampton Students gave a few of their favorite songs which added to the interest of the occasion. After the concert was over the party embarked in the *Quakeress* for the Navy Yard steamer which was waiting to take them over to Norfolk; but the sail-boat having run aground and the wind being too fresh for her to be got off with her heavy load, the guests returned in boats to the landing, and were taken in carriages to Old Point where they embarked on board the steamer and safely reached Norfolk. By the following extract from a very pleasant note from the chairman of the committee, we have the satisfaction of knowing that the party returned to Richmond in safety, and that the whole excursion was one of satisfaction and pleasure:

"*Feb. 18th.* We reached here to-day as per programme all in fine plight and condition, and I write by request of *each one* and *all* to express their sense of the pleasure and gratification enjoyed by the party without exception, far exceeding that of any other excursion ever taken by them. Everything from the start to the arrival at the cottage, their excursions about the place, their examination of the buildings, the methods of instruction, the recitations and deportment of the pupils, and the kind and graceful attentions of each and all, have left their most agreeable imprint on our memories and hearts. The Grand Concert, instrumental and vocal, cannot be forgotten. All was right at Norfolk, and a better satisfied party never took the cars at Norfolk or arrived at Richmond in more cheery mood and spirits."

For the success of this pleasant excursion, which was as gratifying to those connected with the school, as it appears to have been to the members of the committee, we are largely indebted to the kindness and courtesies of the Old Dominion Steamship Company, to Captain Walker and officers of the steamer *Old Dominion*, to Commodore Stevens of the Portsmouth Navy Yard, to General Barry for the concert given by the Band of the Artillery School under his command (which was such a very pleasant finale to the day's entertainment), and to Governor Woodfin of the National Soldier's Home, who kindly offered the use of his vehicles and boats for the occasion.

We believe that this visit will be mutually advantageous to the school and its guests. Laboring as we are in a cause, the success of which we believe will promote the best interests, not of Virginia alone, but of all the Southern States, we welcome the visits of any of her citizens who may feel interested in our work and in the system and methods here adopted.

THE "WHITIN MEMORIAL" CHAPEL.

As the readers of the SOUTHERN WORKMAN are aware, the Normal School, for the last six months has been laboring under a heavy burden of debt incurred in building Virginia Hall. The old barracks, besides being insufficient for the number of female students, were hardly habitable for another term without expensive repairs, which the buildings were not worth. We had therefore the alternative of closing the school to girls for the present term, or of going on with the work on the new building at the risk of incurring a large debt. In the hope that the donations of our friends and the concerts of the Hampton Students would furnish the funds needed, it was decided to push the work on the building so as to have it ready for occupancy at the beginning of the term. But times were hard, money was scarce, contributions fell off, and the Singers hardly paid their heavy traveling expenses. October 1st. found the building in a sufficient state of forwardness for occupation, but loaded with a heavy debt of $25,000, which there seemed no prospect of our being able to meet. The wages of our mechanics and laborers were in arrears, and the bills of dealers were unpaid, and though they were not clamorous for the money, they were greatly in need of all that was due. At this juncture, a lady who had only heard of the school and its needs through her pastor, who was a guest at our last Commencement, offered $5,000 on condition that the remaining $20,000 should be raised within a year from other sources. This seemed a forlorn hope, as our friends had already responded so generously that we were reluctant to make another appeal to them. However, the same benefactors who last year made a donation of $10,000, that the roof might be finished, again came to the rescue and pledged $5,000 more toward the new sum to be raised; and by dint of much effort as much more was secured from other sources, so that by the last of January we had raised $10,000, or one half the amount needed to secure the $5,000 conditionally promised, and cancel the debt. Knowing how hard it generally is to raise the last few thousand required for any given purpose, we hardly knew which way to turn for the large sum still needed, when on the 23rd of January we learned from our faithful financial secretary, Rev. T. K. Fessenden, that Mr. John C. Whitin of Whitinsville, Mass., had

donated to the school $10,000 (the estimated cost of the chapel in Virginia Hall) for the purpose of founding it as a memorial of his deceased wife. This noble gift has therefore completed the sum required to be raised, cancelled the debt, and lifted a burden pressing heavily on our shoulders. The chapel will take the name of the "Whitin Memorial Chapel."

RECENT DISCOVERIES IN THE GREAT PYRAMID.

On Friday evening, Feb. 12th, Rev. Dr. Armstrong, of Norfolk, delivered a most instructive and interesting lecture in the Chapel of Virginia Hall, on the recent and wonderful discoveries of the eminent astronomer, Piazzi Smith and others, in the great Pyramid, which has thrown great light on the question of its origin and object and the date of its erection. We regret that want of space will not permit us to give the whole of this lecture to the readers of the Southern Workman. The Normal School and the citizens of Hampton and vicinity who had the privilege of listening to the lecture are under many obligations to Dr. Armstrong for the gratification thus afforded them.

THE majority of the colored race at the North do not appear to thrive. We cannot say whether this is due to being distanced in the race for wealth and knowledge by a more thrifty, energetic people, or to simple indolence and neglect of their chances.

A clergyman residing in a small town in western Massachusetts writes as follows of this class in his vicinity;

"I have a nice colored boy working for me who ought to make somebody in the world. He is a native of our town—and the darkeys are mostly worthless! There are one hundred and sixty in town, and but two do anything but laze round, do odd jobs and beg. My boy, Dolph, has some ambition and some mind, and it seems to me that away from the influence of his 'folks' might come to something. Under what circumstances or conditions could you take him and put more manliness into him? It is my wife's idea that he would do much better away from home —and he is very ready to go."

Whatever future there is for the colored race is to be at the South. Here they will show to the world the possibilities of their race. Nothing is of more importance to the welfare of the whole country than to gain over to the side of thrift, industry and good morals these five million Anglo-Africans, and not only are they entitled to the fullest, fairest chance, but it is essential to the national salvation that the utmost efforts be put forth for their reconstruction.

The duty of the hour is to make these efforts. We are not responsible for success, but there is a tremendous responsibility upon the country to give them the ground, standing upon which, they can work out their own salvation.

THE Rev. G. D. Pike of the American Missionary Association, who has recently spent some months in Northern Africa in searching for a good stand-point for an educational and religious lever that shall bear most effectually upon the millions in that land, writes us as follows:

"I find my lecture on 'Stone Hunting Grounds of Tropical Africa' takes hold and especially that part of it that relates to the establishment of schools like yours in that land. I tell the people I want a half million dollars to enable us to have a colony from Hampton established in Africa. I feel much in earnest about it. It is the thing to be done and I believe God will open the way for it. I still am convinced that the first school better be north of the desert on the Nile and that the students may as well be freedmen from the heart of Africa—which students can be obtained in abundance at Khartoum. There students could be moulded and controlled, I judge, quite as well as any heathen."

When Mr. Pike's plans are ripe the colony from Hampton will not fail him. This institution is settled as the type of the coming African University because of its manual labor features, which make it a civilizing, as well as educational power.

Mr. Pike has previously stated to us the growing conviction among eastern missionaries where he visited, that the great need in reforming the Oriental races was practical training schools where both hand and head are taught, as here, and where graduates should be drilled in the lessons of real life and confirmed in the whole range of civilized habits.

GERRIT SMITH.

The following extracts from letters of this eminent philanthropist were inadvertently omitted from our last issue. They will be read with interest:

"PETERBORO, *Jan.*, 25, 1874.

"I thank you for so warmly inviting me to be with you the 11th. of June next. Possibly, but not very probably, I will be. I am an old man (nearly seventy-seven) and my health is of late much broken. I should indeed be glad to meet Governor Kemper and other southern gentlemen at Hampton. I love not the North only, but the South also.

"I beg you to keep me informed of the condition, prospects and needs of your important and precious school."

December 10, 1874.

"Your last letter spoke of your school's great need of money, and so does the last number of the *American Missionary*. I send you all I can; viz., my draft for $2,000.

"I continue to do all I can for the leading Colored schools of the South—for in my judgment, on their success depends largely the salvation of our country.

"Let me hear from you how the school is getting on—how many pupils you have, how much you owe, etc., etc.

"I feel grateful to Virginia for her liberality to your school; and it does not surprise me that Rev. Dr. Ruffner opposes so strenuously the blending of the races in schools.

"With great regard

"Your friend,

"GERRIT SMITH."

THE following account is prepared by a southern gentleman residing in Hampton, and a native of this county, who is preparing for our next number an account of the burning of Hampton, one of the saddest and most striking events of that period of the war. These will probably be followed by other articles from those well qualified to write them, upon the leading historical events that have transpired on this remarkable spot and on this vicinity, not only in the late war, but in previous times.

It is felt that no animosity or any sort of ill feeling can result from this course, at this time, and that it is important that these materials should be collected and preserved for the future historian.

THE BATTLE OF BETHEL.

BY CAPT. S. W. ARMISTEAD.

It is not my purpose to enter into any explanation or defence of the motives of either party engaged in that memorable encounter. So far as is possible to human frailty, I shall divest myself of all sectional feeling and confine this paper to a short and simple statement of this first action of the war, mentioning distances, numbers and names only so far as is necessary to give a correct idea of the action.

Bethel Church, from which the battle takes its name, is nine miles from Hampton and twelve from Fort Monroe, and is situated in the lower part of York County, and just beyond the narrow stream which divides it from Elizabeth City County.

Col. I. B. Magruder had been assigned to the command of the Confederate forces on the Peninsula, with headquarters at Yorktown. With characteristic energy he at once set himself to the task of throwing up such works as would enable him successfully to defend himself in the event of an attack. The peculiar advantages which the situation around Bethel afforded for a small force acting on the defensive at once determined him to fortify it as best he could with the limited means at his command, and then to deliver battle should an advance be made upon it.

Gen. B. F. Butler, then commanding at Fort Monroe, learning that Magruder had but a small force at his command, determined to attack him there, and for that purpose ordered detachments from New Ports News and Fort Monroe—in all about five thousand men and under the command of Gen. G. W. Pierce of Massachusetts, to advance upon him on the morning of the 10th of June, 1861. The troops under General Pierce's command consisted of Col. Henry B. Duryea's Zouaves, Col. F. Townsend's Third New York infantry, Colonel Phelps with a Vermont regiment, and Bendix' New York regiment.

It is necessary to state that just below Bethel the main county road forks, one branch known as the Back River Road, running eastwardly; and the other known as the Sawyer Swamp or New Market Road, continuing southwardly, both reuniting in the outskirts of Hampton. The Federal troops started from their respective places of encampment at three o'clock A. M., and proceeded without opposition or accident until reaching New Market, when a well-nigh fatal mistake occurred. Here a collision ensued between Colonel Bendix' and Colonel Townsend's battalions, both reaching the point where the New Ports News road enters the New Market road at the same time, and each in the darkness supposing the other to be the enemy. A furious but not very destructive fire at once ensued, which was soon checked by the coolness and courage of the Major of the Fourth Massachusetts regiment, who boldly rode to the front and discovered that they were firing on friends. Two men were killed and ten wounded.

As soon as order could be restored the two bodies were set in motion and continued their march without interruption until within range of the Confederate batteries at Bethel. The affair at New Market was disastrous in this also, that it alarmed the citizens who hastened to give Magruder information of their approach. The officer had at Bethel the First North Carolina Regiment, four companies from the Fifteenth Virginia, Colonel Montague's battalions, the Wythe Rifles (Captain Willis), four guns from the Richmond Howitzers and two companies of cavalry, —in all not exceeding eighteen hundred men. With this small force it was a question of no small difficulty as to how he should meet the attack in front and yet spare sufficient men to guard his flanks. Fortunately for the cause which he represented his position was an admirable one for defense. A narrow stream, bordered on each side by a wet, boggy marsh, extended along his entire front. This marsh was covered with a dense growth of lowland shrubs. These, with the exception of a narrow strip in front of his rude embankments had been cut down to give an open view in front, and also to obstruct the passage of the enemy. One piece of artillery and a small force of infantry was sent to the extreme left and stationed at what was known as the old millddam, just in rear of Semple's farm, to guard against a flank movement from that quarter. Colonel Hill's regiment was stationed on both sides the county road, and occupied nearly the entire line of breastworks. Colonel Stewart's battalion was placed in a small redoubt on the right and beyond the stream and marsh. Captain Willis's company was broken into platoons and stationed at different points on the extreme right; two pieces of the Howitzers were placed one on each side of the road, and the other piece and both companies of cavalry were held in reserve. Orders were immediately sent to Yorktown for reinforcements, and the Second Louisiana Regiment under Colonel De-Russey, put in motion for the scene of action. This regiment made the unusual time of twelve miles in three hours, but arrived there too late to take part in the action. The Federal column hove in sight between eight and nine o'clock A. M., and the battle was immediately opened with artillery. As soon as General Pierce could make the necessary disposition of his troops they were advanced to the charge. Shall I tell of the desperate charge and valiant defense; the fruitless effort to carry the works and the successful efforts to hold them? No; let us not go into heroics. The historic muse ought to be sober, calm, dispassionate. Suffice to say that three separate charges were repulsed and the Confederates still held their ground. Convinced that the position could not be carried with the force under his command, General Pierce called off his troops and ordered a retreat, while General Magruder, well satisfied with his successful defense and fearing his ability to cope with the enemy on even terms, contented himself by sending a small force of cavalry to watch their movements, while his little command—which it would be a sarcasm to call an army—was conducted back to Yorktown.

On the Confederate side there was only one man killed and fifteen wounded; while on the Federal side there were thirty killed and one hundred wounded. Among the former were Colonel Winthrop of the New York Regiment, Lieutenant Grehle of the U. S. A. The great disparity in the casualties of the opposing forces may be accounted for chiefly from the fact that the Confederates were protected by breastworks and were perfectly at rest, and also from the fact that the Federals being for the most part unaccustomed to fire-arms directed their aim much too high—some of their shot going over to the tops of the tallest trees.

A few of the wounded and dead fell into the hands of the Confederates, but beyond that they reaped none of the spoils of victory. True the South was elated; but the North while it was disappointed, was not discouraged and took wholesome heed of the lessons which the action had taught. Thus ended the battle of Bethel; a barren victory on one side, an annoying repulse on the other; and no more.

Well would it have been for both sections if the fratricidal strife, which for four years deluged the land in blood, could have been ended here. But the dogs of war had been let loose and they clamored for human gore. On that balmy day in June, when heaven seemed to smile and earth rejoice, a pall blacker than Egyptian darkness settled upon a land which claimed to be the happiest on the globe.

SATURDAY morning was the coldest of the season in northern New York and the New England States. At Manchester, Concord, Franklin and other places in New Hampshire the thermometer marked 20 to 35 degrees below zero; at Glen's Falls and Whitehall, N. Y., it was 32 to 37 below, and at Warrensburg, N. Y., 41 below. In Maine, the marking in that part of the State between Portland and White River Junction ranged from 32 to 40 degrees below zero, while at Bangor the mercury congealed. Travel on some of the railroads was delayed by heavy snow, and all outdoor work was stopped by the intense cold. A Boston dispatch of last night reports a continuance of Polar weather, the range of the thermometer in Maine and New Hampshire being from 20 to 25 below zero. It was "generally the coldest day of the season," and many of the harbors along the coast were closed.—*Philadelphia Ledger, Feb.* 15.

A COSTLY VICE.—The Chief of the Statistical Bureau at Washington in 1871, states that the valuation of the annual whiskey product is $375,000,000; of fermented liquors $126,000,000, of imported liquors $100,000,000, and of the annual sales of the 150,000 licensed liquor stores in the country about $700,000,000. Enough to pay off our national debt in about three years. How is it that an intelligent people can sustain a traffic whose only results are waste, pauperism, wretchedness and misery temporal and eternal?

The three years are past; but the debt is not paid and the "intelligent people" still sustain the ruinous traffic.

THE CHILDREN'S HOUR.

Between the dark and the daylight,
When the night is beginning to lower,
Comes a pause in the day's occupations,
That is known as the Children's Hour.

I hear in the chamber above me
The patter of little feet,
The sound of a door that is opened,
And voices soft and sweet.

From my study I see the lamplight
Descending the broad hall stair,
Grave Alice, and laughing Allegra
And Edith with golden hair.

A whisper, and then a silence:
Yet I know by their merry eyes
They are plotting and planning together
To take me by surprise.

A sudden rush from the stairway,
A sudden raid from the hall!
By three doors left unguarded
They enter my castle wall!

They climb up into my turret
O'er the arms and back of my chair;
If I try to escape they surround me;
They seem to be everywhere.

They almost devour me with kisses,
Their arms about me entwine,
Till I think of the Bishop of Bingen
In his Mouse-Tower on the Rhine!

Do you think, O blue-eyed banditti,
Because you have scaled the wall,
Such an old moustache as I am,
Is not a match for you all?

I have you fast in my fortress,
And will not let you depart,
But put you down in the dungeon
In the round tower of my heart.

And there will I keep you forever,
Yes, forever and a day,
Till the walls shall crumble to ruin,
And moulder in dust away!

—*Longfellow.*

TO THE STUDENTS OF HAMPTON.

III.

FOR YOUNG WOMEN.

Taking the articles of your dress in their customary order, I shall first speak of the underclothing, which is of primary importance to your health and comfort.

Next the skin flannel should always be worn, heavy in winter, but in the summer as light as possible; and the reason for this is a sanitary one, for nothing so effectually protects the skin from the effect of cold in winter, and the danger of chills during the profuse perspiration of summer, as some woolen material, flannel being the best and cheapest.

These garments may be made in different ways, but should always come up to the throat, entirely covering the chest; should be made with sleeves to reach at least half way to the elbow (for the under part of the upper arm and the armpit are exceedingly sensitive parts of the body), and should come well down over the hips. Once a week these under jackets must be changed, for the excretions from the skin will thoroughly soil them in that time, although no stain or mark of dirt may be apparent to the eye. The chemise and drawers of cotton must also be changed at least once a week, and it is often desirable to change them more frequently, while with stockings (which should be woollen in winter and cotton in summer) the only safe rule is to change them whenever they are soiled.

The corsets, which are so dangerous a stumbling block in the path of young girls, are so universally worn that the harm which they do is a very serious matter; and I want you to whom I am writing these words, and who in years to come may be able to do much to influence other women, to give me your sober attention while I ask a question or two and offer you a few facts.

There can be no doubt, I am afraid, that many of you wear your gowns much too tight, and in order to do this use your stiff steel-boned corsets to obtain the small waists which you think pretty and elegant. Now let me tell you where lies your first mistake—nothing is pretty which is unnatural, and as you well know small waists are not natural to healthy well developed women. Your waist, if you would have a good and graceful figure, must be in proportion to your height and the breadth of your shoulders, and a waist of seventeen or eighteen inches upon a girl of average size, is simply a deformity. Your small waists are obtained then, at a sacrifice of the very grace for which you are seeking; and that is not the sum of your folly—do you realize when you pull in that fatal corset-lacing of yours, what suffering you are preparing for yourselves?

You are squeezing in your stomach so that it cannot digest food; you are compressing your lungs so that they cannot receive the air which is your life; you are stopping the action of your busy heart; you are doing a dozen things which may ruin your health for life, and which at any rate are giving you daily headaches and backaches, and very probably making you irritable and unhappy. This is surely a senseless and a wicked thing,—a thing which any honest, God-fearing woman ought to be ashamed to do; and I assure you, that you must consider it, not as a trifling question of dress, but as a matter of very great importance to you and to others. For God has given you, in most cases, healthy, well-formed bodies, and the responsibility of injuring them is an awful weight which must rest now and hereafter upon your own shoulders.

As to the directly practical side of the question I can perhaps make some suggestions which may be of use to you. A waist made of stout cotton cloth, firmly stitched and corded, cut low in the neck, with sleeveless armholes, will take the place of the corset in every respect, while in some particulars it is altogether preferable.

It can be made with a corset steel in front, (to be removed when it is washed), but should contain no other bones or steels. Your own back bone is your proper and all-sufficient support, and you are doing your spine and the wonderful nervous system so closely connected with it, no kindness, when you rely upon the artificial aid of whale bones to produce an erect figure. The weight of the skirts, which can be made to hutton on to the waist I am describing, is thus supported from the shoulder by the hand of the armhole; there is no drag upon the hips, no chance to tighten a lacing, no compression between stiff bones, and none of that awkward and unnatural inflexibility which comes from the wearing of corsets.

This matter is one which of course must be left to your own consciences, but once more I ask you to think of it seriously, and to remember that you can sin against your bodies as well as against your souls.

A complete change of clothing at night is imperative. You must have night-gowns neatly made of cotton cloth, and you must have a sufficient number of them to enable you to change at least once a week. On going to bed take off all the garments which you wear in the daytime, and put on your night-gown, which you must be careful to see is thoroughly aired every morning, in order that the impurities collected during the night may be so far as possible removed. For a similar reason the clothes which you take off at night should be thrown loosely upon a chair where the air may have free circulation among their folds,—and in this connection I may properly remind you of the importance of having your sleeping room thoroughly ventilated. Before going to bed you should always open one or more of the windows of your room, and this not only in summer but even more especially in winter (if you are in good health), as at that season house ventilation, for several reasons, is very imperfect and the danger from impure air particularly great.

I have spoken somewhat in detail in regard to your underclothing, and I have done so because it is not unusual, especially among people of limited means, to put all the expenditure of time and money upon the externals of dress, while the underclothing is allowed to take care of itself. Now if you have to choose between finery and cleanliness, between ribbons and a proper change of underclothing, do not for a moment hesitate, for nothing can be a truer type of the "whited sepulchre" of the Bible, than the man or woman whose external dress is showy and expensive while underneath are rags and uncleanliness. Make every exertion to supply yourselves first of all with suitable underclothing, and after that you may think about the fashion of your jackets and the trimming of your hats.

In regard to these same externals of dress, that is as to the style, material, etc., of your outer garments, it is very difficult, as you yourselves will understand, to give you any fixed rules, for in respect to these parts of our dress we are all of us at the mercy of a changing fashion. All that I can hope to do is to offer you some general ideas upon the subject, in the belief that your own intelligent observation and instincts of modesty and propriety will enable you gradually to learn for yourselves what are the characteristics of the dress of a true lady.

Correspondence.

From our London Correspondent.

ABINODON, ENGLAND, *September*, 1874.

To continue my account of our experiences in and about Paris, after our visit to the Louvre (Wednesday, August 12th), we went to see the famous cathedral of Notre Dame. So much has been written about this magnificent structure that I shall not attempt any elaborate description—fully aware how inadequate any description would be to do justice to it. I can only say it is far grander and more imposing than I had imagined it could be,—both within and without. Its richly carved and sculptured balconies and towers, the quaint and sometimes grotesque figures cut here and there in corners and in niches, the exquisite paintings and statuary, the beautiful windows—especially the two rose windows, each about fifty feet in diameter,—are all most wonderful and interesting; and one might linger for hours (if he only had the hours) in almost any part of it, without wearying, certainly without beginning to exhaust its wonders and beauties. I was of course attracted by the two organs—the large one at one end, looking in the distance as if it towered up among the clouds; and the lesser, though by no means a small one, in the choir. We went to the top of the towers, which are two hundred and seventeen feet high, whence we had a splendid view of this beautiful city, spread out like a map all around us. The Cathedral is four hundred feet long and one hundred and nine feet high; the new spire two hundred and ninety-eight feet. I give these figures that you may form some idea of its vast dimensions. We climbed even one peg higher than the towers and saw the great bell—a monster of iron captured at Sebastopol. I heard it a day or two after, and I never heard such a tone from a bell before—very rich, full and rather soft, but one of those tones which can be heard for miles.

Thursday morning we took an early start for the Bois de Boulogne (literally Boulogne Wood)—one of the handsome, ornamented suburbs of the city. Passing out by the Hotel des Invalides and across the Champ de Mars—a sandy and uninteresting place—we crossed the Seine by the Pont de Jena and walked straight on to the fortifications where we stayed sometime sitting on the ramparts and trying to figure out the positions of the forces in the late Franco-Prussian war. We gathered a few flowers here, to press as souvenirs of the place; then went on through the Bois to the lake, took a boat and rowed out to an island where open-air concerts are frequently given. It was a charming spot, and after exploring it pretty thoroughly and enjoying its various beauties—trees, flowers, fountains, etc.—we rowed around it and then returned to lunch in one of the inviting cafés which abound here, after which we strolled about the wood until we struck the broad way leading out to the Neuilly Road, which brought us to the Arc de Triomphe, up which we climbed and from its top had another most excellent view of the city—a more satisfactory one, on the whole, than that from Notre Dame. From this point the principal streets radiate like the spokes of a wheel, making a very beautiful figure to look down upon—very like a huge mosaic. To the east the eye follows the Champ Elysées, Place de la Concorde and Jardin des Tuileries to the ruins of the Tuileries Palace which is now being slowly rebuilt. The Place de la Concorde contains the Obelisk—a very fine granite shaft, surrounded by trees and fountains. Directly beyond the Palace of the Tuileries is the Arc d'Etoile, or smaller Arc de Triomphe, just within the quadrangle of the Louvre Palace. Behind the Louvre comes a miscellaneous mass of buildings; but from the Arc de Triomphe to the front of the Tuileries is one straight, unbroken line, beautiful to look at. Turning toward the west, the line continues perfectly straight as far as the eye can reach, up and down, and finally disappearing at the top of a distant hill. Looking either way the view is lovely; only on the east one sees the city, and on the west the country. Returning, we lingered awhile in the Tuileries Garden and also in the Champs Elysées (Elysian Fields)—both of which afford plenty of attractive and inviting places in which to sit and quietly enjoy the beautiful surroundings. The latter place is especially fascinating in the evening; thousands of brilliant lights, the great fountains playing, elegantly dressed people and fine music, make it altogether charming—and in the midst of it all one can have ice-cream, coffee, or almost anything served from the innumerable little tables interspersed everywhere.

One of the most interesting objects we visited was the tomb of Napoleon—a very beautiful piece of work in marbles of various colors. It is situated directly under the elegant dome of the Hotel des Invalides, which is in itself a wonderful study. The tomb is below the level of the main floor, in which is a large circular opening about twenty feet across, surrounded by a white marble balustrade. Looking over and down you see the tomb on the floor below; around it are female figures of heroic size, with dishevelled hair and in attitudes of mourning. There are perhaps a dozen of these, each backed by a marble column which supports the floor above. The tomb is surmounted by a red marble sarcophagus—the top of which is nearly on a level with the floor on which the spectator is standing. The floor of the tomb is beautifully laid in colored marbles and represents a many-rayed star with a laurel wreath extending from point to point, and near the center of the star are the names of the principal battles in which he was engaged. In the small chapels near the tombs are the tombs of other members of the Bonaparte family. The frescoing and decorating are not yet completed, though what there is has been done for a long time. Very near the tomb is a handsome altar of marble, and by an arrangement of colored windows has a golden light on it all the time—a most singular, and to me, not wholly unpleasant effect. The chapel is hung with the old battle flags and other valuable trophies.

We spent one delightful day at Versailles; the ride (by rail) is a most lovely one, though we passed through several towns and villages which were demoralized during the war, and have never entirely recovered themselves. We saw beautiful houses and gardens in ruins, and in some places nothing was left but the blackened walls with great gaps in them, made by the Prussian bombs. We kept Paris in sight for about five miles out, and it made a beautiful picture; the sun was shining, the towers and spires stood out in clearly defined profile against the sky—the gilded dome of Les Invalides conspicuous among them.

We reached Versailles about twelve o'clock, and walked slowly up from the tion to the park or grounds of the Grand Trianon Palace. Here we took a "voiture" (cab) and told the driver to take us all round the grounds and leave us at the Grand Trianon—which he did, explaining ing every place as we went along—the private gardens of Marie Antoinette, etc. The whole place is lovely; every few moments a viata would open through the trees, extending almost as far as one could see. We rode on the soft turf and under the shade of great trees—beautiful and grand with splendid fountains here and there, until we landed at the Palace. Here we were shown through the elegant reception rooms and private apartments of the Royal family. The paintings are exquisite, and every article of furniture or ornament in the perfect taste and judgment of real French art. Among other rooms we were shown the one prepared for and used by Queen Victoria on her visit to France several years ago. It exceeded in magnificence anything of its kind I had ever imagined. The bedstead, on a raised platform, was elegantly carved and gilded; the canopy was of crimson satin with the English arms on the front of the frame which upheld it; and on the foot of the bedstead were devices and decorations of various forms representing the friendship and *intertwine-ability* of the two nations. All the other furnishings of the room were heavy with carvings and gilding, and all in perfect keeping and fitness. We next visited the carriage-house and were shown all the state carriages for several generations. The handsomest is that of the first Napoleon. This is very large, elegantly carved, painted and gilded, with plate-glass windows filling each side. Highly ornamented as it is it is not in the least gaudy or overdone, but is thoroughly a work of art. The last time it was used was at the baptism of the Prince Imperial. There were several other magnificent carriages and harnesses belonging to various French sovereigns including one of Louis XIV.

We next proceeded to *the* Versailles Palace and rooms of the Assemblée Nationale. The Grand Trianon and le Petit Trianon were residences of royalty, but the rooms of State were in *the* Palace. Here is the famous "Galleni des Bataille" and many historical pictures and relics. In one of the rooms we were quite pleased to find several excellent portraits of Washington and other American presidents and statesmen. Our ride back

to Paris was by another route, taking the opposite bank of the Scine, thus getting a very comprehensive view of that part of the country.

Many other places in Paris and its environs I would gladly describe, but in our rapid survey and the constant change from one novelty to another my ideas are somewhat confused and my descriptions would, I fear, be rather mixed. I hope at some future time to visit Paris when I can command more leisure to enjoy it. We left it with regret on Tuesday morning, August 18th, and after a pleasant ride to Calais embarked for Dover, had a pleasant sail of about two hours, and at 6 P. M. were in London once more and eagerly grasping a handful of home letters. Our stay in London at this time was less than twenty-four hours; then we came here to rusticate and rest and think over and to get up fresh strength and vigor for another year's struggle with flats and sharps and scales and arpeggios and all the other paraphernalia of musical studies. K.

The following extract from a letter of our former teacher, Miss Washburn, now teaching in Sacramento, Cal., shows that distance has not lessened her interest in Hampton; she writes:

"I can fairly see you all in your new quarters, though I do not doubt my imagination is at fault in many details. I rejoice especially in the new dining-room and the cooking and heating arrangements. I am not sorry, however, that I was there in the old barrack days, to share a little of the roughness of early efforts. I look back with loving thoughts to my little dark room, which had only one real lack to me—its want of a lookout upon the water. I should like to furnish one of the new rooms, one whose windows looked on the bay. If, as I understand you, there are some still to be furnished, please let me fit one of them up.

"I wish I knew where to tell the story of Hampton's needs—to draw out some response in real help—but California feels no such responsibility as Northerners in helping to overcome the evils of slavery. Everything is *finished*, in their thought; or the South is an unruly, far-away region with which they have nothing to do. I have often wondered whether General Armstrong's eloquence would overcome this apathy, and touch the springs of generosity which are locked up beneath it.

"I had a very pleasant letter from your London correspondent, Mr. Knox, a few weeks since 3000 miles either way from Hampton, and more than a quarter of the way around the globe—it hardly seems as if it could be two or three years since we were enjoying Father Parker's sermons together. Queerly enough, Mr. Knox' chum was once a San Josean. One of my school girls is an old scholar of Mr. Larry's and remembers yourself and Mr. Knox—only instances of the impossibility of going into any part of our country, or the civilized world, indeed, without meeting some one who knows some one you know."

MARCH.

Earth has a secret dear
  She wants awhile to keep,
But vainly tries
To blindfold prying eyes,
Or hide with clumsy art
Her conscious heart.
Against her will she hints the whole,
And inadvertent shows her soul—
Fretting behind uneasy mask,
Feigning denial fond before we ask.

Her suns more fervid shine
  From equinoctial poise;
Her clouds betray
Sky-colors soft as May;
Through longer afternoons
The south wind swoons;
All day the teary house-eave drips;
Swift under ground the snow-patch slips;
Across the way crisp sparrow-note
Assertive shrills from freshly whetted throat.

Prosaic city streets
  The loath confession catch,
And glad desire
Give back from pave and spire,
While eyes of men repeat
The gospel sweet;
Yea, though there come no surer proof
Than hammer-blows from yonder roof,
Their mellow clink this mellow morn
Would tell us Spring was waiting to be born!

—*The Independent.*

THE FOUR-FOOTED GROOM.

Dr. Smith was a physician practising in Dublin, and not choosing to take a groom with him when he went his daily rounds to visit his patients, trained a large Newfoundland dog, between which and his horse there was a great affection, to take charge of him as he went from house to house. He seldom mounted his horse when on his rounds, but just gave a hint to the dog what next patient he was going to, and the dog brought him up as punctually as a human being could have done. Besides this he used to take him to water, and having to leap a stream in so doing, the two generally performed it together like a perfect bit of music.

One day, however, by some mischance the poor fellow lost the reins as they were about to take the leap. This would have looked like a sad blunder, had not the good horse, as if wishful to save the credit of the dog, turned back, after going a few paces on the other side of the stream, to give him the opportunity of regaining the reins. Thus the two came back in regular order, and nobody would have been the wiser had not some one seen the occurrence. —*Our Four-footed Friends.*

THE FOUR-FOOTED GROOM.

THE DWARF'S MIRROR.

Thomas and Hannah lived quite alone in a little house in the middle of a great forest. Their father was a forester, and all day long in good weather or bad, he had to watch in the woods or else shoot birds and rabbits for the table of the Prince who owned the forest. Their mother was dead, and nobody was at home in the little house with the children but their old grandmother who was almost blind and could hardly hear. In summer they went day after day to the village school, but in winter it was very gloomy and tedious. Then the snow was deep in the forest, and the children had to keep in the house like two little mice in a hole. Little Hannah sat by her grandmother's side spinning, but it was a tiresome work in the silence. Thomas tried to cut figures of dogs and rabbits out of wood, but they never turned out well, and he cut his fingers so often that he became impatient and gave up the business as a bad one. He used to often say: "Ah, how nice the rich children have it. I'd like to be the young lord that I once saw drive in his carriage through the village, no one of the steward's children who can eat whenever they want to, or one of the gipsy boys who can go out whenever they like."

One evening, not long before Christmas, it was more than usually quiet and gloomy. Little Hannah nestled close to her grandmother, and Thomas screamed in her ear:

"Grandmother! now tell us only once more a little story; only one, about the little dwarf in the quarry."

"In the quarry? Yes! wait Bubby, let me think if I know it.

"Where the quarry is, down there in the glen, the dwarfs used to live. They used to carry things down to the dwarf queen's palace, and had a merry little town below. There were not yet any hunters nor stone-cutters nor wood-choppers in the still forest. On sunny days, all the little dwarfs came out and danced on the green moss. At last people came into the forest and chopped down trees, and carried away great stones. The heavy stones fell upon the dancing green, the little city was destroyed, and there was loud wailing among the dwarfs. All the dwarfs who were not killed dug themselves a way far into the forest, and where they live now nobody knows. But one night in the year they come to see if so many stones still lie on their ground, and if anybody should roll out three stones on that night, the dwarfs would grant him any wish he might ask."

This is all the grandmother's story, which tired her so that she went right to bed. But that night Thomas could not sleep. He waited till all the house was quiet, then dressed himself, drew his fur cap over his ears, and slipped out into the forest. With timid steps he crept softly to the place where the dwarf's dancing green had been. With trembling hands he grasped the largest stone he could handle, and dragged it away. Just as he rolled away the third, a thin little voice called out "Who's there?" and on the only spot in the glen where the moonlight fell stood a mite of a man in green clothing. "What do you want there?" said the little man.

"Only to take away the stones so that the little gentlemen can come back again."

"That won't help much;" said the dwarf sadly, "but it is very good of you and you shall not do it for nothing. What do you wish?"

Thomas could not decide upon anything, and yet he knew of many things he wished. At last he stammered out—

"A big purse full of money."

"So"—said the dwarf—"what will you do with it?"

"Oh, lots of things—build a great house, and a stable full of beautiful horses, and buy a new cloak for Hannah, and a whole cask of oil that we may never be in the dark."

"Ho-ho!" what else? laughed the dwarf. "A house you shall build but not in the forest. You shall also go out into the world, but you don't need a horse for that. Hannah can get a new cloak without you, and you can get beech nuts enough here in the quarry to fill your little lamp for two years. So I think you do not need the purse of money yet awhile."

"Ah" said Thomas, low-spiritedly, "if it were only not so gloomy and tiresome in the long winter—if we only had a pretty picture book while the evenings are so long."

"Now," said the dwarf, "that is better. Go home, and after Christmas I will come to you. Be content; the little dwarfs do not forget those who help them."

Christmas came and went, and there was joy even in the little hut. Hannah had a beautiful new cloak, and Thomas a good warm jacket. Their father spent the day at home, and dressed a rabbit for supper; but Thomas was thinking all the time of what the dwarf might bring them. It was night at last and everybody was asleep but Thomas. Suddenly he heard a light knock on the door. With trembling hands he lifted the latch. In stepped the little man in green clothes. He brought nothing but a little piece of colored glass which he fixed in a large knot hole in an old black chest which was the greatest piece of furniture in the room. "So," said he, as he came out, "little one, the tediousness is over. If time seems too long again, only look into the round hole in your chest; but only mornings and evenings when you are alone. Good-night my boy"—and he was gone before Thomas knew what had happened.

It was long before he could sleep; but next day he told his sister all about it, and when evening had come at last, and the grandmother nodded in her chair, the children went timidly, but eagerly to the chest. Thomas looked first into the hole where now shone brightly the glass which the dwarf had put in. Then he drew the trembling Hannah to his side. What a sight met their eyes! They saw a long, wide parlor, magnificently lighted by golden lights, but mostly by a tall Christmas tree from which streamed the light of many hundred colored tapers. The table before the tree was covered with beautiful toys, picture books, and candies.

"Oh dear, who'll get all that?" sighed the children.

The door opened, and a thin pale boy stepped into the parlor. Behind him came beautifully dressed ladies and gentlemen. He smiled faintly, and did not seem surprised as he glanced at the beautiful things.

"Where are you, children?" now called the voice of the grandmother. Startled they drew their heads back, and everything was as dark as before. The old chest looked as if nothing had happened. "Ah! how well off the young lord is," they sighed; "oh if we only had what he has!"

Before it was daylight again, Hannah glided once more into Thomas's bed room. They wished very much to see again the beautiful parlor. Sure enough, there it was in the clear daylight, almost as beautiful as by the light of the Christmas candles. The boy who had been there was lying in a silk dressing gown upon a sofa. A number of pretty books were scattered round him. He seemed tired and restless. A door opened and an old gentleman came in. The children could hear him say, as if far away—

"What! already wearied dear prince? and yet you have so many things that would make other children happy!"

"What other children?" asked the prince; "other children are not alone. I wish I could go out, like other children, I'd rather be a gypsy than a prince."

Before the astonished children could hear any more, the grandmother called them, and they hastily dropped the lid.

The next time they looked into the glass they did not see the parlor again, but an open space in the forest. In the middle was a cheerful fire before which some fine game was roasting. Near by sat a party of brown and ragged people, several of whom were playing a lively tune on instruments of music, to which a band of joyful children sprang and danced around. Thomas wished very much to spring in among them, and was quite provoked when his father called him from the kitchen.

He looked again when he got a chance; but the scene in the forest was not so cheerful. The fire was out. There was a wild anxious running hither and thither among the gypsies, presently soldiers appeared, and led away the the whole band who were accused of robbery.

That evening the children looked again in the glass, and saw another handsome room, almost as beautiful as the prince's parlor, full of pretty playthings also, and occupied by three pretty children—not happy children, alas! They began to dispute about a toy, and soon there was such screaming and crying and yelling and quarreling that the forest children ran gladly away, not wishing to see more.

"Now what do you think, Thomas," asked Hannah, "that all the children in the world are unhappy?"

"No indeed," he answered eagerly, "that cannot be; for if the little prince had not been quite alone—"

"And," interrupted Hanaah, "the gypsy children had only had good fathers and mothers, and the three children had not been so quarrelsome. You see, when people are good and contented and happy and well, and love one another, then they can be happy."

"Even if they are as poor and lonely as we are?" asked Thomas.

Hannah couldn't really say yes.

That evening the grandmother fell asleep very early, and the children made up their minds to try the glass once more, though everything seemed to come to such a sorry ending. As they put their faces to the glass, they almost screamed—

"There is our kitchen, and our own selves!"

So in truth it was—only the room looked lighter and pleasanter than usual. It was much cleaner, and in good order. The window panes were so bright that they shone. On the window seat stood some forest plants that looked beautifully green against the snow outside. In a willow cage such as Thomas had often seen the farmer boys make hopped and whistled a little bird glad to find a refuge from the cold. At her little spinning wheel sat the old grandmother, and Hannah and Thomas by her side but not tired and sorrowful as before. They heard themselves singing a pretty song they had learned at school but never had thought of singing at home before. Then the Thomns they saw in the glass reached down a large old book from a shelf and began reading loud so grandma could hear, the beautiful story of Joseph, till they heard a dog bark outside. Then the Hannah in the glass rose quickly, placed a pair of old shoes near the fire, and hung her father's coat before it. Soon the father entered. Thomas drew off his wet coat, and Hannah brought the warm shoes.

The children gazed with surprise at their busy images. Hitherto, they had always let their father come and go unheeded. The father in the picture looked pleased at the little services of his children, and was much more friendly than the real father was, and this so surprised the children that they would not have known when to come away from the mirror if their grandmother had not called them to bed.

The next morning a new life entered into the children. Hannah turned and cleaned the furniture, washed the windows and cleared up the room so thoroughly that the grandmother asked "Is it a feast day?"

Thomas brought pine branches from the forest and dressed the room. Then they helped the grandmother get breakfast. Formerly she had always had that trouble alone. Then Hannah sat down to spin and Thomas climbed on a chair and brought he dusty Bible down, and began to spell out the words. The grandmother listened attentively. As for the first time in the many years that she had not been able to go to church or read it at home, she heard from her little grandson's lips the Word of God, her old heart became full of joy, she folded her hands on her lap and nodded approvingly while bright tears gathered in her eyes. Thomas was quite pleased to see what effect he had, and read on more earnestly.

In the afternoon it occurred to them to sing. They tried it at first in a low voice, but soon they sang more clearly and heartily, and the grandmother listened as if dreaming, and smiled as she had not for years. How they enjoyed themselves when the father came home. How astonished he was at loving attentions from his children which no one had showed him since his good wife was carried to her grave.

"You must see how beautifully Thomas reads," the grandmother said. As the holy words fell from his child's lips they sank deep into his heart.

The children from this time took less pleasure in the wonderful mirror. They felt it could not show them anything better than their own dear home (especially when the joyful spring came); and they already thought how they could make their little home pleasant and cheerful for the next winter.

All of us have our house or cottage or little room. Shall we not seek to make it as bright and happy as the forest children made their lonely hut?—*St. Nicholas.*

THE DUTY OF THE STATE TO SECURE TO EVERY CHILD WITHIN ITS BORDERS THE BENEFITS OF ELEMENTARY EDUCATION.

A State consists, not of so many square miles of land and the structures upon it, but of organized society of human beings. Upon the character and condition, physical, intellectual, and moral, of the individuals composing this society, depend the wealth, power, prosperity and happiness of the State.

If this is true of States generally, it is in a far higher degree true of a republican State—a State where all power is primarily vested in the citizens; where the government is a direct emanation from their will. A stream cannot rise above its source; grapes do not grow of thorns, nor figs of thistles. Ignorance is the mother of poverty and crime. A single illiterate pauper girl in the State of New York has in seventy-five years become the ancestor of over two hundred criminals—pests to society, a burden and tax upon the people.

Wherever large masses of the ignorant settle down, vice develops and generates; property depreciates; law breakers are chosen to make and to administer the law; both person and estate become daily more and more insecure, till finally the strong arm of force from without is invoked to protect the community from utter self-ruin. If a town, city, State, or nation, falls under the control of the ignorant, corruption, disorder and anarchy seize and fasten upon it; prosperity and capital flee from its territory, and decline and degradation mark its career.

Intelligence in the rulers is essential to good government; in fact, if the community be large, it is essential to the existence of any government at all. An idiot may be made to pull a single oar, but only the trained and educated engineer can manage with safety the machinery of a four thousand ton steamer.

In a democratic republic like ours, of forty millions of people, the rulers are the voters; and the voters are, or may be, every citizen of adult ages; hence self-preservation requires our government to take care that no child shall grow up in ignorance, for at every election he is in command of some part of the vast machine that moves the country, and may wreck it. This is no new or untried application of law: and though especially appropriate for a democracy, yet the founders and supporters of every form of government have in all ages required the education of the ruling class. In a military despotism this class is the army; and no one acquires a voice in the martial councils until he has had a long training and schooling in the camp.

The founder of the Republic of Sparta, two thousand seven hundred years ago, Lycurgus, the law-giver, required the child of every citizen to attend the public schools from seven years of age till maturity; and if a male child, his compulsory education continued till thirty.

The great teacher and founder of modern democracy, Solon, the law-giver of Athens, two thousand five hundred years ago, established universal education in order that the Attic Republic might have no citizen incapable of casting an intelligent ballot.

One thousand years ago, Charlemagne, the great Christian emperor who ruled both France and Germany, established schools and required the education of the children of all classes participating in the government.

The Republicans of France for more than three-quarters of a century have been laboring for universal suffrage and universal education. They have frequently established the one, and enacted the other; but before a generation of children could be trained up in the public schools the ignorant voters have been led by demagogues and despots, both civil and ecclesiastical, to overturn free government; and then the Monarchists have abolished universal education. The sad result to that brilliant nation is that so late as 1868 one-half of its thirty-eight millions of inhabitants could neither read nor write; and this illiterate half furnished ninety-five per cent. of the criminal arrests, and eighty-seven per cent of the convictions.

In Germany three hundred and fifty years, ago a new order of things sprang up, and the great leader of the reform, Martin Luther, favored making education obligatory upon all. State after State adopted it, until for two generations every child in Germany, however poor its parents or humble its lot, has been sure of receiving at public expense a good elementary education.

Sixty years ago this very month Carl Wilhelm von Humboldt, elder brother of Alexander, and Minister of Public Instruction of Prussia, seeing his country, by the treaty of Tilsit, reduced to poverty and weakness by Napoleon, presented to the king a plan for the recovery of the national wealth, power and prestige. It was the present school system of Prussia.

It secures a good elementary education to every child in Prussia, and punishes with both fine and imprisonment any parties who attempt to deprive the child of this invaluable benefaction.

The kings saw that the schoolmaster could accomplish more than the field marshal, and at little cost; and his victories and conquests are both peaceful, profitable, and permanent, while those of the marshal often cost more to keep than to win. The law was adopted and has been most faithfully enforced ever since.

The result has exceeded the most sanguine expectations. Like the genial rays of the sun and the dews of heaven upon germinating seeds, it has enabled the child of every peasant to develop into an intelligent, efficient and productive Prussian, and has raised the country to the front rank in knowledge, wealth, power and influence. When she goes to war, though with her equals in mere brute force, yet, aided by superior intelligence, she is not only victorious, but loses scarcely more than half as many men in the battle, and by wounds and disease, as her opponents. Her administration, both civil and military, is a model of economy and efficiency.

Saxony, Denmark, Sweden, Nassau, Norway and England have similar laws. Not a child is to be found in Saxony who has not attended school. In Prussia in 1864, out of 3,000,000 children only 130,000 were out of school. In Swedes, out of 385,000 children only 9,131, or three per cent., are uninstructed. In the Grand Duchy of Nassau not a single adult could be found in 1867 that was illiterate. The other German States show like results. In our own State of New York in 1870 we had 189,000 illiterate adults, of whom 70,000 were male, and hence are, or may be, voters, and hold in their ignorant hands the political power of the State at every election.

In the Grand Duchy of Baden, by the faithful enforcement of obligatory education, the authorities in seven years—1854 to 1861—reduced the number of prisoners fifty-one per cent., and of thefts fifty-four per cent., and of paupers twenty-five per cent. The moral benefit to society and the saving of criminal and charitable expenditure is very great.

In England the law is optional with the local governments, and has been put in operation in many towns and cities for two years. It works so well that it is now proposed to require the whole kingdom to enforce it.

Eighteen of the twenty-two States (Cantons) of democratic Switzerland a generation ago made education obligatory upon every child. The beneficent effects of enforcing such a law were so great upon the manners, habits, appearance, and expression of the citizens, as well as upon their material prosperity, that in two cases made through that republic a few years since, I could tell within a few miles, without inquiry, when I had passed from a Canton that enforced education, into one that neglected it.

On the 19th day of last April a Constitutional amendment was submitted to the people, authorizing the national government to make the education of children obligatory through the whole twenty-two Cantons (States) of the Republic, and it was carried by an immense majority.

Cannot the great American Republic, stretching from ocean to ocean, and abounding in wealth, do as well by its children as its older but smaller sister perched up among the bleak and barren Alpine peaks?

Last winter the State of New York enacted such a law. It is justly entitled, An Act to secure to children the benefits of elementary education. It goes into effect the first day of this year.

New Jersey, Kansas, Nevada, and California enacted last winter similar laws. Michigan and New Hampshire have also. Massachusetts and Connecticut have had such statutes for the greater part of the time for nearly two centuries; hence the intelligence, thrift, and influence in the nation, of the people of these two States.

One hundred millions of people, the leaders of civilization on two continents, now live under such a law. In whatever country and under whatever form of government it is faithfully enforced for a single generation, its benefits are so great that it becomes the fixed and settled policy of the people; and no politician, demagogue, or statesman, would venture to suggest its repeal.

Twenty-one of our States have established free schools for all the children. The others must do it, or become a prey to internal discord, commotions, violence, ignorance, pauperism, and crime. They have only to look at two pictures—Mexico and Massachusetts—and choose which shall be their future; one or the other is inevitable. The free common school adds to the value of the citizen as a mere producing machine in this country, as has been found by actual investigation in all departments of labor, on an average, fifty per cent, while a higher training increases this two or three hundred per cent. How can a State fail, then, to increase its wealth by securing to every member of the rising generation at least a good elementary education? Ambition is the spur of industry, and ambition comes of intelligence.

Illiterate adults in this country produce thirty times as many paupers and ten times as many criminals as the same number of adults, under similar conditions, with such an education as may be obtained in the free common schools.

The cost of taking care of our paupers and criminals, though comparatively few in numbers, is as large as the whole cost of a good system of free common schools and the vigorous enforcement of the law to secure to all children the benefits of elementary education.

In our large cities, like New York, the cost of the criminal courts and jails, to protect society against a few thousand criminals—most of whom become such through the neglect of the State to teach them anything better—is greater than the whole expense of securing to each one of the 300,000 children of the school age a good elementary education.

Every child has a right to this education; it is the interest and the duty of the State to give it to him. It is profit to the property owner and economy to the tax-payer to see that it is done. It is the most certain and least expensive method of reducing the annual crop of paupers and criminals, and stimulating the steady and certain development of the wealth of the country.—*New York School Journal.*

THE TIME TO BE PLEASANT.

"Mother's cross!" said Maggie, coming out into the kitchen with a pout on her lips. Her aunt was busy ironing; but she looked up, and answered Maggie:—

"Then it is the very time for you to be pleasant and helpful. Mother was awake a great deal in the night with the poor baby."

Maggie made no reply. She put on her hat, and walked off into the garden. But a new idea went with her. "'The very time to be helpful and pleasant is when other people are cross.' Sure enough," thought she; "that would be the time when it would do the most good. I remember, when I was sick last year, I was so nervous, that, if anybody spoke to me, I could hardly help being cross; and mother never got angry or out of patience; but was just as gentle with me! I ought to pay it back now; and I will." And she sprang up from the grass where she had thrown herself, and turned a face full of cheerful resolution toward the room where her mother sat soothing and tending a fretful, teething baby. Maggie brought out the pretty ivory balls, and began to jingle them for the little one. He stopped fretting, and a smile dimpled the corners of his lips. "Couldn't I take him out to ride in his carriage, mother? it is such a nice morning," she asked.

"I should be so glad if you would!" said her mother.

The little hat and sack were brought, and baby was soon ready for his ride.

"I'll keep him as long as he is good," said Maggie; "and you must lie on the sofa and get a nap while I am gone. You are looking dreadfully tired."

The kind words, and the kiss that accompanied them, were almost too much for the mother. The tears rose to her eyes, and her voice trembled as she answered, "Thank you, dearie; it will do me a world of good if you can keep him out an hour; and the air will do him good too. My head aches badly this morning."

What a happy heart beat in Maggie's bosom as she trundled the little carriage up and down on the walk! She had done real good. She had given back a little of the help and forbearance that had been so often bestowed upon her. She had made her mother happier, and given her time to rest. She resolved always to remember and act upon her aunt's good word: "The very time to be helpful and pleasant is when everybody is tired and cross."—*The Well-Spring.*

CASTE IN INDIA.

BY REV. H. J. BRUCE.

It is generally admitted that the system of Caste is the most formidable obstacle with which the missionary has to contend. At every turn he meets it, in some of its forms; in every effort he has it to encounter; and in his preaching he is aware that, however impressive the truth may be made, these impressions will generally yield to the fear that, if the truth is received, it will in some way affect caste relations. The bonds of caste are as bonds of steel, permeating every grade of society. The strength of these bonds it is impossible for any one to understand, or conceive, who has not himself witnessed it. The object and aim is to keep every man in the exact social position in which he was born; and no man can leave his assigned position in this great social system, unless it be to become an outcast from all society.

The divisions of caste vary somewhat in the different parts of the country. Generally speaking, those who are engaged in the same occupation or trade, belong to to the same caste. Thus the goldsmiths, the coppersmiths, blacksmiths, the carpenters, the tanners, the weavers, the cultivators, and many others, each have their separate caste, and in their intercourse with each other are restricted by inexorable law. In a volume on caste published by the Bombay Government, in 1827, about one hundred and twenty-five different castes are named and described; and this includes only those that are found in the Bombay Presidency.

In personal appearance there is a great difference to be seen in persons of the different castes, especially in those belonging to the extremes of the social scale, as is the case in any community. It is difficult, however, and often impossible, to determine the caste standing of a man from his personal appearance, apart from any peculiarities of dress that may belong to his caste.

The complexion of the people differs greatly, some of them being very light brown, and others very dark brown in color. It may be true, in general, that the people of the higher castes are of lighter complexion than those of the lower; but the complexion of a man cannot be taken as an indication of his rank. I have seen Brahmins, at the head of the social system, who were very dark in complexion, and on the other hand a Mang, one of the very lowest, who was comparatively light. The Brahmin, however, would be at once distinguishable not only from his Brahminical dress, but from the brighter and more intelligent expression of his countenance.

The engraving represents a number of the castes and occupations of Western India. The following is a brief description of each:—

1. A Brahmin, eating his dinner. His turban and outer garments are laid aside for that purpose. His food consists of bread, rice and vegetables. He eats no animal food, because it is contrary to their scriptures to take life of any kind. A vessel of water stands by his side, and a drinking vessel lies before him. He is so pure and holy that if any man of lower caste, or even a European, should pass by him in such a manner as to let his *shadow* fall upon his food, he would immediately rise, throw away his dinner, bathe himself, and perform other rites of purification. The marks upon his forehead indicate the god he is accustomed to worship.

2. A gardener, cultivating his plants. The Mali, or gardener caste, is distinct from that of the ordinary cultivator. Members of the two castes will eat together, but will not intermarry.

3. A coachman, in driving-dress, belonging to the cultivator caste.

4. A peon, or errand-man, employed by officers to carry letters, etc. This man is of the Peradashi caste, as indicated by the peculiar mark upon his forehead. His caste is of high rank.

5. A native soldier, or sepoy. Soldiers are taken from al castes.

6. An ayah, or lady's maid. She is of a peculiar class called Madrasee. The ordinary ayah would invariably have the end of the garment, here simply thrown over the shoulder, brought over the head as well, as may be seen in figure 10.

7. A Mussulman butler, bringing the dinner.

8. A Parsee gentleman. The Parsees are *fire-worshipers*, and originally came from Persia, to escape the persecutions of the Mohammedans. They number about one hundred and fifty thousand, and are mostly found in Western India.

9. A Parsee servant bringing water.

10. A native woman, with two water vessels on her head, one above the other. This well represents the dress of the women in Western India. The bracelets upon her wrists are considered quite essential by all classes

11. A dhobi, or washerman, carrying his clothes to the river to wash. The washing is performed by beating the garments upon a stone.

12. A Mussulman water-carrier. The water-bag under his arm is made of the skin of an animal.

CASTE IN INDIA.

13. A dancing-girl, or religious prostitute. Many of these are attached to heathen temples. The god Khundoba alone has some sixteen hundred such "*wives*" to do his service.

14. A Hindoo religious mendicant. The beads in his hand are for counting the number of times he repeats the names of his gods. The vessel at his side is a gourd-shell for receiving flour. His body is besmeared with ashes taken from the altars of the gods. These mendicants are worshiped by the people. If the people refuse to give to them they pronounce a curse upon them, which is greatly feared. He is called a Biragi.

15. A religious mendicant of another sect—a Gosavi.

16. A sweeper, or scavenger.

17. A common man from the jungle; well illustrating the dress of the poorer classes.

18. A woman from the Wadari caste. These resemble a band or camp of gypsies, living in little huts made of mats. They form their encampment in the fields near a village, and remain there as long as they choose, and then remove to another place. They are *rat eaters*, and are very skillful in catching rats and other small animals. They are also inveterate thieves.

Missionary Herald.

KEEP IN THE LIGHT. The light exercises a far greater influence upon our well-being than we think. Plenty of it is as necessary for people as for plants. The diseased fat livers of geese, which are considered such a delicacy by some epicures, are only produced by keeping the animals in a dark cellar during the necessary cramming process. Animals waste in muscular strength, as do plants, when kept in the dark. Sunlight is a tonic. Miners and workmen employed in ill-lighted shops, are found to be especially liable to catarrh in the mucous membranes, flaccidity of the soft parts

---

THE POINTS OF A GOOD COW are thus poetically described in *The London Farmer's Magazine*:

"She's long in her face, she's flae in her horn; she'll quickly get fat without cake or corn; she's clean in her jaw, and full in her chin; she's heavy in flank, and wide in loin; she's broad in her rib, and long in her rump; a straight and flat back with never a hump; she's wide in her hips, and calm in her eyes; she's fine in her shoulders, and thin in her thighs; she's light in her neck, and small in her tail; she's wide in her breast, and good at the pail; she's fine in her boue, and silky of skin; she's a grazier's without and a butcher's within."

The Teachers' Table.

Some of the difficulties which a foreigner finds in learning the English language are amusingly shown in these not very sensible lines which *look* as if they ought to rhyme, as the last words have all the same endings:

HOW TO PRONOUNCE "OUGH."

Peasant Arcadian,
Guiding the plough,
Coarse are your garments,
Your aspect is rough.

Peasant Imprudent,
I hear you've a cough;
Do you feel sure
You're clad warm enough?

Bibulous Peasant,
Your voice it is rough;
You're not a disciple
Of temperate Gough.

Home to your cottage
You hear the winds sough,
Even the birdies
Sing hoarse oo the bough.

Home to your cottage,
And bend o'er the trough
Kneading the loaves
Of digestible dough.

Though the bread's heavy,
Unsweetened, and tough,
Well-sharpened teeth
Will go easily through.

HOW TO TEACH READING.

In the methods for teaching reading now used in the best schools of our country, chief attention is directed toward securing an intelligent utterance of the *thoughts* of the lesson. The child learns word-forms as symbols of familiar objects and ideas, and is led to observe the thought embodied in the grouped words or sentence. It matters not if he keeps far in the background attention to those minor points, as emphasis, inflection, punctuation, etc., since proper training in the utterance of the thoughts will secure the needed attention to these matters. The standard for good reading is its near resemblance to good conversation, toward the attainment of this end all good methods constantly tend.

THE Report of the Oswego Public Schools for 1874, contains some interesting features. There are eleven primary, six junior, two senior, and one high school, and one unclassified school. The following sections, under Duties of Teachers, are pregnant with common sense:

"All rules and definitions should be the deduction of the children. That these may be concise, and at the same time as comprehensive as possible, the teacher should either aid the pupil in the working of these, or use the form given in the book, which should be committed to memory. In the primary classes the committing of rules and definitions may, in the discretion of the teacher be omitted.

"They should sparingly use the text book themselves, except for occasional reference, and should not permit it to be taken to the recitation seat to be referred to by the pupils, except in such case of such exercises as absolutely require it. They should assign many questions of their own preparing, or those selected from kindred text books involving an application of what the pupils have learned.

"It is expected that the teachers, as far as is consistent with their other duties, will endeavor to make themselves acquainted with the parents and guardians, in order to secure their aid and co-operation, and the better to enable them to understand the temperament, characteristics and wants of the children.

"In each school there shall be allowed a recess to all the pupils in the same, not exceeding fifteen minutes in the forenoon, except in the primary schools, in which there may be, at the discretion of the teacher, two recesses in the morning, and one in the afternoon, not exceeding twenty minutes each.

"The teachers of the several schools shall devote themselves faithfully to the duties of their office. They shall daily examine the lessons of their various classes, and make such special preparation upon them, i necessary, as not to be constantly confined to the text book, and instruct all their pupils, without partiality, in those branches of school studies which their various classes may be pursuing. In all their intercourse with their scholars, they are required to strive to impress on their minds, both by precept and example, the great importance of continued efforts for improvement in morals, [illegible] as well as useful learning."

Sunday-school Lessons on the Life of Christ.

LESSON I.

MARCH 7, 1875.

HOSANNA TO THE SON OF DAVID!

MATT. xxi: 8–11.

8 And a very great multitude spread their garments in the way; others cut down branches from the trees, and strewed *them* in the way.

9 And the multitudes that went before, and that followed, cried, saying, Hosanna to the Son of David: Blessed is he that cometh in the name of the Lord; Hosanna in the highest.

10 And when he was come into Jerusalem, all the city was moved, saying, Who is this?

11 And the multitude said, This is Jesus the prophet of Nazareth of Galilee.

Golden Text.—HOSANNA TO THE SON OF DAVID; BLESSED IS HE THAT COMETH IN THE NAME OF THE LORD; HOSANNA IN THE HIGHEST!—Matt. xxi: 9.

JESUS with his disciples was on his way to Jerusalem to keep his last Passover. He was now very near his journey's end. The blessing of the little children and his interview with the rich young man, which we have been considering for the last two Sabbaths, occurred in the "country beyond Jordan." Crossing the Jordan he came into Jericho, where he gave sight to two blind beggars sitting by the wayside, and they immediately "followed Jesus in the way." This is the only incident of the journey that Matthew and Mark record, but Luke tells us of his visit to Zaccheus, the rich publican, and the blessed result of that visit, first to Zaccheus himself, and second to the poor and those whom he had wronged. John relates that as he proceeded on his way he stopped at Bethany at the house of Mary and Martha, whose brother Lazarus he had shortly before raised from the dead.

A great many people had come with Jesus from Jericho and still more had joined him at Bethany where they had gathered to satisfy themselves by the evidence of their own eyes that Lazarus had really been brought to life again. So now as they were coming near to Jerusalem, such numbers had joined themselves to the company of Christ and his disciples that there was a great procession.

Many hundred years before, a prophet had written of the way Jesus should come to Jerusalem in these words: "Rejoice greatly, O daughter of Zion; shout, O daughter of Jerusalem; behold thy King cometh unto thee: he is just and having salvation; lowly, and riding upon an ass, and upon a colt, the foal of an ass." (Zech. ix: 9). Always before, Jesus had refused to be made king, but now the hour was at hand, when, by the fulfillment of prophecy, he was to be pointed out as the King that was to come. This entrance into the city Jesus intended as an avowal of his Messiahship. He came, however, not as a proud conqueror, but as the Prince of Peace, riding on an ass, which was the symbol of peace. Even in the most triumphal hour of Christ's earthly life—when praised and honored as the Messiah he was yet the "meek and lowly Jesus." How unbecoming then that any who are called by his name should be filled with pride and vanity, whatever be their worldly prosperity or position.

There were an unusual number of people in the city at this time, gathered together to attend the Passover, the great yearly feast of the Jews. In their eagerness to see him of whom they had heard such wonderful reports they hastened out to meet him (John xii: 18), and learning for themselves the reality of his miracles (for doubtless the two blind men with Lazarus and many others who had received healing from Christ were in that great company), their excitement knew no bounds. To them it seemed that the hour for the establishment of Christ's kingdom had at last come. Some strewed branches in his pathway and some spread their garments for him to ride upon while they sang the beautiful song of welcome which had been written long years before, "Hosanna to the Son of David." Hosanna means "Save, I beseech thee, O Lord," and these very words are found in one of the Psalms of David (Ps. cxvii: 25, 26). The great multitude with their shouts of praise threw the whole city into commotion. "Who is this?" they ask. The question was probably one of surprise rather than ignorance, for Jesus was known in Jerusalem; but before he had entered the city quietly and on foot; now riding, the honored centre of a grand triumphal procession. Are we not glad that though most of his life on earth was unhonored yet this once he had the honors of his station rendered to him, and entered the city of his father, David as a king in Zion? But we have the saddest reasons to believe that many of those who welcomed Jesus with shouts of Hosanna were carried away by their feelings in mere lip service; and it is to be feared that there are many still who shout "Hosanna" as did those of old who yet by unworthy lives deny the Master they profess to love. Let us remember that no one is safe until he receives Christ into his heart as an abiding guest.

LESSON II.

March 14, 1875.

THE CLEANSING OF THE TEMPLE.

MATT. xxi: 12–16.

12 And Jesus went into the temple of God, and cast out all them that sold and bought in the temple, and overthrew the tables of the money-changers, and the seats of them that sold doves.

13 And said unto them, It is written, My house shall be called the house of prayer; but ye have made it a den of thieves.

14 And the blind and the lame came to him in the temple; and he healed them.

15 And when the chief priests and scribes saw the wonderful things that he did, and the children crying in the temple, and saying, Hosanna to the son of David; they were sore displeased,

16 And said unto him, Hearest thou what these say? And Jesus saith unto them, Yea; have ye never read, Out of the mouth of babes and sucklings thou hast perfected praise?

Golden Text.—BLESSED ARE THE PURE IN HEART, FOR THEY SHALL SEE GOD.—Matt. v: 8.

On the day of Christ's triumphal entry into Jerusalem we learn from Mark that he went into the temple and merely looked around upon all things and then went out to Bethany with the twelve to spend the night. It was the day following that Jesus cast out the traders. Let us notice what it was that Jesus found wrong in the courts of the temple. Oxen, sheep and doves were there offered for sale, and there, too, were the money-tables, where coin could be exchanged. There was nothing wrong in this. Many of the worshipers came from distant countries and it was a great convenience for them to be able to buy the necessary things for sacrifice right beside the altar. Then those worshipers brought money of different countries and they needed to exchange it for the shekel of the sanctuary, the proper holy money. But those traffickers were cheating the worshipers: they were taking more than the value of their beasts, so that what was first intended as an accommodation became afterward a source of unholy gain and extortion. Instead of going to God's house to pray they went there to make money. Christ purified the temple by casting out all that had made religion a cloak for selfishness and sin. Christians are sometimes called the temple of God (1 Cor. iii: 16, 17). What manner of persons then ought they to be? Our King comes to make us holy as well as to pardon us. All the sins that are in our hearts, such as covetousness, pride and lust must go out when Christ comes in. If our hearts are to be fit temples for the indwelling of Christ, we must put away from us every thing offensive to him.

The silent submission of those traders shows with what kingly authority his words must have come to them. But Jesus entered the temple that morning not alone to show his power by driving out his enemies, but to bestow royal gifts upon the poor and needy ones who came to him: "And the blind and the lame came to him in the temple and he healed them." All these wonderful things, the cleansing of the temple and the miracles following, only served to increase the enthusiasm of the people, and the children of the temple joined in the joyful cry, "Hosanna to the Son of David." Now there were some standing by who did not like this—not Christ's own disciples; they had learned a different lesson on that day beyond the Jordan; but certain men very wise in their own esteem, greatly honored, too, on account of their seeming goodness, were sore displeased. The people heretofore had been accustomed to look to them for teaching and guidance and now they felt that the multitude preferred the teachings of Jesus to theirs. They were not willing to step aside—as was the faithful John the Baptist (John iii: 30)—even to give place to Him, to whom all their worship had pointed. While pride and envy so filled their hearts we cannot wonder that they hated Jesus and opposed him. They wished to prevent any joyous acknowledgement of Christ as King. As they found their displeasure had no effect upon the children they turned to Christ and angrily asked "Hearest thou what these children say?" Jesus did not silence the children but severely rebuked the learned scribes and Pharisees by his quiet answer "Yea,"—I both hear them and approve what they do—"have ye never read 'Out of the mouths of babes and sucklings thou hast perfected praise?'" Thus the children were encouraged in their joy and Jesus again showed himself to be the Friend of the little ones. The proud scribes could make no reply to that question. Doubtless they had read many times the Eighth Psalm (which contains these very words) in their temple service, and out of their own Scriptures they were condemned.

Jesus will come again among men as King, not riding on an ass, but in the glory of his Father, the holy angels with him. Greater crowds shall gather about him than when he rode into Jerusalem. All people—young and old—who have truly loved and served him, will then be singing praises to the Prince of Peace. But where will all that happy throng be going? To "the temple not made with hands, eternal in the heavens;" for when Jesus comes to earth again it will be to take all his friends home to heaven to live with him always. May we so truly and faithfully serve Jesus now that when that time shall come we shall be able to hail its coming with joy and to join with our whole hearts in the glad song, "Hosanna to the Son of David; blessed is he that cometh in the name of the Lord: Hosanna in the highest."

LESSON III.

March 21, 1875.

THE LORD'S SUPPER.

MATT. xxvi: 26–30.

26 And as they were eating, Jesus took bread, and blessed *it*, and brake *it*, and gave *it* to the disciples, and said, Take, eat; this is my body.

27 And he took the cup, and gave thanks and gave *it* to them, saying, Drink ye all of it;

28 For this is my blood of the new testament, which is shed for many for the remission of sins.

29 But I say unto you, I will not drink henceforth of this fruit of the vine, until that day when I drink it new with you in my Father's kingdom.

30 And when they had sung an hymn, they went out into the mount of Olives.

Golden Text.—CHRIST, OUR PASSOVER, IS SACRIFICED FOR US.

THE public entrance of Jesus into the holy city, which was the subject of our lesson two Sabbaths since, took place on Sunday, the first day of the last week of our Lord's life. On Monday, as we learned last Sabbath, Jesus cleansed the temple. The two following days he attended to his accustomed work; namely, teaching his disciples and preaching to the people. Thursday he passed in retirement at Bethany, but Peter and John were sent to prepare the Passover. For nearly two thousand years the Jews had eaten a supper in remembrance of their deliverance from the land of Egypt where they were once slaves. God had told them how to prepare that supper. It was of this feast that Jesus had said: "With desire I have desired to eat this Passover with you before I suffer." When asked where they should prepare it, he told them to go to the city and they would meet a man carrying a pitcher of water. They must follow him and when he should go into a house they must say to the man who lived there, "The Master saith, Where is the guest chamber where I shall eat the Passover with my disciples?". Peter and John went as Jesus desired; they saw a man carrying a pitcher of water; they followed him and gave the message Jesus had sent, and the man showed them a large upper room ready furnished which they might have. Here they made ready the Passover; they procured the Lamb, had it roasted, prepared the unleavened bread and the bitter herbs. When evening was come, Jesus went to Jerusalem with the other ten disciples and they sat down to the sacred meal which was made ready and which he designed to render more sacred and more memorable. We call this the Lord's supper because our Saviour has said to all his people, "Do this in remembrance of me."

Before instituting this new ordinance, the little company kept the Passover supper in the usual manner. Toward its close, the incident occurred which marked Judas as the betrayer of his Master (John xiii: 26). At the Master's words, "What thou doest, do quickly," he hastened away leaving him alone with his true friends. Christ then proceeded to institute that supper which was a pledge of his love and care for them notwithstanding he foresaw all their weakness and cruel desertion which was so near at hand. He first blessed and brake the bread. When Christ was on earth he often spoke of himself as the Bread of Life (John vi: 35). He then gave it to his disciples saying, "Take, eat." Each one must receive Christ and the truth for himself. True religion is a real personal matter. The eating of the broken bread should recall to our memory the great fact that Jesus died for our sins, and that as by eating bread our natural bodies are nourished, and our lives preserved so by receiving Christ, the Bread of Life, our souls are fed and sustained, and through his broken body everlasting life is secured to us. "In like manner" he "took the cup" "gave thanks," and said "Drink ye *all* of it." It is absolutely necessary that each one should believe and partake for himself. Religion is strictly individual; we can no more repent and believe for each other than we can eat and drink for one another. As oft as they drink of the cup it is to remind them of his blood freely shed for many for the remission of sin. The just and holy God had said, "The soul that sinneth it shall die." God's word could not be broken. Christ was willing to die instead of us who had sinned and upon whom the sentence of death was already passed; and God the Father so loved us notwithstanding our sin and ingratitude that he freely gave this dearly-beloved Son to death for our sakes. He accepts the sacrifice—Christ's death instead of our death. This is what we mean by our sins being washed away in the blood of Jesus (1 John i: 7). If we love Christ for all he has done for us, and show our gratitude to him by trying to do the things that will please him, then our hearts have been cleansed by his blood, and God will pass over our sins and remember them no more against us—even as the angel of death passed over the houses where the blood was sprinkled on the lintel of the door. Christ welcomes to his table all those who by keeping his commandments prove themselves to be his friends. This memorial supper is a continual reminder to them not only of Christ's love in dying for them but of his return and fellowship in the upper kingdom: "Until that day," "in my Father's kingdom."

All who observe this last request of Christ in faithful remembrance of him shall sit down at the Marriage supper of the Lamb with the ransomed of "every people and nation and tribe and tongue" in his Father's kingdom.

"Behold the Lamb of God which taketh away the sin of the world."

LESSON IV.

March 28, 1875.

JESUS IN GETHSEMANE.

MATT. xxvi: 36–46.

36 Then cometh Jesus with them unto a place called Gethsemane, and saith unto the disciples, Sit ye here, while I go and pray yonder.

37 And he took with him Peter and the two sons of Zebedee, and began to be sorrowful and very heavy.

38 Then saith he unto them, My soul is exceeding sorrowful, even unto death: tarry ye here and watch with me.

39 And he went a little farther and fell on his face, and prayed, saying, O my Father, if it be possible, let this cup pass from me: nevertheless not as I will, but as thou *wilt*.

40 And he cometh unto the disciples, and findeth them asleep, and saith unto Peter, What, could ye not watch with me one hour?

41 Watch and pray, that ye enter not into temptation: the spirit indeed *is* willing, but the flesh *is* weak.

42 He went away again the second time, and prayed, saying, O my Father, if this cup may not pass away from me, except I drink it, thy will be done.

43 And he came and found them asleep again: for their eyes were heavy.

44 And he left them, and went away again, and prayed the third time, saying the same words.

45 Then cometh he to his disciples, and saith unto them, Sleep on now, and take your rest: behold, the hour is at hand and the Son of man is betrayed into the hands of sinners.

46 Rise, let us be going: behold, he is at hand that doth betray me.

Golden Text.—HE MADE HIM TO BE SIN FOR US, WHO KNEW NO SIN; THAT WE MIGHT BE MADE THE RIGHTEOUSNESS OF GOD IN HIM.—2 Cor. v: 21.

IMMEDIATELY after the the supper our Lord went out into the Mount of Olives and consecrated these last quiet hours of his life to those touching and consoling words which the beloved John has alone recorded (John xiv, xv, xvi). He closed his last discourse with that prayer for his disciples which included not only those who were then with him, but all who in after time should believe on him through their word. A precious legacy indeed! for these four chapters of St. John's gospel have been an exhaustless source of consolation and strength to his disciples in all hours of trial and affliction ever since.

When he had finished he descended from the mount and "came into a place called Gethsemane." Jesus and his disciples were familiar with the place, for Jesus often went there alone in the night to pray (Luke 22: 39). After they had crossed the brook Kedron, and had come into the garden, Jesus told eight of his followers to sit down while he went farther on to pray. He took with him Peter, James and John, the same disciples who went up with him into the holy mount, and were there eye-witnesses of his glory—*now* they were about to see his overwhelming sorrow. The hour had come, and he who had always been a man of sorrows was now so "exceeding sorrowful even unto death" that he could not bear the immediate presence of these three friends whom he had taken with him, but said to them, "Tarry ye here and watch with me," and then went a little farther on to be alone in prayer with God. None can understand or begin to comprehend the bitterness of the agony which Christ endured upon that awful night. What we do know is that of his own free will he bore all these sufferings for us, that he might bring us to God. "He hath borne our griefs and carried our sorrows." "We have turned every one to his own way and the Lord hath laid on him the iniquity of us all" (Isaiah liii: 4, 6). Christ shows to sinners his abounding love in what he was willing to do and endure for them. In this time of his distress he looked alone to God for divine aid and deliverance from the cup of sorrow, praying earnestly if it were possible that it might pass from him; "nevertheless," "not as I will, but as thou wilt," he always added in meek submission. But while he looked to God alone for help and succor, "the man Christ Jesus" naturally turned to man for tender human sympathy, and twice he sought the companionship of his friends. But did he find them watching? No; their hearts were so heavy with sorrow that they could not keep awake (Luke xxii: 45), and Jesus had no one to watch and pray with him in this hour of his fearful suffering. Even Peter, who, a little while before had said, "I will lay down my life for thy sake," now slept as soundly as the others. Still Jesus did not complain; he knew how weary and sad they were, and only said to Peter, "What, could ye not watch with me one hour?" Few things make men more selfish and faultfinding than suffering. Not so with Christ, for he compassionately excused them in the words "The spirit indeed is willing but the flesh is weak."

But his importunate prayer was effectual. Three times he bowed down before God, each time repeating the same words: "Let this cup pass from me." The cup was to be drained, but strength was given him to drink it, and he arose firm and calm ready to meet his doom. Let us never forget that it was sin—yours and mine—which made it necessary that Jesus should endure the mysterious woe of that dreadful night in Gethsemane; and may our daily lives be a continual expression of our gratitude to him who for our sakes was "a man of sorrows and acquainted with grief."

HAMPTON, APRIL, 1875.

THE HAMPTON SINGERS AND ENDOWMENT.

Instead of devoting their efforts to securing a building fund of $25,000, as was stated in our last issue, this band will endeavor to add something to the endowment fund of the Hampton Institute.

Although our young men are by no means as well provided for as the female students, and must, ere long, vacate the recitation rooms they now occupy, for snitable quarters, it is not intended to put up another large building at present; cheap wooden barracks will be erected for them.

There is an increasing tendency among thoughtful men to put their money into brains instead of bricks. Not that we would disparage the splendid sacrjfices made in behalf of Virginia Hall, or underrate the great civilizing and elevating influences of that noble building; hut, having built a fine ship, we should send it into its field of action in the best possible order and efficiency.

People of earnestness and force seldom ask of the world more than a fair support that they may labor for the good of their fellow-men. They are indifferent to wealtb, and regret that even the common comforts of life must be required at the hands of benevoleuce.

Scores of able men and women have been starved out of usefulness. Powerful men who are needed to mould the young and lead the march of mind and thought, are weakened and worn out by wretched and uncertain salaries that make rest and recreation impossible.

There is plenty of money waiting to be placed where it will accomplish most, and intelligent wealth is seeing the wisdom of backing up those who are laying the foundations of the nation's future hy the wise and timely instruction of youth.

Hampton asks for $200,000 *at once* the interest of which shall support its officers and teachers and meet its general expenses. Being a manual labor school, the corps is thereby nearly doubled, and the annual running cost far greater. When that is got it will need $200,000 more. This is wanted that the best brain and the best appliances may be brought to bear upon the most important national question—the recovery of the South—the regeneration of these five millions of negroes. In some regions they are lapsing into barbarism; in some they are saving and huying land and improving. Not a third of the black children are at school. Negro illiteracy is one of the most frightful factors in the national life. Eight hnndred tbousand colored voters are a vast political power mainly under the control of demagogues.

Why should we not say at once *half a million for Hampton*, since it can provide for tbree hundred boarders gathered from every quarter, besides a hundred day pupils, and send out yearly one hundred well-trained educators, whose specialty and whose life work is to he teaching the young? Not only does Hampton instruct, it civilizes; it educates the haud as well as the head, and it becomes responsible for two-thirds of the entire living expenses of its pupils from abroad—a burden uever assumed hy other colleges.

The negro teacher is a success. The hundreds of applications from ex-slaveholders for our graduates on file at this office, and the ahundant testimonials of ex-Confederates as to their ability as teachers, is enough for the most carping and incredulous. Forty students will graduate next June to join the hundred now at work in the free-school system of Virginia. A thousand are needed in this State alone.

Our brave little hand of singers is doing what the world has heen waiting for the negro to do—helping themselves. Their profits are small, hut they are something, and that something is to be thrown into the foundations, and, little as it may be, it will, under God, be a stimulus upon others to do greater things, and a valuable and permanent contrihution to the country's good.

CIVIL RIGHTS.

The contest over the Civil Rights Bill has ended. In the closing hours of Congress the colored man was declared to have the freedom of railroads, steamboats, hotels and theatres throughout the land.

Hardly had this been done when southern legislation prepared to make it a barren victory, and it is to-day a question whether in some of the states the determined stand against this bill will not be successful.

We are glad to observe but few indications in the South that the colored people are being unduly elated hy the Congressional guarantee of civil rights. On the contrary, there is every reason to hope that the avowed enemies and the unwise friends of the race, will, in this respect, be signally disappointed. Up to this time a peaceable demeanor has been the political salvation of the ex-slave. By it, he has inspired faith in his capacity to become a useful citizen. No other course of action on his part would have induced such warmth of sympathy at the North, and such efforts for his relief and enlightenment. His moderation has extorted the praise of all hut rash and wild counselors. Thrift is blessing his industry and teaching him that for him, too, it was written that the meek shall inherit the earth. When he stands upon a basis of substantial prosperity he will command the attention of the powerful class who ask only "will it pay?"

It is not enough that among five million a few unobjectionable associates are to be found. There must be a general advance in wealth and knowledge before prejudice will lose its power. Till this is the case it will make an innkeeper poor to defy the wishes of the majority of his customers; and law may be invoked in vain to compel a man to continue a losing hnsiness.

There is no reason why a decent man shouldn't go anywhere—no matter what his color is—provided by patient self-culture he can make himself welcome. At present the colored man is generally presumed to lack intelligence and refinement—because the race has not had time to acquire these essentials of civilized society. When this presumption is removed by progress, and color ceases to be the badge of ignorance, then the negro will have earned his right to a higher social recognition. Till this takes place individuals must suffer — as is the case under all general laws, which are hy their nature necessarily framed to apply to the majority of cases, and not to exceptions. While we sympathize profoundly with the few intelligent colored men whose lineage restricts their associations, we cannot but think it wiser for them to seek to change public opinion rather hy removing all its removahle causes, than hy attacking it hy force.

As earnest well-wishers we appeal to our colored friends to raise uo needless and ill considered issue under the present law. They cannot afford it. The race is in a hopeless minority, and without comparison in wealth and knowledge. Such a contest must be barren of any result commensnrate with its cost, and fraught with the danger of alienating many passive friends into open enemies. This whole people is literally perishing for want of light. Instead of spending their money in the courts, let them remember that thousands of children are needing their aid to prevent them from lapsing into barbarism. For this reason, and because we believe prejudice and public sentiment are not to be conquered hy any law whicb cannot be enforced, we hope those colored men who may have wealth enough to sustain legal contests may nohly prefer the welfare of their race to their own sense of personal dignity.

A general advance by the colored people into their new privileges, regardless of public sentiment, would be most disastrous. Let only those advance who can hold their own, illnstrate the power of education and religion to lift up their race, and show their own shining fitness for that consideration that is universally accorded to intellectual and moral worth.

While men under the frightful ban of color, are, hy the severest struggles, emerging from their sloughy state into a higher condition, their chronic despisers, like the Irishman at the Donnybrook Fair, crying "Wherever you see a head, hit it," would drive such fugitives from degradation back to their old wretchedness as "their place." But we believe that the enlightened judgment of the southern people will, as the present irritation shall subside, accord due credit and proper treatment to manhood and real worth regardless of the accident or misfortune of color.

"HOW TO GET RICH!"

This is the title of a beautiful and instructive little book of thirty pages, just issued hy the Home Savings Bank, Norfolk, Va. The author, "Uncle Ben," has written it for "Poor Men, and Young Beginners in Life," hut its contents will interest any readers, especially the working classes and those who want to get on well in tbe world. By all means call at the Bank for a copy, or write to H. C. Percy, Cashier, Norfolk, asking for one, which he will mail to any person free. "How to Get Rich," though a *little* book, bas mighty force in its words, and is, in these hard times, a kind of advice greatly needed.

We are glad to note the continued prosperity of the Home Savings Bank.

HOW A LITTLE MONEY ACCUMULATES!

Put 5 CENTS in the Savings Bank every working day, and it will amount with interest at Six per cent:

In one year to . . .	$15 88
In five years to . . .	80 70
In ten years to . . .	$210 26
In twenty years to . .	590 00

NEED ANY MAN BE POOR?

The Congressional Committee appointed to investigate the management of the Agricultural land fund by the different states of the Union, reports in a manner highly complimeiitary to this Commonwealth—as follows:

"If the State of Virginia is liable to criticism for investing its fnnd in stocks of fluctuating value, it should receive credit for the care it has taken not to permit the interests of education to suffer from this fact. The endowment of its two colleges is represented by $516,468 in six per cent state bonds. These were purchased for $271,875 in cash, at about fifty-five per cent of their par value. They do not appear to have greatly depreciated in value since the investment was made. The General Assembly has provided for paying the full interest of six per cent semi-annually on the par value of the bonds, although not always able to pay its creditors. This is a hopeful augury. A state so thoughtful of the highest interests of its people, in the midst of embarrassments, is not likely to allow its educational endowments to be seriously impaired."

THE "PENN MONTHLY."

Much magazine reading is, to say the least, unprofitable. That is excellent advice given by a prominent English writer of the day: If you wish to know about any subject get the best book you can find that treats of it and read it thoroughly. Still, good magazines do help to post us in regard to the absorbing questions of the day, and to keep us in harmony with the spirit of the times.

Among the best of the magaziues with which we are acquainted is the *Penn Monthly*. Not so pretentious as some, its tone is good, and the character of its articles interesting. Some would object to it that it lacks vivacity. True, it contains no popular stories or any articles of a sentimental character; but, in our judgement, this fact should speak strongly in its favor. It is designed to instruct, not to amuse, simply. Without attempting to criticize in detail the contents of the March number, the topics treated are timely, and are handled in an interesting and satisfactory manner. The resume of the month is valuable, the editor showing a happy faculty of passing over many matters with which the public is already wearied. The article on National Education contains an eloquent plea for the use of the Bible in our common schools, but which, though we do not attempt to dispute the author's conclusions, hardly seems to take in the length and breadth of the question. That such a use of the Bible can but exercise a good and healthy influence, few would be disposed to deny. But it is to be remembered that such is the spirit of our American institutions, that any considerable class of our citizens have a right to protest against the use of any religious book in our public schools, if the book be objectionable to them as a religious body. In the article following this, we are warned against the growing evil of myophia, or near-sightedness. A fair and interesting sketch of Kingsley's life and character is given. The historical series now being issued under the title of "Epochs of History" is ably reviewed; and other matters of interest are discussed. Altogether the magazine seems well calculated to exert an influence for good, and we have only to hope that its excellent tone and character will be sustained.

We are happy to number among our exchanges the *Richmond Review*, published weekly in Richmond under the auspices of the leading colored men of that city and under the general management of Mr. J. W. Dunjee. The editorial work is done chiefly hy Mr. Waring, a highly educated gentleman of experience and ability. The tone of the paper is better than that of any "colored" newspaper we have ever seen, and it gives promise of both usefulness and success. The *Review* has our best wishes.

We have received the Report of the Board of Directors of the Western Lunatic Asylum at Staunton, which, according to the lithographic view of it in the frontispiece, must be a very attractive place. At the date of the report there were three hundred and sixty patients in the Asylum—two hundred males and one hundred and sixty females. Dr. Francis T. Stribling, late physician of the Asylum, to whose efforts the State owes most of the recent reforms and improvements in the management of the insane, died on the 23d of July, 1874. He had been for nearly forty years the physician and superintendent, and had devoted himself with untiring zeal to the welfare of the unfortunate class under his care.

The Executive Board of the Friends' Association of Philadelphia for the relief of the Freedmen, recently sent a committee to inspect and report upon the schools under the auspices of that society in Virginia and North Carolina.

We extract the following from their report relating to the graduates of the Hampton Institute;

"On 12th month 11th, we left New Garden and our kind friends there, and proceeded to High Point, where our school is taught by Gracie McLean, a young colored woman, deeply interested in the work, who was formerly a scholar of ours at Greensboro and finished at Hampton. There were forty-five children present out of sixty-five (the number on the roll), together with a number of the parents. The smallest class repeated the alphabet both forward and backward, without a mistake. In the Primer class was a very smart boy named Willie, of only four years of age, with very bright black eyes; who went up next to head in his class of twelve or more, passing above four or five very much older than he, and answering the questions very quickly. He belongs evidently to a remarkably smart family, for his brother about fourteen years of age has almost the entire charge of the engine at Tabor's saw-mill. Their father is a steady, hard-working man, also employed at this mill. Around the walls of the schoolroom were hung texts in colors, made by one of the older girls of the school, which added to its cheerfulness.

"On 12 month 14th, we proceeded to Thomasville. Alice Davis [a graduate of Hampton, *Ed.*], the teacher at this school, is a very superior young colored woman, formerly a classmate with Gracie McLean, at one of our schools. While waiting for a few absentees she put the scholars through an excellent drill in gymnastic exercises with the arm and foot. She said she had these exercises two or three times a week, thought them very good for the school, and spoke of the decided benefit they had been to her in times past. There were fifty-one on the roll, of whom forty were present. The exercises in reading and spelling were very well conducted and the geography class did exceeding well. We were very much pleased to have from thirty to forty of the parents at the school, many having left their work on purpose to meet us."

We are permitted to publish the following extract from a private letter from a colored man in Tennessee, to his three sons in the Hampton Institute. The writer is a man of extraordinary natural abilities, and one of the finest orators of his race. He is an industrious mechanic, leads a most exemplary life, and commands universal esteem. All the education he has received has been since the war.

"*Dear Sons,*—We were glad to hear from you all, and hope when these few lines reach you they may find you all well.

"You all are much pleased at the passage of the Civil Rights Bill. I hope you all will act prudently and not boast over it. Many a poor black man will suffer death on account of that bill, because he is going to do something he ought not to do, and I hope you will take the advice of a good old father, and not do anything that would create any disturbance. Now, children, I do hope and pray you all will take the advice of your old father. The Civil Rights Bill is right, but the people are not right. I hope you will look to all these things and act like men of sense. I know you all know more in books than I, but I think I have had a little more experience. You all have spent a heap of time in trying to get an education. I hope you will act in a way to enjoy it, and give us pleasure in our old age.

"The people are not right yet. We must take into consideration that we live in the South, and if anybody suffers it is the poor black man. When a house is divided against itself it cannot stand."

Correspondence.

From our London Correspondent.

London, *October*, 1874.

Back in London, again, and I am heartily glad of it. Our vacation has been a most delightful one and we have enjoyed it fully; but after the rush and hurry and fatigue of two or three weeks' sight-seeing, and the driving from one place to another in order to crowd as much as possible into a short space of time, it seems pleasant to come back to the old rooms, which really had quite a homelike aspect after one month's absence, and to settle down into the regular routine of work and study again; especially when one has another year's work laid out, had rather less than a year probably, in which to accomplish it. Our rooms, too, have been rejuvenated, and look very pleasant and attractive with pretty, fresh paper, whitened ceilings, clean curtains, and several little improvements which add to our convenience and comfort. I have had full opportunity to test all these, as since my return to them I have been afflicted with trouble in one of my eyes, which has kept me for a part of the time a prisoner in a dark room; but now after having "suffered many things of many physicians," and oculists, and having submitted to a somewhat severe operation—the difficulty which was pronounced a local one—has been successfully, and I trust, permanently removed; and I hope I may be able to see my way clear, to the end of my prescribed course of study, as well as to the keeping my home correspondence up to the mark.

Our two weeks stay at Alvington was "a rest and a refreshing." We knew nothing of the place until we stumbled upon it, accidentally, as it were, in our search for quiet country lodgings. On our return from Paris, we staid but one day in London and then started again for Chepstow, which had been mentioned to us as a pleasant resort. We spent one night in Gloucester, and the next day arriving at Chepstow went in pursuit of lodgings; but before we knew it we were beyond the village limits and learned that the pleasant inn—looking more like a country farmhouse—which had attracted us, was not in Chepstow, but Alvington. It was all the same to us, however, as we found here exactly what we were seeking.

Friday, September 4th, we left Alvington for Stratford-on-Avon—the birth-place and home of Shakspeare, which, with some other interesting places we proposed to visit as we journeyed leisurely back to London. Our ride from Lydney—the meanest railway station—to Stratford was somewhat tiresome, owing to the many changes we had to make. We had two hours to wait at one station, remote from any village or anything else that was very interesting; then a short ride through some very pretty scenery brought us to Hereford to wait another hour. Here, however, we had a pleasant walk about the town, and through its large market.

Our next stopping-place was Malvern. We went through a very long tunnel—under a range of mountains—the first I have seen here—emerging into a most beautiful scene. On our left and behind us towered the mountains like great piles of green velvet in the bright sunlight; and on our right a plain extending for miles and dotted here and there with villages, low hills and woods, and in the distance another range of hills, standing out clearly against the sky brightening with sunset colors. Only a few minutes stop at Malvern, then on to Worcester, a short distance, where we stopped an hour and a half and dined. Worcester is quite a large town and has a fine cathedral. One more stop, at Honeybourne, where we changed cars for Stratford, arriving there between eight and nine o'clock, and went at once to the Shakspeare Hotel rejoicing that we had reached the end of our day's journey. This hotel was very neat and inviting, and the Shakespearean atmosphere enveloped us as soon as we entered it. Busts of the immortal William met us at all points. In the hall and dining-room, I counted five beside two medallion heads of him. We couldn't take a step without encountering the solemn gaze of, at least, one pair of plaster eyes. Going up to our rooms we passed two large oil paintings—portraits. Over the door of every room was inserted a tablet bearing the name of one of his plays. My sleeping-room was "Macbeth" (but I was too tired to indulge in tragic dreams); C's was "Love's Labor Lost;" our sitting-room was "Hamlet," and the dining-room "As You Like It"—very appropriate.

The next morning was bright and beautiful, and F. who was out for a "prowl" before breakfast came back with glowing accounts of the beauty of the place, raising quite an enthusiasm among us all, which we soon gratified by a visit to the poet's dwelling-place, and after a short walk entered the identical door through which the elder Shakespeare used to bring his wool and take in his milk during the infancy of the bard. The first room we went into was the family, or living-room, with the same stone floor and massive beams, upon and under which *he* gamboled in childish sport and calico pinafore. We looked upon the great fireplace in which the Shakespeare bacon used to hang and smoke; and we sat on the little seats in the chimney corner, of which we so often read in stories of the olden times. In this, and indeed all the rooms, the ceiling and walls were one mass of names written in pencil; before a regular register was kept there, persons were requested to put their names somewhere and many famous names were thus written; but, unfortunately, Time has in many places flaked off the whitewash, and the names have gone with it. Washington Irving's and Byron's disappeared in this way only a short time ago. After putting our names in the register, which is now kept in a little ante-room, we went up stairs into the chamber where William Shakspeare first drew breath. Here was the low room with its latticed windows and big fireplace—so familiar to everybody from the picture of it in reading-books, histories, etc. We trod the same boards over two hundred years old, on which he walked, and looked out the same window from which he had gazed—and, by the way, on this same window we saw the autograph of Sir Walter Scott, cut with a diamond. Passing through a very small entry, we next entered a room formerly used by Shakespeare *pater* for storing wool, and which now contains a portrait of his illustrious son, enclosed for security in a fire-proof safe. This is not the portrait so familiar to everybody—the so-called "Chandos" picture which gives him so much more of a Spanish than an English look, but one which is more satisfactory both as a (supposed) true likeness and as a pure-blooded Englishman exceptionally gifted and intelligent. The history of this picture is remarkable; in the first place, there is no portrait of Shakespeare in existence which is *known* to have been taken during his life-time; hence the uncertainty as to the probable truthfulness of the many likenesses, each claiming to be the correct one. The "Chandos" is, however, the one most generally accepted. The portrait of which I am now writing was given by a Mr. Hunt, a Shakespeare enthusiast, and he obtained it from a nobleman in whose family it had been for a long time, not, however, in the present shape, but in an old and faded landscape, apparently a worthless daub. It was made over to the children for a target, at which they used to throw balls—fortunately, soft ones. At last an artist visiting at the house observing some places where the paint had peeled off, saw that the landscape was painted over another picture, and obtained permission to have it cleaned; and upon carefully removing the outer coating, this portrait came to light. By close research, the picture in its "landscape" form has been traced back nearer to Shakespeare's time than any other; and, moreover, it more closely resembles the face upon the monument to him in the church—which was cut from a cast taken of his countenance after death. Taking all these things into consideration, I think, as do many others who have seen it, that it is much more likely to be correct than any of the others. It is certainly more indicative of his remarkable genius and power. I can imagine *him* as writing those wonderful plays; but it was always hard for me to realize that such a man as the "Chandos" picture represents could do it.

Before leaving the place we visited the garden, which was an orchard in *his* day. Here our guide, a pleasant, middle-aged lady, gave us each a pansy as a souvenir, and also a slip of ivy from the vine which covered all one end of the house; and then after eating some very nice pears which she offered us, she sent us on our way rejoicing to Anne Hathaway's cottage. We walked out of the town and across the fields, by the same foot-path which the boy-lover trod when he "went a-courting" and were welcomed by an old lady, a lineal descendent of the Hathaway family, who ushered us into the old, low kitchen and seated us upon the identical "settle," where they used to sit and smile upon each other. In this room the dresser of carved oak and the old fireplace are the same as in those old and happy days. Up stairs we saw a carved oaken bedstead, which was in the possession of the family many generations before Anne's time.

In the register here, where we put down our names, we saw the autographs of Charles Dickens, Wilkie Collins, Mark Lemman, and the rest of their party, including Mrs. Dickens and her sister; also those of Longfellow, Mark Twain, Queen Emma of the Sandwich Islands, and many others. Here, too, was a garden from which the old lady gave us sprigs of rosemary, rue, and pansies. We sat down on the old stone by the well, of which Shakespeare has written, and where Dickens too had sat not many years ago; and we drank of the water.

Returning to Stratford we went into Trinity church, and saw the Shakespeare monument—a very peculiar one—consisting of a bust, or, more properly, the head and body down to the waist—resting on a cushion, and the head and dress painted the same as a portrait. This curious thing stands in a niche on one side of the choir, over his grave. His wife rests by his side.

We next went to the New Street house where he died. He lived in the old cottage where he was born until he was about nineteen, at which early age he married Anne Hathaway. But a few years after, he went to London, where he earned money and fame, and returning to Stratford at the age of thirty-five he took this house on New Street, in which he died on the fifty-second anniversary of his birth, April 23. Nothing of the house is now left except a part of the foundation, carefully walled in and protected, but the large garden and beautiful howling-green, and old mulberry-tree are to be seen, and the old well perfectly overgrown with ivy. I omitted to mention in its proper place the Shakespeare Museum, adjoining his old home; but it would be impossible to remember or describe all the souvenirs of the great poet, collected here. Among them was the desk he used at school, the chair in which he sat (and in which we by turns seated ourselves), his game of Morris with the board and the men he used. Here, too, were about fifteen different pictures of him—no two of them particularly alike.

We spent two or three days in Stratford, and then started for Kenilworth; but of that and other places we visited on our Londonward journey, I must tell you in my next epistle.

K.

Pure Water for Animals.—One reason why epidemics among cattle, hogs, and horses are so common and fatal, is because they do not have pure water. As the country grows older and is more extensively settled, the streams are more likely to be polluted with excrement from decaying organisms; and this taken into the blood of animals is sure to breed diseased conditions. Once such epidemics were common among men, and swept off a large part of the race. Now, by wise hygeins, most of them are avoided. The cattle and horse plagus will some day be got rid of by hygeins—never by any other means.

THE BIRDS OF KILLINGWORTH.

BY H. W. LONGFELLOW.

It was the season when through all the land
. . . . . .
The robin and the bluebird, piping loud,
Filled all the blossoming orchards with their glee;
The sparrows chirped as if they still were proud
Their race in Holy Word should mentioned be;
And hungry crows, assembled in a crowd,
Clamored their piteous prayers incessantly,
Knowing who hears the ravens cry, and said:
"Give us, O Lord, this day our daily bread!"

Across the Sound the birds of passage sailed,
Speaking some unknown language, strange, and sweet
Of tropic isle, and passing hailed
The village with the cheers of all their fleet;
. . . . . .
Thus came the jocund Spring in Killingworth.
In fabulous days, some hundred years ago;
And thrifty farmers, as they tilled the earth,
Heard with alarm the cawing of the crow,
That mingled with the universal mirth
Cassandra-like, prognosticating woe:
They shook their heads, and doomed with dreadful words
To swift destruction the whole race of birds.

And a town-meeting was convened straightway,
To set a price upon the guilty heads
Of these marauders, who, in lieu of pay,
Levied black-mail upon the garden beds
And cornfields, and beheld without dismay
The awful scarecrow, with his fluttering shreds,—
The skeleton that waited at their feasts,
Whereby their sinful pleasure was increased.

Then from his house, a temple painted white,
With fluted columns, and a roof of red,
The Squire came forth,—august and splendid sight!
. . . . . .
The Parson, too, appeared, a man austere,
The instinct of whose nature was to kill;
. . . . . .
From the Academy, whose belfry crowned
The Hill of Science with its vane of brass,
Came the Preceptor, gazing idly round,
Now at the clouds and now at the green grass;
. . . . . .
And next the Deacon issued from his door,
In his voluminous neckcloth, white as snow,
A suit of bombazine he wore;
His form was ponderous, and his step was slow;
. . . . . .
These came together in the new town-hall,
With sundry farmers from the region round:
. . . . . .
Ill fared it with the birds, both great and small;
Hardly a friend in all that crowd they found,
But enemies enough, who every one,
Charged them with all the crimes beneath the sun.

When they had ended, from his place apart
Rose the Preceptor, to redress the wrong,
. . . . . .
To speak out what was in him clear and strong.
"In this little town of yours,
You put to death, by means of a committee,
. . . . . .
The birds who make sweet music for us all
In our dark hours as David did for Saul.

"The thrush that carols at the dawn of day
From the green steeples of the piny wood;
The oriole in the elm; the noisy jay,
Jargoning like a foreigner at his food;
The bluebird balanced on some topmost spray,
Flooding with melody the neighborhood;
Linnet and meadow-lark, and all the throng
That dwell in nests, and have the gift of song,—

"You slay them all! and wherefore? For the grain
Of a scant handful, more or less of wheat,
Or rye, or barley, or some other grain,
. . . . . .
Or a few cherries, that are not so sweet
As are the songs these uninvited guests
Sing at their feasts with comfortable breasts.

"Do you ne'er think what wondrous beings these?
Do you ne'er think who made them and who taught
The dialect they speak, where melodies
Alone are the interpreters of thought?
. . . . . .
"Think, every morning when the sun peeps through
The dim, leaf-latticed windows of the grove,
How jubilant the happy birds renew
Their old melodious madrigals of love!
And when you think of this, remember, too,
'Tis always morning somewhere, and above
The awakening continents, from shore to shore,
Somewhere the birds are singing evermore.

"Think of your woods and orchards without birds!
Of empty nests that cling to boughs and beams,
. . . . . .
Will bleat of flocks or bellowing of herds
Make up for the lost music, when your teams
Drag home the sting harvest, and no more
The feathered gleaners follow to your door?

"What! would you rather see the incessant stir
Of insects in the windrows of the hay,
And hear the locust and the grasshopper
Their melancholy hurdy-gurdies play?
Is this more pleasant to you than the whirr
Of meadow-lark and its sweet roundelay,
Or twitter of little field-fares, as you take
Your nooning in the shade of bush and brake?

"You call them thieves and pilferers; but know
They are the winged wardens of your farms,
Who from the cornfields drive the insidious foe,
And from your harvests keep a hundred harms;
Even the blackest of them all, the crow,
Renders good service as your man-at-arms,
Crushing the beetle in his coat of mail,
And crying havoc on the slug and snail.

"How can I teach your children gentleness,
And mercy to the weak, and reverence
For Life, which, in its weakness or excess,
Is still a gleam of God's omnipotence,
. . . . . .
When by your laws, your actions, and your speech,
You contradict the very things I teach?"

With this he closed; and through the audience went
A murmur like the rustle of dead leaves.
. . . . . .
The birds were doomed; and as the record shows,
A bounty offered for the heads of crows.
. . . . . .
And so the dreadful massacre began:
O'er fields and orchards, and o'er woodland crests,
The ceaseless fusillade of terror ran.
Down fell the birds with blood-stains on their breasts,
Or wounded crept away from sight of man,
While the young died of famine in their nests;
A slaughter to be told in groans, not words,
The very St. Bartholomew of birds!

The Summer came, and all the birds were dead;
The days were like hot coals; the very ground
Was burned to ashes; in the orchards fed
Myriads of caterpillars, and around
The cultivated fields and garden-beds
Hosts of devouring insects crawled, and found
No foe to check their march, till they had made
The land a desert without leaf or shade.

Devoured by worms, like Herod, was the town,
Because, like Herod, it had ruthlessly
Slaughtered the Innocents.
. . . . . .
The farmers grew impatient; but a few
Confessed their error and would not complain,
For, after all, the best thing one can do,
When it is raining, is to let it rain.
. . . . . .
But the next spring a stranger sight was seen,
. . . . . .
A wagon overarched with evergreen,
Upon whose boughs were wicker cages hung,
All full of singing-birds, came down the street,
Filling the air with music wild and sweet.

From all the country round these birds were brought
By order of the town, with anxious quest,
And loosened from their wicker prisons, sought
In woods and fields the places they loved best,
. . . . . .
And everywhere, around, above, below,
Their songs burst forth in joyous overflow,
And a new heaven bent over a new earth
Amid the sunny farms of Killingworth.

DAVID LIVINGSTONE.

There has recently been published in England a book containing the last journals of David Livingstone in Central Africa, from the year 1865 to his death, continued by a narrative of his last moments and sufferings, obtained from his faithful servants Chuma and Susi, and it is not too much to say that few books have ever appeared which so commanded the respect and admiration of Christendom.

It is a record of a noble life unreservedly dedicated to a noble work, and the sufferings which made that life in its last years a true martyrdom, are here so simply set forth as to bear the highest testimony to the heroic spirit in which they were endured.

The unremitting energy, the heaven-inspired determination which carried David Livingstone through the immense labor which he voluntarily took upon himself, were in themselves sufficient to have lifted him high above other men; but when we think of the complete self-sacrifice which his work involved, and the triumphant faith which bore him on to his lonely death, our praise is silenced—it is not for us to speak in the presence of such deeds as his.

We cannot now choose from the full pages of this journal, but we can show our readers something of its value; and we ask them in reading the following brief extracts to remember that they were written in the heart of Africa, in the midst of unparalelled difficulties and suffering, by a man whose strength, whose hope, whose only-present friend was the God in whose Name all his work was done.

Here is his prayer on his last birthday but one, March 19, 1872: "My Jesus, my king, my life, my all; I again dedicate my whole self to Thee. Accept me, and grant, O gracious Father, that ere this year is gone, I may finish my task. In Jesus' name I ask it. Amen, so let it be. David Livingstone."

Again, under date April 18th.: "I pray the good Lord of all to favor me so as to allow me to discover the ancient fountains of Herodotus; and if there is anything in the underground excavations to confirm the precious old documents, the Scriptures of truth, may He permit me to bring it to light, and give me wisdom to make a proper use of it."

And here is the story of the end: "Passing inside, they looked toward the bed. Dr. Livingstone was not lying on it, but appeared to be engaged in prayer, and they instinctively drew back for the instant. The men drew nearer. . . . A candle, stuck by its own wax to the top of the box, shed a light sufficient for them to see his form. Dr. Livingstone was kneeling by the side of his bed, his body stretched forward, his head buried in his hands upon the pillow. For a minute they watched him: he did not stir, there was no sign of breathing; then one of them, Matthew, advanced softly to him, and placed his hands on his cheeks. It was sufficient: life had been extinct some time, and the body was almost cold: Livingstone was dead."

AFRICAN EXPLORATION.

Next to Dr. Livingstone in his character of explorer, ranks Sir Samuel Baker, an Englishman, whose account of his second journey into the heart of Equatorial Africa has just been published, forming a most interesting and exciting book, and giving to the world much valuable information in regard to the actual condition of the African people.

While Baker's work cannot, as to its results, be in any way compared with Livingstone's, his explorations having been far less extensive, he was nevertheless the first European to penetrate to the equatorial region from the north, or at least to get so far to the south, by way of the White Nile, as the Albert Nyanza; and these two explorers, in connection with Burton and Speke, have proved that the interior of the African Continent is of very great fertility, and offers great commercial advantages in the future to European or native energy. But, in the first place, before there can be any real progress, the suppression of the slave trade must be effected, and that this is no easy matter is shown by the experience of Sir Samuel Baker, who was given command of an expedition, equipped by the Khedive of Egypt, for the purpose of breaking up the slave trade of the interior. This expedition was a very powerful one, and all possible aid was given to it by the Egyptian government, but the natural difficulties which lay in its path were simply enormous. Navigation of the White Nile is made possible only by cutting a channel through the "floating islands" and masses of vegetation which choke the river; and as may be imagined such work tells very severely upon both men and animals. Then the hostility of many of the native tribes is of the fiercest description, and wholesale slaughter seems to be the rule among them, while toward Europeans they stop at no species of treachery, as might be expected from what is known of their treatment of their slaves.

Although Baker and his men did not achieve as much as was hoped for, there is still no doubt that very important results were ensured, for not only geographically speaking was the heart of Africa successfully reached, but much was done to bring that wild and luxuriant region into connection with commerce and civilization.

It seems inevitable that among those who may read the exciting story of Baker's journey, some will be found with strength and love sufficient to lead them to consecrate themselves to the work of carrying to these "men benighted" that "lamp of life" which alone can break through the darkness that has hitherto encompassed all their vast region of Central Africa. A great, new field for missionary work is opening rapidly—the harvest is ready; where are the laborers?

WHAT THE CHIMNEY SANG.

BY BRET HARTE.

Over the chimney the night-wind sang
And chanted a melody no one knew;
And the woman stopped as her babe she tossed,
And thought of the one she had long since lost,
And said, as her tear drops back she forced,
"I hate the wind in the chimney!"

Over the chimney the night-wind sang,
And chanted a melody no one knew;
And the children said, as they closer drew,
"'Tis some witch that is cleaving the black night through—
'Tis a fairy trumpet that just then blew,
And we fear the wind in the chimney."

Over the chimney the night-wind sang,
And chanted a melody no one knew;
And the man, as he sat on his hearth below,
Said to himself, "It will surely snow,
And fuel is dear, and wages low;
I'll stop that leak in the chimney."

Over the chimney the night-wind sang,
And chanted a melody no one knew;
But the poet listened and smiled, for he
Was man and woman and child—all three,
And said, "It is God's own harmony,
This wind we hear in the chimney.

THE LIGHTHOUSE DONKEY.

I hardly know how to tell my story in proper terms, it is so exceedingly immoral—showing as it does the success of envy, malice, and all uncharitableness; how a cruel, premeditated, and unprovoked murder may be committed without any punishment, and the murderer live on respected and apparently contented, though we must hope suffering internal agonies in his conscience. I must begin, however, at the beginning.

There is a lighthouse built upon a rocky islet jutting out into the stormy Irish sea, surrounded with dangerous reefs, where vessels of old were continually wrecked, and even now come often to grief. It is joined to the mainland by a small suspension-bridge, and can only be reached by a staircase of some three hundred rude steps winding down the face of the cliffs, the rocky ledges in one place little better than a ladder, while on both sides the precipices rise five hundred feet sheer of the sea. Upon this island live the lighthouse-keeper, his wife, and donkey, and up and down this path these three pass every week to get their provisions at the nearest little town some three or four miles away. At the top of the rock is a shed where a small cart is kept to which they harness the donkey—make their expedition—and return along the craggy, steep mountain road behind the promontory. When the party reach the top of the steps, the cart is then put again into the shed, the goods are bound on the donkey's back, who, with much neatness and despatch, proceeds to step with his load carefully down the stairs and then up again into the island, carrying everything safely into his home.

Things had thus gone on very prosperously for some time, though living was a little scanty for the donkey, as the island produces little but sea-birds, which lay their eggs on the ledges of rock all round, which are so narrow that if a human hand attempts to lift an egg, it is impossible to replace the round and slippery thing once more, and it rolls into the sea. Yet here, on a margin of two inches or so, the Guillemots may be seen sitting each on her single long, blush egg, their little white stomachs bolt upright, in rows close together, but apparently quite comfortable. The gulls and razorbills take it easier, and squat less stiffly over the two eggs, which they lay. The clamor of the clouds of birds all talking at once is deafening. The colony is most regular in its habits; it appears on the island always on the same day in February—having previously sent an ambassage of select birds about a fortnight before to see that the rock is still in its right place—that their seaside lodgings, food, etc., are all in readiness. After their young ones are fledged, the birds all leave the cliffs on the same day in August, and their children are not allowed to return to the community, it is said, until they are two years old.

The birds are preserved with almost religious veneration; in a fog, when the light

is invisible, and the bell, which is supposed to sound a distance of two miles, is unheard in the thick air, the noise of the birds give warning of the dangerous coast at hand.

Nothing could exceed the peace and harmony of the island. The gulls and the donkey did not in any way interfere with each other. He was happy both in the society of the summer and the solitude of the winter; when in an evil moment the lighthouse-keeper took it into his head to add a pony to the establishment, which was brought down the steps with great trouble.

The donkey was hurt as to his feelings as well as in his stomach. Clearly there was not room or a living for two; the blades of grass were already so scanty that he had to eke out his dinner with potato parings, etc—indeed, he ate everything that the pigs (if they had existed) would have taken. What had this wretched beast—he thought—to do in this territory? infringing on his rights? taking the bread out of his very mouth? He was naturally excessively cross, and gave way to his temper, and plagued and tormented the miserable pony out of his very life. Still the obdurate lighthouse-keeper would not rid him of his enemy, and the donkey began to see that there would be no end to his annoyance except through his own exertions.

One day, unable to control his temper, he suddenly crept up close to the pony's side, seized him traitorously with his teeth by the scuff of the neck, dragged him to the edge of the rocks, turned round, and kicked him nearer and nearer to the precipice, but a little way off, and at last fairly pushed him into the breakers below. It was all too quickly done for a rescue; the lighthouse man from the top of his tower, helpless to interfere, saw the poor pony, still alive, floating out to sea over the reefs, the gulls hovering above him ready to fall on him and banquet upon his remains!

An attempt was next made to bring in a she-goat: but the donkey was so much the strongest and most astute of the two, that she was obliged to be carried away almost immediately, or it was clear she would have soon shared the pony's fate: and the donkey now reigns undisputed lord of the situation.

TRAPPER DAN'S STORY.

Yes, as you say, I've been in some tight places in my day, on the plains and among the Rockies.

I've had Cheyenne arrows sticking in me, and I've heard the whistle of bullets from Comanche rifles and Border Ruffian revolvers. I've hunted the grizzly, and been hunted by the Pawnee.

I've been left afoot without anything to eat, and almost without arms or ammunition, when the reds made a swoop upon me out on the Arkansas, and I thought I should starve before I could reach any place to get supplies.

But if you want to know when I ran the very closest chance of all my life, it was something entirely different from all these, and I went into it with as little thought of danger as you have when you go out to shoot squirrels. It was more than twenty years ago, while I was yet a youngster.

There was no Kansas or Nebraska then, but our party were lying in camp a few days on the west side of the Missouri, in the Indian country. We had made the trip to Santa Fè that season, and now intended to take a short turn out on the buffalo range before we broke up and went into the settlements for the winter. Part of our company had crossed the river and gone for supplies, while the rest were taking care of the stock, and waiting for them to come back.

One night we had a little snow, and an unusually cold snap for the season (it was early in November), and the ground was frozen a little on the surface. We were camped in a deep ravine, which was skirted with timber, but just back of us was the open prairie as far as you could see.

When I awoke that morning, just at daybreak, I heard the howl of a prairie wolf a little back of the camp. I had been taking lessons of the greasers in the use of the lasso, and had one rigged to my saddle, all ready for use. My horse was a noble young fellow, but I had had him only a short time and we were both awkward yet with our new plaything.

It came into my mind at once that here was a good chance for a little practice; so, without disturbing the other boys, I got up, went to where Sam was picketed, and in almost no time he and I were in full run after Mr. Wolf. He played out lively for a while, but we gained on him; and by the time we had got four or five miles from camp, we were so close that I got my lasso in hand and was getting ready to throw. But just then the wolf ran across a little basin, not larger than a good sized house, which was sunk in the prairie. When Sam struck this spot, down went his fore legs to the very shoulders, while I went over his head into the mud in the middle of the basin. Sam floundered out and ran off, while I

THE LIGHTHOUSE DONKEY.

righted myself as well as I could, and took an observation.

I was evidently in what had been a small, deep pond, but the summer drouth had dried it down till it was just thick enough to stick well.

You could neither stand nor swim in it. It was neither land nor water, but as a mire-hole it was a complete success. The frost had stiffened the top enough to bear the wolf, but all it did for me was to cut my face a little as I broke through it into the mire below. I'm afraid I cursed that wolf some, but I didn't take it hard at first, for I thought the worst of it was to go back to camp cold and dirty, and be laughed at by the boys. When I first straightened up and cleared the dirt out of my mouth and eyes, I found myself in nearly to the waist.

I reached out my arms over the frozen surface as far as I could, and tried to draw myself up and toward the bank. But I broke through, and the effort only made me sink the deeper. Then I pulled off my coat, and tried to spread it on the frost, and put my arms over that. But the frost was now mostly broken within my reach, and I did not help matters any. Then I stood as still as I could and called with all my might, but there was no likelihood that anybody was within hearing. At the same time I kept watch, and soon found that, whether I struggled or kept still, I was gradually settling down deeper and deeper. It was not till then that I began to think seriously that I might not get out of that hole.

Could it be that I should sink and smother in that mess, when I was almost in reach of solid ground? My comrades would think nothing of my absence, and would not be likely to look for me till near night, at soonest. And long before that I should be head and ears under, at the rate things were going. My chance looked slim, I tell you, unless I reached solid bottom before my breathing was stopped. Thoughts came fast then, I tell you, and my evil doings troubled me more in a couple of hours than they had for a year before.

It was strange how they all came back, some that I thought I had forgotten, and some I had made myself believe were quite right, after all; but now they showed themselves to me in their own ugliness, and not at all as I had painted them up.

But while I was having this settlement with myself whether I would or not, I did not stop looking for any chance to help myself out. At last, when I had sunk to my arms, so that I could move them with difficulty, what should come in sight but Sam, dragging the lasso behind him. Somehow, this gave me new hope, and I called and whistled to him, till he saw his master and tried to come to me. He reached the edge of the hole, and broke in and drew back. But I kept on calling, and he moved along the edge and tried again.

He did this over and over, till he was on the opposite side from where I first saw him, and the long lasso was stretched across the basin, and barely within my reach! I caught at it with all my might, and when it was fairly in my hand, I felt as though a miracle had been wrought to save me. I kept talking to Sam to keep him quiet, while I managed to get the rope around under my arms, and to fasten it so I thought it would hold. Then I changed my talk to him, and tried to start him away. The splendid fellow seemed to know all about it, and just turned and moved off steadily till he had drawn me to firm ground, when I spoke to him again, and he stopped while I got on my feet and went to him. I was chilled by my cold bath, and stiff and sore from the strain of the rope, but I rode to camp about as thankful a fellow as you ever saw.

I can't tell my feelings, but I did my last swearing in that hole, and I think I know about how things look to a man who is hanging over the edge of the other world.—*Work and Play.*

A SELF-MADE MAN.

Here's hope for young men. Few of them have begun life under greater disadvantages than did Mr. Ezra Cornell, who died last December a millionaire, and whose name will go honorably down to posterity as the founder of Cornell University, which is, you know, not only a successful college, but the most thorough and successful experiment which has been made in the North to unite manual labor with instruction.

Mr. Cornell began life as a laboring man with little time or opportunity for education. That did not make him despise either labor or learning. Till he was twenty-one he worked at making pottery, and in a machine shop, and then, till he was thirty-six, at milling and farming. He must have kept his eyes and ears open all this while, for at the end of that time we find him inventing a machine for laying telegraph wires under ground, as was at first proposed to do. It was found better to raise them on poles, so his first venture to rise in life was a failure, and he found himself in the streets of New York so penniless that one night he would have gone to bed hungry had he not found a shilling lying on the walk.

What an excellent opportunity to decide that he was born to bad luck, and take to drinking or stealing; not he! He went to work instead, and all the money he could get he put into the new telegraph scheme that Professor Morse had just started.

That, as we all know, was a success, and the penniless laborer found himself growing rich. Another good chance to ruin himself as many a newly rich man has, by dissipation and extravagance.

But as he rose in wealth, he rose in power and moral character. He became President of the State Agricultural Society, and was elected to the State Assembly, and Senate. His influence was always given to work and learning. He founded a public library at Ithaca, New York; and the crowning act of his life was the gift of two hundred acres of land with the buildings on it, and five hundred thousand dollars to establish the university which will perpetuate his name as a worker and an educator.

A noble example! Who'll follow it?

THE ENGLISH WAY OF TAKING CARE OF HORSES.

Some English grooms at Saratoga are teaching Yankees the care of horses. I asked one of these grooms, who has spent twenty years in the stables of royalty, what he had to say about our American way of taking care of a horse.

"Why, sir," said he, "You don't take good care of your horses; you think you do, but you don't."

"Why?" I asked.

"Because, when a horse comes in all wet with perspiration, you let him stand in the stable and dry with all the dirt on. In England we take the horse as he comes from a drive and sprinkle blood-warm water all over him, from his head to his feet. Then we scrape him down and blanket him, rubbing his legs and face dry. Thus

in an hour he is clean and dry and ready to take a good feed, while with your way he will stand and swelter for hours, and finally dry sticky and dirty. Our horses never founder and never take cold. We never use a curry comb; you scratch your horses too hard. The only care necessary is to have the water not too cold; then bathe them instantly while you are rubbing their legs.

TO THE STUDENTS OF HAMPTON.

IV.

FOR YOUNG WOMEN.

The first principle of dress, mey, I think, safely be said to be *suitability*, nnd by this I mean thet your dress should be euited to the occasions on which it is worn, to your position in life, and to the characteristics of your face and figure. When ynu are et work, for example, wear something dark in color, simple in meke, and, if possible, of material which will wasb. Put aside all your finery, for nothing is more completely unladylike then to overdress; and when you are at work of any kind, the siupler you dress the better. Plain linen collars and cuffs are proper et all times, nnd shonld always be preferred to mussy ruffings, though fresb lace or muslin ruffing is a pretty and ladylike addition to your toilette for evening or et any time when you are dressed more than usual.

Any preponderance of bright color, or any glaring or improper combination of colors, is always to be avoided. There are certain colors, as ynu know, which are nlways beautiful; as scarlet and brown, or pink and grey: whilc again there are colors which, to use an expressive word, "kill" each other, as purple and blue, green and yellow. No mere directions can guide you herc; yon must simply train your own taste by watching the dress of people whnm you know you can trust in this particular, and in this way you will soon learn to judge for yourselves; but, in the mcantime, I advise you to err always on the side of too little color rather than too much.

For dress materials choose as much as possible solid colors; thnt is, do not indulge too often in plaids, stripes or figures, and be careful never to overtrim, for the first care of a lady is to avoid attracting ettention by the gaudincss or fussiness of her dress. Derk colors for winter and light for summer, is a very safe rule, though, of course, it may often be sefcly broken. For jackets and cloeks, black or any very dark color is proper, and the hat or bonnct should be made to match or contrast with the suit with which it will be principally wnrn; whilc gloves must never be of eny bright color—grays, drabs, browns and black being the most useful, with white and the light shades for full dress.

Jewelry, lacc, artificial flowers, etc., should not be worn except on special occasions, as evening parties, weddings, etc.; and only at such times too, arc low necked or short sleeved dresses suitable; for it is safe to say thet the ordinary, every-day toilette of a lady, is remarkable chiefly for its simplicity of color, fashion end materiel.

Boots should be thick and strong for common wear, must be kept in good order and neetly blacked. Never on any account be so foolish as to wear tight shoes, for, as I fear meny of yon have already found, they ere the cause of infinite discomfort end pein.

Slippers are proper for the house et ell times, but be careful thet they do not entice you into slipshod habits; do your best to keep your stockings and yonr shoes, clean, whole end neat.

In respect to petticoats, I think you will see for yourselves, that for winter you need those which ere light, warm and not easily soiled, while in summer you want those thet are light, cool and easily wesbed.

The woolen balmorals for the one season end the cotton balmorals for the other, are, if wisely cbosen, neat, comfortable and cheap; while petticoats of white cotton prettily tucked or trimmed shnuld always be worn for your best, or when you heve on a thin dress.

This idea of "suitability" on which I am inclined to dwell very strongly, exists not only in regard to the times and places for which you dress yourselves, but also has a very direct connection witb the amount of money which you are eble to spend. Yon understand, no doubt, that it is unsuitable to dress conspicuously in the street, to dress gaudily while at work, to overdress anywhere or at any time; but do you also understand how very unsuitable it is to spend a penny more than you can honestly afford upon your clothes? To most of you this matter of economy is doubtless a very important one; and I shall (taking it for granted thet you mean to be honest and careful in personal expenditure) try to give you a few hints which may be of assistance to you.

In selecting any garment, from a pair of shoes to a hat, yon may be sure that it is better to have one really good thing than two or three poor ones. Many girls wonld spend the money which one good gown or cloak would cost, upon two or three cheap ones, but it is not in this way that yon will dress well upon a little money. Let your materiels, your gloves, yonr shoes, or whatever tbe articles may be, be always as good and as well-made as you can afford, and then take care of them. Be satisfied to do withnnt a variety in order that you may have better things, which in the end are alweys more economical, especielly when you take into account the extra labor enteiled upon you by the multiplication of cbeap articles in your wardrobe.

Again, do not spend your money upon trinkets; the habit of bnying useless ornaments is most extrevagant and unsatisfectory, for a ring here, a necklace there, a string of beads or a broocb now and then, however cheap they may seem at the time, will run away with the price of a complete stock of underclothing before you think of it. In this connection, too, I must wnrn you egainst the vulgarity of all imitations, false jewelry in perticnlar being always in bad taste. You will find that emong ladies and gentlemen a very plein reality is better than a very fine shem, and that it is good to be true in dress as well as in other things.

In leying out your limited allowance of money always take the most substential things first, for you will find that to sacrifice comfort to show is very poor economy; as, for example, the girl who goes without overshoes in order to buy a feather is very likely to discover her mistake when she gets her feet wet and pays the penalty of illness end suffering.

Never fret yourself and waste your time in the attempt to dress as people do who are richer than you are, or whose position enebles them to make more show upon a similar outlay. You can be a lady in calico as well as in silk; and you cnn make no greeter mistake then to fancy thet economy is a disgrace or extravegance a virtue.

The refinement (to nse re general term) of your dress and appeerance, will depend largely upon your own industry nnd neatness, for a careful eye end ready hand can do much toward making and keeping your dress what a lady's should be, whole and clean; and to thet end you should mend rips, tears and holes in your garments as soon as they appeer, remembering thet most useful little proverb, "A stitch in time saves nine."

If you have patiently followed me thns fer, I think you will now agree with me tbet a lady's dress should always be clean, suitable and comfortable; and eny girl who will work on that foundetion may safely be trusted to make her dress also pretty and attractive, by a careful end modest use of color, a wise choice of material and fashinn, and a systematic avoidance of everything glaring and unreal.

And now there are but two other points upon which I wish to speak, and I have pnrposely reserved tbem for the last, for they are not only matters of dress, but of morality as well.

You must never use articles of toilette which belong to yonr companions, but must yourself be supplied with all that you are likely to require, so thet you need on no account trespass on the belongings of other people. Tootb-brushes, combs and brushes, washcloths, sponges, etc., are sacred to the nse of their owner; and I do not know anything more indicetive of a want of refinement then e promiscuous use of tbese things. The utmost intimacy will not justify you in any cerelessness in regard to articles which in the strictest sense are personal property, and with your ncarest friend you should never permit yourself to become lax in this particular. Also in respect to minor articles of dress—pocket-bandkerchiefs, collars, ribbons, etc.—it is wise to borrow and lend as little as possible. Heve a sufficient number of these things, let them be plainly marked with your name, and while guarding your own rights be careful to respect the rights of your neighbor; for nothing is more likely to lead to petty thefts (e vice about which I shell speak to you elsewhere) than the hebit of indiscriminete borrowing.

My second and last warning to you is against a shameful practice of which I hope you yourselves see the folly. While e lady should take every care of her teeth, her hair and her skin, no lady should use cosmetics in any form. Peint and powder, however skilfully their true names mey be concealed under the mask of "Liquid Bloom," or "Lilly Enamel," can never change their real character, but remain alwnys unclean, false, nnwholesome, a disgrace to those who nse them, and certain ruin to the skins they ero supposed to beautify. Put such things awey from you entirely, end be sure that the adornment they afford is unworthy of good women; for it is an offense against the laws of health, a foolish end paltry attempt et deception.

THE BURNING OF HAMPTON.

BY CAPT. S. W. ARMISTEAD, LATE OF THE CONFEDERATE ARMY.

The burning of this beautiful and ancient little town was not an act of mere wanton and useless destruction: nor was it expected by those who suggested or carried it into execution to have any material effect in crippling the operations of the Federal army encamped in its vicinity. But at that time, the opinion prevailed throughout the North, that the masses of the southern people were not in sympathy with the secession movement, but were led or rather forced along, against their wills and convictions, hy defeated but ambitious politicians, who inaugurated the movement, dictated the successive steps, and, by persuasions or threats, compelled the people generally to adopt their plans and execute their designs. Just the contrary opinion, and, indeed, the contrary state of things, existed throughout the South. It was a matter of frequent remark that in the revolution of 1861, the people were ahead of the leaders. It became necessary, in some emphatic way, to disabuse the northern mind of this entire misconception of the actual condition of affairs; and it was supposed that a scene snch as the burning of a town by its own inhabitants, rather than have it occupied hy an invading foe, would tend greatly to the accomplishment of this end.

This step had several times been suggested to General Magruder, commanding on the Peninsula, and this, too, hy residents of the town and county; but he, unwilling to sacrifice the property of citizens who had already suffered so much from the ravages of war, had declined to adopt the suggestion. At length, however, he reluctantly yielded to the wishes of the people, the demands of the press and the necessities of the occasion. That nothing of its moral effect should be lost—for the moral effect was the chief and almost sole design—he commanded that the town should be fired, as far as possihle, only by such companies as were raised in and around it.

Having stationed a considerahle force at the Whiting farm on the New Market road, about five miles from Hampton, he despatched a battalion of four companies from Colonel Hodges' regiment, Captains Phillips' and Goode's companies of cavalry, and Captain Sinclair's company of infantry, to the accomplishment of the enterprise. Captain Phillips' company, the Old Dominion Dragoons, was raised in the town and county; and Captain Sinclair's, the York Rangers, was raised in the adjoining county of York, but officered hy men from Hampton; the remaining troops were from other portions of Virginia. The whole force was under the command of Colonel Hodges, but owing to Captain Phillips' intimate acquaintance with the situation of the town, and the tact which he had displayed in previous skirmishes with the enemy, General Magruder had entrnsted to him the general superintendence of affairs. In other words, Colonel Hodges had been instructed to adopt the suggestions of Captain Phillips in his general plan of operations.

Strong guards were sent out on the New Ports News and Salter's Creek roads to prevent a surprise from that direction, as the bridge over the creek which crosses the Back River road had been burned, and a force obtaining possession of the New Market road, would effectually cut off their line of retreat. A strong picket was also sent out to Hope's farm on the road, leading north from the town.

The expedition entered Hampton just after night-fall on the 7th of August 1861, and immediately proceeded to the work of conflagration. The town as it stood at that time lay almost entirely on the western bank of Hampton River, and was divided into four nearly equal parts by the intersection of King and Queen streets. The plan of operation was simply to assign a detachment to each of these sections with instructions to commence on the eastern side and fire the houses, as they retired. Colonel Hodges halted his battalion at a line of breast-works thrown up by the enemy just to the westward of the old church wall, while Captain Phillips took command of the remaining troops and proceeded to the more active work of the night. After assigning each detachment its special work, he, himself, proceeded to the foot of Hampton bridge to watch any demonstration of the enemy from the direction of Fort Monroe. After a little brisk firing the Federal picket retired and the Confederates were in undisputed possession of the town.

But few of the houses were occupied; all the arms-bearing population was in the Confederate army; most of the non-combatants had fled to Williamsburg, Richmond and other places when the Federal troops first occupied New Ports News, and the negroes not carried away hy their owners had for the most part sought the protection of the Federal lines. Thus the town was virtually deserted, only a few old and infirm people remaining in it. But the most painful part of that night's work to those engaged in it was to inform those few of the dreadful errand on which they had come.

No time could he given for the removal of effects—what was to he done had to he done quickly; so in fifteen minutes after the citizens had been notified to leave, the work of firing was hegun. So finely planned and admirably executed were the arrangements for this, that in half an hour every house had been fired, and before dawn the pretty little village was a disfigured heap of smouldering ashes and crumbling walls. Only five houses remained standing, they from some cause having failed to burn. Of these five, two were torn down the succeeding winter by the Federal troops; and now there are only two houses on the western side of the river that were built prior to the 7th day of August, 1861.

It is due to the vindication of General Magruder's character against the reproaches that have been cast upon it—yea; due to the truth of history itself—to say, that this act, since so loudly condemned, was at the time received with cordial approval. Not that there were none who condemned, but the exceptions were so rare as hardly to be worthy of mention. Concurrent testimony amply proves that in many cases property was fired hy the hands of its owners, or the children of its owners, and this, too, with an alacrity and zeal altogether unsurpassed.

The land books for 1860 show the real estate of the town for that year to have been valued at $242,749, of which amonnt the buildings comprised $172,450. Thus it will be seen that nearly $200,000 worth of property was thus voluntarily destroyed merely to demonstrate the intense earnestness of the people in the cause which they had espoused, and for which they considered no sacrifice too great.

LETTERS FROM GRADUATES.

GRAHAM'S FORGE, WYTHE COUNTY, VA.,
February, 12, 1875.

Dear Teacher,—The people here, as e general thing, are poor; but while they are poor, they do not content themselves at Poverty's door; but they exhibit a disposition to go bigher hy their own labors end skill. I know it has been asserted that the Negro race will, like the Indian, diminish and finelly disappear before the civilizing and christienizing powers of the Caucesien race. But we rejoice to know thet this is only supposition, since we find no promise that God has made, to preserve one race and to exterminate the other. And while the Lord be with us, we intend to keep our banner thrown to the gale, and help to do as much as we positively can toward bringing our people to the true road of civilization (that is, we who are their instructors). The colored people here are quite enterprising. Meny of them are owning nice little homesteads end are industrious.

I have been teeching ever since I got home from Hempton, June, 1873. I find teaching

to be quite e pleasant occupation, hut one that requires the utmost atteutiou of the teachor, as much or more so then on the part of the scholars.

Since I heve had some experience as a teacher I see it is obligatory that the teacher study es much as he can. I heve had no pupils who could perplex me on any of their stedies; hut I find that I can enter with my scholars and conduct a recitation with so much more enthusiasm after having made uuyself perfectly familiar with th e topic to be considered.

I heve been exemined only once, and passed it quite smoothly. I am teaching under the supervision of Rev. J. D. Thomas, and have been for nearly two years; hut have occupied three different schoolhouses. I am teaching now in the new honse that I hed built last wieter and spring by the assistance of some good friends. Of the number who made liheral contributions there is Miss Edith Heuenway whom I shall never forget so long as life lasts.

I have had good success as e teacher, and have been kindly treated hy both white and colored.

As this has been written in great haste you will please excuse ell imperfections.

I am, ever your obedient pupil,

J. M. Ricks.

The valedictorian of the last class writes as follows from Bonsacks, Roanoke County, Va.:

My experience as a teacher since I left your Institution, is quite limited, and in geueral what others have seid, I will heve to say. I am situated in the Blue Ridge Range, in the western part of Virginie. I enjoy the scenery here very much, though it is very cold. The mountains eppear in the distance et every point, end with their snow-capped summits glittering in the sun, they present e grand and magnifieent view. I enjoy my work quite well, and find my stimulue when discouraged, in considering the needs of the people, among whom I am laboring.

All are anxious to improve their condition and rise from the influences of the past. We need teachers, as a race, I admit, but we need equally as much an intelligent ministry; and without it, I fear that the people to some extent, and to a sad extent, will continue for many yeers to grope in the dark. It is of the utmost importance that they should learn religion ie practical, not formel; thet is, has a beering upon their daily associations with their fellow-men, as well as upon the reletions which should exist between them and God. Young men, who are teechers, ought to be fitted to take a very ective part in churches, as you intend in your course for graduates.

Many in this vicinity are wide-awake to the importance of owning property, and are obtaining land, though they heve to work very industriously and be very economicel, thet they may pey for it.

The Sunday-school isn't attended very well, owing to the distanee the children live from the schoolhouse. The people are quite temperate in respect to strong drink. One disadvantage with us as teachers, we have to weit sometime after teaching, for our salary. Many of my scholers work with white families, and pay their board hy working evenings and Saturdeys. I feel I have the good-will of white and black, as I em politely treeted hy both.

Hoping the good work may continue, I am, yours truly,

G. E. Stephens.

Mr. Editor,—It ie with much pleasure, that I write informing you of the satiefaction which your peper has afforded the subscribers whose names I sent to your office in Jauuery. Many are surprised when they learn thet such an institution as the Hampton Normal and Agricultural Institute is south of Washington; more especially, to learn that the paper which they had so thoughtlessly looked upon at first, was the very one which was doing most to elevate our race. None of my words can so fully express the estimation in which the Southern Workman is held among its patrons, es the simple, yet earnestly spoken words of the father of Miss. M. K., a subscriber, who seid: "I thank God for such a good paper and school in our land. I prey that God may alwaye bless the manegers, the teachers, and all the scholars; also those young men who ere learning to print papers; and I hope that all of those young ladies and gentlemen may be good teachers, too, who will try to get the poor colored people ell through the South to take and read papers, as you are doing, for which I thenk you for recommending the Southern Workman."

Mr. Editor, after such frenkness of epeech from a once sleve-bound and illiterate men, who is now an honest and industrious freeme, I fully refuse to speak a word of praise more, but I consider that I am amply rewarded for my services as an egent for your paper.

Very truly yours, D. A. Ellett.

John F. Pool of the Class of 1874, writes from Elizabeth City, Pasquotank County, North Carolina, as follows:

"I have been teaching since I left school last June, and will teach again during this winter. I taught on Roanoke Island during the fall. This island is twelve miles long, and between two end three miles wide, and has about five hundred inhabitants, whose chief employment is fishing.

"I had sixty scholars enrolled with an average ettendance of ebont forty. The good morals of the school heve gained to it the approval of the community. The common sentiment of the whites in this community and in others where I have taught, is in favor of the edueetion of the colored people."

The Teachers' Table.

TO THE TEACHERS.

We want to meke this column thoroughly practical and useful; and to auy teachers who look to it for suggestions, we say, If you want information or advice thet you do not find here — upon euy special points that mey come up in your own experience, or in which you are especially interested—we should he glad et uny time to hear from you, and to give what help we can over the hard places.

THE LAWS OF TEACHING.

1. Knaw thoroughly and familiarly whatever you would teach.
2. Gain and keep the attention of your pupils, and excite their interest in the subject.
3. Use language which your pupils fully understand, and clearly explain every new word required.
4. Begin with what is already *known* and proceed to the uuknown hy easy and natural steps.
5. Excite self-activities of the pupils and lead them to discover the truth for themselves.
6. Require pupils to restate fully and correctly, in their owu language, and with their own proofs and illustrations, the truth taught them.
7. Review, review, review, carefully, thoroughly, repeatedly, with fresh consideration and thought.

These laws underlie and control all successful teaching. Nothing need be added to them; nothiug can he safely taken away. No one who will thoroughly master and use them need fail es a teacher, provided he will also maintain the good order which is required to give free and undisturbed actlon to these laws.—*Pennsylvania School Journal.*

THAT GEOGRAPHY CLASS.

A readable article in the *Illinois Schoolmaster*—"That Geography Class"—recounts the experience of Miss Ward, in "bringing up" e class in geography. She began with the town in which the pupils lived, locating their houses and the principal public buildings. Then each pupil was assigned some special topic, upon which to obtain all possible information. One took the foundry, and learned the number of men employed there, the kind of iron manufactured, etc. Another took a particuler branch of business, like banking, and so on. When the town had been thoroughly studied, the county was taken up, and then the State. For information the pupils resorted to books, and to conversations with the teecher, or parents and friends. We commend this course to teachers generally.

PHYSICAL TRAINING.

Five minutes spent once an hour, or even more frequently, in simple changes of the position of the body, by requiring the school or class to stand and to sit together three or four times in succeasion, also to exercise the arms hriskly, will do much for the physical comfort of pupils, and even increase the progress in their studies.

The necessity of pure air in a schoolroom is a metter too serious to be neglected hy any for a single hour. Yet quite too commonly, even where the means for secaring it have been provided, teachers carelessly neglect ventilation.—*Virginia Educational Monthly.*

SPELLING.

Remember that the use of correct spelling ie to secure correct writing. It is not in talking hut in writing or printing that blunders are made in orthography. Therefore, the *eye* needs special training to detect them, rather than the ear. The best method of teaching spelling, therefore, as soon as the children are eble to write, is hy dictation. Let them write the worde on their slates, and if you have a blackboard, copy some of their work, and let the class try to pick out the mistakes in it. Of course oral spelling aeed not be given ap entirely. And here is a hint: Children are naturally inclined to spell hy the sound—one word like another if they sound alike. Explain to them, then, as far as you are ahle, how it is thet our English language, grown gradually from so many different stocks, has snch a puzzling variety in its orthography; how to spell all syllebles alike that sound alike wonld be to lose ell the interesting history of words. Even the children will be interested in this, and the more you study it, the more you will be.

TO MY COLORED FRIENDS.

Mr. Editor,—May I again use your columns to say a few words to my colored friends who read the Workman? I fancy I hear you say, "Certainly; the paper was origiaated and is maintsined in their interest."

Well, don't forget what I told you last month, about saving the soap-suds and ashes to put on your gardens; hut now another subject claims atteation.

Everybody,—man, woman and child, *loves profit;* and every wise and iadustrious man will have, at least, a few fruit-trees around his house. And now spring is come and it is time to set out trees; you, if you have only a little lot, may have a few trees. Now, remember it will cost no more trouhle to plant a good tree than a bad one. A good tree will occupy no more ground than a had one. It will require no more cultivation. A good tree is cheaper, at any ordinary price, than a bad one for nothing. Let me thea advise you, hy all means, to be careful as to what sort of trees you get. Don't pick up any worthless thing, that somebody is about to throw away because it is worthless, hut go to some neighbor who has a reputation for honesty und intelligence and *buy,* if need be, a few trees. Better have a few good ones, than an orchard full of mean ones. *Good fruit* is always demanded and always hringe a good price; and as it is no more trouhle to raise, be sure to begin right and *get good trees;* for as the Scripture says, "A good tree hriageth forth good fruit."

Get small trees in preference to large ones; for though you reason that large ones will bear the sooner; yet remember, the larger ones will not geaerally bear transplanting as the smaller ones will.

Plant them from ten to sixteen feet apart ench way, according to their size when grown. It is best to set them about the same depth in the ground that they had in the nursery. If your land is naturally poor, put a pleaty of rich surface soil—woods' earth, old straw, or any half-rotten trash you can scrape up—around the roots.

Between these rows you may plant potatoes or peas, or smaller fruits, as Strawberries or Currants or Gooseberries, etc. By a little pains in this way, every man, who owns even a quarter or half-acre lot, may have fruit for his family and some to sell.

One caution, let me give you: when you plow among your trees, whether old or young, be careful never to drive so near to the trees as to rub the hark with your traces. Many beautiful trees of delicious fruit have been spoiled hy such carelessness. Remember, if fruit trees are worth planting at all, they are worth taking care of.

If the Editor will allow me, I may have something more to say in the Workman.

Kecoughtan.

WHAT FAITH IN GOD DOES.

Faith justifies, because the believer's obligations to justice are all canceled by Christ his Surety.

Faith sanctifies, because the believer forsakes his own righteousness, which at best is hut as filthy rags, and accepts the righteousness of Christ,

Faith purifies, because it begets hope, and he who "hath hope in him purifieth himself, even as He is pure."

Faith strengthens, because the believer forsakes his own strength, which is utter weakness, and lays hold on the mighty arm of God. "He stays on his God."

Faith gives courage, because it enables the believer to penetrate the darkest clouds and see that they are more with him than against him; it makes him cry out, "Though an host should encamp against me, my heart shall not fear."

Faith gives joy in the midst of sorrow, because it tells the believer that his light affliction, which is but for a moment, worketh out for him a "far more exceeding and eternal weight of glory."

Faith gives patience, because it shows the believer that "He is faithful who hath promised," and that in due season we shall reap if we faint not."

Faith gives peace, because it shows the believer that "being justified by faith we have peace with God through our Lord Jesus Christ."

Faith gives rest, not by and hy-only, but now—here—in this world of toil and sorrow; because it leads the believer, laboring and heavy-laden, to Him who gives him rest.

The *Educational Journal* of Virginia, containing an official department in charge of Dr. Ruffner, deserves the widest circulation. It shows the deep interest taken by Virginians in popular education, and proves that this interest is both intelligent, practical and successful.

We wish we had the means of sending it regularly to every teacher who has graduated from this institution. Not to read it is to be behind the times on the most important questions of the day.

NOTICE.

Any persons having spare numbers of the Southern Workman of the dates given below, will confer a favor by sending them to this office. Ten cents will be paid for each—if desired: May 1872, February and March, October and December 1873, October and December 1874, and January 1875.

LESSON I.

APRIL 4, 1875.

JESUS BEFORE THE HIGH PRIEST.

MATT. XXVI: 59–68.

59 Now the chief priests, and elders, and all the council, sought false witness against Jesus, to put him to death;

60 But found none: yea, though many false witnesses came yet found they none. At last came two false witnesses,

61 And said, This *fellow* said, I am able to destroy the temple of God, and to build it in three days.

62 And the high priest arose, and said unto him, Answerest thou nothing? what *is it* which these witness against thee?

63 But Jesus held his peace. And the high priest answered and said unto him, I adjure thee by the living God, that thou tell us whether thou be the Christ, the Son of God.

64 Jesus saith unto him, Thou hast said: nevertheless I say unto you, Hereafter shall ye see the Son of man sitting on the right hand of power, and coming in the clouds of heaven.

65 Then the high priest rent his clothes, saying, He hath spoken blasphemy; what further need have we of witnesses? behold, now ye have heard his blasphemy.

66 What think ye? They answered and said, He is guilty of death.

67 Then did they spit in his face, and buffeted him; and others smote *him* with the palms of their hands,

68 Saying, Prophesy unto us, thou Christ, Who is he that smote thee?

Golden Text.—FOR SUCH AN HIGH PRIEST BECAME US, WHO IS HOLY, HARMLESS, UNDEFILED, SEPARATE FROM SINNERS, AND MADE HIGHER THAN THE HEAVENS. Heb. vii: 26.

Ten days before the feast of the Passover the chief priests and elders and scribes of the people were gathered together in the palace of the high-priest talking about Jesus, whom they hated and were determined to kill. One of Christ's disciples, Judas Iscariot, was with them there. Though he was one of the disciples he was a wicked man. He loved money better than he did his Lord. He knew how anxious the priests and scribes were to take Jesus prisoner; so he went to them and asked what they would give him if he would deliver him into their hands. They said thirty pieces of silver, which would be about fifteen dollars of our money.

Just after Jesus had prayed in so much agony in the garden, and while he was yet talking to the eleven disciples, Judas came bringing with him a great many soldiers with lanterns and torches and swords (Luke xviii: 3). He had said to these men, "Whomsoever I shall kiss, that same is he; hold him fast;" so when he kissed Jesus the soldiers seized him. The disciples, filled with fear and dismay, "forsook him and fled," leaving their Lord in the hands of his enemies who led him away to Caiaphas, the high-priest, to be examined.

Christ had lived such a pure, innocent life that even the malice of his enemies could not tax him with any kind of sin. As no true charges could be brought against the meekest man, they were obliged to search for false testimony. They were resolved, at any cost, to convict him of a capital offense, caring not whether the evidence were true or false. Though many witnesses came to offer testimony they could find nothing "worthy of death." Mark says the reason was "their witnesses agreed not together." Two were required by the law (Deut. xvii: 6), and they did not dare to condemn him without, at least, an appearance of justice. At last, two were found who had a color of truth in their testimony. They gave a perverted account of words which Christ had spoken three years before (John ii: 19-22). What he had then said applied to his own body and not to the temple, and was so understood at the time. Although his words had been so misrepresented and misapplied, he had none to vindicate his innocence.

There were witnesses, who, we may believe, would gladly have testified of his mighty works of saving and healing; but none of these were called and Christ himself "opened not his mouth" in his own defense. Even when questioned by the high-priest he "held his peace" (Isaiah liii: 7). Silently and patiently he stood and endured the contradiction of sinners against himself. The cruel injustice of this whole proceeding and our Lord's patient endurance of it, affords a most important and practical lesson for all his followers. To do well and to suffer wrongfully was the experience of our Master, and ought not the disciple "to be as his master and the servant as his Lord" in this as in every other respect? It is among the hardest of hard lessons to learn; but it is a lesson well worth the learning. It is Christ himself who teaches us by his own example that the proper way to receive harsh and abusive treatment is "to open not our mouths."

Finally, perplexed and irritated by his silence, Caiaphas put Jesus under oath to testify in his own case—saying "Tell us whether thou be the Christ the Son of God." Thus adjured, the true High-Priest, the faithful Witness, calmly gave testimony to his own divine character and mission in the words, "Thou hast said." Jesus not only declared himself to be the Christ, but distinctly spoke of the time when he should come in another and more imposing manner, "on the right of power and in the clouds of heaven." Startling words for one in his circumstances to utter! Now he is before them a prisoner; but then he tells them he will return to occupy the throne as Judge, and they who are now condemning him will stand before him to receive the reward of their deeds. Upon hearing this fearless declaration, the high-priest rending his garments, said, "He hath spoken blasphemy," and then turning to those who were equally anxious to condemn him, he asked, "What think ye?" With one consent they exclaimed, "He is guilty of death." As soon as sentence was pronounced upon him, they began to buffet and to strike him with their hands—to mock him and to spit in his face. Thus they made him the object of the vilest insults and indignities.

It was as the Messiah—our Saviour—that Jesus bore all the pain and grief of Gethsemane—the cruel revilings and injustice of the council. If he hesitated not to bear all this for us, should not we be willing to take up our cross, in comparison, little cross and follow him?

LESSON II.

April 11, 1875.

JESUS BEFORE THE GOVERNOR.

MATT. XXVII: 11–26.

11 And Jesus stood before the governor: and the governor asked him, saying, Art thou the King of the Jews? And Jesus said unto him, Thou sayest.

12 And when he was accused of the chief priests and elders, he answered nothing.

13 Then said Pilate unto him, Hearest thou not how many things they witness against thee?

14 And he answered him to never a word; insomuch that the governor marvelled greatly.

15 Now at *that* feast the governor was wont to release unto the people a prisoner, whom they would.

16 And they had then a notable prisoner, called Barabbas.

17 Therefore when they were gathered together, Pilate said unto them, Whom will ye that I release unto you? Barabbas, or Jesus which is called Christ?

18 For he knew that for envy they had delivered him.

19 When he was set down on the judgment-seat, his wife sent unto him, saying, Have thou nothing to do with that just man: for I have suffered many things this day in a dream because of him.

20 But the chief priests and elders persuaded the multitude that they should ask Barabbas, and destroy Jesus.

21 The governor answered and said unto them, Whether of the twain will ye that I release unto you? They said, Barabbas.

22 Pilate saith unto them, What shall I do then with Jesus that is called Christ? *They* all said unto him, Let him be crucified.

23 And the governor said, Why, what evil hath he done? But they cried out the more, saying, Let him be crucified.

24 When Pilate saw that he could prevail nothing, but *that* rather a tumult was made, he took water, and washed *his* hands before the multitude, saying, I am innocent of the blood of this just person: see *ye to it.*

25 Then answered all the people, and said, His blood *be* on us, and on our children.

26 Then released he Barabbas unto them: and when he had scourged Jesus, he delivered *him* to be crucified.

Golden Text.—HE WAS OPPRESSED, AND HE WAS AFFLICTED, YET HE OPENED NOT HIS MOUTH: HE IS BROUGHT AS A LAMB TO THE SLAUGHTER, AND AS A SHEEP BEFORE HER SHEARERS IS DUMB, SO HE OPENETH NOT HIS MOUTH.—Isaiah liii: 7.

Although at the meeting of the council, which we considered last Sabbath, Jesus was "judged worthy of death" yet they could not carry their sentence into effect without an express order from Pilate who was the Governor of Judea. Accordingly, when the morning was come, they brought Jesus bound to the judgment-hall of Pilate. Doubtless, they had hoped that Pilate would deliver him over into their hands without any investigation of the charges against him, but they were disappointed in this, for, going out to them, his first question was, "What accusation bring ye against this man?" (John xviii: 29). At first they evaded his question—only replying, that if he were not a malefactor he would not have been brought to him for judgment. The Jews had condemned him on the ground of blasphemy, but they well knew that such a charge would have no weight in a Roman court.

They next try to procure his death on a false charge of treason against the Roman emperor, as is evident from the question the governor asked when he re-entered the judgment-hall: "Art thou the King of the Jews?" John tells us that before answering Jesus took pains to make it very clear to him that his kingdom was "wholly spiritual, and not of this world," so that his claims did not interfere at all with Cæsar's rights and dominion; then he made the strong, direct reply, "Thou sayest." The chief priests seeing that Pilate hesitated, and fearing even now that their wicked designs might be frustrated accused him of many things; but as when misrepresented by false witnesses before the council he "held his peace," so now, when listening to the many things witnessed against him before Pilate he answered him to "never a word." Pilate was so thoroughly persuaded of his innocence that he frankly said to them, "I find no fault in him at all."

It was the custom of the Romans at the Passover—the great feast of the Jews—as a favor—to pardon some one who was in prison and let him go free. Just then there was a very bad man in the prison, named Barabbas. He had tried to stir up the people against the government; and he was, too, a thief and a murderer (Luke xxiii: 19). Pilate asked the people which they wished him to set free—Jesus, the pure and sinless Saviour, or the wicked Barabbas, hoping that in this way he might be able to rescue him from the priests, and expecting that the people would prefer Jesus to a notorious robber.

"When he was set down on the judgment-seat" awaiting the decision of the people, Pilate's wife sent to him begging him not to condemn so wise and good a man. God sent a dream to Pilate's wife as a warning, but it was of no avail; for Pilate was influenced by the words of the cruel and angry people rather than by the message sent from God. His crime was cowardice. He feared man more than God. Every one who tampers with sin and reluctantly yields to it against his better nature rather than fulfil the dangerous duty of the hour, repeats Pilate's crime.

Finding that his repeated expedients to rescue Christ from the fury of the mob were of no avail—but that they only called the more loudly for Barabbas—he makes the cowardly appeal, "What shall I do then with Jesus which is called Christ?" As with one voice, they cried "Crucify him." Finding "he could prevail nothing" in the vain endeavor to rid himself of responsibility, he washed his hands before the multitude, as a token of his innocence, and then delivered Jesus unto them; but all the water on the globe could not wash away the stain of innocent blood which will rest upon him forever.

The Jews invoked upon themselves an awful doom—"His blood be on us and on our children," and it has been indeed visited upon them.

Let our last thought to-day be Pilate's question, "What shall I do with Jesus who is called Christ." Are we ready to make reply, I will believe on him, love him, follow him, serve him? Can we be willing to do less than this for Him who has borne so much for us?

LESSON III.

April 18, 1875.

THE CRUCIFIXION.

MATT. XXVII: 45–54.

45 Now from the sixth hour there was darkness over all the land unto the ninth hour.

46 About the ninth hour Jesus cried with a loud voice, saying, Eli, Eli, lama sabachthani? that is to say, My God, my God, why hast thou forsaken me?

47 Some of them that stood there, when they heard *that*, said, This man calleth for Elias.

48 And straightway one of them ran, and took a sponge, and filled *it* with vinegar, and put *it* on a reed, and gave him to drink.

49 The rest said, Let be, let us see whether Elias will come to save him.

50 Jesus, when he had cried again with a loud voice, yielded up the ghost.

51 And, behold, the veil of the temple was rent in twain from the top to the bottom; and the earth did quake, and the rocks rent;

52 And the graves were opened; and many bodies of the saints which slept arose,

53 And came out of the graves after his resurrection, and went into the holy city, and appeared unto many.

54 Now when the centurion, and they that were with him, watching Jesus, saw the earthquake, and those things that were done, they feared greatly, saying Truly this was the Son of God.

Golden Text.—AND BEING FOUND IN FASHION AS A MAN, HE HUMBLED HIMSELF, AND BECAME OBEDIENT UNTO DEATH, EVEN THE DEATH OF THE CROSS.—Philippians, ii: 8.

After Pilate had delivered Jesus over into the hands of the soldiers in mockery they put upon him the symbols of royalty—the "scarlet robe," the "crown of thorns"—put in his hand a reed as a sceptre, and then bowed before him, crying out, "Hail, King of the Jews! It was the custom to compel the criminal to bear the cross upon which he was to be crucified. The Saviour, weak and faint from watching and fasting and from the scourging and mockery could not carry his heavy burden alone; therefore, when they met Simon they forced him to bear part of the load. When they reached Golgotha, the cross was laid down and Jesus was stretched upon it; the cruel nails were driven through those hands that were accustomed only to bless others and through the feet that had trod the earth only on errands of mercy. Then the cross was lifted up and firmly fastened in the ground. Above his head was written in Greek and Latin and Hebrew the inscription, "This is the King of the Jews." The deed is done, and around the cross are gathered a great multitude, who, with the chief priests and scribes taunted and ridiculed Jesus as did also many who were only passing by. The soldiers divided his garments and then sat down to watch him. A few of his friends were there, too, sorrow-stricken and dismayed.

When this wild scene of wicked cruelty was at its height, and the sun had reached high noon, suddenly a great darkness settled down like a pall over the whole land, which lasted three hours. Just before this darkness passed away that exceeding great and bitter cry of sorrow, "My God, my God, why hast thou forsaken me!" broke forth from the lips of the great Sufferer. We can never know on earth the full meaning of those awful words. We only know this, that Jesus was dying for our sins and bore the weight so terrible that they seemed even to separate him from his Father. May we never forget that that darkness was that we might have light.

The great battle had been fought, the victory won. Up to the very last moment of life our Lord endured the mocking of men, yet not one revengeful word came from his holy and loving lips.

Four marvelous things occurred on the day that Christ died. We have already spoken of the great darkness that covered the earth. The vail of the temple which had ever hidden the Holy of holies, where God's presence dwelt, from all eyes, was rent in twain, signifying that now through this new and living way, consecrated by his blood, all could enter without fear into the immediate presence of the holy God. "Whosoever will" may come unto the Father through Jesus—the great High Priest—himself the Way, the Truth, and the Life." Fearful earthquakes, and the dead rising from their graves added to the awe and solemnity of these never-to-be-forgotten scenes. "Truly this was the Son of God" those who were standing by were constrained to say as they saw these wonders.

Christ's gift to a sinful world out of the midst of that overwhelming sorrow is PARDON.

"Love's redeeming work is done,
Come and welcome, sinner, come."

LESSON IV.

April 25, 1875.

THE RESURRECTION.

MATT. xxviii: 1–8.

1 In the end of the sabbath, as it began to dawn toward the first *day* of the week, came Mary Magdalene and the other Mary to see the sepulchre.

2 And, behold, there was a great earthquake: for the angel of the Lord descended from heaven, and came and rolled back the stone from the door, and sat upon it.

3 His countenance was like lightening, and his raiment white as snow.

4 And for fear of him the keepers did shake, and became as dead men.

5 And the angel answered and said unto the women, Fear not ye: for I know that ye seek Jesus, which was crucified.

6 He is not here: for he is risen, as he said. Come, see the place where the Lord lay.

7 And go quickly, and tell his disciples that he is risen from the dead; and, behold, he goeth before you into Galilee; there shall ye see him: lo, I have told you.

8 And they departed quickly from the sepulchre with fear and great joy; and did run to bring his disciples word.

Golden Text.—FOR IF WE BELIEVE THAT JESUS DIED AND ROSE AGAIN, EVEN SO THEM ALSO WHICH SLEEP IN JESUS WILL GOD BRING WITH HIM.—1 Thessalonians, iv: 14.

When Jesus had been in the grave three days, "as it began to dawn on the first day of the week," some women came to the grave with sweet spices to anoint his body. As they walked along they were troubled as to how the great stone that was at the door of the grave was to be rolled away. But a wonderful sight met their eyes as they approached the tomb. The large stone was already rolled away and an angel sat on it! It was thirty-three years since an angel had brought to the shepherds in the fields of Bethlehem the glad tidings of great joy: "For unto you is born this day a Saviour which is Christ the Lord" (Luke ii: 10, 11). And now again after the sad proceedings of this Passover week—to which we have been giving our attention the last few Sabbaths—an angel brought to the sorrowing friends of Jesus the still more joyful tidings, "He is not here; for he has risen as he said." Glad tidings indeed; for He who came to save has finished his work and by rising from the dead he has proved himself an Almighty Saviour; sin and death are conquered forever. The angel further says to the women, "Come and see;" then they were told to do something: "go and tell;" tell his disciples, "He is risen" from the dead. Surely this was too good news to keep to themselves.

The hearts of all Christ's disciples were sad. They sorely needed comfort. They "had trusted that it had been he who should redeem Israel," but now that he was dead they had lost their trust and all their hopes were buried with him. We read that they departed quickly with great joy; and was it not a pleasant mission which these women had entrusted to them, to carry such words of cheer to their desponding friends? Thus running quickly to tell what they had learned and knew about Jesus they preached the gospel—the *good news*. So should every one who has himself learned of Jesus hasten to make known to his friends and companions what they know of the "Friend above all others," who freely invites "whosoever will" to partake of the blessings which his death and resurrection assure to all who will receive him as their Saviour.

We often hear that Christ died for us; True, he died for us more than eighteen hundred years ago, but now he liveth for us forever more. Christ began his work for us on earth; he finishes it in heaven. "He ever liveth to make intercession for us."

Jesus appeared to his disciples several times after he rose from the dead, but the earth was no longer his home. The time soon came for the last earthly farewell, and one day when they were all gathered around him he lifted up his hands and blessed them and then was carried up into heaven. Because Jesus rose from the dead on the first day of the week Christians keep it holy as the Sabbath day instead of the seventh day, as the Jews had always done and still do. Should not every returning Sabbath morning bring to our loving and grateful remembrance thoughts of Him who has thus given to all mankind a pledge of their own resurrection and future life? His own words are, "I am the Resurrection and the Life;" and may we each realize for ourselves the precious truth, "I *know* that my Redeemer liveth."

FROM SINNERS, AND MADE HIGHER THAN THE HEAVENS.—Heb. vii: 26.

TEN days before the feast of the Passover the chief priests and elders and scribes of the people were gathered together in the palace of the high-priest talking about Jesus, whom they hated and were determined to kill. One of Christ's disciples, Judas Iscariot, was with them there. Though he was one of the disciples he was a wicked man. He loved money better than he did his Lord. He knew how anxious the priests and scribes were to take Jesus prisoner; so he went to them and asked what they would give him if he would deliver him into their hands. They said thirty pieces of silver, which would be about fifteen dollars of our money.

Just after Jesus had prayed in so much agony in the garden, and while he was yet talking to the eleven disciples, Judas came bringing with him a great many soldiers with lanterns and torches and swords (Luke xviii: 3). He had said to these men, "Whomsoever I shall kiss, that same is he; hold him fast;" so when he kissed Jesus the soldiers seized him. The disciples, filled with fear and dismay, "forsook him and fled" leaving their Lord in the hands of his enemies who led him away to Caiaphas, the high-priest, to be examined.

Christ had lived such a pure, innocent life that even the malice of his enemies could not tax him with any kind of sin. As no true charges could be brought against the sinless man, they were obliged to search for false testimony. They were resolved, at any cost, to convict him of a capital offense, caring not whether the evidence were true or false. Though many witnesses came to offer testimony they could find nothing "worthy of death." Mark says the reason was "their witnesses agreed not together." Two were required by the law (Deut. xvii: 6), and they did not dare to condemn him without, at least, an appearance of justice. At last, two were found who had a color of truth in their testimony. They gave a perverted account of words which Christ had spoken three years before (John ii: 19-22). What he had then said applied to his own body and not to the temple, and was so understood at the time. Although his words had been so misrepresented and misapplied, he had none to vindicate his innocence.

There were witnesses, who, we may believe, would gladly have testified of his mighty works of saving and healing; but none of these were called and Christ himself "opened not his mouth" in his own defense. Even when questioned by the high-priest he "held his peace" (Isaiah liii: 7). Silently and patiently he stood and endured the contradiction of sinners against himself. The cruel injustice of this whole proceeding and our Lord's patient endurance of it, affords a most important and practical lesson for all his followers. To do well and to suffer wrongfully was the experience of our Master, and ought not the disciple "to be as his master and the servant as his Lord" in this as in every other respect? It is among the hardest of hard lessons to learn; but it is a lesson well worth the learning. It is Christ himself who teaches us by his own example that the proper way to receive harsh and abusive treatment is "to open not our mouths."

Finally, perplexed and irritated by his silence, Caiaphas put Jesus under oath to testify in his own case—saying "Tell us whether thou be the Christ the Son of God." Thus adjured, the true High-Priest, the faithful Witness, calmly gave testimony to his own divine character and mission in the words, "Thou hast said." Jesus not only declared himself to be the Christ, but distinctly spoke of the time when he should come in another and more imposing manner, "on the right of power and in the clouds of heaven." Startling words for one in his circumstances to utter! Now he

---

14 And he answered him to never a word; insomuch that the governor marvelled greatly.

15 Now at *that* feast the governor was wont to release unto the people a prisoner, whom they would.

16 And they had then a notable prisoner, called Barabbas.

17 Therefore when they were gathered together, Pilate said unto them, Whom will ye that I release unto you? Barabbas, or Jesus which is called Christ?

18 For he knew that for envy they had delivered him.

19 When he was set down on the judgment-seat, his wife sent unto him, saying, Have thou nothing to do with that just man: for I have suffered many things this day in a dream because of him.

20 But the chief priests and elders persuaded the multitude that they should ask Barabbas, and destroy Jesus.

21 The governor answered and said unto them, Whether of the twain will ye that I release unto you? They said, Barabbas.

22 Pilate saith unto them, What shall I do then with Jesus that is called Christ? *They* all said unto him, Let him be crucified.

23 And the governor said, Why, what evil hath he done? But they cried out the more, saying, Let him be crucified.

24 When Pilate saw that he could prevail nothing, but *that* rather a tumult was made, he took water, and washed *his* hands before the multitude, saying, I am innocent of the blood of this just person: see *ye to it*.

25 Then answered all the people, and said, His blood *be* on us, and on our children.

26 Then released he Barabbas unto them: and when he had scourged Jesus, he delivered *him* to be crucified.

Golden Text.—HE WAS OPPRESSED, AND HE WAS AFFLICTED, YET HE OPENED NOT HIS MOUTH: HE IS BROUGHT AS A LAMB TO THE SLAUGHTER, AND AS A SHEEP BEFORE HER SHEARERS IS DUMB, SO HE OPENETH NOT HIS MOUTH.—Isaiah liii: 7.

ALTHOUGH at the meeting of the council, which we considered last Sabbath, Jesus was "judged worthy of death" yet they could not carry their sentence into effect without an express order from Pilate who was the Governor of Judea. Accordingly, when the morning was come, they brought Jesus bound to the judgment-hall of Pilate. Doubtless, they had hoped that Pilate would deliver him over into their hands without any investigation of the charges against him, but they were disappointed in this, for, going out to them, his first question was, "What accusation bring ye against this man?" (John xviii: 29). At first they evaded his question—only replying, that if he were not a malefactor he would not have been brought to him for judgment. The Jews had condemned him on the ground of blasphemy, but they well knew that such a charge would have no weight in a Roman court.

They next try to procure his death on a false charge of treason against the Roman emperor, as is evident from the question the governor asked when he re-entered the judgment-hall: "Art thou the King of the Jews?" John tells us that before answering Jesus took pains to make it very clear to him that his kingdom was wholly spiritual, "not of this world," so his claims did not interfere at all with Cæsar's rights and dominion; then he made the strong, direct reply, "Thou sayest." The chief priests seeing that Pilate hesitated, and fearing even now that their wicked designs might be frustrated accused him of many things: but as when misrepresented by false witnesses before the council he "held his peace," so now, when listening to the many things witnessed against him before Pilate he answered him to "never a word." Pilate was so thoroughly persuaded of his innocence that he frankly said to them, "I find no fault in him at all."

It was the custom of the Romans at the Passover—the great feast of the Jews—as a favor—to pardon some one who was in prison and let him go free. Just then there was a very bad man in the prison, named Barabbas. He had tried to stir up the people against the government; and he was, too, a thief and a murderer (Luke xxiii: 19). Pilate asked the people which they wished him to set free—Jesus, the pure and sinless Saviour, or the wicked Barabbas, hoping that in this way he might be able to rescue him from the priests, and expecting that the people would prefer Jesus to a notorious robber.

"When he was set down on the judgment-seat" awaiting the decision of the people, I will believe on him, love him, follow him, serve him? Can we be willing to do less than this for Him who has borne so much for us?

LESSON III.

April 18, 1875.

THE CRUCIFIXION.

MATT. xxvii: 45-54.

45 Now from the sixth hour there was darkness over all the land unto the ninth hour.

46 About the ninth hour Jesus cried with a loud voice, saying, Eli, Eli, lama sabachthani? that is to say, My God, my God, why hast thou forsaken me?

47 Some of them that stood there, when they heard *that*, said, This man calleth for Elias.

48 And straightway one of them ran, and took a sponge, and filled *it* with vinegar, and put *it* on a reed, and gave him to drink.

49 The rest said, Let be, let us see whether Elias will come to save him.

50 Jesus, when he had cried again with a loud voice, yielded up the ghost.

51 And, behold, the veil of the temple was rent in twain from the top to the bottom; and the earth did quake, and the rocks rent;

52 And the graves were opened: and many bodies of the saints which slept arose,

53 And came out of the graves after his resurrection, and went into the holy city, and appeared unto many.

54 Now when the centurion, and they that were with him, watching Jesus, saw the earthquake, and those things that were done, they feared greatly, saying Truly this was the Son of God.

Golden Text.—AND BEING FOUND IN FASHION AS A MAN, HE HUMBLED HIMSELF, AND BECAME OBEDIENT UNTO DEATH, EVEN THE DEATH OF THE CROSS.—Phil. Ilppians, ii: 8.

AFTER Pilate had delivered Jesus over into the hands of the soldiers in mockery they put upon him the symbols of royalty—the "scarlet robe," the "crown of thorns"—put in his hand a reed as a sceptre, and then bowed before him, crying out, "Hail, King of the Jews! It was the custom to compel the criminal to bear the cross upon which he was to be crucified. The Saviour, weak and faint from watching and fasting and from the scourging and mockery could not carry his heavy burden alone; therefore, when they met Simon they forced him to bear part of the load. When they reached Golgotha, the cross was laid down and Jesus was stretched upon it; the cruel nails were driven through those hands that were accustomed only to bless others and through the feet that had trod the earth only on errands of mercy. Then the cross was lifted up and firmly fastened in the ground. Above his head was written in Greek and Latin and Hebrew the inscription, "This is the King of the Jews." The deed is done, and around the cross are gathered a great multitude, who, with the chief priests and scribes taunted and ridiculed Jesus as did also many who were only passing by. The soldiers divided his garments and then sat down to watch him. A few of his friends were there, too, sorrow-stricken and dismayed.

When this wild scene of wicked cruelty was at its height, and the sun had reached high noon, suddenly a great darkness settled down like a pall over the whole land, which lasted three hours. Just before this darkness passed away that exceeding great and bitter cry of sorrow, "My God, my God, why hast thou forsaken me?" broke forth from the lips of the great Sufferer. We can never know on earth the full meaning of those awful words. We only know this, that Jesus was dying for our sins and found the weight so terrible that they seemed even to separate him from his Father. May we never forget that that darkness was that we might have light.

The great battle had been fought, the victory won. Up to the very last moment of life our Lord endured the mocking of men, yet not one revengeful word came from his holy and loving lips.

Four marvelous things occurred on the day that Christ died. We have already spoken of the great darkness that covered the earth. The veil of the temple which had ever hidden the Holy of holies, where God's presence

---

9 And the angel answered and said unto the women, Fear not ye: for I know that ye seek Jesus, which was crucified.

6 He is not here: for he is risen, as he said. Come, see the place where the Lord lay.

7 And go quickly, and tell his disciples that he is risen from the dead; and, behold, he goeth before you into Galilee; there shall ye see him: lo, I have told you.

8 And they departed quickly from the sepulchre with fear and great joy; and did run to bring his disciples word.

Golden Text.—FOR IF WE BELIEVE THAT JESUS DIED AND ROSE AGAIN, EVEN SO THEM ALSO WHICH SLEEP IN JESUS WILL GOD BRING WITH HIM.—1 Thessalonians, iv: 14.

WHEN Jesus had been in the grave three days, "as it began to dawn on the first day of the week," some women came to the grave with sweet spices to anoint his body. As they walked along they were troubled as to how the great stone that was at the door of the grave was to be rolled away. But a wonderful sight met their eyes as they approached the tomb. The large stone was already rolled away and an angel sat on it! It was thirty-three years since an angel had brought to the shepherds in the fields of Bethlehem the glad tidings of great joy: "For unto you is born this day a Saviour which is Christ the Lord" (Luke ii: 10, 11). And now again after the sad proceedings of this Passover week—to which we have been giving our attention the last few Sabbaths—an angel brought to the sorrowing friends of Jesus the still more joyful tidings, "He is not here; for he has risen as he said." Glad tidings indeed; for He who came to save has finished his work and by rising from the dead he has proved himself an Almighty Saviour; sin and death are conquered forever. The angel further says to the women, "Come and see;" then they were told to do something: "go and tell;" tell his disciples, "He is risen" from the dead. Surely this was too good news to keep to themselves.

The hearts of all Christ's disciples were sad. They sorely needed comfort. They "had trusted that it had been he who should redeem Israel," but now that he was dead they had lost their trust and all their hopes were buried with him. We read that they departed quickly with great joy; and was it not a pleasant mission which these women had entrusted to them, to carry such words of cheer to their desponding friends? Thus running quickly to tell what they had learned and knew about Jesus they preached the gospel—the *good news*. So should every one who has himself learned of Jesus hasten to make known to his friends and companions what they know of the "Friend above all others," who freely invites "whosoever will" to partake of the blessings which his death and resurrection assure to all who will receive him as their Saviour.

We often hear that Christ died for us; True, he died for us more than eighteen hundred years ago, but now he liveth for us forever more. Christ began his work for us on earth; he finishes it in heaven. "He ever liveth to make intercession for us."

Jesus appeared to his disciples several times after he rose from the dead, but the earth was no longer his home. The time soon came for the last earthly farewell, and one day when they were all gathered around him he lifted up his hands and blessed them and then was carried up into heaven. Because Jesus rose from the dead on the first day of the week Christians keep it holy as the Sabbath day instead of the seventh day, as the Jews had always done and still do. Should not every returning Sabbath morn bring to our loving and grateful remembrance thoughts of Him who has thus given to all mankind a pledge of their own resurrection and future life? His own words are, "I am the Resurrection and the Life;" and may we each realize for ourselves the precious truth, "I *know* that my Redeemer liveth."

DECORATION DAY.

Our picture this month shows us how this beautiful custom of decorating the graves of those whom we especially desire to honor, is kept up in a country, far older, as a nation, than our own, that is in Germany, where on a certain day of the year, the people go out with flowers and green branches wherewith they make fresh and blooming the solemn resting-places of their dead.

And this is no new fashion: centuries ago, when Greece and Rome were young, of the interior of Africa are, as yet, strange, not only to the influences of Christianity but even to those of civilization, and the work to be done among them is of an importance hardly to be over-rated. Until something more is known of the peculiar wants of the natives and the exigencies of the climate, it is impossible that any special plan of work can be adopted; but now that communication has actually been established between Egypt and the interior, there is no doubt that opportunity will be from time to time offered to any who de- known people. It seems as if it would be almost dishonorable if these pioneer bands of missionaries should be permitted to go out without including in their number one or more members of the race they are going forth to save,—one or more civilized and christianized men of African descent.

OUR GARDENS.

As the summer once more draws near, and the winter, which everywhere has been long and cold and hard, is at an end, it work in our fields and gardens. The SOUTHERN WORKMAN, who loves flowers as well as fruits, and likes to see blossoming gardens as well as fertile farms, has as usual a word or two to say about the wisdom of spending a little time and thought on fruit yards, and fences, and walls, and all the spare bits of ground here and there, which a little industry and care may transform into masses of rich greenery and brilliant colors. Is is astonishing what the timely planting of a few seeds and cuttings can accomplish, for if these are once properly set out and watered they

DECORATION DAY.

Our picture this month shows us how this beautiful custom of decorating the graves of those whom we especially desire to honor, is kept up in a country, far older, as a nation, than our own, that is in Germany, where on a certain day of the year, the people go out with flowers and green branches wherewith they make fresh and blooming the solemn resting-places of their dead.

And this is no new fashion: centuries ago, when Greece and Rome were young, their dead, too, were remembered with this same beautiful ceremony, and from the ancient cities, flower-laden crowds of the living, went year after year to lay loving tribute upon graves of which to-day not even the memory exists. Then, too, the superstitions of the old beliefs taught the Greeks and Romans to believe that food and offerings of clothing or ornaments were acceptable to the dead, so that it was not flowers alone, which, in those days were laid upon the graves, but bread, and gold, and sacrifices of various kinds.

Christianity has taught us that our dead do not need such things as these; they, we know, have passed beyond the reach of our ministrations, and from us can no longer receive that which we should be so glad to give; but we can still go out in friendliness together to make beautiful the places where we have laid all that Death leaves of humanity. It is a pleasant and a reverent custom, one which brings with it peaceful and hopeful thoughts, which help to renew our faith, and to strengthen us for our work, if we keep it up in a right and loving spirit; so let us all in this May time remember our dead with gifts of flowers.

of the interior of Africa are, as yet, strange, not only to the influences of Christianity but even to those of civilization, and the work to be done among them is of an importance hardly to be over-rated. It seems as if it would be almost dishonorable if these pioneer bands of missionaries should be permitted to go out without including in their number one or more members of the race they are going forth to save,—one or more civilized and christianized men of African descent.

OUR GARDENS.

As the summer once more draws near, and the winter, which everywhere has been long and cold and hard, is at an end, it seems as if we must welcome with especial gladness, the freshness and promise of the spring, and be more than ever ready for work in our fields and gardens. The SOUTHERN WORKMAN, who loves flowers as well as fruits, and likes to see blossoming gardens as well as fertile farms, has as usual a word or two to say about the wisdom of spending a little time and thought on front yards, and fences, and walls, and all the spare bits of ground here and there, which a little industry and care may transform into masses of rich greenery and brilliant colors. Is is astonishing what the timely planting of a few seeds and cuttings can accomplish, for if these are once properly set out and watered they will then almost take care of themselves, the only attention they ask being that the weeds may be kept out of their way, and a little water be given to them in the thirsty days of midsummer. Almost any flower is better than no flower at all, but seeds of even choice varieties are now so cheap that few people, however poor, need to have empty gardens, or bare walls. Buy a few morning-glory seeds, or some mignonette, or sweet-william, or scarlet runners, and plant some cuttings of ivy and roses, get some roots of the hardy pink and sweet blue violet, give them a few days' nursing, and your reward will come quickly. Try this year to have a real flower-garden, and you may be very sure that next year you will try again; there is no cheaper pleasure in the world.

EASY METHOD TO LEARN HOW TO SWIM.

Dr. Zippeler, of New York, considered quite an authority on swimming, in a recent discourse asserted that any person about to learn how to swim should be firmly persuaded that his body is lighter than the water, and that when cool and deliberate he cannot sink as

AFRICAN MISSIONS.

It is reported that already three missionary expeditions have been organized in connection with Colonel Gordon's expedition, with the expectation of reaching Lake Nyassa, and probably of making that the head-quarters, for the present, of their mission work. The call for laborers in this new field seems to be strong and pressing; the tribes of the interior of Africa are, as yet, strange, not only to the influences of Christianity but even to those of civilization, and the work to be done among them is of an importance hardly to be over-rated. Until something more is known of the peculiar wants of the natives and the exigencies of the climate, it is impossible that any special plan of work can be adopted; but now that communication has actually been established between Egypt and the interior, there is no doubt that opportunity will be from time to time offered to any who desire to enter themselves as members of the African missionary force, and to undertake to serve in the cause of these hitherto unknown people.
